7547. What about the seasonal trade?—In holiday resorts there might be a seasonal trade. We think that, while the assistant is at such a place, he ought to be paid for anything he works beyond the 48-hour week. I had occasion to go down to Colwyn Bay three years ago. There was a dispute there over the question of hours, and we arranged it. Colwyn Bay is a well-known holiday resort, and they have a 50-hour week in the height of the holiday season. They have the half-holiday there. I used to reside at Portobello, where I have seen 20,000 people come in from Glasgow. As Lord Weir probably knows, it used to be a favourite resort, and yet we never departed from our half-holiday. The people knew exactly the hours, and they accommodated themselves to them; there was no difficulty at all.

7548. Lord Weir: What were the hours?—The common Glasgow time was till 7 o'clock with the weekly half-holiday.

7549. 52 or 54 hours?—At that time I should say we worked, roughly, about 60 hours. To-day it would be entirely different, because the hours were reduced during the war time. During the war the shopping habits of the people entirely changed, and they very quickly accommodated themselves to the changed conditions. That started with the queue system.

7550. Is this 48 hours under the Board going to make any big difference? At what would you take

20 December, 1921.]

MR. J. R. LESLIE.

[Continued.]

the average of all the workers in the grocery trade?—In a big number of towns they close as early as 6 o'clock, but they are seeking to depart from that.

7551. I am trying to get at the fact of what would be the change that would be brought about by the action of the Board laying down 48 hours. Will it make any great change?—I do not think it will make a change for the majority of the shop assistants, because the majority of the shop assistants, employed as they are by the multiple firms and by the Co-operative Societies, will be enjoying the 48-hour week now.

7552. *Chairman*: What proportion of the assistants would that be?—I should say that the Co-operative Societies and the multiple firms would employ the great bulk of the assistants, and the big establishments do not work more than the 48 hours.

7553. *Lord Weir*: So that there is very little wrong to-day?—Very little with the assistants. The long hours are reached in the case of the single shopkeeper or the man with, perhaps, one or two assistants.

7554. *Mr. Bell*: Then where has the agitation originated in favour of the abolition of the 48-hour week?—Strangely enough we only knew of it in the past few weeks by what we saw in the trade press. Associations began to meet and to say that they thought the 48-hour week was too short, and that it

ought to be extended to 52 hours. Of course, we had a shrewd suspicion that what they were objecting to was the payment of overtime.

7555. *Mr. Poulton*: Do you concur in the suggestions of Mr. Turner for the continuance of the Board and in the improvements he suggests?—Certainly. I think that the Board is absolutely necessary because of the opposition of quite a number of employers to collective bargaining through Trade Unions. You have the present chaotic condition where some work for very low wages and then when they are organised they work for fairly good wages in comparison. But the condition of the organised is always endangered by the condition of the unorganised, so that I think it is absolutely essential that Trade Boards should operate in order to put in a rock bottom price. I should like to supplement my remarks on the question of Trade Union officials. On the Grocery Trade Board there are a number of small Unions represented, and it has been very difficult for us to get representatives of the workers. That is one of the reasons why Trade Union officials had to come in. We had extreme difficulty in getting the workers to represent us, and the sparse attendance very often on the part of the workers' side is accounted for by their inability to get away.

Chairman: Thank you, Mr. Leslie.

The Witness withdrew.

MR. WILLIAM FRASER called, and examined.

The Witness handed in the following statement as his evidence-in-chief:—

STATEMENT OF EVIDENCE to be submitted by WILLIAM FRASER, Scottish Organiser, National Amalgamated Union of Shop Assistants, Warehousemen and Clerks; Chairman of Workers' Side, Grocery and Provisions Trade Board (Scotland); Secretary of Workers' Side, Milk Distributive Trade Board (Scotland), and Chairman of Workers' Side Dressmaking and Women's Light Clothing Trade Board (Scotland).

Grocery Trade.

1. Until the passing of the Shops Act, 1912, working hours in this trade were excessively long, and even at present it should be noted that this Act does not restrict the hours of labour (except in the case of juniors to 74 hours per-week). Wages were small, and just prior to the war varied from 22s. to 26s. per week for experienced men. In a comparatively few instances specially qualified men might reach 28s. or 30s. per week. The trade had earned for itself a reputation of contempt—"Born a man and died a grocer." Conditions were such as made neither for individual nor national well-being. The trade in the past gave little opportunity for physical recreation or for mental advancement. Maladies of the trade were flat-foot and varicose veins.

National Economy and Trade Boards.

2. The Trade Board principle by insuring the workers against bad conditions and low wages contributes to national efficiency. It will improve the physical, mental and moral conditions of an important section of the people. From the standpoint of health, it will tend to relieve the drain on public funds.

Grocery Trade Organisation.

3. It cannot be claimed for employers or workers that either side is thoroughly organised. Organisation is difficult among assistants owing to their being isolated in small shops from their fellows in the same occupation. This applies particularly to the private and multiple trade rather than to Co-operative Societies, where employees come into closer contact with each other and are thus given an opportunity to discuss common interests.

Effect of Trade Boards.

4. One very important effect of the Scottish Grocery Trade Board that has already been evidenced has been the growth of a spirit of good-will and understanding

between the organised employers and organised workers. Any atmosphere of suspicion that may have hitherto existed has been largely dispelled as a result of actual contact. A certain sympathy between opposing forces has come into being just as sympathy arises between opponents "in the field." This "sporting" spirit and psychological quality, to my mind, shapes for good.

Another effect of great importance is that the Trade Board will disarm the unscrupulous employer of one of his strongest competitive weapons against the humane employer. A general complaint made by Co-operative Societies and private firms with whom we have had wages agreements has been regarding the unfairness of competition of many small businesses who were exempt from wages agreements. The Trade Board by fixing rates applicable to all businesses meets this objection.

Scope.

5. I am strongly of opinion that the scope of the Grocery Trade Board should be extended for definitely fixing and limiting the hours which all shops engaged in the trade shall be open for the transaction of business providing that such hours shall also be the limit of the hours of labour of workers. At present there are many employers who earnestly desire a limited number of working hours, but refrain from putting this desire into effect through competitors insisting in remaining open.

Appointed Persons.

6. I am of opinion that Appointed Persons other than Chairman, should be appointed by the Minister of Labour after consultation with the Trade Board concerned from a panel arranged by representative bodies of employers and workers.

District Committees.

7. I do not favour the setting up of District Committees. Neither of the Scottish Boards already in being has adopted this principle.

Objections.

8. In the case of Boards newly instituted I am of opinion that the present arrangement of two months' notice being given should continue; but in the event of a second proposal being made, or a variation of an existing rate, I consider that one month should be the period of notice.

Personnel of Boards.

9. I consider that Co-operative Societies should be represented on employers' sides, and Co-operative employees on workers' sides, as both are materially

20 December, 1921.]

MR. WILLIAM FRASER.

[Continued.]

affected by Trade Board decisions. I also feel that no limitation should be placed upon what has been termed Professional Representatives. The workers in most trades covered or likely to be covered by Trade Boards are unused to the conference chamber although they show little diffidence in instructing their representatives in side meetings.

Co-ordination.

10. I feel that certain Boards should be co-ordinated with advantage and economy, as, for instance, Retail Dressmaking and Retail Millinery; Drapery Wholesale and Retail Gent's Outfitting and Boots and Shoes; Meat Trade and Fishmongery.

Effect of Dressmaking and Women's Light Clothing Trade Board.

11. The establishment of rates by this Trade Board has tended to reduce home work, to which, in the past, many workers have been by necessity compelled to resort. The effect of this pernicious system is at once serious for the individual and a question of importance from a national standpoint.

Wages in 1917.

12. In 1917, a strike of dressmakers took place in Edinburgh which lasted five weeks. Prior to this, learners in the first year of experience in many cases received no wages, and in cases where wages were paid these did not exceed 2s. 6d. per week. Qualified workers up to 20 years' experience and over received 15s. and 16s. per week, in a few cases throughout the trade specially favoured workers received up to 18s. and 19s. One case only came to our notice where the worker received 21s. per week.

In Aberdeen at the same period there was no single case of a learner being paid wages during first year of experience. Experienced workers received from 12s. to 15s. per week.

At the busy period of the year, April to August, overtime was worked to the limit allowed under the Factory Act without extra payment being made.

Industrial Training.

13. The Trade Board is a National advantage in that it makes for industrial efficiency by placing upon employers the obligation of instituting some measure of training. Prior to the setting up of the Trade Board, no general effort was made in this direction, with the result that members never developed into efficient workers. We now find, however, that more care is bestowed on a beginner's aptitude, and more definite guidance and instruction given.

Political influence on Trade Boards.

14. In connection with decisions arrived at by the Milk Distributive Trade Board (Scotland) after objections had been considered by the Board, and its decisions forwarded by the Ministry of Labour for endorsement, the Workers' Side learned that certain Members of Parliament had made representations to the Minister of Labour against confirmation of the Board's decisions. This practice is, in my opinion, most objectionable, and if permitted must have the effect of rendering the work of Boards abortive.

General.

15. I would urge upon the Committee of Inquiry that Trade Boards should be set up for all sections, or groups of sections of the Distributive Trade. The degree of organisation in the trade as a whole is such as renders this necessary for the protection of large numbers of under-paid workers. My attention has been drawn recently to the following instances of low wages in various parts of Scotland:—

A. *Glasgow*.—A woman of 40 years of age, assistant in a well-known fancy goods bazaar, receives at present 23s. per week. This woman during the war rendered National service as a nurse.

B. *Wick*.—A lad of 19 years of age, with four years' experience of the Grocery trade, received 15s. per week on November last. Acting on our advice, he has now succeeded in obtaining advancement to 24s. per week.

C. It has been reported to me that a certain multiple provision firm, world wide in its ramifications, has within the past few months, in certain Scottish towns, started experienced and qualified grocery and provision assistants at 40s. and 45s. per week.

Trade Boards, in my opinion, are important assets in national life, particularly in the safeguarding of the position of young people and in insuring that every opportunity is given for the growth of physical, mental and moral qualities. The plea that is sometimes made by certain employers that wages should be based on ability, and that the employer is the best judge of the workers' degree of ability, is unfair, unless a foundation is made imperative.

The Trade Board principle makes for industrial peace.

7556. *Chairman*: Mr. William Fraser, you are the Scottish Organiser of the National Amalgamated Union of Shop Assistants, Warehousemen and Clerks, are you not?—I am.

7557. Also Chairman of the Workers' side of the Grocery and Provisions Trade Board (Scotland)?—Yes.

7558. Also Secretary of the Workers' side of the Milk Distributive Trade Board (Scotland), and Chairman of the Workers' side of the Dressmaking and Women's Light Clothing Trade Board (Scotland)?—That is so.

7559. You say that until the passing of the Shops Act of 1912 the hours in this trade—which trade is that?—The grocery trade.

7560. —were excessively long, and even at present it should be noted that this Act does not restrict the hours of labour (except in the case of juniors to 74 hours per week). What are the average hours worked in the grocery trade now?—About 50 to 52. In the Co-operative Societies and the multiple firms the hours are 48. The multiple firms and the Co-operative Societies all over Scotland recognise the 48-hour week; but in some cases it runs to 50 hours.

7561. You go on to say in your statement that the wages were small, and before the war varied from 22s. to 26s. per week?—Yes. The wages now are up to 80s. under agreements which we have with the Co-operative Societies, and in the private trade they are up to 72s. 6d. at the present time under agreement.

7562. Are those wages regulated according to age?—Those are according to age. From 16, for instance, the agreement we have covering Glasgow, Lanarkshire and the Clyde Valley is from 24s. at 16 years of age for males, up to 72s. 6d. I may say that that agreement has expired, but the Grocers' Federation, with whom we have been in touch, have assured us that no official cut will take place. The only effect is that the juniors may not be advanced in accordance with age until such time as we get another agreement fixed up; that is to say, a lad at 16 years of age gets 24s.; when he attains 17 he may not be advanced to 28s. However, we have an assurance from the Employers' Federation that they will not cut existing wages, and therefore the 72s. 6d. will remain.

7563. That will be above the Trade Board rate?—Yes.

7564. *Lord Weir*: Do those rates operate over the area pretty thoroughly? Is there much evasion of those rates?—No. There may be some evasion here and there by the type of employer who cannot organise.

7565. It is very small, is it not, in the industrial area?—Yes.

7566. In the country areas it will be more difficult?—Extremely difficult.

7567. *Dame Adelaide Anderson*: How is that enforced? How is it that you get this observance?—Simply by negotiation with the Employers' Association.

7568. By negotiation between the Union and the Associations?—Yes. It is rather peculiar, but in getting this agreement we never came face to face with the employers. They refused to meet us. It was all done by correspondence, and I think our

20 December, 1921.]

MR. WILLIAM FRASER.

[Continued.]

coming together on the Trade Board has had the effect of lessening the fear that seemed to exist on the other side. I do not know what they imagined we were. I think they imagined we were rather wild men. One thing I recognise on the Trade Board is that the finest feeling has sprung into existence, and that sympathy is, to my mind, extremely valuable.

7569. Do you mean that, as the result of the Trade Board being established, alongside of that Trade Board there has come organisation which has put into force agreements apart altogether from the Trade Board?—No; I am referring to this agreement up to 72s. 6d. for men which came into operation in October of 1920. That agreement was obtained without our having come into personal touch with the employers' side. We had never met them, and they did not know us. But we met the same people on the Trade Board as controlled the Employers' Federation, and it is since then the good feeling has arisen, which is a valuable thing to my mind, and is due to the operation of the Trade Board.

7570. Mr. Bell: And that has brought about a better understanding between you?—Yes.

7571. Chairman: You got a very satisfactory agreement without meeting them?—Yes.

7572. Then in paragraph 4 of your statement you also say that the Trade Board will disarm the unscrupulous employer?—Yes.

7573. Then the next paragraph is as to scope?—With regard to the seven organisations with whom we have had agreements, nothing was done to bring in their competitors. We had one firm in Glasgow with whom we got on extremely well and for whom we have the highest respect. We can approach them at any time on any point of adjustment. They say: "At any time there is any trouble come and see us." This firm has often twitted us with having done nothing in regard to the firms with whom they are in competition. We feel that in the Trade Board we have a machine which will bring up these other firms. On the question of scope, I think it would be good if the Board could definitely fix and limit the hours of labour in shops, provided that such hours were also the limit for the hours of labour generally. We find that the Grocers' Federation of Scotland want to retain the short hours and they want us to work for them in that matter. They are anxious to retain short hours only many of them cannot carry that into effect owing to competition. The village grocer within the past year or two has got on to the bowling green in the summer evenings. He never did that before; he was as badly off as his assistants. He now wants to retain the good hours.

7574. Chairman: Is it not better to have it done by the local authority for all shops, so far as the opening hours go?—Yes.

7575. Of course, the overtime you can fix on the Boards; that is another matter?—There are certain difficulties with regard to the local authorities; for instance, it is difficult to get them to act. Even where we have closing orders it is extremely difficult to get the inspectors to function in the works sometimes.

7576. Lord Weir: Then you agree in relation to scope with Mr. Turner as to the grouping of the Boards, namely, that an improvement would result from grouping?—Yes; I think that the sections of the distributive trades could be grouped together. Personally, I am rather doubtful about one Trade Board for the whole of distribution. It seems to me it would be so large and unwieldy that it might defeat itself. That is my own personal view. But I am strongly in favour of the grouping of certain trades.

7577. Mr. Turner suggested, for example, food, clothing and miscellaneous?—Yes; I thought that scheme of Mr. Turner's was a very excellent one indeed.

7578. Chairman: Then as to the appointed persons, you suggest that the Board should be consulted before they are appointed?—Yes.

7579. Mr. Poulton: With regard to the panel to which you refer, do you mean that either side should have a panel submitted to them; that they should

select the name, and send that name on to the Minister, who would appoint?—Yes, and at the same time that the Minister might submit names back to the Board.

7580. You have not quite grasped what I want to know. You speak about a panel. Do you mean that a panel of names should be submitted to the representatives of either side, and from that panel they should select a name and send it along to the Minister, who should then appoint the one they themselves select?—Yes.

7581. Chairman: The District Committees you are not in favour of. We have heard a good deal about them. Then as to the time for objections, you think that in the case of a newly-instituted Board the present arrangement of two months' notice should be continued; but in the event of a variation of an existing rate, one month should be sufficient?—Yes. I do not think there should be so much delay as there has been in the past regarding variations.

7582. And you think the Co-operative Societies should be represented on the Employers' side and on the Workers' side?—Yes. I feel very strongly on that. On the Workers' side, for instance, we have great difficulty in getting representatives to attend the meetings, particularly those from the private trade. Something turns up—it might be a small shop, and there might be a slight difference between the employer and the man, or it might be made uncomfortable in some way, or they might be extremely busy. We find that in the Co-operative Societies they can get to the Board meetings without difficulty. Then there is the great effect that any rates and conditions fixed by the Board have upon a Co-operative Society. It seems to me that the Co-operative Society, leading as they do in wages and conditions, should have the opportunity to bring up the questions of conditions on the Trade Board.

7583. Mr. Bell: As at present constituted, you only get employers and employees represented, and then certain Appointed Members. Would not this suggestion bring about the anomaly that you would have employers and representatives of Co-operative Societies on one side and representatives of Trade Unions and of Co-operative Societies on the other side?—No; I do not mean that the Co-operative Societies should be represented on the employers' side and the Co-operative workers represented on the workers' side. My reason for putting this forward is that there has been some evidence given before this Committee against Co-operative Society workers being represented at all. I have been in discussion in a friendly way with many employers in the Scottish Federation on this matter, and they have tried to get me to agree to the principle that the Co-operative Societies and Co-operative workers should not be on the Board at all. To that I cannot agree.

7584. I was afraid you were seeking some duplication?—No.

7585. Workers for a Co-operative Society are members of the Trade Union, or, of course, if they are not organised they are non-members like other workers, and I thought you were seeking to secure some other representation than that of employers and workers as such?—No. It is interesting to note that, on the Scottish Grocery Board there are as many non-Union representatives on the workers' side as there are representatives in our Union; that is, seven.

7586. Chairman: I think you have only four full time Trade Union officials on the Scottish Board?—On the Grocery Board there are four, two from the Shop Assistants' Union, one from the National Distributive Workers, and one from the Horse and Motormen.

7587. Have any of those had experience of the trade?—Two. The other representative from our Union and myself have had considerable experience. I have had over 20 years, and the other representative has had about 30 years' experience of the grocery trade in all positions, from messenger boy to branch manager.

7588. So that really you have only two out of 27 who have not had experience of the trade?—Two out of 25.

20 December, 1921.]

MR. WILLIAM FRASER.

[Continued.]

7589. Have you not got 27 on each side?—There may have been 27, but I do not think that all the appointments were made.

7590. There were some vacancies?—Yes.

7591. *Dame Adelaide Anderson*: How do you account for the larger numbers of non-Union members than obtains proportionately in Boards in this country?—The Minister and the Department seemed to be rather insistent upon representatives for non-Unionists. I do not know how it happened, but I feel that we were not very fairly treated, particularly with regard to Aberdeen where we have a strong membership in the grocery trade. The trade there is represented by two non-Unionists, and we have not a single representative.

7592. Might it not be due to more diffused and longer standing education all round in Scotland, giving individuals a better chance?—No, I do not think so. I think it was due to the investigators who came round. Of course, we are not complaining of that.

7593. No. I quite understand that.—We get on quite sweetly with the non-Unionists. They recognise that we do the work for them.

7594. *Mr. Bell*: Do you find any difference between the members of the Union and the non-members advocating the claims of the workers on the Trade Board?—We had one non-Unionist representative who contended very hard that employers should not pay overtime. Fortunately, he was inarticulate on the Board. It was only one.

7595. I did not catch what you said about overtime.—There was a non-unionist representative who was strongly in favour of overtime not being paid for, but, fortunately, he could not say anything on the Board; he could not speak for himself; he could not voice his views at all on the question; but we get on very well with the non-unionists.

(*Lord Weir took the Chair.*)

7596. So that you find the non-unionist representatives on the Board equally as desirous of improving wages through the Trade Board as the representatives of the Union?—Yes, and they are very much annoyed because they think we are not doing enough to get the rates confirmed.

7597. *Mr. MacCallum Scott*: I do not quite understand the suggestion about the Co-operative Societies. At present there is nothing to prevent representatives from being appointed, is there?—No.

7598. In any trade in which they are in a large number, I should have thought that the Department would, in selecting delegates, probably have seen that they were represented, but it is desirable that many other classes should be represented, say, departmental stores and multiple shops, or small rural shops. Would you take co-operative workers and put them into a class by themselves, and say that they would not be represented?—No, I do not mean that. My only purpose in putting forward this section is to counter the attempt which has been made by some of our friends on the employers' side who wish to see the Co-operative Societies eliminated altogether.

7599. You are not making some special proposal?—No, certainly not.

7600. *Lord Weir*: Just to get it quite clear, is it not the case on the Scottish Board that you have three representatives who represent the Co-operative Societies on the employers' side?—Yes.

7601. And five members of the Amalgamated Union of Co-operative Workers?—Yes.

7602. So that they are both represented?—Yes, they are both represented.

7603. *Mr. MacCallum Scott*: I got a wrong impression at first. I thought you were proposing some new regulation.—We are afraid that efforts of our friends the employers may be successful in getting the co-operators eliminated altogether. As has been stated by Mr. MacCallum Scott, we want to see all sections of the trade represented.

7604. You wish to tell us in particular about the working of the Dressmaking and Women's Light Clothing Board?—Yes. I should like just to touch, if you will allow me, on the question of professional

representatives. I see that the employers have been giving evidence against us. We have touched upon that, I think, though?

7605. Yes, we have dealt with that.—We have. I beg your pardon.

7606. We have also dealt with the grouping of the Boards.—With regard to the Dressmaking Boards, it used to be the case that there was great complaint by the employers against the amount of homework done—that is to say, girls doing work on their own (that is a term of the trade) at home, and so competing in a small way with their employers. I want to point out that the Trade Board has had the effect of minimising that to a great degree.

7607. You might develop that, because we have had certain evidence showing the other side.—But a greater factor than that is the fact that we have agreements at the present time for dressmakers and milliners in all the big towns in Scotland at higher than the Trade Board rates. The Trade Board rate only goes up for qualified workers to 9d. per hour, and we have agreements up to 1s. 0d., and others again up to 11d. in certain towns. In Edinburgh at the present time the private trade are paying up to 11d. per hour, 1½d. per hour more than the Trade Board rate. The St. Cuthberts Coutbridge Association, which is the biggest in Scotland, is by agreement with us paying more than that, namely, 1s. 0½d. per hour, or 47s. 8d. per week; and further, the hours for the dressmaking trade, by agreement, are less than those laid down by the Trade Board, namely, only 44 hours per week, while the Trade Board hours are 46. This answers the employers' argument that Trade Boards would tend to create unemployment.

7608. *Lord Weir*: I wanted to develop that a little further. With regard to homework, is it not the fact that in the past, homework has very largely—or I will not say very largely, but to some extent—been done by girls who were working in a shop, say, for 48 or 54 hours, or whatever the number may be, and, in addition, were doing private work at home, and, of course, getting paid for it and adding to their income by that means? Is not that the fact?—That is exactly what I was trying to get at.

7609. Is it your opinion that that was largely brought about because the income earned by those girls from their ordinary work was not sufficient?—Yes.

7610. So that the increased rates brought about either by proper organization or through Trade Boards has a tendency to reduce the homework which these girls hitherto did?—Yes. I may say that the more responsible of our members among the dressmakers themselves recognise that fact, and are strenuously against homework, but the girls were driven to it by economic necessity. We have had several disputes in Edinburgh and Aberdeen—the first one was in Edinburgh and various parts of the country—with dressmakers, and prior to 1917, my first year of experience, in many cases they received no wages at all in Edinburgh; in other cases they received wages, but the highest was 2s. 6d. In Aberdeen, prior to 1917, we found no single case of any first-year learner receiving wages at all. The highest rate for qualified workers in Edinburgh of 20 years experience and over was from 15s. to 16s. per week. In a few cases specially favoured workers received up to 18s. and 19s. per week, but in only one case we found in Edinburgh where a worker received 21s. per week. This wage compelled these girls to attempt to earn something by doing work at home, but the girls do not want to do it.

7611. *Dame Adelaide Anderson*: That is not the employers sending work home for them to do at home, but their getting the work on their private account from private people?—Yes, from friends and acquaintances.

7612. Something which will bring them in a little ready money?—Yes.

7613. *Lord Weir*: What have you to tell us with regard to the influence of the learners' rate causing the learners to be discharged in the country towns and small businesses? I think you know the point?—I do not think we can have any evidence in support of that. Personally I have found none at all. This trade has

20 December, 1921.]

MR. WILLIAM FRASER.

[Continued.]

always been seasonal. The busy season is from April, I think, until August, and unemployment is periodical. Before the Trade Board on April 10, 1919, we had an agreement with the employers for learners at 2d. per hour, that is $\frac{1}{4}$ d. more than the present rates for learners.

7614. So that you do not consider that the present rates have had any influence on causing those discharges?—No, certainly not. The dressmaking trade has shared in the industrial slump which has taken place, but it is always a trade subject to slack periods, and always has been. Indeed, our Union considered the matter very carefully before we took over dressmaking at all owing to that fact. I am reminded that for several years we did not put them on the provident tables at all owing to the periods of unemployment.

7615. *Mr. Poulton*: But you are satisfied that, having regard to the general state of the trade of the country the fixing up of these rates has not had the adverse effect which has been stated here about the learners?—No, certainly not.

7616. And it is due to the crisis through which the country itself is passing?—Yes. With regard to overtime, I will just remark that prior to our agreements, which were prior to the Trade Board, overtime was worked in the busy season from April to August without any overtime being paid at all. I would like to touch, too, upon that question of training. We find that, since it has been obligatory on the employers to pay the rates set down, there is more attention being paid to beginners. Sometimes in the past it was a blind-alley occupation: A girl might be kept running about simply carrying messages and running errands, but now that they have to pay certain progressive rates more attention is being given to better instruction.

7617. You think, therefore, that even from that point of view it is an advantage?—From that point of view I think it is a distinct advantage.

7618. What would you do over this next matter which you mention, namely, political influence on Trade Boards. You do not make any suggestion; you simply register your objection. Do you think that something ought to be done to place the position in a different atmosphere?—I am not quite certain whether it comes under the jurisdiction of this Committee or not. Indeed, I may say that my evidence was prepared very hurriedly, but still I thought I would put it down. This case came before us here in connection with the Milk Trade Board. In July last the Scottish Milk Trade Board unanimously passed certain rates. When I say "unanimously" I mean that the employers' side were passive. Long before that we had fixed some higher rates, and then we had a hundred objections. We gave way, and the employers allowed them to go through passively; they did not vote against them, but to all intents and purposes it was a unanimous vote. We also unanimously agreed that the Minister be asked to put the rates into operation from August 1, a month later. We heard nothing of the matter until October 5 or 6, and then the Minister told us as a Board that representations had been made to him that these rates, if passed, would tend to increase the price of milk to the consumer and lessen the number of people employed in the industry. We considered this again, and we decided that the Minister should send a representative

to discuss this question. We thought we had been rather badly treated, and I may say that the Appointed Members were with us upon that point. The fact came out that about half a dozen members of His Majesty's Government had made representations to the Minister not to pass these rates. Personally I feel that that is very wrong, and that any objections put in should come before the Board to be handled as objections; and if this Committee can do anything in that matter it would be very good indeed.

7619. I take it from paragraph 15 of your statement that you feel that your experience gives you sufficient knowledge that the Trade Boards on the whole are advantageous and should be continued?—Yes, they should be continued.

7620. What improvements would you suggest in them from your standpoint?—I think they ought to be given more power to get the decisions carried into effect, and that the delay should be done away with, if possible.

7621. *Mrs. Lyttelton*: What do you mean exactly by power for putting things into effect? In what way would you suggest that they should have more power?—For instance, in the case of the Milk Board, where those rates were agreed to, I think those rates should have been carried right into effect.

7622. Without submission to the Minister?—No, but I think that the Minister should have passed these rates into effect and then if the rates were too high or objectionable the Board should consider the question.

7623. *Lord Weir*: You suggest a general speeding up?—Yes.

7624. *Mrs. Lyttelton*: That is what it comes to rather than power; it is speeding up?—Yes, speeding up.

7625. *Mr. Bell*: Do you know of any advantage in either the Minister of Labour or anyone else having the right to veto an agreed rate? By "an agreed rate" I do not mean a case where the employers may have been passive, but where there has been an absolutely unanimous agreement on the Trade Board. Do you see any advantage in either the Minister of Labour or anyone else having the right to veto the rate when it has been unanimously agreed?—No, I think it is a great disadvantage. After all, the Board is a Committee of experts, or should be.

7626. *Lord Weir*: Do you think that the consumer is well-enough represented by the Appointed Members?—Yes.

7627. *Mr. Bell*: And that at any rates on the Trade Board the consumer has some representation, whereas in a Joint Board in a well-organised trade the consumer is unrepresented?—Yes.

7628. *Dame Adelaide Anderson*: Do you think the Appointed Members necessary to represent the consumer, or to guard the interests of the consumer, or do you think that the trade itself, the employers, and the workers, could settle unanimously without review by the Minister?—I think that the trade itself could settle. Of course, I think the matter should be referred to the Minister. I was very glad to hear Mr. Turner express himself this morning in favour of the Appointed Members. I am of the same view. I think it is very important that we should have the element of impartiality observed on the Board.

Lord Weir: We are much obliged to you for your evidence.

(The Witness withdrew.)

22 December, 1921.]

Mr. WRIGHT ROBINSON.

[Continued.]

SEVENTEENTH DAY.

Thursday, December 22nd, 1921.

PRESENT:

THE RIGHT HON. THE VISCOUNT CAVE,
G.C.M.G. (*Chairman*).
DAME ADELAIDE M. ANDERSON, D.B.E.
THE HON. MRS. ALFRED LYTTELTON, D.B.E.
MR. W. T. LAYTON, C.H., C.B.E.

MR. E. L. POULTON, O.B.E., J.P.
MR. J. BELL, M.P.
SIR ARTHUR F. PEASE, BART.
MR. A. MACCALLUM SCOTT, M.P.
MR. H. D. HANCOCK (*Secretary*).

Mr. WRIGHT ROBINSON, called and examined.

The Witness handed in the following statement as his evidence-in-chief:—

STATEMENT OF EVIDENCE of Mr. WRIGHT ROBINSON,
National Union of Distributive and Allied
Workers.

*The Need for the Grocery and Provisions Trade
Board.*

The special section with which I am concerned is that of Grocery and Provision Warehousemen. What I have to say about the need for this Trade Board equally applies to other sections of the distributive trade which comes within my province.

At the outset, when a Trade Board was first mooted for the Grocery and Provision Trade, our members were somewhat lukewarm, feeling that, through their Trade Union organisation, they could look well after themselves. As they learned, however, of the tremendous variations in wages in the Grocery and Provision trade, a great change came over their attitude towards Trade Boards, and they are now strongly in favour of their extension.

In dealing with individual firms or small groups of firms in private trade the employers themselves were insistent that it was most unfair to single them out for increases and leave untouched other firms where we had usually few or no members. From the point of view of employers and employed, a minimum level was desirable, and since neither the Unions nor the employers are strong enough to regulate the wages of the whole trade, a Trade Board is the only practical body which can reach out to every corner and fix at least a subsistence level for the whole trade.

Hence, organised Trade Unionists in receipt of 70s. or 80s. a week felt that, in justice to their own employers, other firms more or less in competition with those employers, ought not to be allowed to pay wages in some cases not more than half of the amount paid by the best firms.

Wages.—Apart from the large warehouse of the C.W.S., at Balloon Street, with which I do not propose to deal, there are about 43 Grocery and Provision warehouses in Manchester each employing from two to a hundred workpeople. About 25 of these warehouses employ less than 10 workpeople; the largest warehouses are those of multiple firms, employing nearly one-half of the Grocery and Provision warehouse workers in Manchester.

The wages paid by one of the largest and most reputable multiple firms in December, 1917, when the workpeople became members of a Trade Union were as follows:—

Adult Males.

7 were paid 35s. per week.
1 was paid 38s. 6d. "
1 " 39s. "
3 were paid 40s. "
1 was paid 41s. "

Females.

1 was paid 14s. per week (aged 17 years).
3 were paid 15s. " (aged 17, 18 and 21 respectively).

3 " 16s. "

1 was paid 17s. "

4 were paid 18s. "

1 was paid 19s. "

3 were paid 20s. "

4 " 22s. "

3 " 23s. "

2 " 24s. "

1 was paid 26s. "

2 were paid 27s. "

1 was paid 30s. "

The hours worked were 50 per week. Overtime was paid at the rate of 6d. an hour for women, and 9d. for men, which was the best rate of which we have any record in 1917 in Grocery in Manchester.

This firm was not a particularly bad firm and prided itself on its generosity. It is a fair sample of the wages paid by the best type of multiple Grocery and Provision firm, and shows a mean rate of about 20s. for adult women, and about 37s. for men, when prices were at 105 above pre-war.

We had an arbitration case in October, 1918, in connection with another multiple firm employing 50 men, which paid wages ranging from 36s. to 45s. when prices were at 129 above pre-war.

At a later period, in 1919, when some stir had been made amongst the employers by the union's attempt at organisation, the best rate amongst wholesale grocery and provision dealers, as distinguished from multiple firms, was as follows. This particular firm had a warehouse also in Liverpool, and felt the effect of the higher Liverpool wages, combined with the influence of the union in Manchester.

Males.		Females.	
Age.	Wage.	Age.	Wage.
28	45s.	15	15s.
24½	45s.	16	14s.
25	40s.	17	15s.
40	50s.	17	18s.
42	45s.	18	22s.
55	50s.		

As a further illustration of both low wages and variability of wages, I give a further list from another multiple firm, in August, 1919.

Males.		Females.	
Age.	Wage.	Age.	Wage.
18	24s.	15	15s.
16	15s.	16	14s.
18	27s.	17	15s.
27½	35s.	17	18s.
25	35s.	18	22s.
21	37s.		
24	40s.		
43	46s.		
28	49s.		
54	49s.		
28	50s.		
?	57s.		

22 December, 1921.]

Mr. WRIGHT ROBINSON.

[Continued.]

In Liverpool a strike had been averted by the employers conceding the dockers' rate.

There were thus four large centres in my province, viz., Manchester, Leeds, Newcastle, and Liverpool, in which disputes arose. I believe mine was a typical experience.

Employers' Attitude towards Formation of Board.

In order to make quite clear the attitude of the employers to the Trade Board then in prospect, I append a letter from the Manchester Wholesale Provision Association Ltd.

Manchester Wholesale Provision
Association, Ltd.,
156-160, Corn Exchange Buildings,
Hanging Ditch,
Manchester.
Oct. 20th, 1919.

"At a meeting of the Directors of the Manchester Wholesale Provision Association, Ltd., held on Friday, the 17th inst., it was resolved:—

"That this meeting of the Directors of the Manchester Wholesale Provision Association, Ltd., having received from the Secretary a report as to the last interview he had with Messrs. Kirby and Edmondson (Secretaries respectively of the National Amalgamated Warehouse and General Workers' Union and the National Amalgamated Union of Shop Assistants, Warehousemen and Clerks), have come to the conclusion that the Ministry of Labour be again communicated with, asking them to establish the Trade Board with as little delay as possible, and that the two Labour Organisations mentioned above, also be requested to do the same.

"Bearing in mind the fact that in the near future the Trade Board is bound to be established, the Directors think that the interests of all concerned will be better and more judiciously safeguarded if in the meantime no arrangement with regard to the payment of wages is come to by either Organisations, as they consider, from the information before them, that the Ministry of Labour is of opinion that legislation between employer and employee at the present moment is not, unless it cannot otherwise be avoided, a desirable method of procedure, as it may in the future tend to handicap them in their further negotiations between these two parties."

This was also the attitude of the North of England Wholesale Grocers' Association, and it was this latter body which induced us to withdraw notices, and they made a very strong plea that it was so unfair to single them out, when so many of their competitors were not under our care. I held at the time that it was a strong argument, and I hold that view more strongly to-day. I feel it more strongly when dealing with a fair employer than with the other sort.

It must be apparent that wages are chaotic in the Grocery and Provision trade. Neither side is sufficiently organised to regulate wages in the whole trade. Small scattered areas are too expensive to organise at present. The Trade Board could lay a foundation for wages in every corner of the land.

Trade Board not representative.

It has been objected that the organised minority ought not to function for the vast unorganised body of employers and employees. A minority of the Employers' Associations, of Trade Unions, of Political Parties, of M.P.s, of Cabinets, and of every other democratic body does in fact function for the majority. Representation of the unorganised is impossible. The members of the Workers' side who are supposed to represent the unorganised on the Grocery Board do not attend the meetings. They can have neither guidance nor mandate. Industrially they are anarchists.

Nor would the situation be eased by setting up fifty District Boards as suggested by Mr. Cahill. If it is

now difficult to man one Grocery Trade Board, the difficulty would be magnified by calling for a personnel for fifty miniature Trade Boards.

In whole districts where the workers are unorganised, a worker fronting his employer on one of these District Boards would not feel a free agent. The friendliness of an employee towards an employer whom he knows to be paying him an unjustifiably low wage is apt to have more of fear than of love in it. With whatever defects it may possess, the present Trade Board is, in my judgment, the most representative body that could be assembled for its purpose.

The more I have considered the case made on behalf of the Grocery and Provision Trade Employers, both on the Trade Board and tendered to your Committee, the less I am impressed by their objection to the machinery of the Trade Board, and the more I am impressed by their objection to any regulation at all outside the employers' discretion. In my view, the employers find wage conditions so chaotic in the trade, and the welter of conditions so baffling, having regard to the conflicting interests of wholesale provision and grocery warehouses, the multiple shop, and the small trader that they are trying to offer up the Trade Board as a scapegoat.

It is admitted by Mr. Cahill that the trade is not sufficiently well organised within itself to bring order into this chaos. His claim is that it should be left alone.

My view is that it cannot be left alone, either in the interest of the worker, the community or the employers. The Government during the war did not leave the fixing of prices to the trade, but had to resort to Food Control in the interest of the community. In the absence or stultification of the Trade Board, over a very large tract of the country, the employers would have in their hands the fixing of both wages and prices. From my reading of the Report of the Committee on Trusts, this would mean an enormously greater burden on the community than would be the case if the community is merely asked to pay proper wages to distributive trade workers.

Employers' Organisation.

Since the Grocery Trade Board was formed, organisation on the side of the Employers has greatly advanced. In Trade Union negotiation in Manchester, I had to deal with three separate Associations, and then with certain individual firms. A large amount of amalgamation or federation has since taken place, amongst the employers. I think the Trade Board has given the Employers a great fillip.

Employers' Dictatorship.

The Employers are consistent in their attitude of "no interference." Their attitude to the Trade Unions is consonant with their attitude to Trade Boards. Since Trade depression set in reductions in wages without consultation are common, while in certain other firms where Trade Union organisation is good either a less reduction or no reduction has taken place. The stultification of the Trade Board would certainly not make for peace but for war wherever it could be waged.

The Small Trader.

Multiple firms have not shown much compunction about the small trader or shopkeeper in the past. While, on the one hand, the employers ask that we shall not make it difficult for the small trader with our wage fixing, the large firms usually try to make it impossible for the small trader by price cutting. They ask us not to hurt the poor man until they are ready to slay him.

Difficulties of the Trade.

In my view there are no difficulties inherent in the trade itself which would warrant preferential treatment as against other trades. The maintenance of either employers or businesses which cannot pay

22 December, 1921.]

Mr. WRIGHT ROBINSON.

[Continued.]

a living wage is not in the national interest. What difficulties do exist, apart from trade depression, are likely to become worse by being left alone.

Take the factor of ruinous competition. In the case of one village of 450 population there are six Grocery stores, and only one employing labour.

In a second case, with a population of 2,500 there are 20 grocers, excluding a Tea Company and a Co-op.

In a third case, within an eighth of a mile from a given shop there are 12 other shops, not one of which has any employee.

In a fourth case, of a village of 1,000, there are six shops.

These are not the kind of traders who employ much labour, and where they do they ought to pay a living wage. If they have the turnover to employ labour it ought to pay wages. And the hundreds of thousands of workers in the larger shops ought not to be prejudiced by those smaller shops.

Trade Board Regulation.

My experience thus leads me to conclude that of all trades the Grocery and Provision trade is the one most in need of Trade Board regulation.

Because—

Of the low rate of wages being paid in the trade.

Of the variation in the rates of wages for the same work in the same area.

Of the large areas where labour is exploited in the interest of unprofitable and unnecessary businesses.

Of the importance of preventing employers from fixing both wages and prices without public safeguard.

Grocery Trade Board.

In my judgment the Grocery Trade Board has failed to fix rates because the employers have been determined to resist any regulation, and have nudily impressed the Minister of Labour. I wholly dissent from the attack on the Appointed Members. I have thought at times that they ought to be more impressed by our side, and that they ought to vote with us when they voted otherwise, but I am sure they have fulfilled a most difficult task and earned at least the respect of the oft-disappointed workers.

With the recommendation of the Trade Boards Administration Committee I am in general agreement. What I feel most keenly is, that when rates are submitted to the Minister of Labour, and he refuses to sanction them, and they are again re-affirmed, he ought not to have the power to prevent them becoming operative.

7629. *Chairman*: I think you are a member of the Grocery Trade Board of England and Wales?—Yes.

7630. You come here as representing the National Union of Distributive and Allied Workers?—Yes.

7631. What is the membership of your Union?—130,000.

7632. Does it include men and women?—Yes.

7633. Down to what age?—We have associate members at 14 years of age, but the ordinary age is from 16.

7634. What proportion of the whole trade do you include?—In the Grocery and Provision trade?

7635. We will take that?—I should think we have probably about 30,000 to 40,000.

7636. Out of a total of what?—130,000.

7637. I mean out of the total number of workers in the Grocery and Provision Distributive trade? What proportion of the workers who might join your Union have joined it?—I should not think all the Unions combined have more than about one-third: I should think that is a fairly generous estimate of the number organised.

7638. What proportion of that one-third do you think your Union includes?—I should think we have probably two-fifths or three-fifths of the total number organised.

7639. You are specially concerned in your Union with the Grocery and Provision Warehousemen?—Yes.

7640. Your members, you tell us, were at first rather lukewarm about the formation of a Trade Board?—Yes, we had some very good agreements

apart from the Trade Board, and they were afraid that a Trade Board might possibly prejudice those rates.

7641. But at present they are strongly in favour?—They are very strongly in favour.

7642. *Mr. Poulton*: Was that due to the operation of the Trade Board or due to the safeguarding of the existing agreements which might be voluntary?—It was chiefly because they believed it would safeguard those agreements. From information which we have been able to supply they realise that very low rates are a menace to their own rates.

7643. Therefore it would help to raise the general standard?—They think so.

7644. *Mr. Bell*: With this organisation amongst these workpeople, what guarantee had you that these agreements which you had were being loyally adhered to?—We have only the ordinary guarantee of our own Trade Union vigilance, the reports from our branches, and so on; and so far as the co-operative movement was concerned they were very widely observed. During the war, too, there was a much greater tendency on the part of the employers to observe agreements and to desire general agreements than there had been previously.

7645. If two-thirds of the workpeople are unorganised, is it your experience that in those circumstances agreements are generally carried out by all the employers?—No, it is not. When I say they are generally observed, I mean agreements which had been entered into on the part of organised workers. The only guarantee we had, and the only guarantee we have now so far as observance is concerned, is our organisation.

7646. So that employers who were reasonable would carry out the agreement; but what happened with what we sometimes term a bad employer?—A bad employer would do as he very often does now: he would not carry it out, and where we were in a position to bring Trade Union pressure to bear for the observance of the agreement we should do so.

7647. Otherwise you would be helpless in the matter?—We should be quite helpless.

7648. So that Trade Boards do compel or exert a measure of compulsion on the unreasonable employer, and therefore a Trade Board rate once fixed is more likely to become general than a voluntary agreement entered into by the employers where the workpeople are not well organised?—That is so; and it means, of course, that perforce with a Trade Union which is only organising a part of any trade you can only act where you are well organised, and it means that very often you are forced to penalise those members who are organised. Part of our reason for desiring to have a Trade Board is to make the area of compulsion much wider, and to see that the employers shall not pay below a certain limit of wage. I think a Trade Board would be very valuable from that point of view.

7649. *Sir Arthur Pease*: I presume that where you get a trade organised, or a section of it organised, the general tendency is for the employers outside to follow the same rate?—That is so where there is keen competition for labour, but at the present time, with the very big margin of unemployed which exists, there is not the same reflected influence from organised workers. I mean to say unscrupulous employers, as a matter of fact, are in very many cases asking men who come and offer themselves for work what they are prepared to take, and I have included in my précis offers which have recently been made when men have come along. Employers have offered to start them at 35s. a week where the rate was 56s., and a bargain has actually been struck for 45s.

7650. *Mr. Poulton*: For a fully competent man?—Yes, in every respect physically able and experienced.

7651. *Chairman*: You have given us some figures relating to grocery houses in Manchester, of which you have, I suppose, special knowledge?—Yes.

7652. They are dated December, 1917?—Yes.

7653. And they relate to reputable multiple firms?—Yes. If I had wanted merely to quote low wages, I have with me, and could have given you very much

22 December, 1921.]

Mr. WRIGHT ROBINSON.

[Continued.]

lower figures than those, but I took what I thought would be a fairly typical multiple firm.

7654. Those were the wages paid before the agreement with your Union?—Yes.

7655. They seem to range for adult males from 35s. to 41s. and for females from 14s. for a girl of 17 up to 30s.?—Yes; and all the ages where the ages are not given were adult ages for women.

7656. The hours worked, I see, were 50 a week, and overtime was paid at the rate of 6d. an hour for women and 9d. an hour for men?—Yes.

7657. You quote other cases, and I have read what you say about those. Then at a later period, in 1919, you give the wages as from 45s. to 50s.?—Yes. That is not the same firm.

7658. In the third instance you give figures showing both low wages and the variability of wages in August, 1919?—Yes.

7659. Then in the fourth case which you give you say that in a large grocery warehouse, in 1920, the workers were prepared to accept 36s. a week. You add that conditions were much worse in the wholesale provision houses; were the cases which you had been quoting not wholesale houses?—They are specified there. The first case is that of a multiple firm, the second is the same; they are all multiple firms up to the case which is stated as being a wholesale provision house. Most of them are multiple firms.

7660. You say that conditions were much worse in the wholesale provision houses employing from two to 40 workpeople, usually employing less than 10?—Yes. Some of those are very small houses.

7661. You give a selection of three firms in Leicester in October, 1921, before the workpeople were organised.—I am reminded that the date given of October, 1921, with regard to these cases in Leicester should be October, 1920. Those are the figures supplied to me, but I am now corrected, and that should read October, 1920, instead of 1921.

7662. Those wages range for males from 28s., which is the lowest, to 45s.?—Yes.

7663. And for females they range from 24s. to 30s.?—Yes.

7664. You go on to say that with reference to the Trade Board objections sent in by employers, hundreds of cases are quoted by the employers themselves of the scandalously low rates they are paying, and you quote four of them. The first is the case of a man of 60 working as a porter and warehouseman, who is receiving 30s. a week. You know nothing about that man, I suppose?—No; I only know what was stated in the letter of objection pointing out that if they were not allowed to pay such rates as those they could not carry on business. I could, of course, have multiplied these instances very greatly, but I thought these were typical.

7665. Mr. Poulton: Was there any other type of objection to the enforcement of a Trade Board rate than the instances and cases which you have given here?—The objections could really be divided into two lots, the first lot being very nearly all of them on those lines, confining themselves chiefly to objection by employers on the ground that rates were too high, and in the second lot of objections there were quite a number of new objections introduced, chiefly to working hours. I am referring to the second lot of objections which came in from employers. They did not bother so much at that stage, though they did object to high wages, as they called them, but they did say that the trade could not be carried on unless they had a 50-hour week, though very many of them were working 48 hours.

7666. Chairman: By two lots, do you mean on two different occasions?—Yes, I mean two different occasions.

7667. Sir Arthur Pease: Turning back to page 2 of your précis, could you give us the figures of what the wages are now of those firms?—Until June of this year they were paying 65s. a week to males, and from 38s. to 43s. to females. We met the firm again, and they refused to renew any kind of agreement

whatever, but said, of course, that they should pay by merit. I do not know at the moment, and we have no accurate records of what they actually are paying at this particular firm.

7668. Mrs. Lytton: Did you say that in 1920 or 1921 they were paying 65s.?—In 1921. Until June, 1921, we had an agreement for 65s. with the Association, but now the Associations, while they meet us, meet us merely to say that each firm is going to deal with its employees on their individual merits. Where we are 80 to 100 per cent. organised, that means that no change in wages has taken place, but where we are not very well organised we do know that changes have taken place, but they are not such as we could put down with any confidence.

7669. Mr. Poulton: Do you mean that Associations as Associations which have been negotiating with you for collective agreement are now discontinuing that practice?—That is right. Since unemployment became acute they meet us, and they say that the individual firms must do as they think fit.

7670. Chairman: Have your agreements come to an end?—Yes, and they refuse to renew any agreement except on those terms, that they will pay the Trade Board rates. They will make no agreement above Trade Board rates, whatever they may be.

7671. The Trade Board rate of a porter would be about 55s. a week, would it not?—That would raise the whole contention as regards the definition of a porter.

7672. I do not want to do that.—I only mention it for this reason, that with all the agreements we have with other employers we have always negotiated for warehousemen, and the word "porter" has never been introduced. Our men, of course, claim to be skilled men, and to be doing a large amount of work which was formerly done by shop assistants, as is, of course, the fact.

7673. Sir Arthur Pease: Was 65s. the minimum rate?—Yes.

7674. Or a standard rate?—It was a minimum rate, because some of our members were paid more, and none were paid less.

7675. Chairman: It comes to this then, that individual firms have increased their wages, very likely under persuasion from your union, to 65s. a week?—Yes.

7676. That agreement had run out, or was about to run out, in June of this year, and they were not willing to renew it?—That is right.

7677. But they said they were willing to pay the rates which had been proposed by the Grocery Trade Board?—Yes, and that anything above that must be left to the discretion of the firm as regards the individual merit of given employees.

7678. I do not want to prejudice your general argument, but in that particular case the Trade Board would have done you neither good nor harm; it would have fixed the minimum rate at the age which they were willing to pay?—Yes, in that particular case.

7679. Anything above must be subject to bargaining, either individual or collective?—Except that we have reports that that firm are actually offering less than the Trade Board proposals at the moment to newcomers, so we feel that even in that particular case the Trade Board would have operated and prevented them getting below the Trade Board rates.

7680. Sir Arthur Pease: Was the arrangement with this firm which is mentioned here that they should raise the minimum rate to 65s. for specially skilled men, and so on?—No, there was no agreement with this particular firm. The difficulty is this: When we began to negotiate at first we had to negotiate with separate firms, and the agreements were not always alike. We had agreements with some firms for 75s. for provision hands, but with this particular firm we had not.

7681. Chairman: I think we had got in your précis, to where you deal with some of the objections. You have referred to the man of 60 working for

22 December, 1921.]

Mr. WRIGHT ROBINSON.

[Continued.]

30s. a week, and you cannot tell me whether he was a man who was able to do the normal amount of work or whether he was what is sometimes called a subnormal worker?—No, I could not tell you, except from the letter itself. In the case of the next objection, which is a similar one, that is obviously a case of what would be called a subnormal worker; but I ought to say that there is quite a large number of men at 60 whose experience very much more than counterbalances any decline in physical strength that may have taken place. We have quite a number of men at 60 who are paid more than the minimum rate.

7682. I follow that, but you cannot tell me about this particular man?—No, I cannot.

7683. Then, again, the second case is clearly a case of a subnormal worker, you say?—I mean the second case of Objection No. 1.

7684. Then Objection No. 2: The man said, "I keep one assistant at 36s. per week." That would be under the Trade Board rate, whichever scale applies. Would it not?—That is so.

7685. Then in Objection No. 3 you give a case of variability. The man says: "I am paying a man £3 18s." That would be, of course, very much above any of the Trade Board rates?—That is so.

7686. "My girls—£1 15s."—that would be above the Trade Board rate?—Yes.

7687. "and a boy of 16 years of age 18s." That would be below the Trade Board rate, and that is the only one of the three which is below the rate proposed?—Yes.

7688. In the fourth objection the man says: "I regret I am unable to pay the proposed wages. I employ two female assistants, both over 24 years of age, and am paying them 25s. per week each." That you would say, no doubt, is a low wage.—It is a very low wage.

7689. "This is only a small village, population about 500, with two other shops to compete with."—Yes.

7690. *Dame Adelaide Anderson*: That would not be a case where there was anything else in addition to the 25s., I suppose?—No. Of course, there are cases where commission is paid, but that is usually stated when there is anything over the actual weekly wage paid.

7691. Do you ever find in little country places that anything is allowed in kind in addition to the wages? I suppose that would be illegal?—They vary so much that I do not think one can lay down a general rule with regard to that.

7692. *Mrs. Lyttelton*: What does "tea money for overtime" mean?—It means that instead of their pay being reckoned at so much an hour, time and a quarter or time and a half, if a man works from 6 o'clock until 8, 9 or 10 o'clock at night they simply allow him 1s. 6d., 1s. 3d. or even 1s. to go out to get his tea with. Some firms during the war allowed bread and margarine and marmalade on the premises instead of tea money.

7693. *Sir Arthur Pease*: You do not know what the ordinary wage for an agricultural girl would be where this 25s. is paid, do you?—I do not.

7694. How do you compare them?—I am not well acquainted with the agricultural rates, and I cannot tell you, but the point I should make is that a man who is paying a girl of 24 years of age 24s. or 25s. a week is paying a great deal less than a man paying 35s. for the same work. I should compare it rather with what other employers in the trade were paying, the best employers, rather than with another trade. Agriculture has certainly been badly paid.

7695. *Mrs. Lyttelton*: Objection No. 3 may come from a big town, and Objection No. 4 from a tiny village?—No, it is not from a big town; it would be in Area A.

7696. *Chairman*: Objection No. 4, I think, is the only case where a normal worker is shown to be receiving considerably less than the Trade Board rate. You can also add the boy in Objection No. 3. No doubt you have satisfied yourself that there are many

cases where wages which are much too low are being paid?—Quite so.

7697. Then with regard to variability, you quote a case in 1920 where a firm already cited was paying from 30s. to 36s. for men when you had an agreement for 60s. for men and 35s. for women, with overtime rates of time and a half?—Yes.

7698. The first firm, I suppose, had no agreement with you?—No. As a matter of fact, this was at the period when it was not organised. We did not organise all the firms at the same time.

7699. You also say that there were firms doing business within a few minutes of each other, one paying the lower rate and the other paying the higher rate?—Yes, similar firms in the same street.

7700. That was so, was it not, in the case of all unorganised trades until the unions came in?—Yes.

7701. You say that the firm which paid 30s. to 36s. in 1920, by 1921 had been compelled to raise wages to 72s. 6d. for men, the necessary stimulus from without having been supplied and their workpeople having joined a Trade Union?—That is so.

7702. Then you question Mr. Cahill's suggestion that organised workers are not better paid than unorganised workers. You say that, almost without exception, increases followed organisation automatically before the trade slump set in?—Yes.

7703. In many cases, you say, an attempt to organise workers was countered by the employers rushing in to stem the tide of disaffection by "voluntarily" and unexpectedly deciding to give an increase of wages?—That is so.

7704. There is also a variability, according to you, between town and town?—Yes.

7705. Then you refer to the question of what is the adult age, and you say: "In engineering, building, and other crafts where an apprenticeship is served, a man is a man at 21. He was a man at 19 during the war. In the grocery and provision trade he is still only a probationer at 21. Full money is not reached, outside the co-operative movement, until the employee is 25, and in some cases 26, and even 28 years of age." Why is that so, in your view?—I do not quite know, but I have always regarded that as a very evil tradition in the trade. On the one hand employers contend that there is not such skill in grocery as there is in some of the other so-called skilled trades, and, on the other hand, they say that a man cannot possibly be efficient at under 25 years of age. I should think the real reason is that the grocery workers have been badly organised, and they come late into the field of organisation. I cannot give you any other reason for it.

7706. Is it not possible that a shop assistant of 21 is less competent to deal with customers of all kinds than a man of 25?—I should say there is something in that.

7707. That is only what occurs to me at the moment. —Quite so. I think it must be fairly obvious that a man is far more likely to be tactful with customers at 25 years of age, and not so green in dealing with people as he would be at 21.

7708. *Mr. Bell*: May I ask whether you have come across any tendency to regard a man of 21 as a single man, and a man of 25 as a married man?—There is a tendency, in fact I have had suggestions made that married men should be paid one wage and single men another wage, but I need hardly say that we do not negotiate on those lines. But there is that tendency to regard a man at 21 as probably more irresponsible, and we are often told how many times he goes to the pictures, and that if they give him more money he will waste it, and so on. At the same time, I think the same age ought to obtain in the grocery trade as in any other trade, and a man should receive the minimum adult wage at 21 years of age. Our Union has always stood for that, and our agreements in most cases are based on that age.

7709. *Chairman*: I can see the argument the other way.—The employers can, but I am afraid they cannot convince me on that point.

Chairman: If they cannot, I shall not try.

22 December, 1921.]

Mr. WRIGHT ROBINSON.

[Continued.]

7710. *Sir Arthur Pease*: Is it not a fact that in some trades a man has got to his best at the age of 21, while in other occupations he does not reach his best until he is 25 or 30 years of age?—Frankly, I should not think, personally, that a worker has got to his best at 21. I cannot conceive it. The case I mention here, I think, is perfectly sound, that while in theory in the craft unions a brick setter or a joiner or anybody else is held to be worth his money, the theory is that the more skilled man is worth more, and the employer might pay it him and ought to pay it him, but, at any rate, at 21 he is worth the minimum wage for the craft. It is quite obvious that at 21 they have not nearly the same amount of experience as they have at 30 or 35, and have not seen as many jobs or as many improved methods as they will have seen later.

7711. *Mrs. Lyttelton*: Your contention is that at 21 they are worth that wage, whether they are going to improve or not?—My point is that they are worth the minimum wage at 21.

7712. *Chairman*: That the minimum wage should be fixed as the minimum wage for a man of 21?—Yes.

7713. And if at a later age they are worth more, they should get more?—Yes.

7714. Then you say the Trade Board has not produced discord because there were several disputes threatening when the Trade Board was formed, which had, I gather, been postponed pending the action of the Board?—Quite.

7715. *Mr. Poulton*: Do you think, under that heading, that the Trade Board, as a matter of practice, would tend to reduce disputes?—I am most emphatically of that opinion. I think the mere fact that a wage is automatically fixed, and that each man who is paying the wage knows that everyone else in similar circumstances must pay it, in itself would be a very great factor for peace. One of our biggest difficulties now is when we go to an employer whose people we have organised, and when we are able to bring pressure to bear on him to pay more money, his contention is that his competitors are not paying the same wage, and therefore have an unfair competitive advantage. I feel sure there is a great deal in that, and therefore I welcome wholeheartedly any attempt to make wage-fixing more general as far as the minimum is concerned.

7716. And you would take that view from the standpoint, not of the union and the employers, but from the standpoint of the community?—From the standpoint of the community as a whole.

7717. *Dame Adelaide Anderson*: And if any difficulty did arise when you were trying to negotiate above the minimum, it would be much less bitter than where your bare livelihood was concerned?—Very much less bitter, I think.

7718. *Sir Arthur Pease*: The figures you give for the low wages which were paid early on in the war, and before, no doubt, and the wages now, are very different, and I suppose wages all round now are somewhere between the two?—It is very difficult at the moment to make any general statement about wages. There are so many reductions which have taken place that are not recorded that I should not like to make a general statement about wages at the moment.

7719. Even the organised trades had to meet conditions by making reductions?—Yes.

7720. I presume you would agree that the other trades would have to meet that too?—Yes. On the other hand, if I were inclined to argue that too far I should say that all the claims that have been made in regard to the effect of reduced wages have been falsified. For instance, we have been told in scores and scores of cases that if we accepted reductions of wages it would help towards a trade revival. Reductions have taken place, and trade has steadily worsened. So that my own view is that if trade is going to mend at all, it is going to be by increased spending and increased consumption. If I were inclined to argue that, I should take that point of view.

7721. That might have some effect on the home trade, but where people are competing with foreign trades you must be able to sell at a price at which your customers will buy. Would you agree with that?

—Yes. Of course, against that, again, I should have to discuss the question of foreign policy and trade policy abroad. I mean, it would be a very big subject, but I should take that line.

7722. *Chairman*: Then you quote a letter as showing the attitude of the employers towards the Trade Board when it was in prospect?—Yes.

7723. And the attitude shown in that letter was then favourable?—Quite. The circumstances under which it was written were that we had actually notices in to withdraw labour, and the employers themselves said: "No; it is far better to have a general regulation of wages than for you to force us to an agreement at the moment. Postpone action: the Trade Board will be set up, and then, when the minimum rates have been fixed, we can negotiate if necessary above that basis." Now they are against all regulation—many of them.

7724. Then you follow with a paragraph which struck me as summing up your view very well. You say: "It must be apparent that wages are chaotic in the grocery and provision trade. Neither side is sufficiently organised to regulate wages in the whole trade. Small scattered areas are too expensive to organise at present. The Trade Board could lay a foundation for wages in every corner of the land."—Yes.

7725. Could make the minimum, which you would make a true minimum, apply everywhere.—True.

7726. And leave everything else to negotiation, individual or, as you would say, better, collective negotiation.—Yes, as we have done in the Co-ops., of course.

7727. Yes, the Co-operative Societies have a minimum scale, but certain persons are paid more than the minimum?—That is so.

7728. Then you have a paragraph as to the organised minorities acting for the whole body.—Yes.

7729. I need not go into that. You object to the suggestion to set up a number of District Boards?—I feel very strongly on that point. The theory that an employer meets his employee in the office on equal terms, or on any other body, I think is a fallacy, when a man knows that if he says anything that is objectionable, or that his employer resents, he can be discharged, and very often is discharged. In that case, of course, they do not meet on equal terms.

7730. That is your objection to the committees for small districts?—Yes, where there is no organisation at all, and where individual members from individual firms would have to be selected.

7731. *Sir Arthur Pease*: That is not so, of course, in the large trades where they have district organisations; Trade Union representatives are there just as much as they are in the central meetings in London.—Yes, but they are organised. In the large trades there is organisation, and I am now dealing with a district or an area where there is no organisation on either side.

7732. *Mrs. Lyttelton*: You are on the point of having very small District Committees, are you not?—Yes, that is so. It would mean in all areas that individual employers would be asked, or co-opted, or elected to a Trade Board to represent the employers, and a group of individual workpeople would have to be asked to serve. Under those circumstances, if a man were victimised—and in many cases workpeople are victimised for being too bold—it would mean that they would have no remedy, and therefore they would always have that in front of them in trying to fix rates. They would not be able to speak to their employer as their representatives can very often speak who are not liable to be sacked.

7733. *Sir Arthur Pease*: But surely you would be able to appoint from your Trade Union at least one representative of each of these District Boards?—Well, we should be willing to supply probably the

22 December, 1921.]

Mr. WRIGHT ROBINSON.

[Continued.]

whole of the representation on the workers' side; but the same objection would lie, that it would not be representative, seeing that they are not in our Union. One of Mr. Cahill's objections, for instance, is that the Trade Board is not representative because it only represents a minority of organised employers and it only represents a minority of organised workers. Well, if you set up District Committees, or Divisional Committees, or whatever they are, it would mean in all areas you would touch areas where there was no Employers' Association and no Workers' Organisation.

7734. You would soon get one, would you not?—Well, I believe they would. I believe it would stimulate organisation on both sides.

Mr. MacCallum Scott: I think the Witness is dealing with the men who are not organised.

7735. Mr. Poulton: To carry the point a little further, supposing they were organised, I have rather taken your evidence before to mean that you would even then be opposed to District Committees?—Yes, I should.

7736. As a matter of practice?—Yes. That is another point altogether. I should be opposed to District Committees. I believe in the national minimum.

7737. Chairman: You would not object to areas?—Well, I am rather inclined to the view that there will have to be areas in a trade like the Grocery Trade, and I am not unduly inclined to quarrel with the population basis, because I think it is a practicable basis, and any alternative basis is very bad to suggest. I have heard of various attempts, but I think on the whole we should have to take as a rough and ready basis something similar to the one we now have.

7738. Dame Adelaide Anderson: What about the industrial areas?—I think you will have the same difficulties there, and I do not think you could quite make the furniture removing, or any other trade, necessarily a precedent for this trade. There is not a furniture remover except with a lorry and a horse in a large number of these areas where there are a considerable number of grocery shops; and therefore I should say that the present arrangement is probably the most practicable one we could find.

7739. Mr. Bell: You are well acquainted with the Manchester area?—Yes.

7740. Do you know Failsworth?—Well, I do not know it very intimately.

7741. You know where it is—the situation of it?—Yes.

7742. Failsworth has an urban district authority?—Yes, that is right.

7743. It is sandwiched in between two large, thickly-populated towns, Manchester and Oldham?—Quite.

7744. If you know anything about Failsworth, you will agree when I suggest that you do not know when you leave Manchester and enter Failsworth?—Quite.

7745. How would your population theory apply to a case like Failsworth and Manchester?—Well, I should think in a case like that it would mean that Failsworth would suffer by being placed under Area A. I do not know whether exceptions could be made or not, but at any rate Failsworth ought certainly to be paid the same wages as the two big areas on each side.

7746. Chairman: The only way to do that would be by taking the industrial area, as somebody has suggested.—Yes, and then you would have other kinds of anomalies in regard to rural areas. I do not see how you can draw up any scheme where you will not have some anomalies. The most you can hope for is to reduce them to a minimum.

7747. The moment you get a boundary, you risk getting an anomaly?—Absolutely; if you put any boundary line down at all, you are sure to have some anomalies. It might be very well worth enquiry as to how a given rate would operate. I do not know whether it would be possible, arising out of that, assuming there were any staff at the Ministry

of Labour for investigating the operation of any given Order, for them to lodge objections, or whether it would not; I mean objections on points similar to the one you raise.

7748. Mr. Bell: May I ask you another question on that point, because it is rather an important one. There are seaside resorts where the cost of living may be higher than even in either Manchester or Liverpool?—Yes.

7749. How would you deal with those?—I should propose to deal with those through Trade Union organisation. Assuming you had your minimum for the country, or for the similar areas to that, I should deal with rates above, by Trade Union organisation.

7750. Knowing that employment at a seaside resort is more or less casual, and the difficulty of organisation the greatest?—Well, in seaside places it would be rather more seasonal than casual labour, and I think if those men have their minimum fixed for them by the Trade Board, and they are not satisfied with that rate, if they do not know the remedy we tell them the remedy; and if they would not take it, I should simply leave them after their minimum had been fixed.

7751. Chairman: Then you have some general observations which perhaps I can take as read. You say the employers' organisation has advanced since the Trade Board was formed?—Yes.

7752. You say the multiple shops have not shown much compunction about the small trader or shopkeeper?—Quite. I have been very greatly impressed by that—the larger employers pleading for the smaller ones, while at the same time they would displace them at any moment with a multiple shop if they could see their way.

7753. I am not quite sure whether the small employer's plea has come from the large employers. I think it came from an association which contained a large number of small employers, such as the drapers, and so on?—Yes. There is also another point, that there are a number of small wholesale dealers who serve small shopkeepers, and who are included in some of the associations, and you get that interest, too, in favour of maintaining the small trader. I should think they have been the most powerful pleaders.

7754. Still there must be an enormous number of small traders in the country?—Yes, but they are very often not those who organise.

Chairman: No, probably not; they might suffer.

7755. Mr. Bell: In the large majority of cases do these small traders actually employ anyone outside their own family?—My own view is, taking the small traders in the mass, that I do not think more than one in six—I should put the figure even higher than that, but I should certainly say not more than one in six—employ any labour at all; that is, of the small shopkeepers. That is my own view. The letters in my evidence deal with that, and I could multiply those examples of small shopkeepers who object to the rate and who say it is not applicable to them because they have so many competitors—I mean in places where there are 800 inhabitants and four or five, or perhaps even six or seven shops. Obviously that is a difficulty which has not been created by the Trade Board, which has not been created by the prospect of the Trade Board fixing wages. There was a difficulty existing there before the Trade Board came, and that will remain.

7756. Mr. Poulton: Nor would it be created by the fixing of it, because they are one-man businesses?—Quite.

7757. Chairman: Yes, but the man who employs labour would be affected by the Trade Board rate, whereas those who do not employ labour would not. Is not that the point?—That is so, but it would usually mean that where a shop had a turnover which would justify the employment of labour, it would justify the payment of the wage. I think that is a very important point. Wherever there is a turnover to justify the labour, there is sufficient profit to pay the wage, and more than pay the wage; and it very

22 December, 1921.]

Mr. WRIGHT ROBINSON.

[Continued.]

often means more efficient management and a better shop as compared with a shop where they employ no labour. We all know, I think, from experience, the little poky shop run by a person himself, in which you cannot stir; you get into a place like a sentry box almost, and you have all sorts of things—dolly tubs and paraffin oil, and heaven knows what, in those little shops, all in a heap; you cannot get at the goods. Well, a man who does employ labour and manages his shop properly, can pay wages and make very much more money than any of his competitors who cannot employ labour.

7758. *Mr. Bell*: So taking the great majority of small traders, in your opinion about five out of six would not be affected by the fixing of rates by a Trade Board?—That is so; I should put that as the very minimum. I should think there might be not more than one in eight, but I should certainly say one in six, to be on the conservative side.

7759. *Chairman*: It depends what you call "small," of course.—Yes. We have sent out, I believe, 136,000 notices from the Trade Board. My point is that to take the small traders there would not be more than one in six of them who employ labour. That, of course, is obviously a guess, but it is formed on some experience.

7760. It depends on what you call "small," though. In the country towns most of them do employ labour.—Yes.

7761. In the villages a good many do not; that would be about right, would it not?—Yes.

7762. So that really you mean in the villages not many would be employers of labour?—But there are also the small traders in places like London and Manchester, in side streets, where the man goes out to work and where the wife keeps the shop.

7763. I just want to know your view: Do you mean that not more than one in six of the whole 136,000 would be affected?—No, I should not say that.

7764. *Mr. Poulton*: You mean of the small traders?—Yes.

7765. *Dame Adelaide Anderson*: What proportion of the whole trade would you say?—Well, that is a very difficult thing to say. It would be a sheer guess, and one which perhaps I had better not make.

7766. There is no organisation capable of finding it out?—No.

7767. *Mrs. Lyttelton*: But broadly your contention is that if a man can afford to employ an assistant, he is making sufficient profit to pay the minimum wage?—That is my point.

7768. The one hangs on the other, does it not?—Yes.

7769. *Dame Adelaide Anderson*: And that on the whole the fixing of the minimum wage would not be likely seriously to affect the larger proportion of small traders?—I do not think it would affect them much.

7770. *Mr. Bell*: And in your experience even in large industrial centres, taking the grocery trade, haidressers, tobacconists, and so on, what proportion of shops would you say in an industrial town are run exclusively, say, by a man and his wife and his family, or in many cases even by the man himself?—I should think it is nearly impossible to give anything like an accurate guess.

7771. Do you think that there is a considerable proportion of them?—I should think a very large proportion of them. There are obviously very many more small shops of that kind than large ones.

7772. Even in large industrial areas?—Yes, I should think so. I should think for nearly every shopkeeper in a given trade there are probably three or four times as many small shops in side streets as there are big shopkeepers on front streets.

Chairman: Then further on you sum up your points. You say the Grocery and Provision Trade is the one most in need of Trade Board regulation, because of the low rate of wages being paid in the trade, of the variation in the rates of wages for the same work in the same area, of the large areas where labour is exploited in the interest of unprofitable and

unnecessary businesses, and of the importance of preventing employers from fixing both wages and prices without public safeguard.

7773. *Mr. MacCallum Scott*: What does the last one mean—the importance of preventing employers from fixing both wages and prices without public safeguard?—Well, it means this—at least what I had in mind was this—that there is a tendency in nearly every direction now for trustification—the formation of trusts—and I believe that a lot of the very large firms will probably amalgamate later; they will combine and will probably do with the Grocery Trade what Lord Leverhulme has done with the Soap Trade. It will take time, of course, and my view is that in the meantime, with Trade Union organisation so weak as it is, and in the absence of a Trade Board, the employers could fix wages, especially on the present unemployed margin, very low indeed, and the low prices would not mean low cost of goods to the consumer; it would mean that the employers could fix the price of wages and fix the cost of goods, and they could practically monopolise the trade in all areas. I believe they can do that, and I believe that is a real public danger.

7774. *Mr. Poulton*: That would seem to suggest, would it not, that they could go further than that and they could crush out many of these little businesses?—Yes, as they occasionally do now, where they really set themselves to it, by going to see what prices the other man is selling at and undercutting him all the way round. With their bigger capital, of course, they can afford to do it.

7775. *Sir Arthur Pease*: Would it be possible to have a trust, with all these tiny businesses?—No, I do not think it would be, with all the tiny businesses. It would really mean that the tiny businesses would gradually disappear.

7776. Are not the tiny businesses really a great safeguard to the community?—Not necessarily in themselves; but the point I am making here is, assuming there is no Trade Board and no regulation so far as wages are concerned, and with Trade Unions so weak, I believe of course that the multiple shop would ultimately eat up the smaller trader and fix both wages and prices to suit themselves, and not the consumer—the community.

7777. *Chairman*: Why should it be more easy for the multiple shop to do that, if there was no Trade Board, than it would if there was a Trade Board; that is what I do not follow yet?—Well, I do not know that it would be much more easy because of the absence of a Trade Board, except so far as fixing the wages is concerned. Even the multiple firms are not yet all paying Trade Union rates of wages, and there are some multiple firms even now who would be touched by the Trade Board rate, and would be compelled to pay a minimum rate of wages.

7778. But is it not just these big firms which can pay the higher wage?—Yes, and which as a general rule do, as a matter of fact, pay the higher wage.

7779. And therefore this process of crowding out the small trader might go in either way—Trade Board or no Trade Board?—Quite so.

7780. *Mr. MacCallum Scott*: Is it not easier to negotiate with the large firms?—Very much easier, and preferable all the way round. It is very much better to fix wages for the whole of the trade if one can. That is the point I am trying to make throughout. It is very much better doing that than doing it piecemeal.

7781. *Mr. Bell*: If you had nothing except the multiple shops to deal with—it is so much easier where you have a large number of operatives or employees to deal with—would not your Trade Union organisation ultimately be able to obtain a wage, if it was not for the large number of small traders who employ very few people?—Yes, I should think that is undoubtedly the case.

7782. *Chairman*: Does that mean you would like to crush out the small trader?—It means that there are a very large number of businesses which ought to be either crushed out or cleared out altogether, in my view.

22 December, 1921.]

Mr. WRIGHT ROBINSON.

[Continued.]

7783. Is that part of the policy of the Trade Union—to crush out the small trader?—No. The policy of the Unions is to get what are considered proper wages for their members, and if a small number of inefficient employers stood in the way they would still press for what they regarded as proper wages.

7784. That is a different matter. I do not understand you to say that simply because it is more convenient to deal with the large trader your Union would like to get rid of the small trader?—No, not at all. No, I do not want to say that.

Mr. Bell: That was not the point I was trying to bring out.

Chairman: No, but I thought the answer might be misunderstood.

7785. Mr. Bell: My point is that the Trade Board is wanted to protect the employees who are so difficult to organise?—Yes, quite; that is a point I have tried to make.

7786. Dame Adelaide Anderson: And you have already said that you think the minimum wage would not affect the small businesses?—Yes, that is so—the larger number of them.

7787. Mrs. Lyttelton: Are you in favour generally of the Trade Boards only fixing a minimum wage and not going into the graded rates?—Well, I should say I am in favour of the Trade Boards fixing the minimum rate; but in a trade like the grocery trade, for instance, I think it would be necessary to fix certain grades.

7788. Have you got the exact grades in your mind?—Well, I have not. On the other hand, I ought to point out that when the workers asked for the original minimum wage in the grocery trade, they wanted one minimum rate for the whole of the country and for all classes of workers.

7789. And from the point of view of organisation I rather understand from one of your answers that you feel that if the minimum rate only were fixed by the Trade Board it would lead inevitably to better organisation amongst the employees?—Well, I think so; I think so now.

7790. Because they would feel it was only through organisation that they could get what they wanted in graded rates?—Yes.

7791. But you are not prepared to say that you are on the whole for the minimum wage only being fixed?—I really ought to qualify it by saying this. I was in favour, on the Grocery Trade Board, of one minimum rate for the whole of the country.

7792. And not touching the rest?—That is right. Well now, the area came on, and I admit there is a great deal of force in the contention behind the claim that there should be more than one area. On the Trade Board, seeing that we were not able to get one rate and one national minimum, I feel now that we ought to complete our work by at least seeing that certain classes of workers do not suffer. I believe, for instance, that the warehousemen's position has been prejudiced by only one rate.

7793. And you mean, therefore, that area Trade Boards do not exactly meet that point?—That idea does not quite meet that point.

7794. Mr. Bell: Will you explain exactly what you mean by your minimum? Do you mean a minimum fixed to cover the lowest class of labour, or a number of minima to cover all classes of labour?—Well, theoretically, I should have preferred one minimum for the whole of the country, as I said. Now, seeing that the country has been divided into areas, and seeing also that the Trade Board has already defined certain classes of worker, I am in favour of definite minima for each one of those classes of workers which has been defined. I opposed mainly of those definitions, and I opposed the differentiation; but seeing that they are there, I would press for definite minima for each of those classes.

7795. Dame Adelaide Anderson: Varying for each class?—Varying for each class, yes.

7796. Mrs. Lyttelton: But even that does not quite meet the other point of grades above that?—No, it does not quite meet the point.

7797. But it might go some way towards it?—Yes.

7798. Mr. Poulton: It settles the basis, does it not?—Yes, it settles the basis.

7799. Sir Arthur Pease: Are you in favour generally of having a large number of Boards for different parts of the distributive trades, or of having it reduced to one, or to a comparatively small number?—I think the effort ought to have been made for one large Distributive Trade Board, with sections; I believe that. I was in favour of that, and I advocated it amongst my own people, and of course I favoured it at a meeting that we had. There was no difference between the Unions on that point. The Shop Assistants' Union, the Amalgamated Union of Co-operative Employees, and what was then a separate Union, the Warehouse Workers' Union, all favoured the one Distributive Trade Board.

7800. And if you had one Distributive Trade Board, would it not rather drive you back on to the one minimum wage, because the grading in every section would be different, would it not?—Yes, that is so, and that was one of the reasons for favouring one big Distributive Trade Board. I incline to the view that while you cannot measure degrees of skill, I think the skill in the drapery and grocery, and so on, is so comparable that probably the nearer we approximated to one rate the closer we should get to justice.

7801. Mr. Poulton: On the question of the appointed members I see you make a statement.—Yes.

7802. Could you at all enlarge upon that as to what you think of their usefulness, not from the point of view of your Union, but from the point of view of the community; because that was the idea behind them, after all, that they were there to protect the consumer?—Yes. Well, I must confess that my own experience of appointed members—and I am on two Trade Boards, the Tobacco Trade Board as well as the Grocery Trade Board—is such that I certainly make no complaint from the workers' side as to the appointed members. We are often disappointed with the decisions; we feel that more weight ought to have been attached to our evidence, and so on; but generally speaking, I think both the principle and practice of the appointed member is a good one. I feel that. It has been suggested that there should be panels from both sides. Well, I should not oppose that, but expressing my own personal opinion I should think the principle of the appointed members is a good principle, and works out well in practice. The appointed members are men who are used to weighing evidence.

7803. Sir Arthur Pease: Would you not suggest that there should be rather a difference between the Chairman and the other appointed members; that the Chairman should be absolutely detached from the trade, but that there might be two other appointed members with technical knowledge of the trade on each side?—Well, I should see a very great difficulty in finding men who would be nearly so impartial, either from the employers' or the workers' side, who had technical knowledge, and on the whole, when you have both sides brought there to make their case—and after all the chief thing that they discuss is wages, and not technical processes—I rather incline to favour the present method of appointed members.

7804. That rather depends upon how far you go with rates and classification?—Yes, quite.

7805. If you have one minimum it does not matter about technical knowledge. If you once begin to go into the question of putting various rates to various processes, you really want somebody who understands what that process is, do you not?—Quite; you do; and as I say, favouring one minimum, I favour the appointed member. On the Tobacco Trade Board, which has worked very smoothly indeed, and on which both the employers and the workers have worked most amicably, they have merely fixed the one rate—a rate for men and a rate for women; there are no areas, or anything. Well, now, on a Board like that, the appointed member works ideally. He listens to both sides of the case, and as a matter of fact on the Grocery Trade Board it has merely been presiding and very occasionally advising.

22 December, 1921.]

Mr. WRIGHT ROBINSON.

[Continued.]

7806. *Chairman*: Is there any advantage in having three or five, instead of one?—With all its limitations, I am in favour of the larger number.

7807. Why?—I think the responsibility on one man alone, who sometimes uses his weight on one side or the other, is a very great responsibility.

7808. *Mr. Poulton*: I take it from your answers that you support the appointed members, not upon the ground of their having decided in favour of the workers so much, but exclusively upon the merits of the position?—Absolutely. If I were arguing on the position in the Grocery Trade Board, I should express

very very keen disappointment. The only point I want to make on that is that is has not been because there were appointed members that no rate has been fixed; I think on the whole they have faced an extremely difficult task, and it is a difficult task with a big trade like the Grocery Trade, with all its peculiar difficulties. I think they have earned the respect of the workers' side, though they have turned us down a great deal oftener than they have turned down the employers' side—a very great deal oftener.

(The Witness withdrawn.)

Miss E. C. WILKINSON, M.A., called and examined.

The Witness handed in the following statement as her evidence in chief:—

STATEMENT OF EVIDENCE of Miss E. C. WILKINSON, M.A., National Union of Distributive and Allied Workers.

Classification of the Union's Membership.

The National Union of Distributive and Allied Workers on whose behalf I am presenting this evidence, was formed as the result of an amalgamation in 1920 between the Warehouse Workers' Union and the Amalgamated Union of Co-operative Employees. The membership of 130,000 can be roughly divided as follows:—

80,000 Co-operative Distributive employees.
10,000 " Productive "
40,000 Non-co-operative workers in wholesale warehouses, retail multiple shops and allied productive trades.

The Co-operative membership is scattered through practically every town and village in England, Scotland and Wales. The private trade members are chiefly located in Liverpool and Merseyside, Manchester, London, Glasgow and Birmingham.

Regulation of Wages in Co-operative Distribution.

Dealing with the co-operative movement first, I should like to draw the attention of the Committee to the fact that a great and growing part of the distributive trade of the country, especially food distribution, is in the hands of the co-operators. Their annual report for 1921 states that there are 4½ million adult co-operators, an increase of three-quarters of a million in two years. As many societies only allow one person in a family to be a member, a very much larger number of people than 4½ millions actually receive goods through co-operative channels, a reasonable estimate being 16 millions. The city of York, for example, claims to have half the householders of the city of York as its members; it has 12,000 adult members out of the whole population of 80,000 souls.

When comparisons are made between co-operative and private traders, the latter frequently speak as though the co-operators were an exceptionally privileged class of people to whom one could not apply ordinary business standards. The co-operative movement is not a philanthropic institution. It works in competition with the private trade, and buys largely from the same markets. It was suggested when the co-operators were giving evidence that there was not the same need to make profits in co-operative enterprise. I show below the large profits that are actually made in the movement, and as the accumulation of dividend is almost the only source from which the retail societies can draw more capital, it is essential that the businesses should produce sufficient yearly surplus to meet their growing needs.

The Co-operative Minimum Wage.

The A.U.C.E. and the Co-operative Women's Guild undertook propaganda for a general basis minimum wage, and at the Congress in 1908 after a terrific agitation the following wage scale was passed as being the lowest at which co-operative employees should be employed. This is usually known as, and throughout this evidence will be referred to as, THE CONGRESS SCALE:—

Age.	14	15	16	17	18	19	20	21
	s.	s.	s.	s.	s.	s.	s.	s.
Males ...	6	8	10	12	15	18	21	24
Females...	5	7	9	11	13	15	17	—

This congress scale forms an important landmark in the progress towards wage regulation in the distributive trades. The Women's Co-operative Guild as representing the organised consumers never claimed that this was an adequate, or for women even a subsistence wage; they fought for it as a basis to prevent sweating. The strong complaints of many of the societies that this would put them far in excess of most of their competitors is the best indication of the low wages being paid in the distributive trades at the time.

Congress Scale Compared with Trade Board Rate.

Certain features of this scale are interesting in view of the controversy as to whether it is possible to have one Trade Board for the whole of the distributive trades. This scale is an "all grades minimum." Many co-operative societies have practically every section in the distributive trade, with the allied productive enterprises. For example the larger societies have the following departments:—

Grocery, Drapery, Hardware, Boots and Shoes. Butchery, Furnishing, Ironmongery, Tailoring, Earthenware, Dressmaking, Millinery, Coals, Chemists, Jewellery, Baking, Clogging, Restaurant, Hairdressing, Undertaking, Bacon Curing, Milk, Upholstery, Hosiery, Fish, Game, etc., Greengrocery.

Each of these departments is the size of a substantial separate business.

This scale was the basic minimum for all juniors and general workers. Skilled shop assistants, branch managers, first assistants, skilled warehousemen, all received additional payment, but the basis in all departments was this scale which by 1914 was in general operation throughout the co-operative movement. In the innumerable agreements that have been concluded with co-operative societies since, copies of some of which are attached, this principle of the basic minimum has been adhered to. The attached schedule shows the wages that were being paid to Co-operative assistants as compared with the

22 December, 1921.]

Miss E. C. WILKINSON, M.A.

[Continued.]

rate then issued by the Grocery Board about which such a storm was made. The rates now being paid after various reductions can be compared with the present grocery proposals and the milk distributive rates, by reference to schedule 2. If one large section of the distributive trades has thus successfully worked one minimum rate for all its distributive sections, it does not seem impossible for one rate to be applied to all the sections of the distributive trade, even when those are not under the same employer.

The Congress Scale not only forms an argument for one Distributive Trade Board, but also for the possibility of working a national rate. The Congress Scale applied equally to the smallest village society employing one man and a boy, and to Leeds, the largest co-operative society in the world. It may be argued that this principle has not been carried out in the many trade union agreements that have been concluded since. But surely that follows the procedure that Trade Boards were intended to institute. We have always contended as a Union that Trade Board rates were not standard but minimum rates, and that trade union organisation, operating on these as a basis, should make the adjustments between London and little Piddlington. In a pamphlet entitled "Trade Board Rates are not Standard Rates" (National Labour Press Ltd.) our Joint General Secretary (Mr. Hallsworth) supports this argument by decisions of various arbitration courts and the declarations of Trade Board chairmen.

Competition.

Many employers have complained that even the low rates that are at present being paid would drive them out of business, especially if as grocery traders they have to meet the competition of employers in distributive trades outside the Trade Boards. But the Co-operative Societies have had to meet the present competition from employers paying half or one-third of their rates. The following figures will give an idea of how by efficient management they have not only survived this competition, but made handsome profits. The figures are taken from the Annual Report of the Co-operative Union, 1921:—

Total Share Capital in 1920	76,374,691
Total Profit in 1920	25,458,551
Percentage of Profit on Capital	33½ per cent.

(Includes interest on share capital and dividend on sales expressed as interest on capital), and this not in the blissful profit-making times of war, but after the slump had set in. Even this profit would have been larger had not the Excess Profits Duty induced societies to reduce profits by selling as cheaply as possible. It cannot be said that those profits were made out of juvenile labour, for the average earnings of all employees, men, women and juniors, amounted to £2 14s. 7d. per week.

The private employers have estimated their wages cost at 5 per cent. on turnover. The Co-operative Union statistics give the wages cost of distribution per £ sales as 1s. 1d., that is 5·5 per cent. on gross turnover.

It is more difficult to get precise details of the profits of the private traders than of the co-operatives. A prominent financial authority has stated that nothing is easier than to hide away substantial profits in a balance sheet that shows to the public only a very moderate return.

The trade invariably states that there is nothing left for them to do but to pass on the increase to the consumer or to dismiss employees to reduce expenses. This would imply that distributive traders were working on the smallest margin of profit and loss, which is not by any means the fact.

But even granting this, the distributive trade is one of those most capable of passing burdens on to the consumer. Even in normal times one finds the most curious differences between the prices of similar articles at neighbouring shops. For example, I

recently saw in two shops not 200 yards apart boxes of Tunis dates, same quality, same exporter, one at 10½d. and the other at 1s. 2d. The wholesale trader has to worry about farthings per gross; the retail trader can be indifferent to pence a box or a yard, and flourish.

Basis of Wages.

But it is a dangerous argument to attempt to base wages on what an industry is said to be able to "bear." During the war industry and distribution were made to bear enormous profits, so large that the Government proceeded to appropriate part of them, but they still had to be paid by the industry. Trade has borne an increase in income tax from the original 2d. to the present 6s. What an industry can "bear" is decided by very many factors, one of the most important being the effect of foreign competition. The Distributive Trade is favourably situated in this respect as except for a section of the wholesale trade its market cannot be affected by foreign competition.

Whether this theory of what an industry can "bear" may or may not be quoted in trade union negotiations for higher rates in fixing a basic minimum, regard must be had in fixing the basic wage of a trade board as to what a man needs to maintain his wife and family in a reasonable standard of comfort. Even the Peace Treaty (Art. 427-3) agreed to "the payment of a wage adequate to maintain a reasonable standard of life as this is understood in their time and country." This should be the first charge on an industry.

If certain small and inefficiently conducted businesses are not able to pay reasonable rates they should not be allowed to drag down the standard of those who by more economical or efficient management are able to pay. If this is thought harsh it must be remembered that this is the normal process of the market. In few industries has trustification gone so fast and far as in distribution. For the small individual business to survive either increasing skill and ability are needed, or greater cheapness.

Now in the present competitive system of industry there are no such tests of efficiency for employers as those to which an employee is subjected. There is no age limit of 50 such as certain employers seek to impose on Trade Boards. The only test of fitness of the employer is that of survival. Anyone who can scrape a little money together can start a business. If he is allowed to compete not on efficiency but by cheap labour he not only injures the people he directly employs, but by this competition begins a downward tendency all round. Trade Board rates protect the scrupulous employer against this unfair competition. But it is surely an ironical state of affairs to find the great multiple shopkeepers who have risen to fortune by crushing out the small inefficient traders coming before this Committee and seeking on this one issue of wages to create an atmosphere of sympathy for the small trader.

Trade Union Action and Trade Boards.

When Mr. Cahill was giving evidence the question was raised as to why if the Co-operative employees were the people who received the best wages, should most of the strikes that had occurred take place in the Co-operative Movement. The reason of course is to be found in the high proportion of organised workers among Co-operative employees, who therefore desired better conditions, for contrary to the opinion generally held by people who have had little contact with the Co-operative Movement, Co-operative committeemen are no more anxious to increase wages of their people than are the private traders.

Conditions in Manchester Warehouses

It has been interesting to hear the pleading of certain employers who have given evidence, that

22 December, 1921.]

Miss E. C. WILKINSON, M.A.

[Continued.]

wages are best regulated by the organisation of employers and employed. Our experience in the great wholesale trade in Manchester illustrates what this would in practice mean. The Lancashire cotton trade is the second largest trade in the United Kingdom, and Manchester, its hub, is within the first half dozen of the world's great distributive centres. We deal, then, not with insignificant firms, but with businesses of world-wide reputation.

Anything from 15,000 to 20,000 men, women and juveniles are engaged in the packing and distribution of every class of cotton goods and "fancies" for the home trade (which includes the colonial). Ten to fifteen hundred workers are employed in the largest houses, while at the other end large profits have been made in cellars and garrets on the labour of two or three men.

During 1916 and 1917, owing to the increased cost of living, there was considerable unrest among warehouse workers, very little being done by employers great or small to alleviate adequately the economic pressure. In June, 1917, a commission of enquiry into Industrial Unrest in the North-Western Area was held by command of His Majesty's Government, and special prominence was given in the report to the position of Manchester Warehouse workers:—

"These men, especially in Manchester, seem to have serious grievances causing unrest. The chief of these is their low wages, the average of which they say is not more than 30s. per week. Such advances as they have had amount only to about 15 per cent. to meet the 100 per cent. rise in food prices. They are expected to work overtime without payment, though sometimes they get a shilling as tea money, or they are given bread and jam and tea without money."

The Report concludes:—

"We suggest that this is a case where much good might be done by a general enquiry into the conditions of labour in Manchester warehouses, and that the moral influence of the Government might be brought to bear upon the employers to meet the Union representatives on the lines suggested in the Reconstruction Proposals, and see if some of the grievances cannot be speedily remedied."

During the whole of 1917, attempts were made to negotiate with individual employers, but without any substantial success. The Chief Industrial Commissioner was repeatedly approached, but as the firms did not come within the scope of the Munitions Act, November found the employees without redress.

An abstract of Warehouse Workers' Wages taken on October 14th, 1917, shows the following conditions as applying to 116 men in fourteen typical representative firms, and to 77 women in the same firm. It is not therefore claimed that the figures are exhaustive, but they are representative and reflect the general conditions prevailing in Manchester cotton warehouses.

Wages paid.

Men.

- (a) 30 men were paid as low as 22s. and not more than 30s.—25 per cent.
- (b) 39 men were paid as low as 30s. and not more than 35s.—33 per cent.
- (c) 37 men were paid as low as 35s. and not more than 40s.—31 per cent.
- (d) 10 men were paid as low as 40s. and over—8 per cent.

Women.

- (a) 23 women were paid between 16s. and not more than 20s.—29 per cent.
- (b) 47 women were paid between 20s. and not more than 25s.—61 per cent.
- (c) 7 women were paid between 25s. and not more than 34s.—8 per cent.

It will thus be seen that about 60 per cent. of the men received 35s. and under, and about 61 per cent. of the women received 25s. or less.

Class (d), men over 40s., is composed entirely of men in positions of extra responsibility; the same remark applies to Class (c) amongst the women. Men and women of special capacity in Manchester were thus paid less than casual labour in Liverpool.

Long and faithful service.

Of the men in Class (a), one man has 12, another 21, and a third 36 years' service with the same firm. Of the men in Class (b) and (c), two men have 21 years, and 22, one 24, one 25, one 31, one 35, and one 47 years' service respectively.

Of the men in Class (c) who receive 40s. and over, the average, taking all of whom we have particulars, is 15 years' service.

No recognised overtime rates are paid.

The only federation of employers was the Manchester Home Trade Association. This body was approached and the help of Judge Parry, the Chairman of the Industrial Commission, was sought. Their reply is significant, being the transmission of a resolution passed at a meeting of the Association.

"That a letter be sent to the Union in response to their request for a Conference, stating that the Committee found that none of the members of the Committee having any dispute with or demand from their employees, and as the Home Trade Association represents only a very small portion of warehouses in Manchester, the Committee does not see that any useful purpose could be served by meeting the representatives of the Union."

It may be advisable at this juncture, having noted the long delay, to emphasise the two points of the foregoing resolution.

- (1) The indifferent attitude of employers towards the very real grievances of employees.
- (2) The inability of associated employers to meet workers' demands through fear of the unfair competition of unassociated employers.

And to point the moral:—

- (a) The private views and personal attitude of an insignificant number of employers should not remain the ultimate factor in fixing the standard of life for thousands of families.
- (b) Each and every employer in a given industry may rightly be expected to accept the same standard of responsibility in respect to the wage of individual employees.

Events having come to a crisis, and a strike being imminent, the Ministry of Labour approached this Association. Their reply to the Ministry contains this passage:—

"We would also like to point out that it would be unfair to make a demand upon one section of business such as those embraced in the Manchester Home Trade Association. Doubtless you are aware that there is a London Textile Association, and the Belfast Warehousemen's Association in Ireland, and also a number of similar warehouse businesses in Scotland and various parts of the country."

In January of 1918, under the Presidency of Professor J. B. Baillie, a conference was called and an agreement reached for 40s. minimum wage, and a 50-hour week.

Sensationally low as this wage was at a time of soaring prices and unexampled prosperity, it was only paid to a fraction of Manchester's great population of distributors. The Employers' Association was too weak to hold its members—firms broke away and the paying employers complained bitterly of unfair competition. In spite of the agreement the employees' Union was forced to endless negotiation—intimidation was rife—as an example I add a specimen of the

22 December, 1921.]

Miss E. C. WILKINSON, M.A.

[Continued.]

method adopted by a large firm which to this day is a source of trouble to the employees' organisation:—

"I hereby promise to serve ——— faithfully for the sum of £ s. d.

I also affirm that I am not a member of the National Warehousemen's Union, and if I join the Union will at once let the firm know.

Signed "

At the present time the same complaint is made by employers who pay agreed rates—that they are undercut by firms that refuse to fall into line and cannot be forced. Although agreements have been made since 1918 thousands of employees are still unprotected. In July of this year one firm (whose head is a member of Parliament) belonging to the Association, paid the rates for the first time, so that for 5½ years he has been advantageously placed in regard to his fellow traders.

This kind of action tests the patience of the better type of employer, and the men's organisation is usually blamed. Friction is thus engendered in quarters that least desire it and both Associations, that of masters and men, suffer as a consequence.

In October, 1920, one employer dismissed his entire warehouse staff (13) on receiving an application on their behalf for an increase on miserably low wages. The suggested increase would merely have brought these employees on a level with their fellows.

It should be borne in mind that this was at a time of great prosperity and no excuse for low wages existed on that score.

Sir Herbert Dixon speaking at the 'Spring Conference of the Textile Institute said:—

"I have no hesitation in saying that the textile industries never had made so much money."

The position of distributive workers in this area still demands serious consideration. Manchester has the largest engineering trade possessed by any town in the world—a fact overlooked because of its renown as "Cottonopolis." A fifteen mile radius of Manchester covers the biggest mass of population in the United Kingdom outside greater London—and in this mass are workers belonging to highly paid trades. These large and powerful groups of wage-earners tend to lift the standard and increase the cost of living so that a relatively weak, though all-important, section of workers in their midst suffer immeasurably.

The employers cannot have it both ways. If they prefer that wages and conditions of labour should be arranged between their own associations and the organisations of their employees, then they must be prepared to stop the victimisation of employees who join the union, to allow reasonable facilities for organisation, and to carry out the agreements entered into by the respective associations. If they complain that if this is done by the majority, there is always the minority that they cannot coerce, we must point out that that is just where the Trade Board will protect them. By its machinery they can either lay down a basis below which no one can go and then conclude Trade Union Agreements beyond that basis for special areas or conditions; or they can make Trade Union Agreements for the organised employees, and then make these Trade Board rates legally enforceable throughout the trade.

CONSTRUCTIVE PROPOSALS.

One Distributive Trade Board.

The foregoing evidence has we hope shown the need for the extension of the Trade Boards to cover the whole of the distributive trade, if possible, by means of one Trade Board. In view of the fact that the personnel of the present Grocery Trade Board has been carefully chosen by the Ministry of Labour so that all big areas of the country are represented, we do not think that there is any necessity for District Committees. We believe that the establishment of District Committees if they were allowed to fix rates

for themselves without ratification by a General Board would lead to chaos and friction. The multiple shops who are now complaining about the number of Trade Board rates they have to operate would then be faced by these, multiplied by the number of District Committees decided upon. We believe that a basic minimum for the whole country is the best means of arriving at reasonable Trade Board rates, leaving higher rates for industrial areas and London to be negotiated for by the organisation in the trade.

Inspectors.

The present staff of Inspectors should be enlarged and their control removed from the Ministry of Labour to the Trade Boards Office.

Chairman and Appointed Members.

The Union wishes to disassociate itself emphatically from the aspersions cast upon the Chairmen of Trade Boards and appointed members by certain of the employers who have given evidence. We believe that the appointed members have tried to be impartial, but some of them have been obviously hampered by their lack of knowledge of the trade.

We believe it would be better if the Chairman continued to be nominated at present by the Ministry of Labour, being, as is often the case, a man accustomed to weighing evidence, and that the appointed members should be chosen by the Ministry of Labour from a panel of workers and employers drawn up by the respective sides, working through the Advisory Committee of Employers' and Workers' Sides that at present exist.

Women Appointed Members.

We would like to say with all respect and diffidence that some of the women appointed members have been handicapped by the fact that their experience of life has brought them but little into intimate contact with the actual conditions of trade and industry. Many of them never speak at the meetings and appear to be completely under the dominance of the male appointed members. Excellence in charitable work does not necessarily qualify women to undertake duties of this kind, and it is regrettable that so few of the considerable number of women experts in social conditions have been nominated by the Ministry to fill these very important positions. This may, of course, be due to the Minister considering that the close experience of working conditions that these women experts have had might cause them not to be so "impartial" as might be considered desirable, but if the idea of the choosing of appointed members from panels suggested by the respective sides is not accepted by this Committee, may we hope that a suggestion should be made by the Committee to the Minister of Labour that his net should be thrown wider in the selection of women appointed members.

Powers of Ministry of Labour.

We suggest that the Minister of Labour should not have the power to hold up rates that have been passed by a majority for more than two weeks. That, if after that time he cannot confirm them, an appeal should lie to an impartial court such as the Industrial Court with a Chairman and Assessors representing employers and workers.

Period for Objections.

The present proposal period of two months for objections should still continue to operate as regards the first proposal of a new Trade Board; after that the objection period should be one month. After the objection period has expired, they should have power to make alterations in the proposed rates based on the objections received without re-proposing the rates.

22 December, 1921.]

Miss E. C. WILKINSON, M.A.

[Continued.]

Representation of Organisations.

The Ministry of Labour should be bound to appoint on to Trade Boards persons nominated by the responsible organisations on both sides who have been invited to send representatives.

The workers have viewed with much alarm the continued suggestions on the part of employers that the representatives of workers should only be the people actually employed in the trade. This would obviously place the workers at great disadvantage to the employers by depriving them of the skilled advocacy of those accustomed to represent them.

Special Section with Regard to Women Workers.

As the N.U.D.A.W. includes a very large number of women members, I feel it my duty from my experience of the last six years amongst women in distributive trades to make a special appeal for the early extension of the Trade Boards Acts to those sections of the distributive trades in which women are very largely employed. Whatever the general findings of this Commission, I feel that they will not desire to ignore the really appalling conditions under which women are working in the distributive trades even at the present time. The Grocery Trade employs only a few women compared to other sections of the distributive trade, and it is certainly in the public interest that the extension of the protection of the Trade Boards Acts to these other women should not be long delayed.

During the War, when the extension of the Trade Boards Act was first mooted, organisation was spreading and wages were rising rapidly among the women factory workers. Women's labour for repetition work was at a premium, and many employers doubtless felt that the institution of Trade Boards for these trades would stabilise rates and delay what they considered too rapid advances. The distributive trade as a whole, though it was affected by the general rise in women's wages, seemed to have managed to increase wages less than anyone else. For example, by 1919 the general level of labourers and unskilled wages had risen 60 per cent., while in the distributive trade it was calculated to have risen only 30 per cent. These figures, of course, being heavily weighted by the advance of wages in the Co-operative Movement.

It was obvious during the war to those interested in women's welfare that the end of the war would necessarily mean that women would have to leave many of the trades in which they had taken the place of men, and they were apprehensive of the effect on wages in those trades generally considered "women's trades" which would result from the flooding of these restricted channels by workers who had been withdrawn during the war. It is cause for profound public gratitude that in the Needle Trades the Trade Boards have at least secured the regulation of reductions in wages, otherwise the competition for jobs on the part of displaced war workers would have forced rates in these trades below any decent level of subsistence. In some women's trades, especially clerical, rates have in many cases fallen back to the pre-war level in spite of the fact that the increase in the cost of living still remains above 100 per cent.

It is true to say that in the distributive trade as a whole women never received increases at all commensurate with the cost of living. The table given below contains the rates that were paid to the skilled assistants by two important Manchester distributive firms at the time of the strike in 1920:—

Age ...	18.	19.	20.	20.	21.	23.	24.	26.
Wage...	20s.	20s.	24s.	28s.	25s.	25s.	28s.	24s.

The above wages are not based on age, length of service, or skill, but on the whim of employer.

Another firm paid slightly higher rates, but they all refused to negotiate rates with the Union on

the ground that most of the firms employing similar labour in the city were paying lower rates than these.

Conditions in Cafes.

In spite of the enormous profits made by catering firms the wages of the women were and are extremely low. In Liverpool and district adult women café workers receive in many cases only 12s. plus two meals per day. The best firm that we have knowledge of pays 25s. plus dinner and tea. In Sheffield some of the largest cafés pay only 12s. per week and another rate is 17s.; in both cases dinner and tea are provided. In Nottingham, adult café workers' wages vary from 12s. 6d. to 17s. 6d. with meals. In 1914 these same firms were paying 7s. to 10s.

In most cases the girls complain bitterly of the kind of meals that were given to them, tea being almost invariably only tea and bread and margarine, and dinner being scrappy in quantity and not particularly good in quality.

Conditions in the Drapery Trade.

It is to be hoped that the Committee will very earnestly consider the bringing of the Drapery trade also under the Trade Board. Drapery is one of the most difficult of women's trades to organise or regulate, because there are undoubtedly some very good posts for women in this trade. A woman of good looks, ability, and "push" may rise to be a head showroom hand, or a buyer, before she has been very long out of her teens. These clever women can usually make their own terms with their employer, or if they are not satisfied frequently succeed in securing good businesses of their own. Even among those not so fortunately placed there is an enormous difference between the smart girls in the showroom and the sweated drudge of the cheap bazaar. In between these two extremes there is a large mass of women labour which is undoubtedly being exploited although enormously high profits have been made by the trade, and the normal margin of profit as apart from the present slump is very high. The necessity for a basic wage in this trade is shown by the following considerations:—

1. *Juniors.*—Juniors are taken as apprentices or learners at extremely low rates and except in the cases of model West-End firms who have schemes of apprenticeship, many of them get little opportunity of learning more than the department in which they have entered. If the firms were compelled to pay a decent junior rate it would be worth their while to see that these girls were properly trained.

2. *Competition of Country Girls.*—The rates of girls in the towns are continually being threatened by the competition of girls who come from the country. This is especially the case in the smart shops of the big towns, such as London, Manchester, Liverpool, etc. Girls who have learned their trade in the small country towns desire high-class experience and are often prepared to come in to well-known shops for bare expenses. It is an oft quoted saying in the drapery trade: "The greater the name, the greater the sweating." Again, of course, one makes the reservation that certain very well-known West-End firms have discontinued this competition in cheapness.

3. *Season Hands.*—There is also a competition of the season hands. Many firms greatly increase their staffs for the summer and winter sales. In some cases, of course, there is no competition with the regular hands, because these "casuals" are women who do not desire regular work, perhaps ex-employees of the firm who have married and desire to augment the family income in a perfectly legitimate way by helping their old firm in rush times. On the other hand, there are many who are forced to live on this seasonal work and who will offer while employed to come to the firm permanently at less rates than the permanent staff is receiving.

22 December, 1921.]

Miss E. C. WILKINSON, M.A.

[Continued.]

4. *Suspensions.*—Another great difficulty in the trade is caused by the number of suspensions in dead seasons. The firm will often euphemistically phrase it by suggesting to the girl that she takes a holiday and will be sent for when wanted. This, of course, greatly reduces the annual income of the girl who is dependent upon herself. The small cheaper class shops offer more regular employment because they are chronically understaffed. The wages prior to the war in this class of shop only amounted to 10s. or 12s., and a small commission, and many are only receiving 18s. to-day.

5. *Cost of Lodgings.*—The wages being generally paid in the distributive trade do not permit of adequate maintenance for the girl who has to live on her own earnings. In Manchester the rates for board and lodging vary from 24s. to 30s. per week. For an unfurnished room, without attendance, a girl is lucky if she has only to pay 5s. or 7s. 6d. She may be able to get a furnished room for from 10s. to 15s. but often has to pay higher than this if she wants any attention or laundry. The impossibility of living on the Labour Exchange dole, the certainty of a long spell of unemployment if she is dismissed, causes a girl at the present time to accept anything that an unscrupulous employer likes to offer.

6. *Deductions for Food and Lodging.*—It is also necessary that the amount deducted by employers for food or board and lodging should be regulated, as many employers have greatly increased the value they placed upon these. Of course during the war the cost of providing food increased with the increase in the cost of living, but in 1920 girls whom I was attempting to organise in one of the less fashionable shopping district in North-West London were receiving 7s. a week and living in. At one meeting at which I was able to get particulars from about 40 girls present, there was only one who was not in debt to the firm for the provision of extras to supplement an utterly inadequate diet. The one exception was a girl who had come up from the country to gain experience and was receiving large parcels from home. I can bring actual witnesses to this if they can be in any way guaranteed against victimisation by the firm. During the war many girls were unable to take advantage of the high wages being earned in munition and other

trades because of the large debts for food and clothing they owed to their employer.

7. *Drapery Wages.*—It is, of course, very difficult to gain much data as to the wages being paid in the drapery trade except in organised houses, because of the condition of secrecy as to wages that exists. The following figures may be some guide as they are from firms who are completely unorganised:—

Liverpool. The drapery firms from which we have got returns pay from 23s. to 25s. plus tea.

In Sheffield the wages vary considerably. One set of returns shows adult rates 15s. to 25s., while some of the better firms are paying 24s. to 30s.

Bolton, the returns for adults are given as being from 15s. to 21s. The wages of 15s. were paid to girls of 18.

Difficulties of Organisation.

It may be argued that the Trade Unions ought to have done more to abolish the worse abuses that exist in the drapery trade. Where an effective organisation has been built up, wages, of course, are considerably in excess of those that have been quoted. The various agreements of the Shop Assistants' Union which they will have placed before you in their evidence and the rates given in schedule 2 attached show that a standard is being built up on at least a subsistence basis, but organisation is rendered terribly difficult by the sub-division in these firms and very close supervision by shop-walkers and charge hands. But all agreements are rendered very precarious because of the unscrupulous competition of the employer who pays the wages that I have quoted. No matter how desirous an employer may be of paying decent wages unless he can be assured that there is at least some limit placed to the competition that he has to face, he naturally tends to discourage organisation and to reduce rates. Some regulation of the drapery trade in the near future is absolutely essential if even the modest standards that have been secured in the trade are to be kept. One could almost go so far as to say that any scale allowed by the Trade Board would be preferable to the chaotic conditions that are existing in the trade to-day.

SCHEDULE 1.

FINANCIAL DATA AS TO THE DISTRIBUTIVE TRADES.

SCHEDULE 3.

COMPARATIVE STATEMENT OF DESTRUCTIVE TRADE BOARDS' RATES AND A.U.C.E. RATES, 1921.

(Handed in—not printed.)

SCHEDULE 4.

COMPARATIVE STATEMENT OF WAGES RATES IN SIX TYPICAL PRIVATE ESTABLISHMENTS AND ASSOCIATIONS.

(Handed in—not printed.)

22 December, 1921.]

Miss E. C. WILKINSON, M.A.

[Continued.]

7809. *Chairman*: You are National Organiser for the National Union of Distributive and Allied Workers?—Yes.

7810. And you have come here, in the absence of your Joint General Secretary, Mr. Hallsworth, and of your General President, Mr. Jagger, who otherwise would have come to give their views?—Yes. This case would ordinarily have been taken by Mr. Hallsworth, but he is seriously ill, and, as I say, the statement has been hurriedly prepared, and for that reason I claim the indulgence of the Committee.

7811. You classify the membership of the Union, which I understand is an amalgamation of the Warehouse Workers' Union and the Amalgamated Union of Co-operative Employees?—Yes.

7812. Your membership, as we have already been told, is 130,000. You divide it into Co-operative Distributive employees, 80,000; Co-operative Productive employees, 10,000; and non-co-operative workers in wholesale warehouses, retail multiple shops and allied productive trades, 40,000?—Yes.

7813. Does that mean that it does not include any workers in ordinary retail shops?—No, it does not mean that, but I was just taking the very biggest, broadest classification. Our membership in the smaller shops, like the membership of any Distributive Union, is very small among the smaller shopkeepers.

7814. You are really predominantly co-operative; that is the biggest?—Yes, that is at present the biggest.

7815. And next to that come the wholesale warehouses and the big shops?—Yes, those are the main things.

7816. And just a small number in the small shops, chiefly, I gather, in Liverpool, Manchester, London, Glasgow and Birmingham?—That is so far as non-co-operative workers are concerned.

7817. Dealing first with the co-operative movement, you point to its importance. You say there are 4½ million adult co-operators?—Yes. My reason for entering in some detail into that is to show that when one is dealing with conditions in the Co-operative Movement one is not dealing with a small section of the Distributive Trade, but a very large section; and that is why I have used it for purposes of comparison.

7818. The 4½ millions are members of Co-operative Societies. What is the number of workers in the Co-operative shops and factories?—We reckon that we have in that 90,000, about 80 per cent. of the total of co-operative employees that there are in the country, and that figure is generally agreed to, and, I believe, is also quoted by the employers.

7819. Then the total would be something over 100,000?—Yes, about 110,000, I think.

7820. Then you refer to the co-operative minimum wage. That is a scale which was fixed at the Congress, I think, in 1908.—What happened there was that the old Amalgamated Union of Co-operative Employees and the Women's Co-operative Guild had a very long propaganda to get a basic minimum in the co-operative industries, and we got this scale, which is known as the Congress scale. It was passed in 1908. It was not immediately put into operation, except by the biggest societies. It took a good deal of trade union action before we got it generally accepted, but by 1914 this scale of 17s. for women at 20, and 24s. for men at 21, was in general operation. I quoted that scale, if I may say so, because it seemed to me the first important move towards general regulation of wages in the distributive trades.

7821. This was for all trades with which the co-operative movement was concerned, I suppose?—Yes; that was the bedrock basic minimum, except, of course, as far as actual craft workers were concerned—those such as bricklayers or engineers or plumbers; but this is both a distributive and a productive scale, because the Co-operative Wholesale Society, with its large productive factories, also adopted it.

7822. And, of course, their business includes a very great variety of trades?—Yes, quite. I quote here something like 24 different branches of grocery, drapery, hardware, boots and shoes, butchering, furnishing, etc., and I have been informed since that that is not exhaustive—that the Leeds Co-operative Society has actually more departments.

7823. And that scale was the basic minimum for all general workers?—Yes.

7824. *Sir Arthur Pease*: Have you a similar scale to-day with other rates?—Yes, I go on to point out that we have many trade union agreements since this scale was adopted. In every case we have that basic minimum in view, and if you will turn to the schedules 2 and 3, you will see that those trade union rates have in fact been built up as time goes on on that original scale.

7825. That is not quite my point. My point is, this was a basic scale at that date on which trade union rates were based. Have you another scale on which trade union rates are based to-day? Have you altered this basic scale?—No, the basic scale still exists, but of course it is very much of a basic scale, because the distributive Trade Board rates, as I say in schedules 2 and 3, are very much increased in amount; but you see they all follow the general lines. For instance, skilled shop assistants go up to 22 or even to 25 years; but you still find that the backbone, as it were, of the trade union agreement is this old Congress scale.

7826. *Chairman*: The summit has got further from the base, but the base still remains?—Quite.

7827. Of course, anything above that was at that time the subject of bargaining?—That is so.

7828. You argue that as one section of the trade has successfully worked a minimum rate, it ought to be possible for one Trade Board to fix a minimum rate for all distributive trades?—Yes. I do not want to seem to be arguing too much from the particular to the general, but I just wanted to refer there to the fact that the figures I gave of the size of the co-operative movement show that it is possible. I think, to draw a general deduction from what they do to what the whole trade might do.

7829. Are some of these co-operative shops in small villages?—Oh, I should say in almost every village of the British Islands the co-operative societies are found.

7830. This applies right through the large towns, small towns, and villages?—Yes.

7831. That is as far as the basis goes?—Yes.

7832. *Mr. Bell*: Some of the places in the outlying districts would be covered by a small branch shop?—That is quite so. Some societies would have a radius of 100 miles. I believe, as a matter of fact, the square mileage of the London Co-operative Society is 230 miles.

7833. And a number of these branch shops may be managed, say, by one man and nobody else employed there?—That is so. Of course, they very often have a branch manager and one assistant, but there are cases where there is only one man.

7834. So that these small shops are to be compared, say, with the small trader?—Yes. I should say you have almost every grade in the co-operative movement from the man who manages by himself, or, as in the case of the Barnsley Co-operative Society—the one that I know of—with the assistance of his wife, right up to the very large shops that there are in the Leeds Co-operative Society.

7835. *Dame Adelaide Anderson*: I think you suggest that the trade union organisation operating on this simple basis should arrange for the adjustments between the large and the very small places; but what would happen where there was no trade union organisation?—Where there was no trade union organisation the workers would, of course, be protected as against the worst sweating by the minimum wage; but I, of course, consider that the workers as a whole should be organised, and that it is in their interest to be organised, and that no Govern-

22 December, 1921.]

Miss E. C. WILKINSON, M.A.

[Continued.]

ment can do that work for them, nor should try to do it.

7836. At least, in your industry there is sufficient organisation to begin upon in the Distributive Trades?—Well, hardly. The Distributive Trades, I should say, are amongst the worst organised in the country, and that would be made up for, I think, by the fact that there would be a basic minimum below which the worst people could not go.

7837. This scale provides simply for age, not for differing branches of the work?—Quite; it does not provide for age or for skill. You see, the shop assistant is a skilled worker, and the rates would be negotiated above this rate; but there is a vast mass of general work, and the rate up to 21 provides for the whole of that. It is the bottom in the trade, as it were.

7838. *Chairman:* You put it very clearly in your statement, where you say: "This follows the procedure that Trade Boards were intended to institute. We have always contended as a Union that Trade Board rates were not standard but minimum rates, and that trade union organisation, operating on these as a basis, should make the adjustments between London and Little Peddlington." You would also say between the normal worker of the lowest grade and the worker of the highest grade?—Yes. Then, of course, some Trade Boards are beginning to fix skilled rates, and those are working quite satisfactorily.

7839. But, of course, those are not minimum rates in the sense in which that expression is used in that paragraph, or in the sense in which it is used in Mr. Hallsworth's pamphlet of which you give us a copy?—Quite.

7840. *Mr. Poulton:* When you refer to that, do you mean a minimum rate for each grade or a minimum rate for the whole of the country?—Of course, as far as the juniors are concerned, I think that you should have a minimum rate for the whole of the country, and that any differentiation that takes place should take place above that age.

7841. Would that be for age or experience?—Well, I mean it would really be a combination of the two. A person who had had this experience would obviously be that old.

7842. The point I want to get here is that a number of objections have been raised by the employers; it has been said that to attempt to fix a rate for age only is very detrimental. What is your opinion of that?

Chairman: That is under 21 years of age.

Witness: I am sorry, I did not quite catch your point.

7843. *Mr. Poulton:* It has been said that a rate fixed for age only is detrimental to the young employee, and the employers have said it has tended to keep them out of the calling. Do you think that is so?—We have had a great many objections on that basis on all the Boards on which I sit; but, of course, most of the schedules actually provided for that by making different rates according to the different time at which a boy enters the industry.

7844. And do you think that should be met under the variation of the rates so as to deal with any special cases?—Yes, precisely.

7845. *Chairman:* And not only special cases, but it is met, as you say, by some Boards, by special provision in the rate which they fix?—If you take the Dressmaking Board, for example, there is a certain rate based on age, by which the girl who comes in at 14 works straight through to 18, and then gets her skilled rate after that. We have made provision for a girl who does not enter the industry until she is 17, or even until she is 18, but she still gets her age rate, and that is why I say that in practice the rate is a combination of both age and experience, so far as the Trade Boards are concerned. On those rates, if a boy comes in at 17, then he gets his rate for his age, so far as the Co-operatives are concerned.

7846. But is it not a fact that some Boards have made this provision, that if a junior comes in, say at 17, she does not necessarily get the rate for 17 at once, but she has a period of probation during which she

takes a lower rate, and only comes into the proper rate for a girl of 17 when she has passed that probation?—Yes, that is so. In some Boards they have just done it simply by—to take an example—giving them 3s. 0d. less for the first six months on the age rate.

7847. That has worked satisfactorily?—That has worked satisfactorily.

7848. *Mr. Poulton:* I mean you find no difficulty in having varying rates to meet those cases?—No.

7849. *Chairman:* Then you deal with the objection that the low rates, the rates which are at present being paid—it is not the rates at present being paid, but the rates at present proposed—would drive some employers out of the business?—Oh, yes, that is so.

7850. The Co-operative Societies have had to meet their competition, and do pay a reasonable rate of wages. Then what are these figures in this paragraph?—Those figures were taken from the Co-operative Congress Annual for 1921, and those are taken from the analysis of the whole movement, and that gives the share capital as £76,000,000 roughly, the total profit as £25,000,000, the percentage of profit thus being 33½ per cent. Of course generally the Co-operative movement pays interest, say, at 5 per cent. on its share capital, and then divides the rest of its surplus as dividend on purchases; and what I have done here is to take the whole of the surplus made, both interest on the capital and dividend on the sales, and I have expressed it, as a Joint Stock Company would express it, as dividend on share capital.

7851. *Mrs. Lyttelton:* But you have not stated that it is exempt from income tax, have you?—That is rather an interesting point. The Co-operative movement is not exempt from the excess profits duty, but on income tax we claim that, just to take an example, if an ordinary trader such as a furniture dealer ordered a suite of furniture for himself and sent it home, he would not have to pay income tax on the whole of the price that he paid for that.

7852. Only I mean it does not make it quite a fair analogy, because you are here treating it as an ordinary company which would have to pay income tax. You state that they made 33½ per cent. without putting the point about the income tax. You cannot use it both ways?—You are quite right on that, but the Co-operative Society does claim that it is not privileged any more than the man who deals with himself.

7853. You stated just now that you were treating it as if it were an ordinary company. If it had been an ordinary company it would have paid income tax, and therefore the profits would not have been so high?—Yes; you would reduce that 33½ per cent.

7854. To a very large degree.—But on the other hand the excess profits duty is paid on the whole sum; I mean this is not the whole sum that is made, of course.

7855. *Chairman:* Does that £76,000,000 represent the total amount of capital?—That is exclusive of the Co-operative Wholesale Society. The Co-operative Wholesale Society is not included in there; I am dealing there with the retail Societies.

7856. But is that the real amount of capital in those Societies to-day?—That is given in the Co-operative Congress Annual for 1921. I can only take that figure.

7857. Do you really think it is right that they make 33½ per cent. profit on their capital?—As a matter of fact, those figures are reduced by bringing in Societies which are not earning so much; but in an arbitration which I took before the Minister of Labour for Northern Ireland, we showed that right up to that period the average profit in the Belfast Co-operative Society had been 44½ per cent.

7858. That seems to be capitalism of the worst kind!—No, it is not capitalism of the worst kind, because in actual practice the people who buy the goods share the advantage. It does not go into private pockets. They could, of course, sell their goods more cheaply, I suppose, and not make profits

22 December, 1921.]

Miss E. C. WILKINSON, M.A.

[Continued.]

at all, but the old Rochdale pioneer said that that would not encourage thrift, and the idea of these dividends was to encourage thrift amongst the workers.

7859. *Mr. Poulton*: You mean by those dividends?—This is the dividend on sales and a percentage on share capital.

7860. *Sir Arthur Pease*: Are you quite sure you have not got the gross profit here, before taking off expenses?—I am quite sure that expenses are not included in that. I am only sorry that I have not brought the Annual with me, but I can produce it.

7861. They are not included?—They are definitely not included in that 33½ per cent.

7862. *Chairman*: They have been deducted, you mean?—Yes, the whole of the cost of distribution, the wages cost and establishment charges, have been deducted before that £25,000,000 figure was arrived at. I am quite sure about that, because I have had to take this particular kind of evidence when we were proving that Co-operative Societies could afford to pay more wages.

7863. *Mrs. Lyttelton*: Then the only reduction that could be made is on this income tax point?—On the income tax, yes.

7864. *Sir Arthur Pease*: Have you come across Societies which were charging so much more for their goods than that, with the dividend deducted, the price was practically the same as those of the adjoining shops?—That is what I think private traders very often put about; but it is very rigorously denied by the Co-operative movement, and I certainly have not found it. Certainly during the war the Co-operative Societies were in many cases on certain lines charging less than the private traders were, and were very bitterly complained of because of that.

7865. The case I have in mind was before the war; it was alleged then.—My experience of the Co-operative movement does not date to before the war.

7866. *Mr. Poulton*: Does not this total profit which you mention here really refer to the dividends to the members?—Quite; plus the 5 per cent. that is paid on the share capital.

7867. I want to follow up my colleague's question: Are there not, as a matter of fact, particularly in the north-east and north-west, a number of Co-operative Societies whose members insist upon a high rate of dividend, and therefore they charge more for their goods in order to have that high rate of dividend, as against the southern ones, who have a low rate?—I think that was perhaps true, especially before the war, especially in the case of the St. Cuthbert's Society of Edinburgh. That was the notorious case where, I think, they had a 4s. dividend before the war; but I should say on the whole those were very few, and that, generally speaking, in the industrial districts of Lancashire and Yorkshire the ordinary market prices were charged. With the exception, as I say, of the case of the St. Cuthbert's Society, where there were no bones made about it at all, the Co-operative Committees have always claimed, and I think justly, that their prices were the same as those of the private traders. I do not think it can be denied that during the war Co-operative prices were in some cases lower, and it was the Co-operative Societies which steadied what might have been even a worse inflation of prices.

7868. *Mr. Bell*: Would you agree that co-operative societies who desire to make a big profit and pay out a big dividend always have the opportunity of increasing the price of the commodity and thus have a margin of profit to distribute?—I think that might be so if they desired it, but I should say as a whole the members do not desire it. I know in the Manchester and Salford Society, in which I am particularly concerned, that is not the case. There was a statement made that the Equitable were actually charging more in order to get a higher dividend, and this was challenged at a quarterly meeting, and in actual practice was found not to be correct. Of course they could if they wanted to, but I do not think as a matter of fact they want to.

7869. *Dame Adelaide Anderson*: But the members consuming the goods would protest in time; they would not go on paying steadily a higher rate than the rate at which they could get commodities round about?—That is true; but I would like to point out on this question (which I think is quite important) that if you take, for instance, the case of butter, there has been a great complaint that the co-operative societies were charging more for butter than were the outside traders; but if you compared prices there, you found that a purer article, an article containing less water, was supplied by the Co-operative Society at a higher price, and the same is true of other Co-operative productions. The Co-operative Societies pay decent wages and they put on C.W.S. production, which is good production, and that of course is charged for at a higher rate than stuff coming from other factories. I think you could take innumerable instances, but if you investigate them you find it is not true that for goods of equal value the Co-operative Societies actually charge more than the private trader.

7870. *Chairman*: And your point is that they are able to pay good wages?—My point is that they are able to pay good wages, and that the profits of the distributive trades as a whole enable them to pay good wages.

7871. You put the cost of wages at about 5 per cent. on the turnover?—Yes. In 1917 the Co-operative Union estimated that it was 9d. per 2 on sales; that is 3½ per cent.; but considerable differences took place between that and the end of 1920 which brought it up to 1s. 1d., and that, I think, is a fair average. I think Mr. Cahill gave that also as the average for the private trade employer.

7872. Is that in the distributive trades, or on the whole?—No, that is purely wages cost of distribution, apart from establishment charges altogether.

7873. You point out that the distributive trade is one of those most capable of passing on its burdens to the consumer?—Yes.

7874. Now I understand that you have an argument about the attempt to base wages on what the industry is able to bear. I suppose that must enter into it to some extent?—I should think it enters in, when you are dealing with very highly skilled rates, but what I was dealing with here was that when you were dealing with, as it were, the basic level, the subsistence level, an industry ought to be able to pay that rate; it ought to be able to ensure a decent livelihood. I think I quote the Peace Treaty there, "The payment of a wage adequate to maintain a reasonable standard of life as this is understood in their time and country." It does not seem to me that there is a case for considering the small trader paying below what is enough to keep a man and his family in decent comfort. If they cannot do that, then they must make way for those who are more efficient. I do not want to seem to suggest that we want to abolish the small man, but if he is to compete he ought to compete with skill and efficiency, or, if one may say so, in the intimate contact with his customers and all the things the small man has the advantage of; but he ought not to be able to compete on cheap labour.

7875. You mean you must not have regard to what a particular employer can bear; but I suppose you must have some regard to what the trade can bear. Take the case of a trade where there is foreign competition; you must have regard to the fact, must you not, that if you put the wages too high, it may be killed by foreign competition?—That depends on what you mean; if you mean that English workers ought to work at coolie wages because certain products can be made abroad at coolie rates—

7876. That is not at all what I mean, of course.—That is where the argument leads you to, it appears to me. If you can take a certain product and you say: This can be made abroad, say, with the German mark at 1,000, or even by the Japanese or the Chinese, who will live on two meals of rice a day, therefore the English worker should be paid less, I say that is not fair—that the English worker's

22 December, 1921.]

Miss E. C. WILKINSON, M.A.

[Continued.]

standard has got to be maintained, and if we cannot compete on those terms, then there is something wrong with our policy abroad. For instance, in the International Labour Treaty there are attempts to get rates standardised, but I do not think we should bring down English rates to that level.

7877. Do you think that we should have no regard at all to foreign competition?—Of course, you cannot make a sweeping generalisation, but I should say that the foreign competition which should be regarded is the competition of similar kinds of labour, and that other means should be taken to prevent the competition of such very lowly paid workers as, say, the Japanese or Chinese, such as is being done by the International Labour Office. In the question of foreign competition you cannot just say that, without regard to all the factors of international trade or of the exchange, can you?

7878. I wanted to know whether you thought that no regard whatever should be had to the conditions of trade—whether you thought that the only factor to be taken into account is the cost of living here, or whether you thought that the state of trade and the prospects of keeping it alive ought also to be taken into account; not, of course, with a view to fixing anything like a starvation rate of wages, but still as affecting the rate to be fixed?—Quite so; but then my feeling about that is this, that on so many of the Trade Boards such as the one with which I am particularly concerned, the Dressmaking and Women's Light Clothing Trade Board, where you have a big export trade done, the employers can say: "We cannot afford to pay these rates because Germany can make these goods at so very much less, and consequently undercut us." I think that the method of dealing with that is not by attempting to reduce the standard of the English workers to the impossible level to which they would have to be reduced to compete with Germany, but that you have to deal with those factors in another way: you would have to deal with them politically—to bring political pressure to bear upon those responsible for those conditions, and not say that wage reduction is a universal panacea which solves every kind of ill.

7879. I do not know that anyone would say that.

7880. *Mr. Bell*: You might have the same industry carried on in your own country in different areas, might you not?—That is done, of course—not in the distributive trade, but you might in certain productive industries.

7881. And the argument might be used in one area "We cannot compete with the neighbouring area" ? —That is done, of course.

7882. Perhaps not on account of the wage but on account of some other conditions: one might be an up-to-date establishment and the other not?—Quite so.

7883. So that when you deal with the argument about what an industry can bear, are you of opinion that if that were taken into consideration you might have two different rates within your own country, because of either bad management or anything else?—That, of course, does exist at present where the trades are not organised, because, as I say again, people think that by reducing wages they can cover up their own inefficiency, and often the more efficient people can meet competition and also pay decent rates.

7884. *Chairman*: Your argument would lead to one minimum for all trades, would it not?—I am arguing on the distributive trade particularly, where, of course, with the exception of the shipping section of the wholesale trade, you have not to deal with foreign competition. It is a peculiarly home trade.

7885. I mean that your argument, so far as your answers about foreign competition and other matters are concerned, would lead to the conclusion that there should be one minimum basic wage for all trades?—Of course that might be an ideal, if it is workable, but I think probably if you got a very wide extension of Trade Boards, in practice after a considerable amount of work one would find, as one is finding for

instance in the various women's trades, that the minimum basic rates tend to approximate; but I do not mean to argue from that that it is possible immediately to have a national minimum basic rate.

7886. That is what I was trying to bring you to; because otherwise there is no reason for having these different minima in different trades, unless you are to have some regard to the state of the trade itself?—Quite so, at the beginning, because in all regulation, just as in everything else, you have got to go slowly at first.

7887. And while your negotiations abroad are going on, people have to live?—Yes.

7888. You refer to the point that most of the strikes have taken place in the Co-operative movement, and you think that the reason is to be found in the high proportion of organised workers among Co-operative employees?—That is so. May I say that the heading "Cave Committee of Inquiry" is a typing error; it ought not to be in and if it can be taken out I shall be glad. It has no reference whatever to the text.

7889. I have struck it out in my copy.—May I say with regard to the conditions which I quote here that these are none of them grocery conditions. Mr. Wright Robinson and myself, coming from the same Union, have carefully not quoted the same figures. Mr. Wright Robinson's figures with regard to Manchester warehouses deal entirely with grocery and provisions, and these deal almost entirely with what is known as the home trade, that is drapery, soft goods, and that kind of thing.

7890. This refers to warehouse workers' wages to a great extent, does it not?—Yes.

7891. And you cite some cases of very low wages?—Of course when these people were organised, these were not by any means the lowest. May I point out that of the men in Class A, where I say that 50 men are paid as low as 22s., out of those 50 men we had one man with 12 years' experience, another with 21 years' experience, and a third with 36 years' experience in the same firm, and he was then getting less than 30s. per week. In Classes B and C we had men getting between 30s. and 35s. per week, some of whom had up to 47 years' experience in the trade.

7892. One of them.—Yes; one had 35 years' experience, one 31 years, one 25 years, and one 24 years; and these were firms who, as you would recognise if I mentioned the names (as it would not be fair to do), are people with world-wide reputations. These are not people in little back streets, but these are the main Manchester merchants.

7893. This was in 1917?—Yes, before they were organised at all; and as you will see in the evidence before the Commission of Inquiry into Industrial Unrest, the average of the wages of these Manchester workers was given in 1917 as being under 30s. per week.

7894. *Sir Arthur Pease*: Was this early in 1917 or later in 1917?—I have the Report here.

7895. *Chairman*: October 13th, I think.—July 16th is the date of the Report.

7896. *Sir Arthur Pease*: There was a very marked movement in the direction of increasing wages all round in 1917?—Yes. By that time we were getting them organised.

7897. *Mr. Bell*: How did these wages compare with the wages paid by the same employers, not in their warehouses, but in their productive establishments? Some of these firms whom you mention have warehouses in Manchester, but also they have factories in some other parts of Lancashire. How did the wages compare with the wages paid by the same employers where their workpeople were organised?—Of course in the case of many of these that I quote, where you are dealing with Manchester goods, their factories would be regulated by the Unions in the cotton industry, and they would be paid the Trade Union rates, because that industry is almost entirely organised.

7898. That is the point I was trying to get: as to how the wages paid amongst the unorganised workers in the warehouses compared with the wages of the

22 December, 1921.]

Miss E. C. WILKINSON, M.A.

[Continued.]

organised workers perhaps in a factory working for the same employers?—With the organised workers they compare very badly indeed. The organised workers in the factories got much higher rates than these. You get women in the organised trades with higher rates than I quote here for men. The shirt factories, for example, of some of these firms were under the Shirt Trade Board at that time—it was set up before the war—but where they were unorganised they were very badly paid. I remember that in the case of one of these firms I had to deal with button-carding and the hook and eye trade, and that kind of thing, which was done in a factory by one of these firms, and the women were very badly paid. Their wages depended almost entirely on the state of organisation.

7899. I want to be perfectly fair. I was trying to get at a comparison for exactly the same kind of work—say a labourer or something of that kind working in a warehouse, as compared with a labourer working, say, in a cotton mill for the same employer, one organised, the other not.—The organised worker would be paid the district rate, which, of course, is higher than the rate which I quote. If you take the cotton mills, for example, there is a fair amount of general labour organised in a cotton mill which is not organised in the Textile Unions, but is organised by the Workers' Union or by the National Union of General Workers, as a rule. The National Union of General Workers in particular had a very large number of these men organised, and was getting organised rates for these people, ranging in 1917 up to about 60s. for the labourer. We were not concerned with them, because they were not on our particular job. These rates which I quote were paid to men who were doing much more skilled work in many cases, because they were not merely engaged in trucking goods about, but they were also engaged in checking invoices and all the usual things that a warehouseman does; and as my colleague reminds me, some of these men mentioned in my statement are salesmen.

7900. So that the difference in the wages paid by the same employer must be attributed to the organisation amongst the workpeople?—I should say entirely, because obviously if it were going to be done on service, the man who has had 47 years' service with a firm is entitled to more consideration than he has actually got. The firm could hardly say, for instance, that he was an inefficient worker; they had had 47 years to find out whether he was efficient or not.

7901. *Sir Arthur Pease*: Might he not be becoming inefficient?—Surely if he had given 47 years' service to one firm, a slight lack of efficiency due to his increasing age might be considered by the firm when they consider the work which he had done for them for 47 years.

7902. That was not my point. You were suggesting that he was becoming more and more efficient. He might have got over the top, that is all?—The same thing still applies; if he has gone over his crest he has given the very best years of his whole life to the firm.

7903. *Chairman*: Then you refer to some negotiations which went on, and some threats of a strike, and you say that there was a Conference and an Agreement reached for 40s. for a 50-hour week?—Yes, the Conference was only after Government pressure, as the result of the North-Western Commission on Industrial Unrest; and that is rather interesting in view of the Trade Boards, because the Home Trade Association said if they agreed to pay Union rates their competitors would pay less.

7904. Perhaps I may take the history which follows as read, and go to your constructive proposals?—Before you do that, may I point out the paragraph where I quote a specimen of the method adopted by one large firm to prevent Trade Union organisation. Now many of the employers have said that much of the work which is being done by Trade Boards ought to be done by the Trade Unions, and this is an actual copy of a document given to us by one of our members: "I hereby promise to serve R. & Co.

faithfully for the sum of"—giving his yearly income.

"I also affirm that I am not a member of the National Warehousemen's Union, and if I join the Union will at once let the firm know." This, again, is not a small employer; it is an employer of world-wide fame. If the Employers' Association say that the work which the Trade Board is now doing ought to be done by the Trade Unions, they cannot at the same time dismiss men for joining a Union, if they are going to be consistent.

7905. They do not say that.—No, they do not say it, but I think that is their practice, and the sinister remark, "if I join the Union will at once let the firm know," is evidence of what is done; and we have plenty of men who have actually been dismissed for joining the Union.

7906. *Sir Arthur Pease*: Without creating a disturbance with other people?—In the earliest stages of organisation, of course, the people were too afraid. They could not do it now, where we are organised up to 90 or 100 per cent, but still they are doing it to-day in those firms where organisation is very weak.

7907. But there are two stages: the one which you mention where the employer says, "I will not employ anybody who is in a Trade Union," as you suggested, and the other is where the workpeople say, "We will not work with anybody who is not a trade unionist."—But between those two there is a very great gulf fixed—months, or perhaps years, of organisation, and the difficulty occurs where you have the point where the employer is refusing to deal with organised labour, and then holds the threat of dismissal over everyone who joins a Union; and that is particularly the case when you are dealing with women workers.

7908. *Mr. Bell*: What would happen suppose that 100 per cent. of his workpeople let the employer know at once that they had become members of the Union?—I think that the gentleman would then call in the Trade Union official and give him a cigar, and be very nice to him; but he does not do that when you are only organised to 10 per cent. We find that organisation makes a noticeable difference in the attitude of employers who meet us.

Chairman: I think you sum it up where you say: "The employers cannot have it both ways. If they prefer that wages and conditions of labour should be arranged between their own associations and the organisations of their employees, then they must be prepared to stop the victimisation of employees who join the Union, to allow reasonable facilities for organisation."

7909. *Sir Arthur Pease*: Do you really think that there is a large amount of victimisation?—A tremendous amount, especially just now. We are having heart-breaking cases, where people have been organised to 100 per cent., and the employers say to us quite openly that they are taking advantage of the present unemployment crisis to have an open shop—to have unorganised labour. Of course, what is happening is that those people who remain union members are in deadly fear of that fact being known; they will not even go to the meetings, although they pay their subscriptions, for fear the employers shall know. Of course an employer can go to the Labour Exchange and fill the place of every one of them a hundred times. I do not say that a decent employer does it.

7910. *Dame Adelaide Anderson*: Are there not leading employers who are setting a new tone in encouraging organisation?—Yes.

7911. They exist in other industries than the distributive industry?—I should say that that is being done in some of the big West End firms, but my colleagues of the Shop Assistants' Union would know much more about that than I do. I believe that some of the big West End firms are at least not discouraging organisation; but in the distributive trade we are in exactly the same position with the trade as a whole as the position to which I referred when we were dealing with an individual employer, that is to say, that taking the trade as a whole, apart from the co-operative membership, there is a very small

22 December, 1921.]

Miss E. C. WILKINSON, M.A.

[Continued.]

percentage organised, and the employers as a whole are not anxious that that organisation should extend.

7912. It is a new idea?—Quite.

7913. But is there any evidence that the idea is beginning to sprout at all amongst the employers, such as one met with many years ago in the great productive industries, when the employers preferred that their workers should be organised?—I think that is true, and if I may say so, I do think that the Trade Board work has encouraged that feeling amongst employers. I know that on the Dressmaking Trade Board employers who before the Trade Board was set up would not meet a union, now that they have had some experience and realise that trade union officials are not the dreadful people they imagined, will have no objection to see them, and are beginning to say openly, "If we are organised we do not see why our workers should not be"; but that is, of course, in the beginning. It is growing. It was growing considerably during the war, but now, of course, the terrific slump has thrown all power in the hands of the employers.

7914. It has arrested it?—Yes.

7915. But the Trade Board is an educative influence in that direction?—I do think it is decidedly so.

7916. *Chairman*: We will now pass to your constructive proposals. First, you are in favour of one Distributive Trade Board, and, I gather, a basic minimum for the whole country?—Yes.

7917. *Sir Arthur Pease*: For that Board, not for all Boards?—No, for this Distributive Board only.

7918. *Chairman*: Then you suggest that the present staff of inspectors should be increased, and their control removed from the Ministry of Labour to the Trade Boards Office.—It is important to emphasise the need of more inspectors even in this time of national economy.

7919. Then you say: "The Union wishes to disassociate itself emphatically from the aspirations cast upon the Chairmen of Trade Boards and Appointed Members by certain of the employers who have given evidence. We believe that the Appointed Members have tried to be impartial, but some of them have been obviously hampered by their lack of knowledge of the trade. We believe it would be better if the Chairman continued to be nominated at present by the Ministry of Labour being, as is often the case, a man accustomed to weighing evidence, and that the Appointed Members should be chosen by the Ministry of Labour from a panel of workers and employers drawn up by the respective sides, working through the Advisory Committee of Employers' and Workers' Sides that at present exist." I do not quite follow that. Do you mean one panel of workers and employers to be used for all the Boards?—What I meant by that was that there is in existence now an Advisory Committee of all the unions who have representatives on Trade Boards, and an Advisory Committee of employers, through which all the employers' sides of Trade Boards are represented. That gives you an organisation which is not concerned with one, but with all, and our suggestion was that these respective organisations should draw up an agreed panel, and that the Minister of Labour should be free to appoint one of the people of that panel for any one of the Trade Boards which he has in mind.

7920. That is what I understand.

7921. *Sir Arthur Pease*: Do you mean a panel for each Board?—No, for all the Boards—a general panel from which any Appointed Member could be drawn for any Board which the Minister was going to set up.

7922. *Chairman*: Is there any advantage in that? Would you not really be just adding one to each side, although I agree an experienced one; but still, you are adding an employer to the employers' side and a worker to the workers' side?—That looks just as though it was doing that, but in practice what it means is that when a Trade Board is working and the two sides are negotiating, the employers, say, will go to the Appointed Members and say that such-and-such is the case, and then the workers' side will go and say that something else is the case, and

at present there is no check on either of these statements. Of course, in bargaining it is a very difficult thing, necessarily, to reveal the statement of one to the other, and we feel that if you had an employer and a worker, not necessarily connected with that particular section, but connected with the general trade, it would facilitate the process of bargaining—I say "bargaining," which is quite a wrong word, but I mean the process of negotiation—and it would be possible then for the statements to be checked and for the two sides to be kept better in touch with each other than when, as at the present time, you have people who do not know very much about it being pulled one way or pulled the other.

7923. You would still call on the Chairman to make the decision?—One is perhaps making a very big statement here, but it has seemed to me that in actual practice it is the Chairman who has the deciding voice anyway.

7924. Then you deal with the women Appointed Members, and you say that some of them, although excellent in charitable work, are not necessarily qualified to deal with these trade questions. That is really an appeal to the Minister of Labour to be very careful in making his selection?—Of course one says that, as I say in my statement, with a great deal of diffidence, but one has felt that the Ministry of Labour has felt that the women who have done a great deal of social work are perhaps not quite impartial; and certainly some of the women Appointed Members seems to have been completely under the dominance of the male side. In fact, one that I know has never yet spoken at a meeting of the Trade Board; and we do feel that the whole of the women's side is so important, in view of the rates which are being paid to women workers, that the Ministry of Labour might have a wider selection. While admitting that some of the women members are quite the best people that could be imagined, there are others who quite frankly are not.

7925. But still, the fact that a person does not make a speech does not always show that he does not have considerable influence?—That is quite so, but we have found also when appealing to various Appointed Members that the woman member, quite as a matter of course, seems to be quite ignored by her male colleagues. She does not seem to have any influence. One can tell whether people have influence or not, especially when you are meeting Appointed Members in their own room; and some of us women representatives on the Trade Board feel that while some of the ladies are the most charming people possible, actually they are not sufficiently experienced in social work or in public work to be able to make their influence felt.

7926. *Mrs. Lyttelton*: You do not want to make your point a personal one, do you? You want to make it on the class from which they are generally drawn?—Quite definitely that, if I may say so.

7927. *Mr. Bell*: Could you not raise exactly the same objections to some of the men who are appointed?—Very much so. I did not in any way want to be understood to mean that the whole of the male Appointed Members are perfect by any means. I suppose that we women get into the habit of exacting a very high standard from the women—there are so few of us really—who are on the work; but I know one of the Appointed Members that we have seems to be almost completely deaf, which makes it very difficult in argument to deal with him; and I am sure that he is quite an excellent person.

7928. *Dame Adelaide Anderson*: There is a certain difficulty in finding many women with full enough actual experience of industrial life and conditions other than those who are engaged in the industry?—That is true, but the point which I rather wanted to make was this, if I may say so, that that type of woman is in actual fact in only a small number of cases being appointed, and when I discussed this with an official of the Ministry of Labour quite informally, he said, "Yes, but you see the difficulty is the woman who has done a very great deal of social work has generally made statements which show that she is not impartial." I mean, if you are having that kind of

22 December, 1921.]

Miss E. C. WILKINSON, M.A.

[Continued.]

thing you are having the women who are being appointed having to be drawn from a very restricted class.

7929. Do you suggest that a higher standard of impartiality is being asked of the women upon the Boards?—No, not higher. Of course, I do not believe that such a thing as an impartial person exists; I believe it is as much of a myth as the economic man; but I do feel that the Minister of Labour, in endeavouring to get impartial people—people whom he considers impartial—has a wider field in the case of men, because there are, as a matter of numbers, more men engaged in general public work, and also there is the fact that the women who are engaged in social work have probably made stronger public pronouncements than their more cautious male colleagues.

7930. All you mean to do is just to lay rather more stress upon technical knowledge—knowledge of the industry?—Yes; not necessarily knowledge of any particular industry, but knowledge of how things work behind the scenes.

7931. *Chairman*: Then you suggest that the Minister of Labour should not be able to hold up rates for more than two weeks. We have heard a good deal about that; perhaps we may pass that. Then your next suggestion is that the period of objection should continue to be two months for new rates, but for variations one month, and after the objection period has expired the Board should have power to make alterations in the proposed rates based on the objections, without re-proposing the rates. I suppose you would limit that in some way?—Yes, I should limit it by saying that it must be based on the objections received, but of course one would say that it must not be too drastic. The only difficulty there, of course, is in defining what "too drastic" is.

7932. Would it be enough to say that they may make alterations with the consent of the Minister of Labour, and leave it to him to see that they are not so drastic that they really ought to be re-advertised?—Yes; though, of course, as a matter of fact that actually exists to-day. I mean, when we are coming to re-proposing there is always some doubt as to what we are allowed to put in the fixing notice which was not in the proposing notice. One would feel that probably, as you say, it would be better if the Minister had a final discretion, but a somewhat larger interpretation was given.

7933. Certainly. There should be a new provision in the Act giving express power to fix rates differing from the proposed rates, subject to the consent of the Minister of Labour?—Yes.

7934. That would give a general discretion?—Yes, quite so.

7935. Then as to representation, you say "The Ministry of Labour should be bound to appoint on to Trade Boards persons nominated by the responsible organisations on both sides".—Perhaps by trying to make it too short I have not quite explained what I mean, but I mean this: at the present time a Trade Union, for example, is asked to send in names of representatives, and it generally sends in a mixed list: a certain number of officials and a certain number of workers in the trade. The Ministry of Labour, as the result, I believe, of continual pressure from the employers' side, or as the result of their own feelings on the matter, are always trying to get the Unions to appoint more and more workers at the trade. We are dealing with a case now where we are asked to put on a worker instead of an official. In another case we put on an official whom they definitely turned down, and a worker was chosen instead. We say that we agree that a considerable proportion of the people on a Trade Board should be people who are actually working in the trade, but we do say that also a number of Trade Union officials should be there, because they are the people who are accustomed to represent the workers normally.

7936. I think no one has suggested to us that no Trade Union official should be there, but we have been appealed to to limit the number of Trade Union officials not engaged in the particular trade.—In reply to that, one says that the business of a Trade

Board partly deals with technicalities, but partly is a question of skilled advocacy on both sides, and obviously the workers, especially in the Distributive Trades, would be at a very great disadvantage if they were dealing on one side with employers who were used to the higgling of the market every day of their lives, and had nothing on the other side but workers who were not accustomed to all that kind of thing.

7937. You say "nothing on the other side." I tried to make it clear to you that no one has suggested that—at least, no one that I remember; the only suggestion is that the majority of those who represent each side should be persons who are in the trade, or who have had experience in the trade—that the number of mere advocates should be limited.—Yes; but, of course, in practice the difficulty arises where one Union has one member on a Board, where it is a small Board; there the difficulty arises as to whether that one should be a Trade Union official or a worker, and I feel that that should be left to the organisation itself.

7938. Ultimately the Minister must be responsible, must he not? He makes the appointments.—He makes the appointments, but, after all, these people are supposed to represent the organisations, and the organisations should be the people best able to know whom they want to represent them.

7939. He asks for suggestions from the organisations, which the Act does not compel him to do; they give him their suggestions, but he surely must decide whom he shall appoint to the Board?—My opinion is that if these Boards are to be really representative it should be the organisation which they represent that should decide on the persons.

7940. I will not argue it with you, but they do not represent the organisation; they are there to represent the whole of the workers in that trade.—Yes, in theory, but in actual practice the manner in which they are appealed to is, "How do the workers whom you represent view" so-and-so?

7941. *Mr. Bell*: Do you mean that if the Minister communicates with an organisation stating that he is proposing to set up a Trade Board and asks for nominations—it may be one nomination or it may be more—the Minister then should accept the nominations made by the organisation?—Yes.

7942. In an industry where, say, two out of every three are unorganised workers, if the Minister desires, as probably he will, that the unorganised workpeople should be represented on that Board, how does he obtain nominations from the unorganised workers; can you give us any information as to that?—I believe actually what he does is to send out investigators, and they suggest people; but it seems to me a contradiction in terms to have representation of the unorganised; you cannot represent the unorganised. An unorganised person who is on a Trade Board can only represent him or herself, because an unorganised person has no constituents, and unorganised people cannot, by the fact of their unorganisation, be grouped together into a constituency.

7943. *Chairman*: I should like to put this to you, because I want to follow it before we adjourn: do you think that if the Minister does not confirm the rates an appeal should lie to an impartial Court, such as the Industrial Court?—Yes. Might I say that the reason why my evidence is apparently cut into two is because I was originally only going to give evidence on women workers, but then I had suddenly to prepare the evidence for Mr. Jagger, and I had not time to incorporate my women's evidence in the general evidence which I had to prepare. That is why it is quite a separate section which is, as it were, left on its own.

(Adjourned for a short time.)

7944. *Chairman*: You were going to pass on to deal with the position of women workers. What is your chief point there?—The whole point with regard to this is to show the urgent necessity of an immediate extension of the Trade Boards to the other sections of the Distributive Trades. The reason why I put in this as a special schedule is that whatever the men's

22 December, 1921.]

Miss E. C. WILKINSON, M.A.

[Continued.]

rates are, they are nothing like as chaotic as the rates which are paid to women workers. I give you the rates and conditions in cafés of very large café firms. Their rates vary between 12s. and 17s., and in South Wales the rates are from 8s. to 10s. They have two meals a day of more or less indifferent quality, and then of course there is the possibility of tips, a very variable quantity depending a good deal on the kind of café, and also a diminishing quantity just now. Then with regard to the Drapery Trade, I was urging that because there you have really chaotic conditions—I mean you do not have a uniform condition of very bad sweating, but you have some drapery firms paying to their women as good wages as there are to be got by women in the country—

7945. You are speaking of distributive drapery?—Purely distributive now, and retail. Certain drapery houses do offer the women a definite career; I mean a girl who is very good at her job has in the drapery trade definite prospects open to her of well-paid, interesting and responsible work; but while that is true of a section of the drapery trade, it is also true that there are first of all great extremes, such as, of course, the very cheapest class trade—the penny bazaars and the threepenny and sixpenny bazaars—and also there is a very great deal of under-payment in what one might call the middle between the extremes of the well-paid show-room hand in a very great firm, and the badly paid girl in the very cheap class trade. I have given several points there to show the necessity of Trade Boards, because not only are these standards in many cases very low, but also they are very precarious, the result, for example, of the very large number of women who came to work during the war who did not work before, and who have now got to work, and their withdrawal from what were known as men's trades. They have continued to flood the channels of those trades which were open to women; and then the drapery trade especially is open a good deal to all kinds of insidious competition. There is the competition, especially in London, of the girl who has served an apprenticeship in the Provinces, and who has wanted to go back to the Provinces, and open a shop of her own and to say, "So many years with So-and-so"—a very big, swell house, which will stand her in good stead, and which will be a definite business asset to her; or she wants to go into a country district and say that she has been so long with one of the big West End houses, or, for that matter, to a lesser degree, with one of the big Manchester or Liverpool houses. She is prepared to come and work for her bare existence; it is a definitely paying proposition for her to do that, just as much as it is for anyone to get training.

7946. Of course, the Trade Board rate would shut her out?—The Trade Board rate would say that in return for the work which she gives—and, mind you, it is quite skilled work, because she has already served her apprenticeship—the employer should not take advantage of the fact—

7947. But he is not taking advantage of her: that is not your point; it is worth her while?—Yes.

7948. Your point is that the competition with the other girls sends their wages down?—Yes, quite so, and we definitely want to prevent the competition of the pin-money worker, whether she is doing it because she lives in London or a big town, and only wants pocket money, or whether she is doing it because she wants experience, because it is such very hard lines on the girls who have to live in lodgings and have their own living to earn.

7949. I see that. On the other hand, you are taking from this country girl who wants special experience the opportunity of getting it?—No, I do not think we are, because there is a demand for her in any case.

7950. You think she would be worth her wage?—Many employers say that she is more worth her wage than the girl who has started in a London shop, because in a provincial shop she has an all-round experience; she will perhaps have gone through all the departments, whereas in the London shop she will tend to stay where she comes in.

7951. *Mrs. Lyttelton*: In fact, I suppose economically she might get a higher wage than the minimum rate, because she would have had greater experience, but it tends to lessen competition if she simply comes for the basic rate, if there is one?—Yes, quite so; and the employer does get value for his money. If she is going to be given special training an arrangement with regard to premium and so on could be made, but the point is that she is not; she is coming there because she can go back and say, "I have been for so many years, or months, at this great house."

7952. *Chairman*: Are you coming to the juniors?—I had rather go on from them.

7953. *Sir Arthur Pease*: May I ask one question there: do they ever pay premiums for coming?—Some of them do and some of them do not. I mean the girls who would come into Regent Street from Wales—I believe Wales is the great recruiting centre for many of the Oxford Street and Regent Street shops—I think would not. Some of them do. The place where you get premiums sometimes is in one of the small shops which are frightfully high class, like the small shops round Bond Street, but that is rather different from the sort of thing to which I was referring.

7954. Would not Trade Boards prevent those premiums from being paid?—I think they do. I think that the Trade Boards prevent premiums except those which are paid within one month of the person starting work. I am rather quoting from memory, but premiums, I think, can be paid for apprentices if the total is paid within one month of their starting work—some safeguard like that.

7955. *Chairman*: That prevents what is nominally a premium being a reduction of wages?—Quite so; that is the idea.

7956. I wanted to ask you a question about juniors. You say that juniors are taken as apprentices or learners at extremely low rates, and except where there is a proper apprenticeship deed many of them get insufficient training?—Yes.

7957. Have you thought over the point from the girls' point of view—as to whether it is desirable to allow girls to become apprentices on a low rate provided that they have proper security that they are taught the trade?—One would be quite willing for girls to come in as apprentices for lower rates—not necessarily low, but slightly lower than those which are being paid to the others. For instance, in the Dressmaking Trade we have made provision for that. In that case we should regard a girl who is being trained and who is going to get a higher rate—say 2d. per hour higher than the girl in the wholesale light clothing—as getting a lower rate as a learner, because it is assumed she is getting training.

7958. I am distinguishing in my mind between a learner who comes practically on a weekly contract or a short contract and an apprentice who is bound for three years or some such period as that. It was suggested to us by more than one witness that it is very desirable, in order to train up people for these trades, that apprenticeship should be encouraged, and for myself I see no way of doing that except by saying that we limit the wage for learners: it must not be below a certain point, but if you take a girl as a genuine apprentice and undertake to teach her the trade, you can take her at a slightly lower wage?—I am very much in agreement with that, because I am very anxious to get as much training for women as we possibly can. We are suffering so much from floods of untrained and semi-trained workers; they are crowding the Labour Exchanges and the Rota Committees now, whereas if proper arrangements could be made—I do not mean in this particular trade, I mean in all trades—that they should get proper training, they would be much more useful.

7959. Then you were going to mention the next point, as to season hands?—Yes.

7960. That is another form of competition?—Yes, that is a form of competition. I was making some inquiries in Manchester, and I found that in two large shops there they only had about one-third of their staff who were actually permanent hands; they

20 December, 1921.]

Miss E. C. WILKINSON, M.A.

[Continued.]

engaged so many for the season. I know also, as a matter of fact, that in many of the London shops the same thing holds good—that a large number of girls are engaged for sale time. There is a very insidious form of competition there, all tending to break down the rates, from the girl who manages to get on for a few weeks. If she is a married woman who has possibly been with the firm, that is all right; she helps her income and helps the firm; but where she is deponent, as so many of these people are, on rushing round after the seasons and is living entirely upon that, she tends to offer to take less in order to be kept on permanently, and it is a very difficult form of competition to deal with.

7961. You could only deal with that by fixing a minimum, I suppose?—Exactly. If you fix a minimum then you may offer to take less than the skilled girl, but it is not there where the difficulty comes, because the skilled hand is worth her money. Any employer will pay for a very skilled person. It is not the tip-top people, it is the 90 per cent. of the trade who are more or less on the minimum, and who are always tending to be dragged down, that make the difficulty.

7962. You next refer to suspensions.—That, of course, is another form of competition, because you have there the income being very greatly reduced by the fact that the girl is turned out. You say, "Well, I do not suppose a Trade Board would help that; the girl would still be suspended if there were a dead season," and of course that is true; but the point is that her annual income would be higher if she got the present Trade Board rate than if, as at present, she is working for wages on which, quite frankly, many of them cannot live, if they have got to live on their own; and then when they are suspended they have nothing behind them; they have no savings, and the position of many of these girls is simply terrible when they are turned off during suspensions. In some cases it is not a question of looking for another job; they are connected with that firm, and the firm says that they will send for them when they want them, and the girl is kept hanging about sometimes for weeks without wages.

7963. Of course the fixing of a minimum rate will not prevent that?—It would not prevent that, but it would at any rate prevent her being employed on such low wages when she was employed. Is there not some danger that if you fix the minimum too high there will be more cases of suspensions?—If I may give you an example from another trade, in the Laundry Trade we found that when the rates were very low, as they were before the Trade Board—about 12s. to 14s.; I shall be giving evidence on this matter before you—an employer tended to have a very large number of people connected with his laundry, and none of them got a really decent week's work; they were there in rush times; but what we have found is that since the Trade Board rate there has been a tendency to stabilisation. He tends to keep fewer people, but he does tend to give them more regular employment; and when you have labour decasualised to that extent by a decent rate, you find that it tends—I am not putting it any stronger than that—to stabilise conditions to some extent.

7964. *Sir Arthur Pease*: Could not the difficulty of these rush periods be minimised by having more elasticity with regard to hours. Take a seaside place where the season lasts two or three months; if you had more elasticity in the matter of hours for those three months to make up for the rest of the year, could it not be met in that way?—I do not know how far that would be desirable. It is obviously not fair for an employer to work his assistants long hours during the season that suits him and exhaust them as a result. There is no doubt whatever that, say, at a sale time a girl who is at work eight or nine hours in one of those shops where people are literally fighting to get to the counter, by the time the present shop hours are ended is absolutely dead beat, and to increase hours would, I think only mean increasing the amount of sickness in the trade. I

do not think that you can get away from having extra hands taken on at seasonal times. What you want to do is to prevent them being used to break down the standards of the other people.

7965. What I was meaning was this: supposing an employee got a contract to be kept on for a year, would it be reasonable to make the time longer at one part of the year than at another part?—Of course, at a seaside place it is rather different. There she has long periods when I suppose she could recuperate. I do not think I would like to give a definite answer on that without thinking about it, but I should be definitely against it in the case of sales times, which come three or four times a year, and where the girls are working absolutely to the last limit of human endurance. During those sale times, I think, the hours are absolutely long enough.

7966. But in a seaside place there are slack times?—A seaside place is rather different from a sale. I do not suppose that you have ever been in one of the big drapery shops when there has been a sale time, but if you have ever had that experience—

7967. Once.

7968. *Mrs. Lyttelton*: It is a thing not to repeat.—(To *Sir Arthur Pease*): You do not sound as though it were a pleasant experience. It is very hard work for the girls behind the counter.

7969. *Chairman*: Then you refer, very rightly, to the cost of lodgings. That is an argument in favour of the contention that some decent wage ought to be paid, because in many cases the girl has to find her lodgings.—That is right, especially, of course, in the Distributive Trade, because so many of them are girls who come in from the country. I am not now speaking of people who come for experience, but people who definitely come to get the job. I find that it is so often assumed, quite unconsciously, when you are dealing with employers, that the girl has a home behind her, and employers will be much more sympathetic in dealing with men than in dealing with women. They say very often that the girls are filling in time between school and getting married, or that they come from a comfortable home, or that their fathers are engineers and their brothers are engineers, or something like that; but of course many of them have to live on their own. I think Mr. Cahill made the point that it was unreasonable to expect a maintenance wage for girls of 18 years of age, but if a girl has to live on her own, somebody has got to pay that.

7970. *Mr. Poulton*: You think that at that age she has had sufficient experience to earn a living wage?—I think a girl of the age of 18 ought to have a wage upon which she can maintain herself. Of course, in the Distributive Trade you have never finished learning if you are a really competent hand.

7971. *Chairman*: Then you refer to deductions for food and lodging. I suppose they are not strictly deductions, but that a lower rate is paid on the ground that food and lodging are given?—Quite so. On the Dressmaking Trade Board, for instance, it has been frequently raised that we ought to fix amounts for food and lodging for those who live in, but of course the difficulty is not as much as it is in the Drapery Trade. They vary considerably. I do not know whether you remember evidence given in 1909 before the Truck Acts Commission. There some employers said, even so early as that, that the cost was from 9s. to 18s., although an employer admitted that at 18s. he was not going to have "living in" any more; it was too expensive for him. We found, and the Shop Assistants' Union found, that 8s. was about what it cost him. He deducted a higher amount, or rather he said that that much was deducted from the nominal wage; and at the present time it is most arbitrary; the girl has no option; an employer fixes practically his own price for the food, or lodging, which he gives. I may say that even in the co-operative movement in some cases—not in all—we have had an awful lot of trouble to get fair rates placed on the food supplies. There is no living in there, of course.

7972. *Sir Arthur Pease*: Can the employer feed the girls better and cheaper than they can find them-

22 December, 1921.]

Miss E. C. WILKINSON, M.A.

[Continued.]

selves if they do it well?—That, of course, depends a good deal on the place. In London, where lodgings are very difficult to get, perhaps that may be so, but our point is that the employers do not actually give the girls the value of the money which they say they take from their wages, but in very many cases, especially in provincial towns, the girls say that they could keep themselves on what their employer says he deducts from their wages—what the employer says it costs him—and the rest of their wages better than the employer keeps them. Of course the tendency then is that you get rates reduced down to, as it were, a barracks existence wage.

7973. I take it that your answer means that in London it would cost the employees more to keep themselves than the rates which the employers charge, but that in the country it is the other way rather?—I am not an authority on the conditions of living in London as much as my friends of the Shop Assistants' Union are, because I have not investigated London. I have investigated in the Provinces, and I should say on the whole that it would depend. I mean, in some of the best houses in London which do give decent conditions the girls are probably getting more than they might get for the corresponding amount themselves, but in the worst cases, of course, the conditions are bad and the girls are herded together, and it would be better for them to be in lodgings by themselves, even if it were a great struggle.

7974. *Dame Adelaide Anderson:* Are these charges for living included amongst the deductions referred to in the phrase in the Trade Boards Act, "Clear of all deductions"? One of the advantages of applying Trade Board procedure to the wages of girls is that you have got a minimum wage clear of all deductions?—That is so.

7975. Would deductions for food supplied and for board and living-in be amongst the charges that would be excluded?—Of course, what in practice happens, taking the dressmaking trade as a case again, is that the employer must pay that amount, and it is supposed that if he arranges with his employee that she lives in, then they can agree upon a sum which is to be paid for board and lodging. That is the theory of it. Of course, in practice when the girls are employed—

7976. It is very uncertain?—I think it is quite uncertain, but we discussed it on the Dressmaking Board, and that is what we arrived at.

7977. I asked the question because you say: "It is also necessary that the amount deducted by employers for food or board and lodging should be regulated"?—We had that question before us to regulate it on the Dressmaking Trade Board, but it was decided to defer it, because there was not sufficient living-in in the Dressmaking Trade for it to be a crying need, and it obviously had to be left to the Distributive Trade Boards—

7978. Is that special in Manchester?—No, I am talking now of the Dressmaking Trade Board for the whole country; but we certainly assumed, and neither the employers nor the Appointed Members contradicted it, that we had the right to fix it on that Board.

7979. Is there any part of the country, to your knowledge, where the deductions by the employers for articles supplied—say, clothing—are particularly heavy?—Of course in some cases an employer will allow the employee to purchase clothing at wholesale rates, and that, of course, although it sounds an advantage, is, as a matter of fact, a very serious thing. As I quote here, in one case I was organising some girls in the north-west of London; it was during the war, when munition workers were getting high wages, and these girls were working for 5s. or 7s., plus, of course, their living-in, and they were very dissatisfied because the food was not sufficient. I asked them why on earth they did not change, and go to munition work, which would be better, and I found that every one of them owed considerable debts to the employer, both for extras to make up their food and also for clothes which they had had at wholesale prices.

7980. That was in England?—That was in London. I can bring witnesses to that, only, of course, one cannot mention the firms; but I think all of them would be known if I mentioned their names.

7981. I do not know whether you are acquainted with the Factory Inspectors' Reports. In some of those Reports, just before the war, it was reported that workers were in debt to the employers to more than the extent of their earnings for the year?—Yes, in this particular case I know that not in one case, but in two or three, not only were they in debt to that extent, but the employers sometimes did not pay wages on the day they were due, and sometimes not till three weeks after they were due, and the girls were "subbing," as they say, during that time.

7982. Does that continue, or do you know of cases only early in the war?—That continued, I know, until after the signing of the Armistice when the girls were in our Union, but after then when the slump started some of the girls were dismissed for joining the Union, and the others dropped out, so I do not know the latest conditions; but I am perfectly certain that if that happened when they were organised it will not be any better now that they are not.

7983. *Chairman:* This question of getting into arrears is a matter which is really outside the Trade Board question. I am considering how it bears on our Inquiry. There is nothing, is there, to prevent the Trade Board saying to-day that an employer shall not pay his girls who live-in less than so much per week clear?—Quite so.

7984. That is how it could be dealt with?—Yes; but in saying this I am only trying to urge that the drapery trade should have a Trade Board at once, because the conditions are infinitely worse in a large mass, though as I say in certain firms they are quite good.

7985. *Sir Arthur Pease:* Supposing effect were given to the other point which you take, that the Trade Board should fix what the value of living-in was, would it be a possibility to fix what they had to have for that living-in?—It would be rather difficult to draw up the menus, would it not? You would have to trust to the inspectors and to complaints there, I think, in actual practice. If the girls complained that they were badly done by, the conditions would have to be inspected. You could have some general phrasing; but that is a difficulty.

7986. The point which you mentioned about the menus is exactly the one which struck me.—We could not say that there must be oatmeal porridge and marmalade. It would be difficult, but on the other hand the inspectors are very good and very well trained, and, dealing as they do with all sorts of complicated questions, they could see whether, in their view, the accommodation and the food supplied met with the provisions of the Trade Board. I mean if they can deal with the very difficult questions which they have to decide, such as what is and what is not a subnormal worker, they could deal with the question merely of food and lodging and whether it is adequate enough, if it is only a question of deciding it on the calories, because in feeding a lot of people you obviously have definite menus, and the employers would have to decide, if it came to the point, on the number of calories on which it could be done. I do not say at all that it would be an easy thing to do.

7987. Of course it would mean an additional number of inspectors, and you are already saying that there are not enough?—At present there are not only not enough, but they are ridiculously inadequate, are they not?

7988. This would mean additional inspectors?—Yes, but I think that efficient inspection is a thing which reduces itself as you go along. Once you get the thing going and the worst abuse is removed, then things tend to keep more or less right without so much inspection. It is at the beginning that the amount of inspection is needed.

Chairman: I think the rest of your statement we have anticipated.

22 December, 1921.]

Miss E. C. WILKINSON, M.A.

[Continued.]

7989. *Mr. Poulton*: Have you any special or particular suggestion to make as to improvements which could be made for the administrative work of the Board?—Do you mean in connection with the inspectorate?

7990. No, in making the work easier with regard to the procedure as to notice of alteration or increase of wages—varying wages?—I make those suggestions in my statement, where we suggest that the Minister of Labour should not have the power to hold up rates, and also make a suggestion with regard to shortening the period of objections. I do not know whether that is what you mean; but I think those are quite minor points compared with the increase of the inspectorate which is so badly needed.

7991. *Dame Adelaide Anderson*: Before that you say that the staff of inspectors should be removed from the Ministry of Labour to the Trade Boards Office. What is the particular purpose which you have in view?—Our difficulty is that at the present moment the only thing we can do with regard to inspectors is just to send on complaints to the Ministry, and the Ministry, with a very small staff at its disposal, takes months before the complaints are investigated. We have claims held up for a long time. Then with regard to prosecutions the Minister has entire discretion with regard to that, and we feel that the inspectors ought to be much more closely connected with the Trade Boards than they are at the present time. As it is they are almost divorced, which means as far as that side of the work is concerned that the Trade Board can only appeal to the Minister.

7992. It is rather a question of number, I understand, from what you have just said: that is to say that increased numbers of efficient inspectors would do what you want?—I think they would do a great deal towards it, but I still think that even if you had a larger number of inspectors their work would be more efficiently directed by the head of the Trade Boards Office, than by the Ministry of Labour, because at the present time the staff at Montagu House and the staff at the Trade Boards Office are working entirely separately, and we cannot get at the inspector who, for example, has sent in a particular report. We cannot, for example, deal as we did with the very important questions which came up on the Laundry Board; we could not get at the inspector; the Ministry of Labour merely send us replies.

7993. But it is open to anyone to write to an inspector?—Yes, but it is hardly the sort of general complaints that I am dealing with; I am dealing with specific points which arise on the Boards. You may have certain piece-rate questions concerning the policy of the Board, and you want those questions dealt with, as it were, as a block, and you want to get at the inspector who is dealing with them, and

you want to be able to say that these should be dealt with at once, and in a particular way. At present we cannot do that.

7994. Of course the basis upon which an inspectorate should be built up is a big question, but there is a great deal in having the work of the inspectorate co-ordinated and systematic, and not directed by different persons. You are not proposing that the inspectors should be directed by each separate Board?—No, quite definitely not, because every Board would demand the whole of its inspectors for its own work. I mean that the administrative head of the Trade Board office—I am not talking about personalities now; I do not mean necessarily that he should be the head of the inspectors, but whoever is at the head of the inspectors should be controlled by the Trade Board Department, and not, as at present, almost entirely divorced from the administration of the Trade Boards.

7995. *Sir Arthur Pease*: You mean that on a difficult point the Trade Boards might ask the head of the Trade Boards to instruct an inspector to attend a meeting of the Trade Board?—Yes. We cannot instruct an individual inspector; that is the difficulty. We can have perhaps a head officer, or we can have one of the Ministry of Labour officials but no immediate connection with the individual.

7996. *Chairman*: You could not have several people ordering about the same inspector?—I think it would be a perfectly fatal thing to have every Trade Board doing as it liked with the inspectorate staff. I am not suggesting that, but I am suggesting that the present control of the inspectorate is in nothing like close enough contact with the Trade Boards.

7997. With the Trade Boards Department?—With the Trade Boards Department, yes.

7998. *Mrs. Lyttelton*: What is your opinion about Trade Boards dealing with skilled rates and the variation of rates?—You mean, should the Trade Board set up skilled rates?

7999. Yes.—I think they should set them up as sections. You would have one department of the trade considered as skilled, and you would have a separate minimum rate for that.

8000. You are really in favour of settling the minimum rate for each section of the trade, rather than attempting as a Trade Board to deal with varying skilled rates?—Yes, I am in favour of that.

8001. Quite definitely?—Yes, quite definitely, because I think so much of that work is definitely Trade Union work. If it is claimed that an unorganised person is unprotected, at that one says is that it is a pity, but they have their own remedy.

Chairman: We are very much obliged to you for your evidence.

(The Witness withdrew.)

Mr. ALFRED W. BURROWS, called and examined.

The Witness handed in the following statement as his evidence-in-chief:—

STATEMENT OF EVIDENCE of Mr. A. W. BURROWS, National Union of Distributive and Allied Workers.

In submitting supplementary evidence on behalf of the National Union of Distributive and Allied Workers, I am desired, on behalf of the 13,500 members in our Midland Division, to state that they are unanimous in supporting the continuation of the Trade Boards.

The Distributive Trades were, generally speaking, wretchedly paid in pre-war days, and the rise in the cost of living has, for a large proportion of them, only aggravated that position.

In 1910 our organisation (then known as the Amalgamated Union of Co-operative Employees) in the Midlands adopted a Scale of Wages for the Division, in which they incorporated what was known as the Congress Scale, which has already been dealt with.

This Scale gave principally the following rates:—

Juniors.	14	15	16	17	18	19	20	21	—
Boys ...	s. 6	s. 8	s. 10	s. 12	s. 15	s. 18	s. 21	s. 24	Per week.
Girls ...	5	7	9	11	13	15	17	—	

In view of the fact that the adult rates were for skilled grocery, drapery salesmen and women, these could not be termed extravagant demands.

In the Midland Division there are 141 Co-operative Societies, but after hard struggles, strikes, etc., we had made the following progress, as can be seen by our Annual Reports for the years mentioned:—

1913.—	Only 28 Societies had adopted the Scale.
1914.—	39 " "
1915.—	41 " "

In addition, a number of Societies were paying the Scale to males only, but although the Annual Congress

22 December, 1921.]

Mr. ALFRED W. BURROWS.

[Continued.]

of the Co-operative Societies had themselves adopted the Female Scale as a reasonable minimum rate, this was the big bone of contention. A few Societies in industrial centres had also agreed to pay higher rates for men than those mentioned.

Generally speaking, it was true that the Co-operative Movement, as a whole, paid higher wages to the ordinary employee than the private trade, and in negotiations to secure our Scale, we gained considerable information as to the rates being paid outside the movement.

In hundreds of instances we found skilled grocers, working in industrial centres, receiving 20s. and less per week, drapery salesmen of adult age receiving 20s. and 21s. per week, while youths were paid almost any small sum, as low as 7s. 6d. for those 18 years of age being found.

But particularly bad has been the pre-war treatment of women in distribution, as owing to a large number whose parents were willing to subsidise their earnings, the rates were appallingly low, so low, in fact, that one cannot imagine how those dependant upon their own wages managed to exist at all. Scores of cases were found where adult women were receiving 10s. and less for a full week's work, often of 60 hours.

The Midland Division contains, in addition to industrial areas, parts which are purely rural, and when in the autumn of 1916 we carried an active campaign into Shropshire and Mid-Wales, it was found that conditions here were extremely bad.

At the time we launched the campaign (September, 1916), the Labour Gazette gave the cost of living as being 50 points above July, 1914, but a few instances of wage rates will show the conditions prevailing:—

Adult Male Grocers, 18s. to 22s. per week.
First Hands Grocery (Male), 20s. to 24s. per week.
Adult Female Shop Assistants, 7s. to 12s. 6d. per week.
Branch Manageresses, 15s. per week.
Boys at Wages ranging from 5s. at 14 years to 14s. at 20 years.

The figures include those paid by private traders and some co-operative societies, but when an advertisement by the co-operative societies for an assistant occurred, they had a large number of local applicants, which pointed to the fact that the societies on the whole paid better wages.

Our first agreement with the Co-operative Hours and Wages Board for Shropshire and Mid-Wales was made in February, 1917, at a time when the "Labour Gazette" gave the cost of "All Items" as being 65 to 70 points over July, 1914, this settlement gave to many of our members advances varying from 7s. to 12s. per week, this being particularly noticeable with women in societies in Group 2. In the case of one branch manageress her wage was

doubled to make it 24s. per week, and in conversation with her we learned of others in that district, occupying similar posts in outside trade, who were as bad off as she had been.

Again, in September last, when cost of living was 161 points up, we had a dispute with a Lincolnshire society who were paying adult shop assistants 40s. and 45s. per week, adult female assistants 25s. and 28s. per week, while the head milliner who managed the millinery department, responsible for buying, got 35s. per week, but inquiries brought to light the fact that numbers of female drapery assistants in the town were getting 20s. and 24s. per week plus a commission, which in the most favourable case only came to 2s. 6d. per week.

As other witnesses connected with the Unions organising this class of worker have emphasised, there is a tremendous difficulty in organising them, as, owing to the low wages, they cannot afford to pay Trade Union subscriptions. Despite the fact that they perform a valuable function in Society, they are too often in receipt of wretched wages, and not working in large numbers together (and this is especially true of country areas), the discontent has been of the passive type, and in our opinion it needs the legal compulsory powers of a Trade Board to secure for a large number, the larger proportion in fact, a fair and reasonable standard of life.

Objections.

The main objections would seem to be largely based upon the inability of the trader in the rural or country districts to pay the rates, and carry on his business successfully.

This objection has been met in a large measure, in my view, by the A, B and C grading which has been adopted.

The Division I represent, containing, as it does, the following counties:—

Derby, Nottingham, Northampton, Lincoln, Leicester, Rutland, Stafford, Warwick, Worcester, Shropshire, Montgomeryshire, and parts of Huntingdon and Denbighshire,

has a large proportion of country or rural area within its boundaries. For the purpose of our Divisional Agreements with the co-operative societies in the Division, the societies are grouped into three groups, and the wages for Groups 2 and 3 are 7½ per cent. and 10 per cent. respectively less than Group 1. (See Schedule.)

Both parties to the Agreement of 1919 felt that some method of this character was necessary to meet the situation, and though we do not regard it as ideal, it certainly has, in the main, proved satisfactory.

The actual figures for Groups 2 and 3 work out as follows:—

Juniors.

		14	15	16	17	18	19	20	21
<i>Males.</i>		years.	years.	years.	years.	years.	years.	years.	years.
Group 2	...	14/4	15/9	20/4	25/-	35/1	40/8	47/2	66/7
" 3	...	13/9	15/2	19/10	24/4	34/3	39/8	46/-	64/10
<i>Females.</i>									
Group 2	...	13/5	14/9	18/11	23/2	30/-	31/5	37/-	41/7
" 3	...	13/-	14/5	18/6	22/6	29/3	30/8	36/-	40/6

These figures are higher than the rates proposed by the Grocery Trade Board, and we submit that co-operative societies in rural and country districts while paying these rates have been able, in addition to paying 5 per cent. interest on share capital and allowing for depreciation, etc., to return to their members as a dividend on purchases a very substantial sum of money.

This, to our mind, clearly proves that it can be done as a business proposition, or there is some special advantage in the co-operative method of business.

Let me quote from the balance sheets of a few societies in such districts.

Wirksworth Co-operative Society (Derbyshire).

Balance sheet for half year ending January 31st, 1921.

Share Capital, £4,223.

Half yearly sales, £22,794.

Net profit after paying 5 per cent. interest on share capital and allowing for depreciation, etc., £2,251, paid out at 2s. 4d. in the £ on purchases. If paid out on share capital would have meant a half yearly dividend of about 45 per cent.

22 December, 1921.]

MR. ALFRED W. BURROWS.

[Continued.]

Mayfield Co-operative Society (Derbyshire).

Balance sheet for quarter ending June 25th, 1921.

Share Capital, £2,198.

Quarter's trade, £2,586.

Net profit after paying 5 per cent. on share capital and allowing for depreciation, etc., £139 paid out at 1s. 1d. in the £ on purchases. If paid on share capital would have meant a further dividend for the quarter of 6 per cent.

Market Harborough Co-operative Society (Leicestershire).

Balance sheet for half year ending July 6th, 1921.

Share Capital, £50,768.

Half year's trade, £70,443.

Net profit after paying 5 per cent. on share capital and allowing for depreciation, etc., £4,072. Paid out at 1s. 2d. in the £ on purchases, but if paid out on share capital would have meant a half yearly dividend of 8 per cent.

Daventry Co-operative Society (Northamptonshire).

Balance sheet for quarter ending September 6th, 1921.

Share Capital, £28,082.

Quarter's trade, £33,676.

Net profit, after paying 5 per cent. interest on share capital and allowing for depreciation, etc., £1,620. Paid out at 1s. in the £ on purchases, but if paid on share capital would have meant a quarterly dividend of about 6 per cent.

Gainsborough Co-operative Society (Lincolnshire).

Taken from Annual Return to Chief Registrar under the I. & P. Society Act, 1893.

Year ending January 4th, 1921.

Share Capital, £129,083.

Annual trade, £304,323.

Net profit, after paying interest on share capital at 5 per cent., and allowing for depreciation, etc., £28,162.

This would have paid a dividend of about 22 per cent., which together with the 5 per cent. paid as interest, would give an annual return on share capital of 27 per cent.

With these results, which are all I have been able to gather together at short notice, it cannot be maintained that the proposed Grocery Trade Board rates cannot be paid and a business successfully run.

Surely the workers cannot be expected to subsidise inefficient management.

It should be remembered that in these districts the grocer's shop is more often than not of the character of an "emporium," carrying a large range of commodities, many of which have no connection with grocery. It is not unusual for the following to be included: grocery and provisions, drapery and haberdashery, sweets, ironmongery, corn and offals, boots, and last but not least, paraffin oil. He is in fact, the general supplier of the necessities of life.

In many of these shops it is a family concern, the man carrying on the trade with the assistance of his wife during the "rush" periods. They do not employ anyone but a boy to sweep up and run the errands, who may possibly be a "friend of the family," but whose chance to learn the trade is practically nil.

Where the trade warrants the employment of assistance, it would appear that this argument resolves itself into pleading the necessity to underpay the shop assistant in order that others may have cheap food, etc.

But does the customer get cheaper commodities from this class of trader? None whatever; he has no advantage, for one has only to make a purchase at such a shop to find that fact out. But surely the fact that our industrial centres, where higher wages will be paid, are crowded with "country" people

purchasing the commodities of life, is because they can shop cheaper and better.

It may possibly be urged that this class of trader is at a big disadvantage owing to his position, but there are several factors which have to be taken into consideration.

It is true that transport costs will be higher, and that buying in smaller quantities he has to pay higher wholesale prices. But on the other hand he has big advantages in the fact that rent and rates, two very serious items in industrial centres, are considerably lower, he has low advertisement charges, if any, and far less capital invested in "fixed stock."

What is true of the grocer and draper is also true of the butcher in these districts.

If, under these circumstances, it is the wages at the lowest Trade Board rate which will prevent him successfully managing his business, one is entitled to pity the poor lad, taken on out of friendship and given a training in the trade, and to ask if it is likely to make him a proficient worker?

Too many a youth has entered shop life on this "friendly footing," only to find out too late that he has never been trained in a manner calculated to make him a proficient worker. There seems but little real friendship in actions which lead in this direction.

What usually happens is that when he wants something more than "friendship" for a wage, he is too old for them, and he must seek employment elsewhere, when he discovers he has never learned his trade properly, and those engaged in organising shop workers all know the tragedy of these cases.

It is bad for the lad, for his parents, for the trade and the nation itself.

It is argued that the junior rates prescribed by the Trade Boards are too high, a fact which we dispute, but we do submit that it is highly desirable that the wages of juniors should be of such a character as to prevent an excessive amount of juniors being employed.

In the past, the custom was, particularly in the drapery and millinery retail trades, for juniors to work a period for nothing, and a further period for "pin" money. The effect of this has, without doubt, been to steadily increase the number of juniors in proportion to adults, thus steadily ousting adults from the occupation to be replaced by a junior at low wages.

That a sufficient quantity of juniors must constantly be trained to fill the natural vacancies is readily admitted, but when that number is greatly exceeded the adults suffer either by loss of their occupation, or they are forced to accept a lower wage in consequence of the economic competition of the low junior rates.

It further has the effect of compelling the employer to have some regard to the training the junior receives, and it materially assists in eliminating an early age those who are not adapted to the trade.

Further, the parent cannot be expected to subsidise the youth, and incidentally the employer, and the rates should be sufficient to maintain him or her. We would point out that at adult age the shop worker does not get the wages of unskilled labour.

It has been urged that the operations of the Trade Boards will cause greater unemployment.

Experience shows that for years prior to the outbreak of the War, a general speeding up had taken place in distribution. Newer and more scientific methods had been applied. The rise of the multiple firms and the co-operative movement had directed the attention of architects to the necessity for planning shops on a more scientific method.

It is obvious that the planning of a shop, quite apart altogether from such important matters as sanitation and ventilation, will have an effect upon the staff required to successfully and efficiently carry on the trade.

Badly arranged fixtures, narrow passages behind counters all mean more labour, and it is the rise of this new type of shop which has materially assisted in carrying out the speeding up.

22 December, 1921.]

Mr. ALFRED W. BURROWS.

[Continued.]

Naturally, too, the class of trade will materially effect the question, but, taking all into consideration, staffs to-day are, in my opinion, as low as they can possibly be. I do not believe that greater unemployment will follow, but that greater efficiency will result which will benefit all concerned.

Men Returning to Shop Life on Demobilisation.

It has been urged that the workers in the distributive trades are content with the present state of affairs, but there is a great deal of dissatisfaction prevalent amongst them, which but for the unemployment crisis would doubtless have come to a head.

The treatment meted out by a number of employers to "demobbed" service men does not argue well for the appreciation of the services these men performed in France, etc.

In hundreds of cases rates of pay were offered which would not enable them to live. Coming new into civil life, unused to the new conditions with respect to cost of living, often being only too anxious to get back to their families after such an experience, many accepted the rates offered, but experience soon pointed out their folly and they were determined to improve the conditions.

Let me quote you a few typical instances reported to me in 1919 and 1920.

- (1) A boot and shoe salesman married with four children offered 35s. per week.
- (2) A grocers' assistant married with children offered 40s.
- (3) A butcher (skilled slaughterman and maker-up of pork goods) offered 40s. for a week of about 55 hours.

These cases could be multiplied, but the effect has been to awaken those engaged in shop life, and they are profoundly dissatisfied with present conditions.

At the commencement illustrations were given of what were the rates prevailing in pre-war days, but to-day the conditions for a big percentage have not, comparatively speaking, appreciably improved. Below are given rates prevailing in sections of the distributive trade which we have organised since 1914.

Wholesale Grocery.

Unorganised until October, 1919, when the following is a selection of the rates paid, when cost of living was 120 points up:—

Males.			
Age	Occupation		Wage s. d.
44	Provision hand	37	6
67	Bacon roller	32	0
Adult	Warehouseman	37	0
63	Bacon washer	32	0
Adult	Bacon washer	28	0
52	Bacon roller	42	0
32	Prov. Department foreman ...	45	0
31	First counterman	42	0
55	Butter cellarman	38	0
52	Skilled counter hand (orders)...	45	0
52	Warehouseman	35	0
?	In charge of sugar room desp.	37	0
21	Order department	32	6
44	Provision hand	37	6
42	Head stock-keeper	45	0
50	Warehouseman	40	0
33	Warehouseman	35	0
48	Credit and Returns Dept. ...	35	0
Females.			
32	Tea packer	35	0
24	Tea packer	25	0
25	Tea packer	25	0
22	Grocery hand	25	0
22	Grocery hand	24	0
26	Cellar assistant	27	6
23	In charge of cellar	30	0
19	Counter hand	27	6

Hairdressers (Organised in February, 1919).—
Wages then in operation varied considerably, but best rates were:

30s. under 21 years.
50s. over 21 years.

plus a very small commission on fancy goods and tobacco.

Fishmongers.

Unorganised until January, 1919, when wages for adult males were 40s. per week.

Nothing was allowed for meeting trains in on Sunday during mackerel season.

Present Rates.

£3 10s. to £3 15s.. Double time for salting mackerel on Sundays, 1s. 6d. for each time they meet train on Sunday and no fish arrives.

One week's annual holiday.

Two weeks' sick-pay and then very generous treatment.

Pork Butchers.

Unorganised until end of 1918. Wages for adult males 37s. 6d. to 45s.

1921.

£3 10s. to £4. 2s. 6d. each visit to feed pigs on Sunday. One week's holiday. Full sick allowance. Wholesale price for own goods

Only last week, however, we secured the information respecting the wages of female drapery assistants in Derby, and found that 25s. at 21 years was practically the adult female standard, a wage only equal to 12s. 6d. in pre-war days, while male drapery assistants were receiving 40s. to 45s. per week, equal to about 22s. 6d. in pre-war days.

We are constantly receiving information of shop workers who, through the pressure of the times, are being forced to accept rates far below what it absolutely necessary to enable them to live at least decently.

Profits of Co-operative Societies.

That the distributive trade can pay these wages and successfully carry on is demonstrated beyond all doubt by the fact that co-operative societies, paying higher rates than those suggested by the grocery trade, successfully competes and returns to its members a substantial sum every year.

I should like to quote the balance sheet of a few societies, whose rates are far in excess of the proposed Trade Board rates, and who are making good progress. (*Specimens only printed.*)

It must be clearly understood, that with a co-operative society before the net profit is arrived at, the gross profit is charged with interest at 5 per cent. on share capital, allowances made for depreciation and for reserve. The net profit is the "balance for disposal" and is paid to members on their purchases and not as an ordinary limited company does, as a dividend on share capital.

Derby Co-operative Society.

Balance sheet for half-year ending June 29th, 1920.

Share capital, £698,165.

Half-year's trade, £944,120.

Net profit, £35,789.

Paid out at 1s. 6d. in the £ on purchases, but would be equal to about 4 per cent. on capital.

Pinxton Co-operative Society. (A mining and agricultural area.)

Balance sheet for quarter ending June, 1921.

Share capital, £49,795.

Quarter's trade, £14,088.

Net profit, £1,138.

Paid out at 2s. in the £ on purchases, but equal to a 3½ per cent. dividend on capital for the quarter.

Coolville Co-operative Society. (Mining and agricultural area.)

Share capital, £158,773.

22 December, 1921.]

Mr. ALFRED W. BURROWS.

[Continued.]

Quarter ending March 26th, 1921.

Trade, £148,200.

Net Profit, £12,836.

Paid out at 1s. 8d. in the £ on purchases.

Quarter ending June 25th, 1921.

Trade, £110,226.

Net profit, £6,566.

Paid out at 1s. 2d. in the £ on purchases.
(Covers the period of the colliers' dispute.)

Quarter ending September 24th, 1921.

Trade, £110,210.

Net Profit, £7,416.

Paid out at 1s. 4d. in the £ on purchases.

Total net profit for the nine months is £26,818,
equal to a dividend on share capital of 16½
per cent.*Ripley Co-operative Society.* (Mining and agricul-
ture).

Quarter ending June 25th, 1921.

Share capital, £492,537.

Trade, £143,500.

Net profit, £12,710.

Paid out at 1s. 8d. in the £ on purchases, but
equal to 3 per cent. on share capital for the
quarter.*Leicester Co-operative Society.*Balance sheet for half-year ending June 30th,
1921.

Share capital, £621,060.

Trade, £289,302.

Net profit, £32,351.

Paid out at 1s. 2d. in the £ on purchases, but
equal to 5 per cent. on share capital for the
half-year.*Long Eaton Co-operative Society.*This town has suffered amongst the worst in the
country with unemployment for a period of over two
years.Balance sheet for half year ending July 18th,
1921.

Share capital, £318,487.

Trade, £348,797.

Net profit, £13,922.

Paid out at 1s. 6d. in the £ on purchases, but
equal to a half-yearly dividend on capital of
4 per cent.

Summary.

In conclusion I desire to briefly summarise the
various points as follows:—

- (1) That prior to 1914, the wages paid in the distributive trade were extremely low.
- (2) That rates paid to-day are in a very large number of cases even worse than in 1914, bearing in mind the cost of living.
- (3) That the rates paid to-day in country districts are below any reasonable standard of life.
- (4) That the Trade Boards have made provision for these areas by having three Groups, viz., A., B. and C.
- (5) That it is possible to pay these rates is proved by the fact that the co-operative societies in country areas are paying higher rates and making substantial profits.
- (6) That a general analysis of the balance sheets of co-operative societies shows that the distributive trade can pay high wages and still retain a good margin of profit.

It would appear to me that the distributive trade should have one Trade Board only, and not the large number suggested. The rise of the modern emporium has materially changed the structure of distribution. In these large emporiums a drapery salesman works alongside a boot and an outfitting salesman. To have differential minimum rates would be to create dissension and friction.

By a unanimous vote our members have shown that they desire the continuation of the Trade Boards, believing that it is in the best interests of the nation as a whole.

SCHEDULE.

PRESENT SCALE OF WAGES IN OPERATION IN CO-OPERATIVE SOCIETIES IN THE MIDLAND DIVISION.

Group I—Societies.

Age ...	14.	15.	16.	17.	18.	19.	20.
Males ...	15/6	17/-	22/-	27/-	38/-	44/-	51/-
Females ...	14/6	16/-	20/6	25/-	32/6	34/-	40/-

Adult Males.—72s. per week.

Adult Females.—45s. per week.

Male Shop Assistants.

Age ...	21.	22.	23 years.
Wage ...	72/-	72/-	74/6 per week.

First Assistants.—(Male and Female.)

To have at least 4s. per week over the above scale in shops where not less than four are employed, and 8s. per week over the above scale where six or more are employed.

Definition.—The assistant capable of taking charge during the absence of the manager.

Branch Managers.

Group 1.—£4 6s. per week minimum.

Scales as per blue scale less 6s. per week.

Branch Manageresses.—55s. minimum.

Warehouse Managers or Foremen.—86s. 6d. minimum.

Transport Workers.

A.—Motor Mechanics, 86s. 6d.

B.—Motor Drivers, 76s. 6d.

C.—Horse Transport and Stable Hands, 72s.

D.—Transport Workers regularly taking cash or tokens shall be paid 5s. per week over the above rates.

E.—Sunday Stable duty to be paid for at the rate of 5s. for a maximum of five horses.

F.—That the above rates for Transport Workers shall apply to all persons 18 years of age and over, who are in charge of vehicles.

G.—That sub-clauses D and F shall not apply to Milk Deliverers.

Clerks.

Age ...	20.	21.	22.	23.	24.	25.	26.
Males ...	54/-	72/-	74/6	76/-	79/-	84/-	89/-
Females ...	43/6	45/-	47/6	50/-			

Check Clerks.

Males ...	21 years.
Females ...	72/-
	45/-

Charge Clerks.

To be paid additional rates according to their responsibility, by negotiation between the N.U.D.A.W. and the employing Society or District Hours and Wages Board, but in no case shall the advance be less than 12s. 6d. per week.

Special Cases.

Special cases shall be the subject of negotiation with the individual Society, and in case of disagreement it shall be referred to a sub-committee, consisting of equal representatives from the Joint Hours and Wages Board and the N.U.D.A.W.

Hours of Labour.

The working week shall not exceed 48 hours. The working week for clerical workers shall not exceed 44 hours.

Holidays.

Six working days' annual holiday with pay to all employees after 12 months' service, and for all adults after two years' service, 12 working days' annual holiday with pay.

Wages During Sickness.

Twelve days' full pay in any 12 months, where absence from duty is vouched for by medical evidence.

22 December, 1921.]

MR. ALFRED W. BURROWS.

[Continued.]

Overtime.

All time worked before and after the usual hours to be paid for at the rate of time and a quarter, with double time for Sunday labour. Fifteen minutes to be allowed, when necessary, for the clearing of shops.

That any class of labour not covered by the above minimum scale of wages shall be the subject of negotiations between the union and the employing society or the District Hours and Wages Board.

Group II Societies.

That the scale of wages for societies in Group II shall be $7\frac{1}{2}$ per cent. less than that for Group I. Except in Clause 6 where the exact rates are stated.

Group III Societies.

That the scale of wages for societies in Group III shall be 10 per cent. less than that for Group I. Except in Clause 6 where the exact rates are stated.

GROUPING OF SOCIETIES FOR THE PURPOSE OF THE MINIMUM WAGE SCALE.

Group I.

Birmingham District.—Birmingham, Dudley, Soho, Ten Acres and Stirchley.

Coventry District.—Coventry, Lockhurst Lane, Nuneaton, Rugby.

Derby District.—Bolsover, Derby, Ilkeston, Long Eaton, Pinxton, Ripley, Tibshelf.

Leicester District.—Barwell, Coalville, Hinckley, Leicester, Wigston.

Lincoln District.—Gainsborough, Grantham, Lincoln.

Northampton and Earls Barton District.—Northampton.

Nottingham District.—Annesley Colliery, Annesley Woodhouse, Bulwell, Cinderhill, Codnor Park, Hucknall Torkard, Kirsby-in-Ashfield, Langwith, Langley Mill and Aldecarr, Mansfield, Netherfield, Nottingham, Pleasley, Selston, Stanton Hill, Stapleford and Sandiacre, Warsop Vale.

Stafford District.—Burton-on-Trent, Stafford, Tamworth, Walsall, Wolverhampton.

Group II.

Birmingham District.—Alcester, Halesowen, Kidderminster, Worcester.

Derby District.—Wirksworth.

Leicester District.—Ashby, Burbage, Enderby, Fleckney, Hathern, Loughborough, Melton Mowbray, Mountsorrel, Oadby, Ratby, Rothley, Shepshed, Stoney Stanton, Whetstone.

Lincoln District.—Boston, Newark, Retford.

Nottingham District.—Ruddington, Southwell.

Kettering and Wellingborough District.—Kettering, Rushden, Wellingborough.

Shropshire and Mid-Wales District.—Oakengates, Oswestry and Shrewsbury.

Stafford District.—Cannock, Tipton, Wednesbury.

Group III.

Birmingham District.—Bidford, Fenny Compton, Highley.

Coventry District.—Atherstone, Blue Lias, Harbury, Long Itchington.

Derby District.—Lea and Holloway.

Kettering and Wellingborough District.—Burton Latimer, Desborough, Finedon, Higham Ferrars, Irchester, Irthlingborough, Market Harborough, Raunds, Ringstead, Rothwell, Thrapston, Walgrave, Wollaston.

Leicester District.—Barrow-on-Soar, Broughton Astley, Croft, Cosby, Great Glen, Groby, Glenfield, Huncote, Kirby Muxloe, Markfield, Quorn and Sapcote.

Lincoln District.—Spalding.

Northampton and Earls Barton District.—Brixworth, Brington, Cogenhoe, Daventry, Denton, Earls Barton, Ecton, Hackleton, Harlestone, Harpole, Long Buckley, Moulton, Pitsford, Yardley Hastings.

Nottingham District.—Keyworth, Lowdham.

Shropshire and Mid-Wales District.—Aberystwyth, Chirk, Ellesmere, Ironbridge, Prees, St. Martins, Welshpool and Whitechurch.

Stafford District.—Bridgnorth, Hollington, Mayfield, Rugeley.

8002. *Chairman:* You are midland divisional officer for the same union, the National Union of Distributive and Allied Workers?—Yes.

8003. You have some supplemental evidence to submit to us, a good deal of which consists of figures which we have read, and which we will take as part of your evidence. You refer first to the co-operative scale, of which we have heard?—Yes.

8004. And you refer to the progress which was made in getting those wages as shown by your reports?—My point there is that in the Midlands where we have a large agricultural or rural district, as well as industrial centres, even in the co-operative movement itself we have made very little progress in securing the adoption of that old congress scale, particularly with regard to the Midlands; and of course it is generally true that the co-operative movement pays better wages to the average employee than has been the custom in the trade outside.

8005. But you have progressed a long way in getting that scale adopted?—Yes, we have progressed somewhat.

8006. But still there are cases, as you point out, where astonishingly low wages are paid?—That is so.

8007. You say that scores of cases were found where adult women were receiving 10s. and less for a full week's work?—Yes; that was particularly true of Shropshire and Mid-Wales. In those districts where you have an agricultural area, even in 1916 and 1917 the wages paid when the cost of living had advanced considerably were what we could only regard from a trade union point of view as scandalous.

8008. I am taking this shortly, because we have read it through. You refer to your first agreement with the Co-operative Hours and Wages Board: that, I suppose, is an employers' association?—Yes, built up purely to deal with the wages question.

8009. For Shropshire and Wales?—Yes.

8010. You had an agreement with them in February, 1917, and that had a great effect on the wages that they paid?—Yes.

8011. In September last you say when the cost of living was 161 points up, you had a dispute with a Lincolnshire society who were paying adult shop assistants 40s. and 45s. per week, and adult female assistants 25s. and 28s. per week?—That was in another agricultural part of the country, where we found that those low rates were being paid.

8012. Did you succeed in getting them raised?—Yes, we raised them considerably. The matter finally went to arbitration, and those rates were raised considerably. They were raised to over £3 for the average adult male.

8013. When you say September last, do you mean September, 1920, or September, 1921?—I mean that for September, 1920, because in September last, of course, the cost of living was not up 161 points.

8014. You say that the main objections to the Trade Board seem to be based largely on the inability of the traders in the rural or country districts to pay the rates, and to carry on the business successfully. Has that been met by the system of differential rates in different areas?—In my view the grading put forward by the Trade Boards into Grades A, B and C, while it is not based on a perfect system (and it is, of course, very difficult to find a perfect system), does meet to a large measure the objection which is raised that the trader in the rural or country district cannot pay the rates. Under that he is not asked to pay the rates which are operative in an industrial centre, and to that extent his case is largely met.

22 December, 1921.]

Mr. ALFRED W. BURROWS.

[Continued.]

8015. How was that met in your agreement with the employers?—For the whole of the Midlands it has been met by a grouping into three groups. We did not take population as the sole factor, but we took it more on the zone system. We took the zone round an industrial centre, and made that our basis, the places included in the zone being regarded as industrial.

8016. Where shall I find that? Is it among these scales?—Yes, it is included in Schedule 3. You will find the grouping in the blue leaflet at the end of my précis.* You will notice there that the group is dealt with right at the outset. I do not and did not agree that three groups were necessary, but in negotiations for a settlement both sides have to give way somewhere.

8017. *Mr. Layton:* Does Group 3 include agricultural villages?—Group 3 is practically agricultural villages themselves. I think, if you will take the bulk of them, they are agricultural villages in the main. The first that catches my eye is Mayfield in Derbyshire, and the remarkable feature of it is that the societies which are now in Group 1 state very deliberately in the negotiations that they themselves are hard put to it to-day to maintain the same ratio of profit as the small agricultural villages which are in Group 3.

8018. *Sir Arthur Pease:* That is so all through, is it not? The big establishments are harder hit than the small ones?—I would not like to say all through, but I do think that in the distributive trades during these present difficult times the trader in the small place has an advantage.

8019. *Mr. Layton:* Why?—In the first place his stocks were never heavy when the crash came and reductions took place, and in the second place, systematically, or at any rate for as long as I remember, in distributive trades they have always been slightly in excess in price of the retailer in big centres. In the third place he has, in my opinion, a very big advantage in that his rent, rates and taxes are not as high, or by any means such a serious item as they are in an industrial centre. In my opinion he has great advantages.

8020. *Sir Arthur Pease:* The rates and taxes are a very much more serious item now than they were, are they not?—I think that would be more true in the industrial centres than in the rural centres, and therefore to-day the men in the rural centre is getting an even bigger advantage.

8021. *Chairman:* This was an agreement made with co-operative societies, was it not?—Yes.

8022. You give the rates which were agreed to, and you say that they are higher than the rates proposed by the Grocery Trade Board?—That is so. A comparison will show that the present rates in operation, even for Group 3, are higher than the rates which are proposed by the Grocery Trade Board.

8023. They have been able to pay those rates?—They have paid those rates, and, in my opinion, they have made a fair and reasonable profit on their transactions.

8024. On page 4 and onwards of your précis I notice you give figures showing the profits which have been made by a number of co-operative societies?—Yes, and all those co-operative societies, with two exceptions, will be graded in Grade A in the Trade Board rates. The two exceptions are Gainsborough, which will be in Grade B, and Market Harborough, which in the old Census returns would come in Grade A, but I do not know, and have not got the present figures of the last Census, so I cannot tell whether it has been transferred to Grade B, or not. It was just getting towards the border line. The rest will all be in urban districts, and be graded under A. My point is this, that the co-operative movement in these districts has been able to pay higher rates, and has made a fair and satisfactory return on a successful business, and therefore it ought to be possible for the ordinary trader to do exactly the same.

8025. *Mr. Layton:* When you speak of A and B,

you mean the Trade Board A and B, do you not?—Yes, I was speaking of the Trade Board A, B and C.

8026. *Chairman:* You put forward the argument in the middle of page 8 which we have heard from Mr. Wright Robinson, that where the trade warrants the employment of assistants it would appear that this argument resolves itself into pleading the necessity to under-pay the shop assistant in order that others may have cheap food, and so on?—That is our contention. We believe that the trader in the rural district can, with efficient management, make the profit necessary to pay a reasonable wage which will maintain an assistant in a decent standard of life, and still have finally for himself a substantial profit on his transactions.

8027. *Mr. Poulton:* As a matter of practice, do the employers who have put up that plea reduce the cost of their commodities below what is charged in other places?—No; I think everybody is bound to admit that the prices in rural districts are, on the average, higher than they are in industrial centres. Were it not so the people from those rural districts would not go to shop in the industrial centres at the week-end. There must be some advantage in shopping in those large centres at the week-end, or they would not do it, and it lies in the fact that they get a better selection at a cheaper rate.

8028. *Chairman:* There is something in the attraction of the town itself, is there not?—Not being fond of country life myself, I should think there would be, but the main attraction to compel a woman to carry home with her a large parcel of the necessities of life must be an economic one as far as she is concerned. If I may deal with a point which was raised this morning, it is not true on the average that the Co-operative Societies charge higher prices than anyone else. If they were to do that they would lose their market. There are cases where it is true that prices are slightly on an increase, but taking quality for quality, on the average the Co-operative Society is as cheap.

8029. *Sir Arthur Pease:* My argument was that where an article was 20s. in a shop, and the Co-operative Society is charging 23s., you have to get back the 3s. before the price is really the same?—If that were the case in actual practice, yes.

8030. I have heard it alleged that it was before the war?—It may have been alleged, but I say that these societies which I have quoted in rural districts—and I know everyone of them, having been there—compare favourably as regards prices with the prices of private traders; they are able to buy in the market and still pay the rates of dividend and make the profits that I have submitted.

8031. Does the Co-operative Society charge a different rate in the country district from what it does in a big centre?—No, and to illustrate that, let me take the Derby Society that spreads out over a radius of 40 miles: you can buy any article at the same price at their smallest village store as you can in the centre of Derby. One price rules throughout the Society. Then I can take you to the Alcester Society in Warwickshire: that district covers a radius of about 35 miles, and exactly the same price list rules for Little Pakenham as rules for Alcester itself.

8032. *Mr. Layton:* Do the women not go into town then?—Yes, they do; but they do not carry home their parcels. The attraction in town is the fashion, and so on.

8033. *Sir Arthur Pease:* That means that the rural people can live as cheaply in the country where there are Co-operative Societies as they can in the towns?—Yes, I believe that to be true.

8034. *Chairman:* I suppose in the case Sir Arthur Pease has put to you of a Co-operative Society charging 3s. extra profit, that would not go to the individual purchaser, but to the members as a whole?—But the profit being returned in ratio with the amount purchased, that extra profit would naturally go back to the party who had made that purchase.

8035. The whole of it?—There would naturally be some regard paid to management expenses, but in a case of that description it would go back in the

* See page 577.

22 December, 1921.]

Mr. ALFRED W. BURROWS.

[Continued.]

main to the customer. Of course I would not admit that it happens. The average working class woman of to-day has absolutely no money to play with, but she must find the cheapest market.

8036. *Mr. Layton*: Will you say what, in your view, is the justification for the difference in wage between groups 1, 2 and 3?—I think the justification in the main is the fact that rents in the country districts are, to some extent, lower, I did argue that the same minimum rate should obtain, but we were faced with strong opposition from that point of view, the other side putting up the case that rents were considerably cheaper in the rural districts.

8037. Was it based entirely upon rents?—Upon rents, and the production of a garden which is an argument that I will not admit. But you cannot get out of the minds of other people that both rents of houses and gardens are cheaper, and they maintain that it is cheaper to live in the country than in an industrial centre. The argument about rent is very largely a true one.

8038. You do not suggest to us that the profit of those societies in country districts is in fact more than in town branches of the co-operative movement, do you?—No, it is not more.

8039. In spite of the lower wages?—The country branch of a large society does not pay lower wages. To illustrate my point the Derby society pays the Derby rate even in a country village store which is controlled by the Derby society, because we contend that one rate should govern one employer.

8040. But you have three scales here?—Yes, but the Derby district is in Group 1, and all those branches are in Group 1.

8041. Then you might have a branch of the Derby Society, and in close proximity a local society in one of those villages?—You would not find that with respect to Derby, but you might find cases of that. I agree. Take Leicester: In Leicester you will find a case where the Leicester society has a branch at Anstey in close proximity to the late Markfield society, which is now taken over by the Coalville society.

8042. *Sir Arthur Pease*: Do not many of these co-operative society stores in very small places actually lose money, and are they not really carried on the backs of the big society?—I have yet to be persuaded personally that the co-operative movement will keep on any business long on which it cannot make a profit.

8043. Possibly they just do not lose, but they make their profits in big centres, and do not more than make ends meet in the small ones. Would you agree with that?—No, I do not agree with that, because the system of the co-operative movement, particularly with its grocers' shops, is not only to check the manager by a leakage system, but also to check the shop by the gross profits of the shop itself, and my experience is that if a man systematically comes much below the average, whether it is a country shop or a town shop, there will probably soon be an inquiry as to why that average has not been reached.

8044. You could not expect a man to make the same proportion of profits with a small turnover as with a big one, could you?—In certain circumstances, yes. If he is selling small quantities it is not an unprofitable business.

8045. Do you mean by that small lots to each person?—Yes. If you go into the poorer parts of any place where the people buy in small quantities, such as pennyworths, there is a bigger ratio of profit.

8046. I understood you to say that they charged the same price for the same article all the way through?—Yes, I think perhaps you are not following my argument, which is that if a person goes in for a pennyworth of anything which costs 1s. 1d. a lb., he naturally gets an ounce.

8047. *Mrs. Lyttelton*: You always pay more for anything which you buy in small quantities, whether in towns or in the country?—You can buy a pound cheaper than you can buy an ounce, where an article is 1s. 2d. a pound.

8048. *Chairman*: I suggest you can even buy one pound of something at the same price as two pounds?—Yes, that is true, but I should think you might very often buy a pound at a cheaper rate than you could buy an ounce. Take, for instance, an article which is 7d. a pound, if you buy a quarter of a pound you will pay 2d. for it.

8049. *Mrs. Lyttelton*: Your point is that the small trader can make proportionately as good a profit?—Certainly, that is my point.

8050. *Sir Arthur Pease*: It depends on the class of trade he is doing, does it not?—Yes, but in any case whatever the class of trade he can make a profit sufficient to pay the Trade Board rates, and still leave himself with a very substantial margin.

8051. If he has a sufficient turn-over?—If he has not a sufficient turn-over he has not sufficient turn-over to keep a staff.

8052. *Mr. Layton*: You have a Group 2 here in this agreement?—Yes.

8053. It appears to fall between Scale A and Scale B, so far as rates are concerned, because your Scale A here would correspond to your Group 3, and Scale B to some extent to your Group 1?—Yes.

8054. But you have here a Group 2 in which some towns appear to be above the 10,000 line, and in which most of them probably would be below. Would you agree as to the desirability of a further subdivision in the case of a bargain of this kind; a collective bargain—would not the argument be equally applicable to the Trade Board, and would it not furnish an argument for having a new group?—No, I think not, because the Trade Board rates are rates applicable to the country, and as minima are low minima. The proposed Grocery Trade Board rate is a low minimum rate for a skilled grocer, a skilled provision hand to receive. I contend that there is a high degree of skill necessary in the distributive trade, and such rates, in my view, are not rates that ought to be paid to a skilled man, but they are merely minimum rates on which a substantial advance ought to be negotiated.

8055. But you have made this arrangement under which the current rates paid by a society in Worcester are 7s. less than those paid in Rugby or Nuneaton?—Yes.

8056. That is a considerable difference, but in the Trade Board figures you would group those two towns in the same group?—There is not 7s. difference; there is a difference of $\frac{7}{8}$ per cent.

8057. I am looking at the wages in the middle of this Schedule?—Those are for branch managers. You are referring to page 8, I presume.

8058. Where are your general rates?—They are on page 7. You will find there is a summary behind that blue form which gives the rates for Group 1. For male shop assistants they are now 72s. at the ages of 21 and 22, and 74s. 6d. at the age of 23.

8059. What is the difference between the scales?— $\frac{7}{8}$ per cent. between Group 1 and Group 2, and 10 per cent. between Group 1 and Group 3, and that, of course, was arrived at by negotiation, and it does not follow that it is satisfactory to either side; it is a compromise.

8060. *Chairman*: Then you refer to the fact that sometimes boys are taken on at very low wages or none. I find that on page 8 of your précis?—Yes.

8061. And you say it is bad for the lad and bad for trade?—We think that the training, or the supposed training which boys receive, or are supposed to receive, in many of these rural shops is of such a character that when they reach the age when they want a wage to live upon, they too often find themselves seeking fresh employment, and being faced with the fact that they have never been properly trained, and do not know their occupation. There is a vast difference in the trainings received by the boys. As far as we are concerned we are very anxious that the boys and girls in the distributive trade shall receive the highest possible training, because we believe that there is a high degree of skill required in the industry itself. I do not believe that many of these rural grocers can train a boy properly.

22 December, 1921.]

MR. ALFRED W. BURROWS.

[Continued.]

8062. *Mr. Poulton*: Why?—In the first place, they have not the trade to show him and to train him in all the ways that are necessary behind a grocer's counter. To mention only one example, they cannot teach him the provision trade to anything like the extent that he can be taught in an ordinary store belonging to, say, a multiple firm or to a co-operative society. He will not see the different grades of bacon; he will not see the different cuttings up; and on the provision side particularly, dealing with bacon, a provision hand is either a source of great profit or great waste to the employer.

8063. *Sir Arthur Pease*: Then the conditions in this trade are exactly opposite to what they are in the dressmaking trade, because we have just been told that the training in the country is better than the training in the town in that trade?—There are exceptions in this matter. Some of the country shops, particularly those in market towns, give them a high class training, but, taken on the average, it is not true to say that it is an efficient training which is given in the country districts.

8064. *Mr. MacCallum Scott*: In the small country towns it would be good, but in the small villages it would not be good?—In the small country towns certain of the shops will be able to give a good training, while others will not.

8065. I suppose the same thing will apply in the big towns; in London there would be some shops which could not give a good training?—Yes, that is true, because there are some men who could not impart it.

8066. *Chairman*: Dealing with the question of unemployment you say, "It has been urged that the operations of the Trade Boards will cause greater unemployment."—I believe that to be true in the main.

8067. The numbers could not be reduced without touching the efficiency, could they?—That is so; they could not be reduced without touching the efficiency in the shops. Our experience this year, in particular, has been that the distributive worker has been flung haphazard on the unemployed market, and staffs of shops have been so reduced that they have got beyond what we believe to be the absolute minimum for efficient service. We want fully skilled shop assistants. A shop assistant has not only to be a salesman (and salesmanship demands a fairly high degree of skill), but also any of you who have read the great advertisements which the London colleges put forward will realise readily that salesmanship is not something to be very easily gained. Apart from that fact, if you take the provision hand, he has handed to him a side of bacon, perhaps, which is charged to him at a side price, and he has to make that price up by charging various prices for the various cuts. A high degree of skill is necessary to enable that man to be right at the end. Suppose he has an ordinary roll of bacon, or particularly some of the Irish rolled bacon which has been coming into England lately; there is a solid 2 lbs. of fat at each end, and while it may be true that in country districts they like a good deal of fat, that is not so in towns, and the waste and the loss to the employer comes in where an unskilled provision hand has been cutting that bacon, and two large end pieces are left. A skilled provision hand will not leave large fat pieces at the end to be sold as fat to the waste man. Again, you must have a high degree of skill to be a good salesman. Is there anyone who will suggest for a moment that a drapery salesman is not a skilled man? He must be skilled, and in addition to that high degree of skill he must have a great deal of patience.

8068. *Chairman*: The patience is not always on the one side!—But it always has to be on the side of the employee.

8069. Then you refer to the low wages for the ex-service men on demobilisation, and give some instances.—We give these illustrations to show that even when men were being demobilised the rates were low.

8070. You put in an agreement between the hair-dressers in Leicester and the Union.—Yes, the reason we have done that is to prove that the trade can pay a fairly substantial wage and yet make a profit. I might say with regard to those wholesale grocers quoted we can give you the present rates in operation. The present organised rates in operation are, for adults, 55s. to 65s.—I have classified them so as not to read out every individual case—and for foremen, ranging from 70s. to 85s.

8071. Which do you wish to compare those figures with?—We compare them with the figures given here of the wholesale grocery when they were unorganised.

8072. That is at the top of page 11, is it?—Yes. I have not given the full detailed figures. It is just to give you an idea that these rates can be substantially improved and profits made by the employers.

8073. Then perhaps we need not go through these next figures in detail; but you give another set of cases, and you deal with the profits of the co-operative societies.—And all the societies quoted will be in Scale B, every one of which is paying Group 1 wages on our scale, and they are making what I regard as being reasonable profits even in 1921. You will notice that these balance sheets are all for the present year, the year of the slump. I have not quoted last year, feeling that the figures given this year were even more important from our point of view, and particularly is it true with regard to Long Eaton, where the lace trade is one of the staple occupations, or was, I should have said, one of the staple occupations. For over two years that town has suffered fearfully from unemployment, being one of the six worst places in England; and despite the bad trade, despite the fact that this society believes it has reached as a society the rock bottom of the trade that it is possible for them to reach if the people are going to live at all in Long Eaton, even still it has made a profit, and its prices are so keen that they have competed a good many of the people off the market place of Long Eaton itself, proving that they can cut the price; and if they can do that, our point is that so can, and does, the ordinary employer.

8074. *Sir Arthur Pease*: Are they charging less at Long Eaton than they are at other places?—No; I should say that Long Eaton will be charging less in some cases than in others, but their rates are so low that they have now taken a stall on the market place, and they have competed with the butchers there and competed a good many of them off the market place.

8075. *Mrs. Lyttelton*: I suppose you would admit that they have one great advantage over the small trader—that they can buy in far greater bulk. A big society with branches all over the place can buy in greater bulk?—Yes, but buying in far greater bulk to-day is not an advantage. It is a much greater advantage to-day to be able to buy in less quantities, because one never knows to-day where the market really is, and while they have under normal circumstances an advantage in that direction, they have also got the fact that their interest on the money has got to go on all the time.

8076. Still, broadly speaking, it is more to the advantage of the big co-operative trading society than to the small owner?—Speaking economically, of course, big businesses are always more profitable and more economical than are smaller businesses.

8077. I mean, it is not quite fair to compare a small co-operative shop in a village with a small privately-owned shop in a village?—But the case I have quoted in support of my argument is that in rural districts they are all small self-contained rural societies; some of them have only one shop; they are owned by the villages themselves, and I have not in any one of those cases quoted a big society. I have purposely taken the very small societies which can only be called rural societies, managed by men from the farms.

8078. *Chairman*: Then on page 16 you sum up your points: "(1) That prior to 1914 the wages paid in the distributive trade were extremely low; (2) That rates paid to-day are in a very large number of cases even worse than in 1914, bearing in mind the cost

22 December, 1921.]

Mr. ALFRED W. BURROWS.

[Continued.]

of living; (3) That the rates paid to-day in country districts are below any reasonable standard of life; (4) That the Trade Boards have made provision for these areas by having three groups, viz., A, B and C; (5) That it is possible to pay these rates is proved by the fact that the co-operative societies in country areas are paying higher rates and making substantial profits; (6) That a general analysis of the balance sheets of co-operative societies shows that the distributive trade can pay high wages and still retain a good margin of profit." Then you are rather an advocate of one Trade Board for the whole of the distributive trades?—I am an advocate of one Trade Board for the whole of the distributive trades. I believe it is possible, and I think our experience in arranging rates has proved it to be possible, to have one Distributive Board, because if you have to face the difficulty of there being varying rates for shop assistants in your large emporiums, it is going to create a great deal of friction where two shop assistants are working different classes of articles. Very often there is only a small difference between the articles themselves, and to find in many instances the difference in the degree of skill would be chasing relativity all over the earth, and we feel that if you have two varying rates it is going to lead to greater friction and more trouble inside the distributive trade.

8079. It was suggested to us that there might be three Boards; one for provisions, another for soft goods, and a third for other distributive trades. What do you say to that?—Well, that would certainly be far better than the 30; but I do believe that the one would be better even than three. Still, I would prefer three to the suggested number put forward.

8080. I suppose it might be said that a Board representing all distributive trades would have to be a very large one?—I think with organisation on the employers' side and organisation on the workers' side a true representation of the country could be found. But in my opinion the bigger the Board the less effective it is likely to be.

8081. *Sir Arthur Pease*: The bigger in numbers, you mean?—Yes.

8082. *Chairman*: That is why I put the point to you: You mean that the Board need not be very large if the employers of all the trades got together and selected their representatives, and so with the workers?—That is my view.

8083. That would be a way of reducing the numbers?—Yes.

8084. *Sir Arthur Pease*: Would it not be possible if the Board was rather large to keep one Board and split it into sections dealing with the different branches?—Yes. Of course, I am speaking without any practical experience on a Trade Board, but it would appear to me as an onlooker that there are difficulties in that direction.

(The Witness withdrew.)

Mr. JOE COULDWELL, called and examined.

The witness handed in the following statement as his evidence-in-chief:—

On behalf of the Federation of Journeymen Butchers, I wish to point out how necessary is the continuation of the formation and bringing into operation of Trade Boards, especially in connection with the meat trade as a whole.

Previous to the war the rates of pay on an average were not more than 30s., and the hours worked anything between 80 and 100 per week.

During the war and the operation of the Food Control Board the rate of wages was more than doubled and the hours lessened by almost one half, especially in the case of shopmen.

Since decontrol, and the employers in the meat trade being able to return to more normal conditions, the majority are again gradually drifting back to the old conditions of low wages, and as the employers have no method of enforcing any particular

8085. Of course, there would not be if you were going to fix one minimum rate; but there are all the questions of subnormal people, and that could be dealt with in each section separately, could it not?—I think it is possible that they could. As I say, I am speaking without practical experience on the Board itself.

8086. *Mr. Layton*: What sort of organisation do you have for fixing these Midland rates with the Co-operative Societies? Have you a Board covering the whole area?—The Co-operative Societies in each district have fixed up what they term an Hours and Wages Board, in reality an Employers' Association, in the 10 districts. One from each of the 10 districts is sent on a central body known as a Joint Wages Council, and we meet that Joint Wages Council.

8087. How many persons would be present at those meetings?—They have 11 on their side, and we simply meet them as an independent body and discuss and negotiate. It is not by any means a Conciliation Board.

8088. That covers the Midlands?—That covers the whole of the Midlands, and what is true of the Midlands is true of the North-Western, the Northern and other districts; but not the South.

8089. That covers all the Distributive Trades, not merely the Provision Trade?—All the Distributive Trades of the Co-operative Society.

8090. You would obviously want a much larger body then to cover the Distributive Trades of the Midlands alone?—Well, I am opposed emphatically to District Boards.

8091. I was merely putting it to you as bearing on the question of the size of the Board you would have to have for the country as a whole?—I do not think that follows. It might be possible for them to have, for instance, a bigger council of the employers' side and a council of the employees' side, or a meeting or conference of that description; but it is not necessary for all that number to be on the Board itself.

8092. You say you are opposed to District Boards or District Committees of the Board?—I am.

8093. But that is the way you negotiate your own wages?—Yes, because we are hoping to advance towards a national settlement.

8094. And do you think that system of wages could be applied to the country as a whole without further complication?—I think the system of the Trade Board has adopted a minimum.

8095. I mean this agreement?—No, I do not think you could apply that. I am speaking quite personally, and for myself I do not think you could apply that generally throughout the country. That is why I am a supporter of the Trade Board to get a minimum—a base—on which it could be built.

rate of wages or hours through their local associations, nothing but a compulsory Act, will bring about a fixed payment and hours for the workers.

Although, as mentioned above, the butchers have not only local, but country associations, and also a National Federation, to which they are all practically affiliated, these are purely of a voluntary nature, and even when any of them agree on a certain rate of wages and number of working hours, if any individual member does not wish to fall into line with his association's recommendations, he simply falls out of membership and imposes such conditions as he thinks fit.

At the present time the National Federation of Meat Traders' Association and the Lancashire County Council of Meat Traders have recommended a 48-hour week, but in many cases this is not being adhered to, and we have one association wanting our agreement to a 60-hour week with a reduction of 25 per cent. in wages.

22 December, 1921.]

Mr. JOE COULDWELL.

[Continued.]

This is not an isolated case as a very large number of employers are working their men 60 hours per week, even where agreements for less have been made, and owing to the great amount of unemployment in the country, the men have either to submit, or be thrown out of work, and this increasing of the number of hours is tending to further increase unemployment.

It cannot be said with truth that employers cannot afford to pay the wages, as it is a well-known fact that during control and since, butchers have never made so much profit in their lives, and the general public have been plundered to a very large extent.

Further, I would point out that the Meat and its Allied Trades are of such magnitude, overlapping itself inside its own industry, as even in limited or multiple companies' establishments they have separate departments for meat, and the staff of particular departments do not handle other goods such as sugar, soap, ironmongery and other miscellaneous goods, but at the same time, during slack parts of the day in the shop, some of the staff may be drafted into the slaughterhouse, or room where small goods are made up, and with the small employer in the private trade and Co-operative Societies, this is the general practice, that it is most imperative that there should be at least two Trade Boards to meet the position as a whole.

A Draft Order was issued on January 11th, 1921, for a Meat (Distributive) Trade Board, but it has not started to function up to the present time. This delay is certainly uncalled for except from the employers' point of view in his having a free hand to bring about similar conditions to those which prevailed in the old days when "Butchers' hours were all hours."

The 14 definitions set out for this Board certainly cover the trade fairly well, so far as the slaughtering, preparation, selling and making up of small goods and bye-products of fresh and frozen meat are concerned, but there is still outside the scope of this Board the bacon factories who deal more particularly with pigs and their many small goods manufactures such as sausages, brawns, pressed and potted meats of many descriptions, glazed goods, polonies, etc.; and also the bacon and ham curing, boiling, steaming, or otherwise preparing for sale, and for this section a separate Board should be set up, as some 20 or 30 definitions are needed to cover the whole.

Along with both these necessary Boards is the preparation of guts and skins, or runners, in which sausages, etc., are filled, but as in some cases this is done by the workers in one or other of the departments it could be dealt with under its respective heading. In this particular industry, the old rate of wages for males was from 16s. to 24s. per week, for a varied week of "all hours when required," and generally running to 80 or more.

Considering that at least there are upwards of 40 or 50 different sections of workers employed in the above operations and that in every case both employer and employee are not connected in any way whatever with trade outside meat or meat products it is impossible for them to be represented even in part on any mixed Board consisting of other food trades, as it is only practical men who could deal with the position, and in order that all sections could be represented this would require a big Board if other industries were included, and it is computed that in the above-named trades at least half a million male and female workers are employed.

It is quite useless for employers to talk about Trade Board rates being the cause of more unemployment, as none of them pay wages unless they get value for the money, nor do they keep staffs in excess of their requirements. The fact that the hours they wish to keep their employees at work entirely disproves such statements and shows that if a reasonable number of hours were worked, they would be compelled to employ larger staffs in order to deal with their trade.

(Signed) J. COULDWELL,
General Secretary.

8096. *Chairman*: I think you are General Secretary of the Journeymen Butchers' Federation of Great Britain?—Yes.

8097. Those are working butchers, I suppose?—Yes.

8098. Are you a member of the Grocery Trade Board?—Yes, we have one seat on that Trade Board.

8099. Is that because they deal with bacon, and so on?—Yes, because there is a certain overlapping in some small directions.

8100. As regards meat there is a Trade Board formed, is there not?—The Draft Order was issued on January 11, but the Board has never become operative.

8101. It has not gone through?—No. Why that is so one hardly knows, because the Ministry of Labour issued a letter on August 23, 1920, saying: "I am directed by the Minister of Labour to refer to your letter of the 31st July on the subject of the proposed application of the Trade Boards Acts to the meat distributive trade, and in reply to state that the Minister is fully aware of the necessity for establishing a Board as soon as possible. In so large and complex a trade a number of difficulties of definition and demarcation are, however, bound to arise and, as you will appreciate, it is of the utmost importance that all such points should receive due consideration. Nevertheless good progress is being made, and the Minister hopes to issue at an early date the notice of his intention to apply the Trade Boards Acts to the trade. A draft definition is being drawn up, copies of which will be sent to your federation for their observations." That was on August 23, 1920, and then on January 17, 1921, I received a copy of the draft Order; and that draft Order has not yet been put into operation. Why it has been held up one can hardly conjecture, because the Ministry have had inspectors all over the country, and we have had two or three deputations to the Ministry of Labour in order to help to get the definition and the demarcation of the Trade Board, the people it should cover, and so on; and the report of the inspectors was that it would be absolutely necessary to have one Trade Board and possibly two. They thought it would be hardly possible to work it with one Trade Board, although one Trade Board might be sectionalised into two; because the bacon factories cover a big number of employees, and they can hardly be compared, or put on the same lines as the meat trade. Of course, what is meant by the meat distributive trade is not altogether simply the retail trade, but it also covers the wholesale slaughtering and the wholesale from the market. I presume you have copies of the draft Order?

8102. *Chairman*: Yes. There was an opportunity for objections, and I gather from what you have said that questions have arisen as to definition, and so on, and as to whether there should be two Boards or one. Am I right in understanding that from you?—No, I hardly think so. I think it must have been put up by the employers, because the draft Order of January 11 states definitely the sections that it shall apply to, and a copy of one that was issued some months before—the draft Order of January 11 is revised.

8103. But you know this is a draft Order to which objections may be made by one side or the other?—Certainly, yes.

8104. Therefore you cannot say it is definitely settled until the objections have been considered. However, I am not concerned to deal with that. Now as to one Trade Board for all the distributive trades or one Trade Board for all the provision trades, and separate Boards, what does your federation say?—On behalf of our federation, and being a practical worker in the meat trade, I may say that it will be practically impossible, to my mind, to run a Meat Trade Board in conjunction with the others, even if it is sectionalised, because the Ministry of Food returns show that there were 52,000 butchers' shops in the country; there are 14,000 slaughter houses, and the trade is so split

22 December, 1921.]

Mr. JOR COULDEWELL.

[Continued.]

up, that while it may overlap itself inside, it does not go outside into other sections of trade. For instance, it is not often that a grocer is a butcher, nor do they deal in many other goods; the butcher's shop is simply a butcher's shop, and to my mind and to the mind of our members, it would be impossible for grocers, drapers or other representatives on the various Trade Boards to deal with the different gradings which there are connected with the meat trade. In the bacon factories alone you get about 40 different grades of men.

8105. You are contemplating that a Trade Board shall deal with each separate grade of men in each trade. Would there be any difficulty in one Trade Board fixing the minimum rate—that is the lowest rate for all these provision trades?—I must say we do not look upon the meat trade as a provision trade. The provision trade does not come into the meat trade at all.

8106. Is meat not provision?—Well, it is not called provisions in the ordinary sense of the term.

8107. Possibly not, but I am dealing with the suggestion that there should be one Trade Board for all the food trades. At all events, meat is food, is it not?—Yes, it is food.

8108. Is there any reason why one Trade Board should not fix the minimum rate of wages for the work of the lowest grade in all the food trades?—Yes, because we claim that even the unskilled man in the meat trade is very different from the porter in the grocery warehouse, or in the grocery trade, because there is a certain amount of skill even among the unskilled. If you take a walk round Smithfield you will see men carrying beef there. Well, you would find very few porters who are in a grocery warehouse who could do that kind of work. Even with the unskilled men there is a certain amount of skill and knack in carrying stuff that they have to carry; and then there are the semi-skilled and the skilled. We claim that especially in the skilled section, as men have to serve a considerable amount of time, not exactly as apprentices, in learning how to take a hide off a beast—it takes them some few years to learn that—there is a very great amount of skill in it; and in fact that right through the trade there is a certain amount of skill in every different section of it.

8109. Then I suppose those men are paid more on account of that?—They should be, but it does not always follow.

8110. But even if a minimum wage were fixed for all the food trades, there is no reason why a journeyman butcher, if he is worth it, should not get a rate of pay higher than the minimum?—Yes, but unfortunately the workers in the trade are so unorganised right throughout the country, and their kind of employment is very individualistic. That is, if you get into the provinces a butcher employs perhaps one man; or if you take a small town the biggest butcher in the town will not employ possibly above two butchers, and he simply gets them at a very cheap rate, and if a man does not like it there is always somebody ready to drop into his place. I think the meat trade is the worst trade in the country. Pre-war men had to work 80 to 100 hours a week for less than 30s. a week—men who have to take off the hides and deal with by-products.

8111. *Dame Adelaide Anderson*: Their work would approach more nearly to the work of a tanning yard?—Yes, it does approach to that, because that is the next place to which the hide goes.

8112. *Mr. Layton*: You say there is always a man to drop in when one drops out. Is that because the butcher's trade is very easily learnt or that there are many people in the country who are trained for the work?—The butcher himself in 90 per cent. of cases is a man who can do the skilled work himself; and when the beast is knocked down and stuck he can take the hide off and leave a semi-skilled man to do the other, so long as he gets the hide off all right. One cut in the hide may mean a loss of 1d. or more a pound on it.

8113. Would you call the selling in the butcher's shop semi-skilled work?—That is skilled work too, on account of the cutting, because in cutting beef or mutton up practically one cut of the knife may mean a loss of many shillings to the employer.

8114. When you were speaking of low wages you were only referring to the slaughterhouses?—No, to the trade as a whole.

8115. *Mrs. Lyttelton*: You mean some occupations are classed as unskilled when really they are skilled?—They are not classed as either skilled or unskilled, but when you take 28s. or 30s. a week for 100 hours a week, it is extremely low.

8116. *Mr. Layton*: But if so much turns upon the skill with which the man in the shop deals with the meat, is not the employer willing to offer him a corresponding wage to retain his services?—No, not always.

8117. You give the impression here that the level of wages is very low, and you suggested just now that it tended to become depressed because it was easy to replace the men?—In the provinces more particularly you have the butcher, the owner of the shop, and his wife and his son and daughter in the shop; you will often see them there. We had a case at Taunton where there is a man who worked for a butcher for 16 years, and when we asked for £2 a week the butcher discovered that the man was not skilled; and that was while he had been killing six or eight beasts every week for a number of years, and between 20 and 30 sheep. When we asked for £2 a week for that man the employer found that he was not worth it. Then he would do the skilled work himself, and he would put his wife and girls to look after the shop. He leaves the unskilled men or lads to do the cleaning up and the rough work which follows on slaughterhouse work.

8118. What wages do your men get now—I mean the ordinary journeymen butchers?—They are very varied. In the North they are considerably higher than in the South.

8119. Can you give us some instances?—The average man at the present time in the North is getting £4; some are getting £3; some are getting £5.

8120. £3 to £5?—Yes, in the industrial towns.

8121. Elsewhere what do they get?—Anything from 50s. to £3, and we have some cases at present—though they are not the general rule—where they are getting 28s. and 30s.

8122. *Sir Arthur Pease*: Whole time?—Whole time.

8123. *Mr. Layton*: Without allowances?—Yes. And down at Portsmouth only last week they were offering slaughtermen very low wages. Our rate down there is £4, but men were coming in from the country round about and offering themselves for £2 and 50s. for the simple reason that they were unemployed, and they left the butchering trade to go into other classes of industry, and now that those avenues are closed against them they are offering their services back again at rates from £2 to 50s.

8124. *Mr. Poulton*: Is that without any extras?—Without any extras except what they can make themselves.

8125. But you feel on the whole that your trade is such as to demand a separate Board?—Yes.

8126. *Chairman*: But that is in order to get these high rates of wages?—Certainly not to get high rates of wages; it is in order to get the butcher who employs one or two men—and they are in the majority, taking the country throughout—it is in order to get them to pay even that rate, even a minimum rate, a living rate.

8127. What do you suggest is a living or a minimum rate for a butcher; that is what I want to get from you?—Opinions would differ very much on that. £4 might be a living rate in some places, and about £3 might be a living rate in another, or very near it.

8128. Why I call it a high rate is because it is very much higher than the last rate fixed in the grocery trade and many others. I want to know whether your purpose is to try to get for the butchers a higher rate than that fixed for grocers' assistants,

22 December, 1921.]

MR. JOE COULDWELL.

[Continued.]

and so forth?—No, we want a minimum rate that will even approach that, in the Western area more particularly.

8129. What you want to get is that the lowest paid of your men should get a living wage?—Yes.

8130. Is there any reason why that should not be obtained by a Board dealing with all the food trades?—I contend that a Board to cover all the sections of beef and pork is impossible. Even the National Association itself cannot deal with the meat trade as a whole; they have had to sectionalise the trade, and surely if a body of practical men like the National Federation of Meat Traders cannot deal with their own particular trade, it would be an impossibility for men representing grocers, drapers, and all the various other food trades, to deal with it.

8131. *Sir Arthur Pease*: Are you not confusing the difference between minimum and standard rates? If you fix one minimum or one or two minima, it is a comparatively simple thing; but if you are going to fix grade rates all the way through you have a very complicated question to deal with?—That would be the question of whether the Board had the power to fix more than one rate. That would be a rate perhaps for unskilled, semi-skilled and skilled; that would be a question for the Board to deal with.

8132. Minimum rates?—A minimum rate for either the one or the whole of the three sections.

8133. The Board have the power to do it; if one Board had to do it they would have to make a very much simpler arrangement than if they had one Board for each trade, would they not?—Considering that the meat trade has connected with it in one way or another hides, and skins, and fats and all that, there are practically half a million workers in it, and I think it demands very, very reasonable consideration for a separate Board, because the trade overlaps itself inside so much although it does not go outside. You may get a man who may be a beef butcher in the morning selling in the shop; in the afternoon possibly he is a slaughterman; and later on still he may be a maker-up of small goods dealing with some pork; but while it overlaps itself inside it does not go outside.

8134. You say the meat trade has nearly 500,000 workpeople employed in it?—Yes, but that is covering the bacon, the fresh meat, frozen meat, and bacon factories, dealing with meat purely except in a cured state.

8135. *Mr. MacCallum Scott*: Are the wages in your trade at present on the average higher or lower than they are in the grocery trade?—Well, the skilled men are certainly higher.

8136. Your men are higher?—The skilled men.

8137. What about the unskilled level?—The unskilled are very, very low.

8138. Lower than the grocery?—Yes, especially in the Western and the Southern parts of the country.

8139. Do you want a higher minimum for them than prevails in the grocery trade?—No, we want to get a minimum rate for the bottom man.

8140. Supposing you had one Trade Board for all distributive trades, would it not be likely to fix the same minimum for the unskilled; that would represent a rise?—Yes.

8141. That is not enough from your point of view; you want separate minima fixed for each class of labour above the minimum?—Yes, and it must be dealt with by practical men. When you get the wholesalers, when you get a place like Smithfield Market, the wages there were 25s. a week in pre-war days; and after control came along and we had a representative on the Control Board, they went up. Now since the control came off we are beginning to deal with them individually, and now there are so many unemployed that no one knows what they are getting. We hear of figures as low as 30s. at the present day.

8142. It is not because you are afraid for the lowest end of the scale that you are against one Board?—No, certainly not.

8143. You are looking solely to the higher end of the scale?—No, we are not looking solely to the higher end of the scale. The reason we are looking for the one Board is to be dealt with by practical men, and to bring sufficient employers and employees representing the Meat Trade—what is called the Meat Trade, wholesale, retail, beef and pork and the bacon factories—under one Board; it would mean, for all these sections to be represented, a Board of, at the very least, 10 employers in each to deal with the different sections, and it would make one general Distributive Board a very, very big one.

8144. Do you think the degree of skill in the case of a shop man who is cutting meat is much greater than the degree of skill required by a good grocer?—Yes, certainly, and also reckoning the calculating on the scale. Of course, in these days of pneumatic scales and scales with a diagram of showing what the amount comes to, it is different; but the grocer generally has to put his hand out and take a packet of tea; whereas a butcher has to cut the meat, and if a lady goes in and asks for 3 lbs. of meat she does not want 2 lbs., and she probably does not want 4 lbs. The man in the butcher's shop has to reckon up what it comes to.

8145. You would not regard the scale fixed for shop men in the grocer's shop as adequate for a minimum for butchers?—Certainly not. In regard to Co-operative Societies we have much better conditions than in the Grocery Trade Board for the employees in the Co-operative Societies' Butchering Departments throughout the country. Take Harris's—one particular firm—they floated the company, turned it into a limited liability company with two and a half million pounds—one and a half million pounds issued; so you can realise the immense amount of money that there is in the trade, that is to say, under the one firm.

Chairman: Thank you.

(The Witness withdrew.)

(Adjourned to Tuesday, January 10th, 1922).

10 January, 1922.]

MISS ELLEN C. WILKINSON, M.A.

[Continued.]

EIGHTEENTH DAY.

Tuesday, 10th January, 1922.

PRESENT:

THE RIGHT HON. THE VISCOUNT CAVE,
G.C.M.G. (Chairman).
THE RIGHT HON. LORD WEIR OF EASTWOOD.
DAME ADELAIDE M. ANDERSON, D.B.E.
Mr. W. T. LAYTON, C.H., C.B.E.

SIR ARTHUR F. PEASE, BART.
MR. E. L. POULTON, O.B.E., J.P.
MR. A. PUGH.

MR. H. D. HANCOCK (Secretary).

MISS ELLEN C. WILKINSON, M.A., Called and Examined.

The Witness handed in the following statement as her evidence-in-chief:—

As chairman of the workers' side of the Laundry Trade Board, I have been appointed by the workers' representatives to lay before you evidence as to the work done by the Laundry Trade Board, the desirability of maintaining a Trade Board for this industry, together with certain suggestions for improvements in the machinery.

Necessity for Trade Board in laundry trade.

It is generally admitted that the laundry trade before the advent of the Trade Board was one of the worst paid industries in the country. While certain model laundries paid fairly reasonable wages and gave good conditions to their staffs, very many were far from satisfactory, working under bad conditions for very low pay, and up to the full legal limit allowed by the Factory Act, namely, 60 hours per week.

Much valuable work was done by the women factory inspectors, but, owing to the very large number of small laundries, the difficulties of inspection were enormous.

Wages paid previous to the Trade Board rate.

Before the war, laundry workers were largely unorganised, and the only authoritative figures available as to the rates paid are given in the 1906 Wage Census of the Board of Trade. The average earnings of laundry workers were given as follows:—

	Men.	Boys.	Women.	Girls.	All Work-people.
Laundry (Factory)	26/2	8/9	12/10	6/6	13/-
Laundry (Work-shop).	22/6	9/4	12/9	6/7	12/7

Between 1905 and 1912 the Board of Trade estimated an increase in the cost of living of 11·3 per cent.

Prices were rising until 1914. On that increased basis cost of living had risen to 110-120 in the latter half of 1918. In that year a complete census of the wages of laundry workers in Bradford was undertaken by the then A.U.C.E.

In Schedule 1 the Committee will find an analysis of the results of this census which will give some idea of the conditions prevailing in the laundry trade at that time of high prices. I do not quote Bradford as being the worst town, but simply because I was concerned in that census, and we have a signed statement from every one of the women involved. The Bradford laundries had, of course, to meet the competition of mills and munition-works, which were offering good wages and regular work. Thus it was possible by trade union agitation to force up wages very considerably even in the first agreement by which we secured the following rates:—

Under 15 16 17 18 years of age.
Wage 10/- 12/- 15/- 17/6 per week.
18 years of age and over, wage 20/- per week.

That this scale, which was about the highest obtained by any trade union at that period, was only secured by threat of a strike at a time when the employers were at their wits' end for labour is an eloquent comment on the wages that were being paid.

The agitation for securing a Laundry Trade Board for workers was commenced immediately after the passing of the Trade Board Act of 1909, and I think it may be agreed that there was no trade in which a Board was more badly needed.

EFFECT OF THE TRADE BOARD ON THE LAUNDRY TRADE.

Reduction of employment.

The most convincing proof of the good effects of the Trade Board has been the gradual conversion of the majority of the employers to its activities. While they had fought hard against having a Trade Board, their federation, both on the Trade Board, and, I understand, before this Committee, has stated that they would not like to see the Board abolished for their trade. There are, however, a large number of

10 January, 1922.]

MISS ELLEN C. WILKINSON, M.A.

[Continued.]

employers who feel that the Trade Board rates have adversely affected the industry. It is argued:—

- (a) That the present Trade Board rates have caused a reduction of employment in the laundry industry. Figures are frequently quoted of the number of workers given by the census of 1911, and those employed at the present day. In this connection it must be realised that when the trade was unregulated, a very large number of casual workers were connected with laundries. Owing to the nature of laundry work, it suited most employers to keep a very small staff, but to have a large number of workers who came in on a daily or hourly basis for the rush time at the end of the week. It was noticeable even with the early trade union agreements that the fixing of a weekly wage led to a better organisation of the laundry, and, while less people were actually employed per week, those who were employed got a chance of a decent week's work. While not wishing to prevent the married woman, as such, from supplementing her income by industrial work, the trade union women felt that it was unfair that women, whether married or single, who had to live on their own earnings should have their rates imperilled by certain women who only wanted a few hours' work per week. When the Board laid down the principle of the *guaranteed week*, a very valuable piece of social legislation was secured, in that much of the labour in the laundry industry was decasualised, and a step had been taken towards making this trade one in which a girl could enter and look forward to reasonable maintenance. The principle of the guaranteed week was, in the first place, confirmed by the Ministry of Labour, and later declared to be *ultra vires* by a new legal adviser of the Ministry. We were not allowed to meet this legal adviser to discuss this, or to take other opinion. Lawyers, like doctors, do not always agree, and the workers' side wishes to protest against the destruction of this very useful piece of work on the mere word of invisible legal advisers.
- (b) Employers argue as though wages were the only factor in the admitted reduction in the total amount of laundry work now being done in steam laundries, but no one who investigated the situation could deny that many factors other than wages have contributed to this, and that, no matter how low the wages might be in the laundries, this reduction would have taken place. Improved appliances for the home, the shrinkage of middle class incomes, and the perpetual assumption of the employers that the only way to meet advances in costs is automatically to increase prices have all had their effect. Laundry employers like others will have to consider other methods, and make appeals to other sections of the community, if they are to prove themselves capable of continuing the laundry trade of the country, and prevent the municipalisation of this very important service.
- (c) The employers have undoubtedly been helped by the prevention of cut-throat competition among themselves, and this could be entirely eliminated if better methods of enforcing the rates than the present haphazard inspection could be devised by the Ministry.

Wages Rates fixed by the Laundry Trade Board.

(a) Continual complaints have been made by the federated employers, that the rates fixed by the Board

are national rates, and do not make provisions for differentiation in the cost of living between various areas. We believe that they have stated before this Committee that the rates should be fixed on the area of the lowest cost of living, and that variations above this should take place by trade union action. The workers' side of the Trade Board would point out to this Committee that in practice rates have been fixed on the level of the rural areas. The rates for the Laundry Board throughout have been so low, that even the employers have admitted on the Board, that they are not sufficient for the industrial areas, but in practice, there has been the continual attempt, unfortunately in many cases successful, to keep the industrial areas down to the Trade Board rates.

(b) The Co-operative movement which is in competition with the private laundries has been paying as much as 10s. per week above the Trade Board rates, to women of 21 and over, who form the bulk of the workers in these laundries and yet they have been able to pay very comfortable dividends.

The Co-operative minimum rate until the recent reductions (bringing the minimum at 21 to 39s. as from January 1st) was:—

Age ...	14	15	16	17	18	18	20	21
Wage ...	16/-	18/-	21/-	26/-	32/-	35/-	38/-	44/-
Highest Board Rate.	16/-	18/-	21/-	26/-	32/-	—	—	—

One of the large Co-operative laundries in the North of England with an average annual turnover of £26,000 paid the Co-operative minimum wage of 27s. per week at the beginning of 1918. When the Trade Board minimum of 54s. was established, this laundry paid the Co-operative minimum rate of 44s. for female workers at 21 years. Its total capital was £20,000 and during four years of war it made a net profit of £10,482 or over 50 per cent. of its share capital, being an average annual profit of 12½ per cent.

As proving that the rate of wages is not the only factor in determining the ratio of wages to revenue, let me add that during the four years in question the wages cost in this laundry averaged 49·58 of the revenue and was therefore ·42 below the ratio generally accepted by the employers as being satisfactory.

To sum up on this question of wages rates, we would submit to this Committee that experience on the Laundry Trade Board has, in spite of all difficulties, converted the laundry employers to the wisdom of Trade Boards. A stable rate has been secured in what had been a very sweated and chaotic industry. However much we differ with the employers as to the rates to be fixed, there is now complete unanimity on the Board that Trade Board rates of some kind are desirable.

We should like now to deal with the evidence of the employers, to answer certain points that they have made, and to agree with much that they suggest with regard to the improvement of the Board.

Trade Union Officials.

(a) Mr. Stark made a point that the Board was dominated by trade union officials, and rather suggested that in at least one case which he illustrated the officials were fighting for something that the workers did not want. I am asked to controvert the suggestion very strongly that on the case quoted there was a division between officials and workers on the workers' side. It was a division caused by different customs in different districts, and not a division between officials and workers. In no case has such a division occurred. What happens is that on both sides the policy to be pursued on the Board is argued in private side meetings, and both the employers and workers leave the actual debate in the Board to the two leaders of either side.

10 January, 1922.]

Miss ELLEN C. WILKINSON, M.A.

[Continued.]

(b) It further must be remembered that the workers' side is not as homogeneous as the employers, and that a large number of unions are represented thereon. Some of the officials may not have worked in a laundry, but they have all of them taken part in disputes in the laundry industry. They thus have an extensive knowledge of different conditions in laundries over wide areas. Analysing the officials now sitting on the Laundry Board, we find that they come from the following towns or districts—London, Manchester, Birmingham, Bristol, South Wales, Lincolnshire, Kent, Newcastle, and Leeds, besides one or two who have experience of laundry conditions all over the country. It is thus possible for them to take wide views from the areas that they have covered, while the detailed knowledge is supplied by workers who have had experience at one or two laundries in which they have actually worked. It is difficult to see how the number of officials on this Board at any rate could be reduced, without seriously prejudicing the effectiveness of the workers' side.

(c) The work of a Trade Board is not finished when rates have actually been passed. It was one of the ideals of the early trade board movement that the Board should not be a mysterious thing, acting far away from the workers in the Trade, but that they should understand that it was partly their Board, representing them as much as their employers. It is very essential that the workers, by means of meetings, conferences, and all the usual trade union machinery, should be kept in touch with what the Trade Board is actually doing. With the best will in the world, this cannot be done as effectively by a girl who has her living to earn in a laundry, as by an official whose business it is to attend these meetings and to report.

I have dealt with this point in some detail, because it is not merely the question of the advocacy on the Board itself, which could be done by a couple of officials if all the rest were workers in the trade, but it is also a question of keeping the different districts in touch with the particular Board, and with all the complicated machinery which results from their deliberations.

POINTS IN AGREEMENT WITH THE EMPLOYERS.

(a) Objection Period.

We are in general agreement with the employers when they desire that the objection period should be reduced from two months to one, and that if objections render it necessary and advisable to make certain alterations in the proposals, it ought to be possible to incorporate them in the order issuing a fresh set of proposals.

(b) Arrears.

We further agree that a note of the arrears of pay due by an employer who has been found not to be complying with an Order, should be sent to him as soon as possible after the investigation. At the present time, cases reported to the Ministry have been allowed to accumulate such arrears that it would completely ruin the employer to pay them, and the Minister then refuses to prosecute, whereas had the matter been dealt with at the beginning, it could have been put right without injury to anyone.

(c) Inspection.

We would like to re-inforce what the employers have said with regard to the inspection of small laundries. The whole position of the inspectorate is completely unsatisfactory. When the Committee realise that for the whole of South-East Lancashire, with its teeming population and hundreds of thousands of workers who come under Trade Boards, there is but one man to inspect and report, you will realise that the present inspection is simply a mockery.

(d) Machinery for Enforcement.

We are continually urged to consider the national financial position, but if the Treasury feels it impossible to give sufficient money for an adequate

number of inspectors, we should like to suggest that this Committee take into consideration the question of simplifying the machinery of prosecutions and securing the enforcing of the rates. At the present time, cases reported to the Ministry cannot be dealt with for months, owing to lack of staff. It is, of course, true that it is open to the trade union to take proceedings on behalf of its members, but to deal with even a tithe of the complaints that are being continually received would be impossibly expensive for any large general union with a considerable number of members covered by Trade Boards. The Workers' Side suggest that machinery analogous to the machinery of the Munitions Tribunal should be set up to deal with Trade Board complaints. It would be thus possible for trade union officials themselves to appear before the Court, and would save expense in every direction. This matter will be more fully dealt with in the general evidence from the workers to be given later, but the case of the Laundry Board is a very good illustration of the necessity of some such improvement in the machinery for enforcement.

(e) Institution and Hotel Laundries.

Regarding the laundries carried on by hotels and shipping companies, or by institutions, this Committee has already laid before it the resolution that was passed by Sub-Committee of the Laundry Trade Board, and I understand that Mr. Stark dealt very fully with the unfortunate delay of the Ministry of Labour in dealing with this very important question. We would like to emphasise, and agree with all that the employers have said on this head. We do feel that the delay is inexcusable in view of the complete unanimity of both sides of the Board on this matter.

(f) Trade Board Accommodation.

We also support the plea of the employers for better accommodation for the unfortunate Trade Board members who have to deliberate in the rooms at Old Bailey for many hours at a time. We are lost in admiration of the competent strike leaders who were discovered on the Employers' Side of the Laundry Board in our recent endeavour to get these conditions improved, but so far it has produced no effect on the Treasury and Office of Works. If a suggestion could be made by this Committee that at least the cubic air space of the Factory Acts should be allowed to Trade Board members, it might have more weight.

CONCLUSION.

I would like to conclude this evidence by stating that in the opinion of the Workers' Side the Laundry Trade Board has done something towards removing a condition of affairs that was little short of a national disgrace. In these days when there is so much facile talk about economy, it cannot be too frequently emphasised that low wages and bad conditions of labour mean a greater loss of national efficiency, a greater burden on the whole community than any nation can afford. As Dr. Janet Campbell stated in the Report of the War Cabinet Committee of Women in Industry (1919):—

"The conditions under which women were employed before the war were not such as to enable them to develop full health and vigour. Low wages, an unsatisfactory and inadequate dietary, long hours and lack of exercise in the open air resulted in physical and industrial inefficiency. The result of the employment of women under war conditions has emphasised the importance to health of good food, clothing, and domestic comfort which can be obtained when the wages represent a reasonably adequate recompense for labour."

It is too lightly assumed that we are not going back to pre-war conditions. The reductions that are at present taking place, even in Trade Board rates, are tending to bring the workers' standard perilously near those admittedly bad conditions. We trust that this Committee will recognise the danger to the community that the weakening of any safeguards of the workers' standard would entail.

10 January, 1922.]

8146. *Chairman:* Miss Wilkinson, you are Chairman, I think, of the Workers' Side of the Laundry Trade Board?—Yes.

8147. You have been appointed by the Workers' representatives to lay before us evidence as to the work done by the Laundry Trade Board?—Yes.

10 January, 1922.]

Miss ELLEN C. WILKINSON, M.A.

[Continued.]

8148. And you say that before the advent of the Trade Board the laundry trade was one of the worst paid industries in the country?—Yes.

8149. Before the war laundry workers, I understand, were largely unorganised, and the only authoritative figures available as to the rates paid are given in the 1906 wage census of the Board of Trade?—That is so.

8150. You give figures in your memorandum. The men in factories received 26s. 2d., and in workshops 22s. 6d. Boys received 8s. 9d. and 9s. 4d.; women 12s. 10d. and 12s. 9d.; girls 6s. 6d. and 6s. 7d. Then you say: All workpeople, 13s. and 12s. 7d. What does that mean?—That, like all averages, is rather an artificial figure. It simply means that the Board of Trade have taken all the people and have added up all their wages and divided them by the number. It does not seem to me that that shows very much, because obviously it is an average between 26s. 2d. and 12s. 9d. I simply give that because it was in the schedule. The important thing is the wages of adult workers in power laundries, which is what "factories" means practically, namely, 12s. 10d. and 12s. 9d. in laundries without power.

8151. *Sir Arthur Pease*: Is that the adult rate?—Yes, for those over 18.

8152. *Chairman*: Then you say that from 1906 to 1912 the Board of Trade estimated an increase in the cost of living of 11·3 per cent. Prices were rising until 1914, and on that increased basis the cost of living had risen to 110-120 in the latter half of 1918, in which year a complete census of the wages of laundry workers in Bradford was undertaken by the Amalgamated Union of Co-operative Employees.—Yes. They were unorganised at that time, and we had schedules given to every one of the women whether they were our members or not. About 400 were returned, and on the first of my Schedules I give an analysis of the various laundries—the larger laundries of course; not the very small laundries. It shows the average rates that were being paid and the hours worked. I give the lowest and the highest rates as well as the average in order to show that we are not striking averages between 12s. and 22s.

8153. Those letters are just factories, I suppose?—They give the key to the names of the laundries. I did not give the names, but of course I can do so.

8154. The hours seem to vary from 45 to 60 if you include Bolton.—Yes. In the case of one—K—where the hours are given as 45, that laundry at that time was working rather short time. Generally speaking, the hours in every case were well over 50, because when we came to negotiate we could not get a 48-hour week at that time. 50 hours was considered a great reform when we won it on that agreement.

8155. In the case of women workers other than ironers, I see the wages range from 13s. 6d. to 23s.—Yes.

8156. And for ironers they range from 15s. 8d. to 22s. 6d., with a war bonus in each case.—That is so.

8157. Then with regard to inside workers, to whom does that refer?—Those are male inside workers. They are merely washhouse men—enginemen and stokers. We have given the highest figure even though only one woman in the laundry was getting that; and we have also given the lowest. In each case the war bonus is included in those figures, but I give the war bonus separately to show how much had been given.

8158. *Mr. Layton*: How many people are covered by the return?—Just about 400. I think the actual number was 408.

8159. *Chairman*: Then on that I suppose there were negotiations and you obtained an agreement?—Yes. The agreement is given. It ranges from 10s. at 14 years of age to 20s. at 18 years of age and over. For adults that made an average increase of about 5s.

8160. *Lord Weir*: Was Bradford a particularly bad district, or could you take it as a representative district?—I took it because it just happened to be the town I was organising at the time, and was the only town where I could get the most complete schedule; but I also give a schedule showing the laundries in Bolton, Leeds and Manchester.

8161. Those might, perhaps, be taken as representative of the industrial towns?—Yes. As I say in my evidence, Bradford had to meet the requirements of mills and munition works. At the time when these particulars were obtained, there was very keen competition, especially for junior female labour for repetition work.

8162. *Dame Adelaide Anderson*: Is it not always the case that wages in laundries in textile towns are affected by the wages paid in the mills?—Very much so. I should think, in taking Bradford and Bolton, which are two textile towns, one has got about as high a rate as would be paid anywhere in the country, with the possible exception of London. The competition for female labour is much greater in these towns than it is in London.

8163. *Mr. Poulton*: As you come farther south would it not be the fact that wages get rather lower?—Much lower.

8164. *Mr. Pugh*: Have you anything in the nature of a piece-work system in the laundry trade?—Yes; ironers all work on piece-work. Roughly speaking, the method of calculating the piece-work was by taking 3d. in the 1s. on the selling price for plain articles, and 4d. in the 1s. for fancy articles. About this time prices had risen enormously in the laundry trade, and, of course, the girls had been getting very much higher wages than these I quote on the 3d. and the 4d. on the selling prices. As the selling prices increased, however, they did not get the increase, but were given a war bonus of 1s. or 2s.

8165. Was any piece-work arrangement included in this statement of yours?—Yes, all the ironers that I give there are on piece-work.

8166. *Sir Arthur Pease*: By "selling price" do you mean the cost of washing?—I mean the selling price to the customer. If a customer paid 1s. for an article, the girl who ironed it was supposed to get 3d. That was pretty general before the war, when, of course, laundry prices were fairly low; but as they increased enormously during the war the corresponding ratio was not maintained, and the girls got instead this utterly inadequate 1s. or 2s. war bonus.

8167. *Mr. Pugh*: Do you mean what the customer gave for the article?—Of course, there was always a good deal of friction in the laundry about it, but that was the theory. The girls in actual practice said they were not getting a quarter of what the selling price was. You must remember, although it looks high, it is calculated in the laundry trade that wages average about 50 per cent. of the total turnover. Wages are the heaviest charge that a launderer has to meet.

8168. *Sir Arthur Pease*: Suppose a shirt sold for 10s., would the girl get 2s. 6d. for washing it?—You must not argue on what you are having to pay now. For instance, you may have to pay 2s. for a silk blouse. That does not mean to say that a girl now gets 6d. It was calculated on when you paid 6d. or 8d. when the girl would get 2d. That is exactly how the laundry piece prices were calculated before the war. I am talking about washing the article, of course.

8169. You said it was the selling price?—I am sorry. I did not think you meant what the customer originally paid in the shop.

8170. *Mr. Poulton*: I thought there was some confusion.—I mean the actual price to the customer of the article as laundered.

8171. *Lord Weir*: On the Board you have taken account of that by fixing a piecework basis time rate, have you not?—Yes, that is so. We thought that was more satisfactory than going back to the old system, because laundries vary both as regards prices and organisation.

8172. You probably for some reason did not care to crystallize that practice of a percentage on the laundering price?—The workers' side would have been perfectly delighted to have crystallized that practice at present prices, but we had no hope of getting that from the employers' side. At the present moment we have a Committee which is being set up to work out a definite piecework schedule; but that Committee is only in the midst of its work at the moment.

10 January, 1922.]

MISS ELLEN C. WILKINSON, M.A.

[Continued.]

8173. Do you mean a Committee of the Board?—Yes, a Committee of the Board.

8174. *Chairman*: Then, Miss Wilkinson, you go on to deal with the effect of the Trade Board on the laundry trade. You say that while the employers fought hard against having a Trade Board, their federation do not now desire to see it abolished?—That is their statement on the Laundry Board, and I believe it is their statement before you.

8175. I daresay it was, but I have not been able to find it. Then you deal with the suggestion that the Trade Board rates have caused a reduction of employment in the laundry industry?—Yes.

8176. *Mr. Poulton*: On this point in the last few lines of (a) you make a protest there against this invisible legal adviser. Has your union taken any advice on this matter as to whether they thought it was *ultra vires*?—We consulted our own advisers and they gave an opinion that it was not *ultra vires*. This point, however, was raised by our General Secretary who was then on the Board. He was simply told that the advice of the legal adviser of the Ministry carried with the Ministry. But we wish to emphasise that this was a new legal adviser apparently who made this decision, and of course it is a point that it is extraordinarily unfortunate that the whole question of whether a guaranteed week was or was not *ultra vires* was decided on this rather casual industry, because it has wiped out the fixing of weekly rates for trades, such as the distributive trades, which have never known any other kind of wage-fixing than weekly rates.

8177. *Lord Weir*: There is surely nothing in the Act which prevents the Board from fixing overtime conditions; in fact, it has to fix overtime conditions. Could it not fix a guaranteed day?—No. We are advised by this same legal adviser that the Board is only able to fix an hourly rate. It can state what is a normal day. You may say that the day is 9 hours and 5 hours on Saturday, or a 48-hour week, and that after that overtime has got to be paid. But the point about the guaranteed week is that you fix, say, 30s. for a week of 48 hours, and the employer then is bound to pay a worker 30s. so long as she is not absent owing to her own fault; that is to say, if there is not work for her, or if the machinery breaks down, or anything that is in the employer's control but not in the control of the worker, then he has to pay the 30s. That is the point about the guaranteed week.

8178. *Sir Arthur Pease*: She has an upstanding wage?—She has an upstanding weekly wage.

8179. *Lord Weir*: The Act does not protect her obviously on that.—On the present reading the legal adviser stated that it did not.

8180. *Chairman*: Then your next point is about unemployment. Your point, I think, is that whereas it may be that women and girls who get employed for part of a week have been thrown out of employment, yet others have been employed for the whole of the week and get what you call a decent week's work?—Yes, that is really rather a strong point. We found, for instance, in organising laundresses in South-East Lancashire that one laundry would have really a very large number of people on its wages books—more than could ever have worked a full week's work—and that when we had a guaranteed week what immediately happened was that these casual people were no longer required, but those who remained did get a 48-hour week. There was at that time simultaneous collection and delivery arranged, which was very important, and the result was that you got quite a host of casual people, none of them getting a living wage and none of them getting a decent wage.

8181. Has that gone on since this ruling about the guaranteed week?—That, of course, struck at the very heart of it, and the simultaneous collection and delivery has not gone on. But, nevertheless, I think that the general effect of the Laundry Board even now has been to work for the employees, as they have got to pay these wages to get a definite number of people on their staff instead of a number of casuals.

8182. *Sir Arthur Pease*: Are not there some of the employees who only want to work one or two days a

week?—Yes. The difficulty is that there are also a large number of laundry employees who want a full week's work and we make the point that their work should not be imperilled by, say, married women who have other sources of income, and who come in to make a little extra.

8183. *Chairman*: It is the fact, is it not, that there is more unemployment in the laundry industry than there was?—That is stated, but we have been getting some figures from the Labour Exchange. For instance, in Manchester there are no skilled laundresses at all on the books of the Employment Exchange. I got the figures only recently for the Lady Mayoress's Unemployment Committee, and the only laundresses they had who were unemployed were old women who put themselves down as washerwomen.

8184. But there is; I took it from your own statement, where you talk about the admitted reduction?—Yes, but it is rather a different thing which I mean there. What the employers say is, they give the actual figures; I have not got them at the moment, but I think it is 103,000 who were given as employed in the last census of 1911, but to-day they know that that is only, I will say—they are not actual figures—80,000; look what the Laundry Board has done! I want to point out that it has meant a reduction in the number of people employed, but not an increase in unemployment among people employed.

8185. *Mr. Pugh*: Do you say that what has occurred is you have considerably reduced the number of casual employees?—Quite.

8186. *Chairman*: I read this paragraph differently. —I am sorry if it was not quite clear.

8187. You say there is an admitted reduction, and then you give some reasons for it at the top of page 3: "Improved appliances for the home, the shrinkage of middle-class incomes, and the perpetual assumption of the employers that the only way to meet advances in costs is automatically to increase prices, have all had their effect." I read that to mean "have had their effect in reducing the amount of employment"?—Yes, but in (b) I say: "Employers argue as though wages were the only factor in the admitted reduction in the total amount of laundry work now being done"; that, of course, is what is always raised at every Board meeting that we have, that the amount of laundry work now going into the steam laundries is less than it was.

8188. It is so, is it not?—Oh, it is so; that is admitted.

8189. Your answer is that laundry employers must consider other methods and make appeals to other sections of the community if they are to prove themselves capable of continuing the laundry trade of the country, and prevent the municipalisation of this very important service? In other words, as I understand it, you admit that there is a reduction of laundry work, but you say that it is the fault of the employers in increasing their prices too much—that they must reconsider that, and mend their ways?—Yes. I am not stating that merely from my point of view. Many employers have said, including quite important people on the Laundry Board, that they are not sure that the continual increase of prices was in fact a wise policy, and ask whether it could not have been done in other ways. You see, at the present time the laundry trade is tending to become by this continual increase in prices not even a middle-class service, but an upper middle-class service, and there is a large amount of laundry work to be done, and it is a question whether other methods could not be employed in order to increase the amount by mass production and to reduce prices.

8190. I do not venture to go into that, because, of course, it is a technical matter; but am I right in understanding this paragraph to mean that there has been a reduction in the amount of work, and that it is partly due to increased prices, and that those increased prices are attributed to the increase of wages?—Yes, that is so; that is the argument of the employers which I am trying to combat.

8191. I understood it to be your argument and your admission in this paragraph?—No, I am so sorry,

10 January, 1922.]

Miss ELLEN C. WILKINSON, M.A.

[Continued.]

apparently we are getting a little confused. The point is that the employers invariably attribute the admitted decrease in the amount of work in the steam laundries simply to wages, and I wish to point out, while admitting the decrease, that in fact there are a large number of other factors.

8192. Chief amongst those being the increase in prices?—Chief amongst those being the increase in prices, yes.

8193. Which they, at all events, attribute, as I said, to the increase of wages?—Which they attribute to that, but which I, in paragraph (b), say I do not think is by any means the only cause.

8194. *Lord Weir*: You say that the increase in prices for laundry work, while it has been brought about by increased wage cost, can only be reduced, in your opinion, by the employers taking up better methods; that is the only way the cost can be got down?—I should not go so far as to say the only way, because I should say the charges now being made for laundry work are excessive. The laundry rates have never been as high for wages as rates which have been fixed by other Trade Boards. I mean, the employers speak as though they were having to pay abnormally high wages, which really they are not.

Chairman: Perhaps we can go to the next paragraph, about wages.

8195. *Dame Adelaide Anderson*: May I just ask one point before we leave this? A little while back, I think you said wages were a larger proportion of the cost in any case in laundries than in any other industries; did I understand you rightly?—I said that, roughly, the wages are 50 per cent. of the turnover; that, I think, is admitted.

8196. Has the laundry industry the same resources to fall back upon for reduction as an industry dealing in the manufacture of raw material—turning out articles from raw material?—Of course, the margin in the small laundry is small, obviously; but I should say that, in the steam laundry, there is room for a great increase in improved machinery, and that kind of thing, and improved organisation.

8197. But with regard to the raw materials used in the laundry, the soap, soda, and so on?—They have increased, but they are decreasing considerably.

8198. But necessarily wages, whatever the reason, do form a larger proportion of the costs than in a manufacturing industry?—Yes, but that does not necessarily mean a dead cost. By improved machinery and improved methods of organisation, not having piece-workers waiting, and so on, you can make that 50 per cent. a much more productive thing than in some of the wasteful ways it is being done.

8199. You can make it a more productive thing?—Yes, I mean without any speeding up of the girls. We continually have complaints from piece-workers that they are kept waiting about, or that they are given very different masses of stuff to do instead of having the work sorted out so that one girl is working more or less on the same kind of thing, which she can do very much better.

8200. *Chairman*: I suppose it is true that this rise of wages, however proper it may be, has fallen pretty heavily on the small owners, and they have had to put up their prices?—Well, of course, prices are increased by the various local associations, and the difficulty has been that the steam laundries always say that they are under-cut in prices by the small laundries.

8201. *Mr. Pugh*: I suppose you have the condition that obtains in most trades, that where you have to depend almost entirely on hand labour the cost of labour must be proportionately higher?—Yes, quite.

8202. Your point is, if mechanical assistance is brought in the labour cost is reduced as a result?—Yes, proportionately.

8203. *Chairman*: Of course, it is more difficult for a small establishment to afford expensive machinery than a larger establishment?—Could I give a point to show what I was answering to Dame Adelaide Anderson? If you take the co-operative laundries, they have been working practically since 1919 on a 44s. rate for women at 21. They were paying 44s. when the other laundries were paying 32s. at 18. Now, when we have analysed their balance sheets we have found that the cost of labour has been—I think it was

—49·2 per cent. There you have a case where, although the wages were very much higher—and, of course, the profits were high too—yet the proportion, the 50 per cent. about—was still maintained. It is not the actual amount that is paid per individual, but how you use that individual work that decides on your profit.

8204. So you mean they have better machinery?—Yes, up-to-date machinery; and also they have better methods of organisation and so on.

8205. They are large concerns, I suppose?—Yes, large concerns.

8206. *Sir Arthur Pease*: Would not the co-operative societies deal with comparatively simple articles compared, say, with a London West End firm?—Of course a very fashionable West End laundry is a thing by itself, but the co-operative laundries always deal with various things. It is not by any means purely working-class trade.

8207. We have had in evidence that the labour on certain articles is 20 per cent. in some cases and 80 per cent. in other classes; would not that apply to laundries to some extent?—Of course, if you are doing fashionable garments you charge very much higher. The prices of a West End laundry are very much higher than the prices in a laundry in the North, because of the hand work.

8208. But is not the cost of labour on one class of article very much higher than on another?—Yes, but what you lose on the swings you make up on the roundabouts, you must remember.

8209. Not if the class of article is one that the whole laundry is dealing with?—But what I am trying to point out is that you cannot compare the co-operative laundries in Leeds and Bradford with the private laundries in the West End of London. You must compare them with the laundries in Bradford and Leeds. They are doing the same kind of work.

8210. The figure you gave us was 49·1 as the wages costs in the Co-operative Society's Laundry. If they were doing a comparatively simple kind of repetition work, so to speak, you would expect the wages to be lower, would you not, than in a laundry doing a very high-class trade?—That would be the fact if they were doing anything different from their competitors; but my point is they are not. They are doing pretty well the same work as their competitors in the same town.

8211. *Lord Weir*: Do you think it is quite fair to make that comparison? The co-operative laundry is rather a big unit, and a well-equipped unit, and should not you compare it rather with the corresponding unit in the corresponding industry rather than with the average of all the others?—Oh, yes, quite; but then there are very well-equipped laundries in private trade.

8212. Which would disclose a totally different result from what you have given?—No; my point was this, that this 50 per cent. applies to the quite well-equipped laundry like Tooting's, or Whiteley's in London; they would give the same average; that is the recognised average in the laundry trade. It of course ranges, say, from 40 to 54 per cent. But taking the range of an enormous number of laundries, you get about 50 per cent.; and I wanted to point out that the same average was maintained even where you got very much higher rates than were in fact being paid by the Trade Board.

8213. *Chairman*: Then you go on to deal with the Trade Union officials point. Perhaps I may take that as read; it will be part of your evidence. I do not understand that one sentence in paragraph (a). I think that refers to a point which Mr. Stark put forward, does it not?—Yes.

8214. You say there was a division; the union did not agree with the trade union officials on the Board. You say there was a division caused by different customs in different districts. What is the meaning of that?—The meaning of that is this, that in Lancashire, for example, it is the custom to work on Good Friday and to have a corresponding holiday either

10 January, 1922.]

Miss ELLEN C. WILKINSON, M.A.

[Continued.]

in Wakes Week, which is the time when the whole town takes a holiday, or in the Easter week. Now a girl in a Lancashire laundry does not want to have a compulsory holiday on Good Friday, because it is to her disadvantage. She knows, of course, if she is to be paid double for the work she does on Good Friday the employer will give her that holiday. She would prefer to take her time when all her comrades are having the holiday at the same time.

8215. Why do you say Lancashire? Mr. Stark said that practically every laundry in the country works on Good Friday?—We disputed that. We said it was not the case in many laundries in the South and Midlands.

8216. There is that difference between you, I understand?—Yes. I just wanted to point out that, because there is that difference.

8217. I understand from what you say that you are in conflict with what Mr. Stark says?—Yes, I wish to contradict what he says.

8218. Then you agree that the period of objection might be reduced to one month, and if amendments are made they might be incorporated in the Order?—Yes.

8219. I suppose that means without re-advertisement. Then you say that a note of the arrears of pay due by an employer who has been found not to be complying with an Order should be sent to him as soon as possible. You agree with the employers with regard to the inspection of small laundries; that the present provision is insufficient. As to the machinery for enforcement, you suggest that machinery analogous to the machinery of the Munitions Tribunal should be set up to deal with Trade Board complaints. That was an informal kind of tribunal at which complaints were made and supported by the trade union officials?—Yes. Our feeling about that is that the present machinery is extraordinarily costly for a big union. It is usually said that there is no reason why the Ministry of Labour should do all the prosecuting. It is open to any Trade Union to appear on behalf of its members; but if you take the general trade unions, dealing perhaps with 40 or 50 Trade Boards, it would be an enormous expense for them to have to engage a solicitor and deal with all these cases; whereas in this Munitions Tribunal they could send their trade union officials to deal with the cases; and, of course, it is not a case of moral turpitude being involved; it is merely a matter of getting the employer to pay up.

8220. I am not quite sure about that. It is a criminal proceeding, is it not?—Yes, but my point is this, that in a great many cases the employer pays up when he has to, and if he refuses to pay up the question of criminal procedure would then come in.

8221. Mr. Poulton: But if the trade union came in, would not they have to take it up on shortage of wage on a particular week, whereas the Ministry can take it up on the ground that they have not complied with the law as laid down?—That sort of details would have to be adjusted, but if it was decided by the tribunal that case after case was given where the rates had not been paid, a man would not as a matter of fact have to pay for the—

8222. Chairman: What I was putting to you was quite a different thing. The proceedings before the Wages Tribunal were civil proceedings; the employer was summoned for payment of money. Under these Acts he is summoned for an offence against the law under the Criminal Law. Is not that quite a different thing?—Yes, I think it is. I quite see that point, but I only wished to point out that it seemed to me possible for something of this kind to be worked out if any amendment was being made of the Trade Boards Act, because you have had cases, such as the case at Portsmouth, where the Magistrates refused to convict on the ground of the offence against the law; they convicted on the point that they had not put up the notices in the workshop.

8223. But surely it is a very different thing for a man to be sued for payment of money, when he may dispute his liability without the least moral turpitude, as you say, and for a man to be prosecuted for a crime—an offence against a law. Surely that is a very different thing?—Of course, I am not by any

means a legal expert, and I dare say many people on the Board know much more about it than I do; but it did seem to those of us who were discussing this matter that in this case something of the kind of a Munitions Tribunal could be worked as a court of first instance, because obviously there are cases, quite a number of cases, where the employer disputes liability, as, for instance, the very complicated question of piece work. You may have, for example, a laundry in which a very large percentage of the people have earned the piece rates, and where the employer says that his piece rates are therefore high enough for the normal piece worker to earn the rate. You have had cases where the inspectors and the trade union officials have maintained that they are not; and that those piece rates are, as a matter of fact, fixed on the very quick worker. Now, that is a case of disputed liability, and if you give that into the hands of an ordinary solicitor, he is not a technical expert, and he is somewhat at sea, and that is a case where the trade union official and the employer could argue it out before an impartial court.

8224. Dame Adelaide Anderson: Cannot they do that now before an ordinary court? Cannot civil claims be made? You are asking for special machinery—for a new tribunal. Is it only for the Laundry Trade Board or for Trade Boards generally?—Trade Boards generally. I think when the general evidence comes to be given on behalf of the workers' side this point will be elaborated, and perhaps it would be as well if further questions were put then; but this is put forward, I think, by large numbers of the workers' side as being machinery which would enable the Trade Board Acts to be enforced much more cheaply than they are at the present moment, and which would largely do away with the need for a very large staff of inspectors.

8225. Making civil claims through a special channel?

8226. Chairman: No, no; is it confined to civil claims?—No, all claims under the Trade Board Act. I merely gave that as showing that there were certain kinds of Trade Board claims that were of the nature of civil liability.

8227. Mr. Pugh: But you want to distinguish between a genuine dispute as to whether the employer is entitled to pay so much, and a case where he is obviously breaking the law; and your point is where there is a genuine difference or dispute as to what should be done, that should be settled by a court; whereas, when it is a case where the employer is not complying with the law, the ordinary procedure should apply?—Yes, but my feeling was that it would be very much simpler if you get that liability tested and agreed by an impartial court, where the employers' officials and the trade union officials could appear without bringing in legal machinery, and that only then if the employer refused to agree to the decision of this court, then it would be a case for prosecution in the ordinary court.

8228. But you could not take the Portsmouth case, for instance, to an arbitration court?—I think the Portsmouth case could have been taken before such a court as this tribunal until, of course, the magistrate had given that decision. The moment the magistrate had given that decision it had, of course, assumed a very different aspect, because you had a magistrate refusing to enforce the law.

8229. But supposing you had an employer knowing very well he was not complying with something which the law said he ought to do, could not he use the arbitration court as a means of delaying or evading a legal decision—legal in the sense that it comes within the Act relating to your Trade Board?—I do not think the question of delay would come in, because although it might delay it to have it tested by this tribunal, he would have to pay retrospectively from the time he infringed the Act; so that, taking the case to this court first, and then, if he refused to obey, taking it to the ordinary courts, would not in fact save him anything; he would have to pay up his arrears.

10 January, 1922.]

MISS ELLEN C. WILKINSON, M.A.

[Continued.]

8230. *Lord Weir*: There is just one point on that still. Your suggestion does not appear to help the unorganised worker in any way; you confine this suggestion to this: "It would then be possible for the trade union official to appear before the court;" but the chief people who want protection against evasion by the employer are surely the unorganised workers, of whom there are, say, 80 per cent.—If the unorganised workers want protection it is perfectly simple for them to join a trade union and get protection.

8231. That is quite true, but you have told us, I think, that there are only about 20 per cent. of the workers organised?—Oh, no; I have not told you that in the laundry trade.

8232. What is your percentage?—I do not think I could give a percentage, because we are in continual controversy with the employers as to the number of people there are in the laundry trade.

8233. Can you give it approximately?—The percentage is very much higher than 20 per cent. in the industrial towns. The percentage is very much lower in the rural areas.

8234. Those rural areas are the places where the evasion takes place?—But, as I say, it is perfectly simple for them to communicate with the nearest trade union office dealing with them, and for their very small trade union contribution they would receive protection. I am afraid I am not particularly interested in the unorganised worker.

8235. *Chairman*: Then your next point is that you agree with the employers about the small laundries?—Oh, yes, and I should like to emphasise that. That has really been quite a serious business. Right from the beginning we have had continual assurances from the Ministry of Labour that hotel and shipping laundries would be dealt with. There are not the same difficulties with regard to inspection and so forth with regard to them as there are for the institution laundries, and yet ever since the Laundry Board has been established this matter has been delayed, and we have had continual joint deputations. There is the completest unanimity between the employers and the employed sides on the Board, and yet we have not been able to have anything done, and then now we have been told that the setting up of this Committee, which obviously is not concerned with a very technical point like this, delays the putting into operation of the repeated promises of the Ministry that hotel and shipping and railway companies laundries would be dealt with.

8236. Then you speak about the accommodation at the Old Bailey being very bad?—It really is. appallingly bad.

8237. I think everybody is agreed on that.—But I did want to point out there that it was the employers who led the strike, and they led that strike very well. It was quite a 100 per cent. strike, but unfortunately it did not have the effect that we had hoped.

8238. Then you state your general conclusions, and you say at the end—which is important—that there is a risk of the trade going back to pre-war conditions if the Trade Board should cease to function?—Oh, if the Trade Board should cease to function I think there is no doubt that there would be an immediate return to pre-war conditions, and I wish to emphasise there that the continual reduction in Trade Board rates would tend to bring about that in the industrial towns, though, of course, not so much in the rural areas.

8239. *Lord Weir*: How do you suggest that that should be got over?—What?

8240. The continual reduction of rates of Trade Boards.—Well, I think that there ought to be a common understanding that there is such a thing as a rate below which the Trade Board rates should not fall if they are going to give a decent standard of life to the worker. At present we are, of course, at the mercy of the Appointed Members if they wish to give continual reductions, and we feel that there is a danger that the state of one trade in a state of slump should reduce the workers' wages to below the pre-war level; and it is very much more difficult, of course, to get them up again.

8241. *Dame Adelaide Anderson*: That is, you would rather have a more restricted area covered by laundries than that it should be a larger industry with worse conditions of wages?—I am afraid I do not quite understand your question.

8242. Supposing you fix this standard, a living wage, and the whole of the trade cannot bear it, some of it will go?—Yes.

8243. And you consider it is better that it should go than that you should have more laundries with worse paid workers?—Well, I do think on that that it is rather important.—

8244. It is an important point to face?—It is an important point, and I think we ought to face it, because the laundries which would go would be the small, insanitary, badly-managed laundries, which are a menace to the whole trade. The well-equipped steam laundries throughout the country can well afford to pay these rates. For example—I have not the cutting here, but in a recent Association meeting addressed by one of the employers' officials 80 per cent. of the people there stated that they did not intend to give the reduction which the Trade Board had given. I mean these rates are not only not excessive, but they are admitted by the employers themselves not to be large enough for the big steam laundries. We are continually being dragged down by these small, insanitary and badly-managed laundries, and I think it would be to the benefit of the whole trade if they were done away with. No doubt it sounds harsh, but it does not seem to me right that people should employ labour under bad conditions and then expect, because of that, that all the rates have got to be fixed to meet their convenience.

8245. There is one more question about the guaranteed week. You would include that—that the trade should be organized so as to bear the guaranteed week?—Yes, I do that, because—

8246. To carry it, I mean?—Yes. The employers organized on that basis; they did not propose to pay for labour that was idle, and, therefore, they proceeded to organize their business so that labour should not be idle.

8247. It was an agreed thing between the employers and workers?—Oh, no. The employers voted against it on the Trade Board; it was carried against them, but when it was carried then they had to organize in order that it should not cause a loss, and the organisation was going on splendidly and the system was getting into order when the bolt from the blue came, in the shape of the legal decision of the Ministry.

8248. *Mr. Poulton*: On the point you mentioned just now as to the rate of wage, you said that the larger employers said that the rate was not sufficient and that you were continually dragged down by the worse employers. Does that mean that the better class employers took advantage of the Trade Board rate, which is a minimum rate, to bring the others down to the minimum although they were not obliged to do it?—Well, I think that is, as a matter of fact, what is happening, though not generally. For instance, in Manchester we have been working all this time under a trade union agreement and not on Trade Board rates; but there is, of course, the pull all the time to reduce the Trade Board rates, and in many cases the employers, as in Birmingham, Newcastle, and a large number of places, have simply informed the Trade Union that the agreement no longer applies, and that they propose to enforce the Trade Board rates.

8249. Which means that they bring everybody down to that rate?—Yes.

8250. *Sir Arthur Pease*: Then the Trade Board rate is really becoming a standard rate?—Well, do not all minima tend to become standards? Minima always tend to become standard in actual practice unless with very highly-organised workers. It is human nature that the employer does not pay more than he has got to pay. That is our experience.

8251. *Chairman*. That, of course, depends on the strength of the Union?—Yes, quite. As I say, in Manchester and Bradford, and a fair number of other towns, the Unions are powerful.

8252. *Dame Adelaide Anderson*: It depends also on the state of prosperity of the country. The higher wages would depend not only on the trade union organization, the power to enforce, but also on the

Miss ELLEN C. WILKINSON, M.A.

[Continued.]

general prosperity of the country—the ability on the part of the general public, the consumers, to pay?—That would be so if it had not been our experience during the war that that did not happen until the workers were organised. I think an increased prosperity tends to make it easier to organise the employees; there is not the same fear of unemployment; and then it is easier to get wage agreements; but left to themselves I do not think that that makes very much difference as to the amount of wages that are paid by the employers, taking them all round.

8253. Surely if the community is very poor that tends to reduce prices, and in the long run wages?—That is quite true, but the contrary is not necessarily true: that when the country is rich, as it apparently was during the war, that necessarily means that wages are increased correspondingly unless there is the organisation to increase them. That is our experience.

8254. But employers would be more ready to increase wages in those circumstances?—Yes, a very large number of employers would, but I am talking about the very large mass that we have to meet.

8255. *Sir Arthur Pease*: Then you think that it is quite impossible for a minimum wage not to become a standard wage in the majority of cases?—To be quite accurate, I should say there is a very strong tendency for the minimum rate to become the standard rate.

8256. *Mr. Pugh*: You referred to Appointed Members in your argument as to the tendency for wages to go down. I would like to get your opinion with regard to the Appointed Members in relation to your suggestion of a sort of Arbitration Court. Would you consider that the Board, dealing with its own questions, should, instead of Appointed Members, have an Arbitration Court to go to on any point upon which it could not agree? What is your view with regard to the utility of the Appointed Members in bringing the parties together and getting equitable settlements?—I think it is very useful to have a Chairman on the Board who is appointed from the outside, both for discussion and for negotiation. My feeling is that the other two Appointed Members ought not to be, as it were, duplicate Chairmen, silent when the Chairman is there, but that one of them ought to be chosen from a panel appointed by the employers' side of the whole of the Boards, and one of them chosen from a panel appointed by the workers' sides. Then, as it were, you would get two assessors to sit with the Chairman.

8257. And the Board then would be, as it were, its own Arbitration Court in case the employers' and workers' representatives could not agree?—Yes, quite so. If you had any difficulty after that, if you wanted a Court of Appeal after the Chairman had given his decision and so forth, then I think the suggestion of something like the present Industrial Court would be useful instead of what happens at present: the veto or otherwise of the Ministry of Labour, with its endless delays.

8258. *Mr. Poulton*: Then you would vary the Appointed Members to that extent: following the suggestion made just now, rather than having the present Appointed Members?—Yes, I think the present Appointed Members tend rather to duplicate the Chairman.

8259. *Chairman*: Or rather to triplicate the Chairman?—Yes, to triplicate the Chairman. I beg your pardon.

8260. *Lord Weir*: One question in connection with the laundries of hotels and shipping companies. Have you many members in those laundries?—Yes, the biggest Unions have quite a large number of members in those laundries.

8261. What kind of wages do they get—good wages?—Yes, fairly. Some of them get somewhere about Trade Board rates, some of them get above and some get less. They are not of course subject to inspection in the same way as the laundries coming under the Trade Boards, and they are not bound to pay the Trade Board rates.

8262. I wondered whether they were big enough units to enable you to organise them so that you could

secure, as a rule, at least the Trade Board rates?—In the two cases that come within my personal knowledge, Liverpool and Portsmouth, they are organised, but in other cases they are not. Even so, we think that these people should be bound to pay at least the minimum to their workers—that they ought to honour the present Trade Board rates. It has been contended by the employers, and evidence has been given to attest the truth of it, that certain big shipping laundries in Liverpool and in Portsmouth, when they have not got the big contracts in from the ships, are tending to collect and take in the work of the ordinary commercial laundries.

8263. The point which I wanted to get at really was this: Is it not the case that these big laundries really do pay comparatively high wages—that they pay over the Trade Board rates of wages?—I should say that it was true in the case of the big shipping laundries; I should say that it was not true in the case of hotels. The hotel laundries are most difficult to organise, of course, because in so many cases it is difficult to get at the girls, and there I should say that as a general rule they pay less.

8264. *Sir Arthur Pease*: Do they live in in the hotels?—Some of them, but of course some do not. I should say that generally speaking they do not, but we have some cases where they do.

8265. *Dame Adelaide Anderson*: In all these places they have to conform to the standards laid down by the Factory Acts?—Yes, and of course for laundries, if I may say so, the Factory Act is an Act which very badly needs revising. It is somewhat old now, is it not? It has not kept up with the present conditions of industry. I mean it still gives 60 hours as the number to be worked in a week.

8266. As regards hours, that is a new movement, but as regards sanitation, safety, and the certificates of physical fitness, and so on, the standards in force are precisely the same standards in hotel laundries and shipping laundries as in any other laundries?—Quite, but the point to which I was referring when I said that they were not open to the same inspection is that any private laundry is open to have its books inspected by Trade Board Inspectors, who will see what rates they are paying. That does not apply of course to hotels, shipping and institution laundries.

8267. But under the Factory Act the same law applies as regards safety, sanitation and physical fitness?—But not as regards hours, does it?

8268. The same as regards hours, yes. I understood you to refer to the standard hours under the Factory Act being longer than are now obtaining in industry?—Do you not think it is true, if I may ask, that the whole of the Factory Acts have not kept pace with the modern movements in industry, and that the actual protection which is given by the Factory Acts is nothing very much to boast about?

8269. I was not upon that point at all. All I wanted to elicit was that, whatever the standard of the Factory Act is, it applies in a shipping laundry as it does in a private laundry?—Yes, I do not think I was disputing that.

8270. *Mr. Layton*: Just now you spoke of the tendency of minima to become standard rates. Do you want the Committee to understand that in fact this rate of 7½d.—I think that is the current rate—is the general rate right through the country districts as well as the town laundries?—Yes.

8271. They are actually paying the same rates?—Yes.

8272. I think you said elsewhere in your statement that there was a lot of evasion, or you suggested that the inspection was inadequate?—I suggested that the inspection was very inadequate, yes.

8273. Do you think that lower rates are paid really?—Yes. For instance, we had a case before the Board quite recently where the Glatness Laundry had never paid those rates.

8274. That would not be an unrepresentative case; there would be a lot of cases of that kind?—Yes; but of course the whole difficulty is the inspection of the

10 January, 1922.]

MISS ELLEN C. WILKINSON, M.A.

[Continued.]

smaller laundries. I should not say that there was much evasion on the part of the bigger laundries.

8275. Would you consider it sound to have the same rates for London and for rural districts?—Our whole difficulty with regard to that has been the almost impossibility of getting anything like a reasonable differentiation. Laundries of course collect their work by motor vans. You might say, for example, that Leeds and Bradford, which are big industrial towns, should pay (for the sake of argument) an 8d. rate when the country is paying a 7d. rate; but there is, as a matter of fact, a very large laundry in Pudsey, which is equidistant between Bradford and Leeds.

8276. That is an industrial district, is it not?—It is in a purely agricultural district, and it can collect just as Leeds itself, for example, collects from York. We have cases where a 30-mile radius is covered by the vans of one laundry.

8277. You would not call Pudsey a rural district, would you?—I think the Pudseyites would. Particularly is that the case with the laundry which I have in mind, which is situated in the middle of green fields near a country village. I mean that is the difficulty. We have fixed on the Board that 30 miles from Charing Cross should be the London area, but we were met with storms of objection on the part of employers who were just on the border.

8278. But if you do not adopt that plan are you not forced into the dilemma of either fixing the rural rate as the basis of the whole national Trade Board rate—the rate which can in fact be paid in rural districts without preventing the trade being carried on—or else fixing a rate suitable to the urban districts and producing difficulties in the rural district, either evasion or else unemployment?—Of course, what has happened in practice has been that we have fixed on the rural areas.

8279. You say that this is on a rural basis?—Yes, quite.

8280. And you still wish us to understand that the effect of this has been that the town laundries are now paying on a rural basis?—That is so. I say that the rates which are being paid now in the towns are rates which have been fixed all the time with two eyes on the country area. That is the whole point.

8281. And competition does not tend to bring the rates up above the rural rate?—Why should it? Competition would bring the rates down, but I do not see that competition would bring the rates up. That is the whole difficulty.

Chairman: I think Mr. Layton means competition for workers.

8282. Mr. Layton: Yes. Competition works both ways?—Yes. In that case, to some extent I think it does, just as in the case which I have given of Bradford; but that, I say again, only happens where the workers are organised. It happens, of course, in individual cases; but, taken over the whole, increases of rates in the industrial areas at the present time only happen where you have got the workers organised.

8283. Chairman: But you have a lower rate in the country districts?—We had when we had an 8d. rate; we have not now when it is 7½d. They are all paying the same. That was a case when we did reduce definitely.

8284. Mr. Layton: Would you consider it a satisfactory scheme if the Trade Board were to fix a minimum rate on the rural basis in an industry which in fact was common both to town and country,

other rates above the minimum to be determined by the power of organisation?—On the whole I do, in this sense, that I do not see that in the laundry trade anything else can be done. We have argued it out a very great deal, but we have seen exactly the difficulty that you are raising: that where you are having work collected by motor vans and a very large radius to cover it has been, even for the employers, an almost impossible thing to produce a really workable scheme.

8285. Chairman: Surely that is not quite the point, is it? A reason, and perhaps the main reason, for fixing a lower rate in the rural districts is that rents are lower; it costs the worker less to live?—That is so, but you see what would happen: the country laundries which were within, say, a 20 or 30-mile radius of a large town would be in a very good position to compete with the town; and that would be the case even if you did not take it so far away from the towns. It might be a question of their being only 5 miles, or even 2 miles, over the actual boundary, and there might be a difference of 1d. per hour between the people in the different laundries.

8286. Wherever you have boundaries, of course, you have trouble?—Yes, but this is a case where it is very difficult. It is much more difficult in this case than it is in the dressmaking trade, where we fixed differential rates.

8287. Mr. Layton: You would not object to laundries being taken out into the country districts, I suppose? Would you not think that a good movement?—Yes, so long as it did not reduce the rates. I am rather sceptical about this difference between rural areas and town areas. There is a difference in rent and there is a difference in the cost of transport, but there is not the same difference in food, and clothes are generally dearer.

8288. But if it were shown that there was a difference in cost, you would not object to laundries moving into the rural districts, would you? In itself that is a good thing, is not it?—That sounds very nice, but in actual practice what it would mean would be that girls who now live in the slums of Leeds would either have to go and overcrowd the country towns round, or else they would have a very great deal further to go to their work. If the laundry companies would be prepared to build model villages round their laundries, of course it would be an excellent thing, but I do not see them doing that.

8289. If you fixed the same rate for the rural districts as was fixed for the towns, you would at all events discourage that, would you not?—Of course it does happen even now, because you have rates and taxes cheaper in the country areas than they are in towns. I can think of one very large laundry in the north which has moved out because of that, where there is an enormous difference between the rates and taxes of the two areas.

8290. Sir Arthur Pease: As a matter of fact, in the organised trades, which have been considering these problems for years and years, the rates are higher in towns than in the country, are they not?—That is so; but it is quite a moot problem as to whether they are higher because the cost of living is higher in towns, or whether organisation is better in the towns than it is in the country areas.

8291. Take railways. There you pay a man higher in a town area—say at Newcastle—than in the country. That is settled between the unions and the railway companies. It is recognised in other trades; that is what I mean?—Yes, quite.

(The Witness withdrew.)

Mr. P. C. HOFFMAN, called and examined.

The Witness handed in the following statement as his evidence-in-chief:—

MEMORANDUM OF EVIDENCE SUBMITTED BY P. C. HOFFMAN, London Organiser, National Amalgamated Union of Shop Assistants, Warehousemen and Clerks; Member of the Dressmaking and

Women's Light Clothing Trade Board (E. & W.); Vice-Chairman of the Consultative Committee to the L.C.C. in connection with Classes for Learners in the Needlework Trades; Member of the Consultative Committee to the L.C.C. on Instruction of Salesmen and Saleswomen in the Wholesale and Retail Textile Distributing Trade.

10 January, 1922.]

Mr. P. C. HOFFMAN.

[Continued.]

Distribution is an Unorganised Trade. 1,250,000 Employed Persons.

1. During 1918 a Committee called the National Trade Advisory Committee (Distributive Trades), representative of the principal employers' associations and of the trade unions concerned in distribution, was set up to report upon openings in the distributive trades for disabled sailors and soldiers. In the report issued by this Committee M.5, the number of persons employed in England and Wales in the distributive trades is given as, males, 930,340; females, 365,607. This is exclusive of those employed in the catering trades. These figures are inclusive of employers but exclusive of clerical staffs, vanmen, etc. The number employed in the *drapery trade* is given as, men, 111,248; women, 100,465. Of these quite a large number are juveniles. The "Labour Gazette" for October gives the total number of insured persons in the distributive trades as 967,570, to which has to be added 36,170, classified as warehousemen, packers, porters, etc. There are also a number of distributive clerks, who are included in those classified under the heading Commercial, Clerical, Insurance and Banking. There should be added to these figures those who are in receipt of £250 a year and over, of whom in the aggregate there is a goodly number. There is thus probably 1,250,000 employed persons in the wholesale and retail distribution of goods. No account is taken in these figures of those employed in the dressmaking trades or of those engaged on manufacture and repairing in connection with the big stores.

In the same number of the "Labour Gazette" for October, 1921, is given the membership of the various trade unions of the country from 1916 to 1920. The number of unions catering for shop assistants, clerks, etc., in the British Isles is given as 57, with a total membership of 120,000 in 1916, and in 1920, 276,727. These figures are exclusive of the membership of unions confined to Government, banking, railway, or shipping clerks, but include a number of clerks not necessarily employed in distribution and is inclusive of dressmakers, members of this and one or two other organisations. Making due allowance for these modifications, it will be seen that only 20 per cent. of those employed in the distributive trades are organised.

Drapery is an Underpaid Occupation.

2. The drapery has been and is an underpaid occupation for a large proportion of those employed as compared with other classes of workers. Many instances of low wages have already been put in before this Committee by my colleague, Mr. John Turner. (See Minutes of Evidence—16th Day.) I submit in Schedule "A" supplementary instances of low wages in the drapery trade. As I will show presently, there is corroborative evidence from the employers' side as to the state of things which has hitherto prevailed in the drapery trade.

Compared with other Trades.

3. These wages compare most unfavourably with those in operation at the same time for other classes of workers, for example:—

Railway Women and Girl Clerks.—Class 2 were in receipt of wages from 17s. 6d. at 16 years of age up to 60s. at 31. Class 1 from 55s. to 70s. with 4s. increase for London. In addition to which floating bonuses were paid subject to fluctuation in accordance with the cost of living. *Female Colliery Clerks* from 29s. 6d. at 16 to 68s. at 21 years of age. *Telegraphists, Counter Clerks, etc.*, from 18s. 6d. basic up to 42s. 6d. with bonuses in addition from 24s. to 50s. subject to rise or fall in the cost of living. *Women Upholsterers* from 11d. to 1s. 6d. per hour. *Women Cleaners* in printing trade 48s. for 44-hour week. *Female Operators in heel building, boot and shoe trade, or stockrooms*, 19s. at 16 years up to 40s. at 20. *Temporary Government Clerks.*—Grade 1, from 62s. to 69s. 6d.; Grade 2, 58s. to

65s. 6d.; Grade 3, 52s. 6d. to 58s. *Corporation Clerks (Copying Typists)*, £80 per annum by £10 to £100 plus Civil Service war bonus.

Men—Musicians, £4 for 32-hour week. *Electricians*, £5 17s. 6d. *Bricklayers, Carpenters, and Joiners*, over £5 per week. *Labourers*, over £4 per week. *Printers*, £4 per week. *Journalists*, from £6 6s. per week. *Railwaymen*, from over £3 to nearly £5 per week. *Policemen*, from £3 10s. to £4 15s., with bonus and allowances on top.

"Draper's Organiser" on Shop Assistants' Poverty.

4. There is a general admission throughout the Drapery Trade that conditions have not been as good as they might be. The "Drapers' Organiser" in July of this year published the following:—
"The improvement in the life of the Shop Assistant of recent years is to-day generally acknowledged. The pre-war Shop Assistant was despised on account of his poverty as much as anything. The general level of salary was a poor contribution to personal dignity. Into the cauldron produced by the war the Shop Assistant fell head foremost, to reappear with a clearer and deeper conception of his own importance. The movement towards improved conditions was apparent before the war, and might have come about in any case, for the large stores demanded more efficient business men. The Store Clerk (American term) of to-day is more efficient than his predecessor and possesses a fund of really valuable knowledge. The work of the Shop Assistants' Union had certainly contributed to the improvement in status. . . . Retailing has taken a more scientific turn and the demand for efficiency will continue, and will assist to maintain a higher level of comfort than in the past. It is a matter of congratulation that trade unionism in the shop is not of a virulent type, and if the union should see its way to promote the education of the Assistant the effect would give it new and wonderful friends."

Mr. W. Malin (Derby) on the Unattractive Drapery.

The "Drapers' Record," another trade paper, in a recent number published the following:—

"Mr. W. Malin, of Messrs. Thurman and Malin, one of the leading drapery firms in Derby, addressed the local Rotary Club on Monday on 'Some Aspects of the General Drapery Trade.' He pointed out the useful and important rôle played by the draper in his capacity as a distributor. . . . The difficulty at the present time was to find enough men to fill the positions in which the higher sum could be obtained. One of the principal men in the business had told him that he could secure plenty of men worth £800 a year, but not many worth £2,000, although he was needing that class.

"Perhaps the shortage was caused by the fact that nowadays there was a reluctance on the part of youths to enter the trade as apprentices. Rightly or wrongly, the tradesman and his shop were not favoured by the well-educated youth of the present day. Either the hours were too long, or the details for the first year or two were unattractive. . . . The draper had to be an artist, an actor of no mean order, a student of the requirements of the public, and be proficient in finance. If all the abilities and capacity of the Cabinet were found in one person, he would not be too good a man for a general draper."

Prior to the war there was a dearth of the right sort of young people willing to take service in the drapery trade. This is still true.

Drapers' Chamber Consults Union to Find Remedy.

5. In 1915 the Drapers' Chamber of Trade requested their Retail Staffs Committee to meet representatives of this Union in order to find out what ought to be done to improve matters, and for the Committee to outline a policy to be pursued by the trade in future. As a result of that Conference both sides recommended that a National Committee should be set up in order

10 January, 1922.]

Mr. P. C. HOFFMAN.

[Continued.]

to regulate working conditions in the trade. That recommendation was not, however, at that time agreed to by the Chamber, but they stated they would be prepared to meet us should necessity arise.

Drapers Procrastinate, Assistants Act.

6. In spite of this, drapers did not increase wages with increasing costs. Economic pressure drove drapers' assistants to secure by organisation what they had been unable to obtain by good-will. The Union's membership went up from under 40,000 in 1917 to 58,000 in 1918, and nearly 90,000 in 1919. We were very busy negotiating with drapers in various parts of the country for the purpose of securing a guaranteed rate of pay and improvements upon their earnings. I submit to the Committee copies of Agreements which we obtained from time to time with various drapers. See Schedule "B." (Specimens only printed.)

Decision to Apply Trade Boards Act to Distributive Trades.

7. On March 20th, 1919, a Conference of Employers' Associations and Trade Unions concerned in the Wholesale and Retail Distributive Trades was convened by the Minister of Labour at the Central Hall, Westminster, to consider the application of the Trade Boards Act to the Distributive Trades—

- (1) In regard to the number of Boards required.
- (2) As to whether there should be separate Boards for the Wholesale and Retail Sections.
- (3) In regard to the question of overlapping in manufacturing distribution.

Two hundred representatives were present. The Conference was presided over by Mr. G. Wardle, M.P. A Committee of 20 representatives from the employers and 20 from employed was set up to report as to whether there should be one or more Trade Boards for the Distributive Trades.

On April 24th the Committee reported as follows:—The first resolution was passed by a majority of the Committee:—

"That this Committee recommend that one Trade Board should be set up for the whole of the Distributive Trades."

Voting.—For, 20; Against, 10.

The second resolution was also passed by a majority:—

"That if any organised trade reached such a point as to provide adequate machinery for the regulation of wages throughout such a trade it can be withdrawn from the operation of the Trade Boards Acts and placed under an Industrial Council. That the Ministry of Labour do so define the Trades as to include within the scope of the Trade Board only purely distributive operations and that the only manipulative operations included will be those incidental to distribution. That to meet the general agreement that there must be some link between the Trades, but to make provision for the separate trades in relation to special conditions of them, such a Trade Board should set up Committees to deal with all classes of establishments and these Committees should be given a larger degree of autonomy."

Voting.—For, 17; Against, 7.

Prior to this Conference, in January, 1919, a memorandum, copy of which has already been submitted to this Committee, had been drafted, and joint representations made by the National Chamber of Trade and this Union for the purpose of securing one Trade Board for the whole of distribution. We were promised there would not be more than three or four Boards. Mr. Wardle stated that "they were prepared to start almost at once with the two Trade Boards on broad lines such as Drapery and Groceries."

Drapers demand a Drapery Trade Board.

8. In spite of this and in spite of the decision of the National Conference, employers insisted upon separate Trade Boards being set up for each trade. For instance at the largest national meeting of retail drapers called together for many years which was held at the Drapers' Hall on October 21st and 22nd, 1919, the following resolution was carried:—"The members of the Drapers' Chamber of Trade in general meeting assembled, are of the opinion that a Trade Board for the retail textile distributive trade should be established at the earliest possible moment, it being the opinion of the meeting that the reforms to be dealt with by a Trade Board will be more effectively carried out by a separate Trade Board than would be done by one Trade Board for the whole of the distributive trades."

From the foregoing it will be seen that traders' associations were in the closest touch with everything that was taking place, and if there has been any departure from the original intention of one Board it is almost entirely due to the attitude of the traders themselves.

Drapers anticipate Legislation—Not to be caught Napping.

9. The pressure from organised assistants, together with the prospect of a Trade Board being set up for the trade, compelled the Chamber to face the position squarely and deal with it fairly.

In February, 1919, Mr. J. K. Pyne, President of the Chamber, referring to the prospect of a Trade Board said: "It may be that many may resent what at first sight appears to be interference with the employers in the conduct of their business, but on reflection it will be found this is not so, it is in fact a movement, in their interest, and to provide machinery for the prevention of unrest on the part of employees."

In June of the same year Mr. F. W. Cook, J.P., the Chairman of the Chamber, said: "It was also necessary for them to anticipate legislation. It was no use their being behind in such matters. The Chamber must have a constructive programme which would lay down what was necessary with regard to their workrooms, shops and employees. If they prepared in advance they would not be taken unawares. The Wages (Temporary Regulation) Act had come like a thief in the night. The Act should be a lesson to the trade and they should not be caught napping again. The Chamber would also do what it could in connection with the establishment of training classes throughout the country. They wish to draw the right class of employee into the trade, and they had to make the employment sufficiently attractive."

An Agreed National Scale of Wages and Conditions.

10. During 1919 a series of conferences took place between representatives of this Union and the Drapers' Chamber of Trade as a result of which an agreed scale of wages and working conditions was reached. (See Schedule "C.")

The rates are based on age and experience and are varied in four grades according to the Returns issued by the Board of Trade in regard to the cost of living, 1912. Copies of the booklet dealing with this point have already been laid before the Committee. In addition there are reductions in the basic rate of 2s. 6d. for boy learners and 2s. for girl learners in small country towns under 5,000 population.

Mr. Skinner (John Barker's) says: "Trade can afford to pay."

The adoption of these scales was moved by Mr. S. M. Skinner of John Barker's, the present Chairman of the Incorporated Association of Retail Distributors. He said "theirs was a great trade and could afford to pay a living wage to those whom it employed." Dealing with the learners' rates he said: "Some parents were not unnaturally desirous of reaping an immediate reward in the way of wages

10 January, 1922.]

Mr. P. C. HOFFMAN.

[Continued.]

from the young people when they started work after leaving school. For that reason the immediate reward offered by the trade would have to be sufficiently attractive."

The Staff Committee of the Chamber placed on record its appreciation of the conciliatory attitude adopted by the Shop Assistants' Union during the conference.

Worth merely the Paper it was written on.

11. The attitude of the Chamber itself towards the agreement may be summed up in the words of Mr. Chas. Coleing, who said, "It was merely an agreement arrived at between two organised bodies which until they got an Industrial Council or Trade Board was merely worth the paper it was written on."

At the annual conference of the Drapers' Chamber of Trade that year the President, Mr. J. Arthur Pyne, said: "The rates already fixed would remain operative until a Trade Board was set up for the retail textile distributing trade, when he had no doubt the schedule passed at the conference would form the basis of consideration for the new rates which, when passed, would be obligatory." The agreement was not generally operated; only where assistants were organised was it enforced.

Discontent leads to Strikes.

12. During 1918 and 1919 shop life was seething with discontent and the conditions which were generally bad culminated in a stoppage of work at the Army and Navy Stores at the end of 1919. Other stoppages which occurred during this year and 1920 in the Drapery Trade were at the Economic Stores, Aberdeen, Beatties, Wolverhampton, Peterhead Drapers, and John Lewis, London, but the strike which had eventually the widest results was the Army and Navy Stores.

Enter the Incorporated Association of Retail Distributors.

13. The Incorporated Association of Retail Distributors which until that time had not dealt with wages rates and had not, in fact, functioned at all during the war, in consequence of the Army and Navy Stores strike drew up a scale of wages (see Schedule "D") which closely followed the agreement with the Drapers' Chamber of Trade. As we secured variations in our original agreement with certain firms in the West End of London such as Messrs Bourne and Hollingsworth and Messrs. John Lewis, the Incorporated Association of Retail Distributors varied their scales all of which I have put in. (See Schedule "D.") Besides drawing up their own scale of wages which they said their members would operate, the Secretary of the Incorporated Association of Retail Distributors met us on behalf of some of his members and came to arrangements in certain cases, as for example Messrs. John Barnes of Finchley Road, Messrs. Thos. Goode of South Audley Street, the Junior Army and Navy, and the Haymarket Stores, but as I will show later they declined to discuss a general minimum rate with us.

They Welcomed Trade Boards.

14. From all the foregoing will be seen, that the drapers agreed to scales of wages on a progressive age basis, that they anticipated and even welcomed the setting up of a Trade Board for the Drapery Trade. That they also desired to improve the occupation in order to make it more attractive for the right sort of young people to enter it.

The Right-about-turn. Organised Campaign against Trade Boards.

15. With the depression in trade came an alteration in the attitude of the employers towards Trade Boards. In October, 1920, the Incorporated Association of Retail Distributors informed its members that "it was with pleasure the Association reports that a definite scale of minimum wages was adopted by the Grocery and Provision Trade Board

on September 30th. The Association which is concerned with every branch of the Distributive Trades realises that the minimum rates fixed by this Trade Board would tend to become the index rate for all other Sections of the Trade. A strenuous fight was therefore made by our representative upon the Trade Board to secure that index rate being made as low as possible."

But, by January, 1921, this Association decided to "promote a campaign for the suspension of existing Trade Boards and to secure that the various powers exercised by the Minister of Labour should revert to the original Ministries," and "this campaign was to be conducted in conjunction with the greatest possible number of commercial and industrial organisations through the Press and otherwise, and later by Parliamentary action." The Press was deluged with paragraphs and circulars about the wickedness of Trade Boards, and coming, as these statements did, from their biggest advertisers, the Press could not afford to ignore them.

The result of this policy began to show itself very quickly. A month later the Drapers' Chamber of Trade passed the following resolution:—"That owing to the very unsatisfactory experience of the Chamber in connection with the Dressmaking and Women's Light Clothing Trade Board and the Hat, Cap and Millinery Trade Boards, this Chamber views with grave apprehension the proposals of the Ministry to set up Trade Boards for the retail drapery and out-fitting trades, and (a) emphatically protests against any further extension of the Trade Boards for the retail textile distributive trades; (b) that kindred associations be invited to actively co-operate with the Chamber in its protest, and a joint deputation be appointed to wait upon the Ministry of Labour; (c) that those resolutions be sent to the Prime Minister, Mr. Bonar Law, and the Minister of Labour."

Chances for Martyrs.

16. In the "Drapers' Organiser" for March 12th, 1921, under the heading, "Chances for Martyrs," appears the following paragraph:—"The weekly circular issued by the Incorporated Association of Retail Distributors states that retailers in one or two towns have expressed their intention of paying wages below the official minimum wages to employees of the millinery and dressmaking workrooms, and of risking prosecution. The risk is considerable, but it may be worth taking purely as an advertisement of the defects of the Trade Board system. No doubt contributions to the expenses of a prosecution could easily be found among employers similarly affected, and a number of challenges simultaneously offered in several parts of the country ought to do good. It would be advisable to avert odium by arranging to pay to some public charity the difference between the minimum and the actual rates. It is time for the public to know what impossibly high rates of wages mean, and under-payments openly made for the purpose of inviting prosecution would focus attention upon the matter."

Attack on Dressmaking Board to Stop Formation of Drapery Board.

17. In March, 1921, the Drapers' Chamber of Trade sent out a circular. (*Handed in—not printed.*) See Schedule "E" in which occurs the following paragraph:—

"There is unfortunately no doubt that owing to the Dressmaking and Millinery Trade Boards fixing rates of wages for workers higher than employers can afford to pay, much unemployment has ensued. This Chamber, whilst it is doing all in its power to remedy this undesirable state of things, wants to bring sufficient pressure on the Ministry to prevent the setting up of any further Trade Boards for the distributive trades."

The drapers, then, it is clear, now want to prevent a Trade Board being set up for the distributive trades, and they give as a reason their experience

10 January, 1922.]

Mr. P. C. HOFFMAN.

[Continued.]

of the Dressmaking Board. In fact they were encouraging opposition to the decisions of the Dressmaking Trade Board in order to stave off the setting up of a Trade Board for the drapery trade. To attack the Dressmaking Board was their defence against a Drapery Board.

The Allegations of Employers.

18. Their contention is that the effect of the decisions of the Dressmaking Board has been:—

- (1) To throw workers out of employment.
- (2) To prevent learners being employed.
- (3) Age rates lead to lack of initiative and reduction in the standard of efficiency.
- (4) That the handcraft trade is being killed.

It is necessary then to deal in detail with the dressmaking position.

201,140 Dressmakers, 25 per cent. Organised.

19. In the past the condition of things in dressmaking workrooms throughout the country has been absolutely deplorable, for only within the last few years have they become even partially organised.

The "Labour Gazette," October, 1921, gives the number of women employed in the dressmaking, millinery, furriers, etc., as 201,140, of whom probably not more than 25 per cent. are organised in the various Trade Unions who have opened their ranks to this class of worker.

Low Wages of Dressmakers.

20. Schedule "F" gives the full particulars of low wages paid right up to the time when the Trade Board was established, that is to say, when the cost of living stood round about 120 per cent. above July, 1914. In some cases learners worked for nothing at all. The following are a few of the worst cases:—

			s.	d.
3½ years' experience	(18)	...	1	6
9 "	"	(24)	10	0
10 "	"	(24)	11	0
3½ "	"	(18)	7	0
5½ "	"	(21)	16	0
4 "	"	(17)	7	0
3 "	"	(18)	9	0
8½ "	"	(23)	19	0
12½ "	"	(26)	21	0
1 "	"	(—)	4	0
1½ "	"	(15)	2	0
6 "	"	(21)	4	6
6 "	"	(21)	7	6
6 "	"	(21)	10	0
9 "	"	(23)	12	0
8 "	"	(24)	10	0
15 "	"	(30)	18	0
10 "	"	(28)	16	0
4 "	"	(18)	8	0
11 "	"	(24)	20	0

Even in the West End of London, where girls are engaged upon the very highest class of work, wages such as those quoted below were being paid in the early part of 1918, when the cost of living stood at 90 per cent. above pre-war level, prior to agreements with employers.

			s.	d.
Assistant	7 years experience	(30)	18	0

"	7 "	(24)	22	0
Assistant	14 "	(30)	17	0
"	6 "	(20)	16	0
"	12 "	(27)	16	6
Skirt Hand	9 "	(24)	21	0
"	4 "	(18)	15	0
"	20 "	(46)	20	0

The first arrangement this union came to on behalf of its dressmaking members was in Aberdeen in May,

1915, when we were able to secure a 50-hour working week and arrangements for overtime. The wages that were paid at that time were atrocious, girls of 18 being in receipt of 4s. 6d. and 5s. per week, assistants of 21 and over being in receipt of 7s. 6d. to 10s. per week.

Strike of Non-Union Dressmakers.

In November, 1916, the low wages, with increasing prices, drove girls to revolt, and numbers of those who were not members of the union in Aberdeen went out on strike for 2s. a week advance in wages, came to us, and decided to join the union while they were out. A settlement was reached at that time. Other strikes have occurred in Scotland, in Edinburgh, Dundee, and Ayr, and other places at various times, and agreements reached.

Agreements with Employers and Associations.

21. I submit to the Committee copies of agreements reached in Edinburgh with drapers and dressmakers. See Schedule G. (*Specimen only printed*.) Prior to these agreements the girls were in receipt of very low wages. Girls of 6 years' experience received 7s. 9s., and 10s. a week; 11 years, 12s.; 17 years, 13s. 6d.; 13 years, 15s., and so on. The first agreement covered some 30 firms and fixed wages up to 25s. per week. A stoppage of work occurred at 12 firms who refused to negotiate. A settlement was reached, with Sir G. A. Askwith as Arbitrator, on July 20th, 1917, and gave slightly better rates than those secured under the arrangement with the other firms. A National Scottish Agreement was subsequently reached on the 10th April, 1919, which fixed rates up to 8½d. per hour, whilst an agreement arrived at on the 1st August, 1920, fixed wages up to 11d. per hour. In August, 1919, an agreement was arrived at in Nottingham fixing wages up to 32s.; in January, 1920, up to 36s.; and in May, 1920, up to 44s.

In September, 1919, an agreement was arrived at fixing minimum rates for assistants at Stockton, Middlesbrough and Hartlepool at 8d., senior hands at 10d., and charge hands at 1s. See Schedule "H." (*Handed in—not printed*.) In Birmingham and district in January, 1919, rates were agreed to up to 38s. per week, and in July, 1919, rates were agreed to from 8d. per hour for assistants up to 45s. per week for charge hands. In 1918 the first agreement was arrived at in the London area with the London Employers' Association in respect to the bulk of people employed in the dressmaking trades. Other agreements were arrived at from time to time, copies of which I place before the Committee. See Schedule "I." (*Handed in—not printed*.) These are but a few of the agreements which we have come to with individual firms and employers' associations in various parts of the country, but they indicate that prior to the Trade Board being set up rates were agreed to which were in some respects superior to Trade Board rates.

Rates Prescribed under Wages (Temporary Regulation) Act.

22. In the early part of 1919 the Minister of Labour was impressed with the need to prescribe rates of wages for the Needlework Trade under the Wages (Temporary Regulation) Act, so he requested the Interim Court of Arbitration to advise him in regard to the matter.

The Court heard the parties on March 4th, 5th and 6th, 1919, as a result of which rates were published in Statutory Rules and Orders 357, and were enforceable as from April, 1919. See Schedule "J." (*Handed in—not printed*.) (Prescribed rate 7d. per hour for adult female workers.) These rates were well-known and circulated through the trade, although the Drapers' Chamber raised some opposition, and in the words of Mr. Cook decided that "they must not be caught napping again."

The Union had to take up a number of prosecutions before the local Munitions Tribunals and succeeded in recovering back pay due to the members.

10 January, 1922.]

Mr. P. C. HOFFMAN.

[Continued.]

Schedule "K" gives instances of pay recovered on behalf of some of our members. (*Handed in—not printed.*)

Trade Board Rates Agreed Rates.

23. The first meeting of the Dressmaking and Women's Light Clothing Trade Board was held on January 20th, 1920. The rates proposed and afterwards fixed were agreed rates and I may here add that in regard to the fixing of rates of pay both sides have met together and eventually arrived at an agreement, and in no case has a decision been come to on the vote of the appointed members. The National Chamber of Trade are wrong in their evidence on that point. The rates were fixed and operated as from 24th May, 1920.

A rate of 10½d. for skilled workers 22 years of age and over who have not less than three years' experience was fixed in November, 1920. On 11th July, 1921, lower rates were fixed for learners and a new rate of 9½d. was proposed for the less experienced workers, and proposals are now published of further revisions in the scales of wages.

Higher Rates than Trade Board Rates in Operation before Trade Board Rates were Fixed.

24. I have drawn up a comparative table of the agreements which have been come to in the London area with the London Employers' Association and the Trade Board rates. (*See Schedule "L."*) It will be noticed that the alteration has been a gradual one and that rates equal to and much better than Trade Board rates were in operation prior to the Trade Board being set up. I submit also (*see Schedule "M"*) a list of the members of the London Employers' Association (*handed in—not printed.*) It is a surprising thing, therefore, that Mr. J. H. Barnard and Mr. E. J. Pegg, representing Messrs. Thos. Wallis and Messrs. John Barker, Ltd., both of which were members of the London Employers' Association, should state before this Committee that unemployment was due to Trade Board rates and that the loss on the workrooms last year was put down entirely to the Trade Board.

Unemployment and Slack Time.

25. The question of setting up a Trade Board for the needlework trades had been before the Minister of Labour for some time. Numerous conferences were held at the Ministry between employers' associations and workers' representatives to try and arrive at an agreed line of demarcation. The workers' representatives and some of the employers felt that the easiest way was to have one Board for the whole of the clothing trade with sub-committees, but other employers' associations insisted upon separation. There was in consequence considerable delay in getting the Board set up. Eventually the Board was set up in January, 1920, and it was in the spring of that year that the boom in trade ended and a decline set in, so it is a coincidence that the first Trade Board rates and the depression in trade should synchronize.

Slack Time the Bane of Dressmaking.

Slack time, that is, suspension or part time employment, had always prior to the war been the bane of the dressmaking trade. So general was this that dressmakers were not admitted to our provident tables until 1920 when an experiment was made of allowing them to take one unit of unemployment benefit, namely 6s., for a penny. This was done because it was felt that the altered working conditions were stabilising the occupation. In a pamphlet entitled "Steady Employment for Girls in the Dressmaking, Ladies' Tailoring, Millinery and Allied Trades," issued by the London Employers' Sub-Committee (the forerunner of the London Employers' Association) in July, 1917, and which I shall have occasion to quote again in regard to slack time, states: "It has already been mentioned that during the first year no girl learner will be placed on short time, and every possible effort will be made to prevent those who have served that period from being placed on slack time. By making and remodelling

stock garments and by other means it is anticipated that it will very seldom happen that the girls are unable to draw a full week's wages." In pre-war days slack time has been in operation for as long as six months in the year, which means girls have been partially employed or wholly unemployed during this period. Court dressmakers in the West End of London used to close their workrooms entirely at the end of their season for as long as three months. The slackest time for dressmaking except in holiday resorts is from August to the middle of September, and from February to March. I have prepared a table (*see Schedule "N"*) which gives the figures available in respect of unemployment in the dress-making trade.

Unemployed: 62,583, January, 1921; 20,825, March, 1921.

The first figures are taken from the "Labour Gazette" and show that unemployment which stood at 44,826 in December, 1920, went up to 62,583 in January, 1921, down to 58,235 in February 1921, and slumped down to 20,825 in March. These figures are borne out also by our records of our members unemployed in the London area, which were 431 in January, 1921, and were down to 52 in March.

General Trades, 14 per cent. Unemployed. Dress-making, 10·4 per cent.

The national figures of the union for unemployed women were 1,506 January, 806 in March. Apart from that period it will be noticed that the figures of unemployment are fairly steady and are actually below the percentage of unemployment for all trades. From March to October the average month's percentage of unemployment in general trades is 14 per cent., and for Dressmaking 10·4 per cent. One is driven to the conclusion therefore that what unemployment there is, is due almost entirely (if not entirely) to the state of trade, and the month's percentage seems to show that this occupation is in fact better off than most trades in that respect.

Another factor which may make for unemployment in the Dressmaking has been the improvement in making up by the wholesale trade. This tendency was noticeable in pre-war days, but war conditions have helped the ready-to-wear trade enormously.

Employers Adjusted Cost of Materials but not Labour Costs.

26. It is no doubt true that in the case of those employers who did little or nothing to improve conditions for their workers during the war, and ignored Statutory Rules and Orders 357, the decision of the Trade Board came as a blow and caused dislocation, but those employers had ample warning and had years of favourable trade to adjust working conditions. The cost of some materials from which dresses were made had advanced up to 300 per cent. The public paid these increased charges and the employer has no one but himself to blame if he did not adjust the cost of labour at the same time that he adjusted the cost of materials. As I show later on the employers were enjoying ample profits, and the necessary adjustments could have been made without any hardship whatsoever.

A questionnaire which the Drapers' Chamber of Trade sent out in July, 1920, copy of which is given in Schedule "O" (*handed in—not printed.*), asks, "What will be the result to your workers if the present wages are compulsorily increased as proposed?" This is practically an invitation to employers to anticipate the worst, and whatever figures are given by them as a result of that enquiry ought to be treated accordingly. A letter from our Local Secretary at Aberdeen to his local Member of Parliament deals with the charge of unemployment locally in a very effective way. (*See Schedule "P."*)

Learners and Apprentices.

27. For many years there has been a dearth of learners entering the dressmaking workrooms, just as

10 January, 1922.]

Mr. P. C. HOFFMAN.

[Continued.]

there has been a dearth of eligible young people entering the Drapery Trade. The pamphlet issued by the London Employers' Sub-Committee, to which I have already drawn attention, was published with a view to encouraging girls leaving school to enter dressmaking, ladies' tailoring and millinery workrooms. That Sub-Committee formed from amongst important London employers in the trade mentioned, had "given much time and thought to the question how to make workroom life attractive and agreeable." They say "that the conditions of life and rates of wages in the past may not have been so attractive as they should be, but that condition of affairs has now been altered." It was agreed amongst them that each girl entering the trade as a learner would be paid 6s. for the first six months and 8s. for the second six months. There was nothing further laid down in respect to wages, although they did say that she would in time, "if proficient, become a fully-fledged worker responsible for the garments made by her with the help of assistants, improvers and learners; for this she would be paid from 21s. to 30s. according to her ability." Messenger work was to be discontinued when learners had served six months, certain overtime rates were laid down together with a 48-hour week.

This was a voluntary and quite useful attempt on the part of employers in the West End of London to deal with the dearth of learners that had for some years been in evidence. *But what has succeeded in this direction more than anything else is the improvement in wage rates and working conditions which Organisation and the Trade Board have brought into existence.*

Dressmaking Training Classes.

28. The Union has striven in every way to encourage training amongst those entering both Dressmaking and Drapery trades. We are represented with employers upon the L.C.C. Advisory Committee which is dealing with training girls for the Needlework Trades.

There are two types of L.C.C. classes: one the day trade school for girls up to 16 years of age; the other part-time training where learners attend for two periods of three hours each during the employer's time. Part of the Agreement which this Union had with the London Employers' Association in 1918 was that girls should attend these classes during the employer's time without deduction from pay. As will be seen from the Returns of Attendances which I put in to the Committee—see Schedule "Q" (*handed in—not printed*)—there has been no lack of learners attending the classes, in fact there would be a very much greater number if accommodation was available. The Committee has constantly asked for increased accommodation. The effect of learners' rates has been that they are receiving better training and being kept for dressmaking work instead of being used to run errands as formerly when no wages and low wages were paid.

Apprenticeship Broken Down.

29. In the Drapery Trade the system of apprenticeship has broken down. I have been serving along with the General Secretary of the Union, Mr. John Turner, and Miss Mabel Talbot, an ex-President of the organisation, on an Advisory Committee as Union representatives along with representatives of the Wholesale Textile Association, Drapers' Chamber of Trade, and the L.C.C., which anticipated Mr. Fisher's Education Bill by two years. A series of classes of complementary training during the employers' time without deduction from pay were undertaken at the Central School of Arts and Crafts, and a Memorandum on the subject was drawn up and published by the L.C.C. See Schedule "R." (*Handed in—not printed*). We sought to secure the formation of complementary training which would link up the education of the school and the train-

ing the learner should be undergoing in the shop. This scheme, although endorsed by the Drapers' Chamber of Trade, has not yet been operated by them, though it has been received with gladness and adopted in America. Arising out of this and the agreement with the Drapers' Chamber of Trade which I have already dealt with, a form of learners' agreement was drawn and agreed to both by the Drapers' Chamber of Trade and this Union. Schedule "S" (*handed in—not printed*) is a copy of this form of learners' agreement, and, as will be seen, both the Chamber and ourselves were parties to it. Apprenticeship has gone never probably to return. We have sought to have a better instrument in its place. The operation of the scale of wages and working conditions arrived at with the Chamber, a system of learners' agreements and complementary training would have vastly improved the Drapery Trade and made it of increasing service to the public. Unfortunately, trade depression, as I have said, has sadly altered the drapers, and the light of a vision has faded from their eyes. There was a dearth of learners in the dressmaking, and apprenticeship had broken down in the drapery, before ever Trade Boards were proposed to be set up.

Wage by Age and Efficiency.

30. In our first dressmaking agreement with employers' associations it will be noticed that the rates were based upon experience, but in practice this is largely an age matter, because employees enter the occupation soon after leaving school at 14 years of age. It will be noticed that in 1919 wage by age was introduced, and that method has been carried out in subsequent years. It will be noticed, too, that the schedules of wage agreements for drapers' assistants which have already been put in are based upon age plus experience in some cases. The Incorporated Association of Retail Distributors, who put their scales into operation without consultation with this union, had all of them based upon age. The experience which we have goes to show that in recent years the quality of dressmaking has considerably improved. I put this down to two things—first, the general improvement in working conditions; secondly, the system of training which has been going on in the London area.

Killing Hand Craft.

31. Dressmaking is a very highly-skilled occupation, but the struggle between the Ready-to-Wear Trade and the Retail or Bespoke Trade is as keen in women's wear as in men's wear. Low rates of pay can only temporarily keep back the supply of ready-to-wear garments. In fact under-payment by reducing incentive and impoverishing skill will tend to hasten rather than retard the change. If the so-called hand craft is to be kept alive, it can only win through because of the superior craftsmanship of the workers. In this, as in every other occupation, brains are better than poverty. In my opinion, improved wages help to compel improved organisation in the workrooms, and instead of killing the hand craft, the Trade Board may actually be its saviour.

What I have Tried to Show.

32. I have tried to show that as long as pressure was coming from drapers' assistants for improved conditions drapers were in favour of setting up Trade Boards "to provide machinery for the prevention of unrest on the part of employees," but with the depression in trade they changed their minds, and are seeking to use the Dressmaking Trade Board as an excuse for their attitude. I have also tried to show that the charges brought against the Dressmaking Trade Board are generally unfounded.

Trade Board as Excuse for not Discussing Wages.

33. I now want to show that the drapers have used the excuse that a Trade Board is going to be set up

10 January, 1922.]

Mr. P. C. HOFFMAN.

[Continued.]

as a reason for declining to enter into negotiations in respect to wage rates. Extracts from two letters are sufficient proof of this:—

" . . . I beg to inform you that at the meeting of the Council held yesterday the opinion was unanimously expressed that in view of the falling state of trade, and the recent establishment by the Ministry of Labour of two Trade Boards—one to cover the Retail Distribution of Articles of Drapery and Women's and Children's Outfitting, the other to include the Retail Distribution of Articles of Men's and Boys' Outfitting—which Boards will fix the rates of wages for the employees engaged in these trades, no useful purpose would, at the present juncture, be served by the holding of a Conference as suggested in the last paragraph of your letter.

" (Signed) J. R. QUILTER, Sec.

" Drapers' Chamber of Trade.
" Nov. 17th, 1920."

The next is from Mr. Jackson, Secretary of the Incorporated Association of Retail Distributors, and is dated October 25th:—

" . . . I have placed the question before the various firms mentioned in your letter, and I am directed to reply on their behalf, and to say that they do not consider that any good purpose would be served by discussing these matters at the present juncture, when Trade Boards for all sections of the Distributive Trades are either formed or in the process of formation, as it is the function of these bodies to fix minimum rates and working conditions which will be legally operated by the Minister of Labour. . . ."

Thus we are put off when we desire to discuss fair conditions of service with the plea that the Trade Boards will settle things; then a raging, tearing propaganda is waged against Trade Boards. Some employers and employers' associations meet us quite fairly and show us every good will; on the part of others, I am sorry to say all the time covert steps are taken to prevent the organisation of their employees. Even trade education is fostered by some in the hope that it will stave off organisation; thus Mr. Percy Best, of Selfridge's, at the Educational Associations' Conference in London on January 2nd, said: "Every boy and girl entering business or industry should be made to feel that business occupies an important place in the national service. One effect of this would be that trade unions would be turned overboard as soon as the minds of the workers were endowed with self-esteem and a desire for self-development."

The Trade can Afford to Pay.

34. The drapery has always been a wealthy trade and a study of the balance sheets of various companies proves that on the whole they do very well indeed. Schedule "T" is a comparative table of the profits of a few of the important drapery firms (handed in—not printed). In

1914	38 firms	showed a profit of	£1,225,678
1918	39	" " " "	£2,324,475
1920	31	" " " "	£2,333,354

In addition bonus shares have been issued to some shareholders, for example, the Army and Navy Stores converted their 1s. shares into 10s. shares out of the reserve. Harrods in March, 1920, issued a fully-paid ordinary share to existing shareholders in proportion of one new share to every three held. No

wonder Mr. Skinner of John Barker's said "this was a great trade and could afford to pay a living wage."

Suggested Improvements.

35. Improvements in machinery and if necessary amendments to the Trade Boards Act are in my opinion necessary in order (a) to make it possible to include all branches of a trade under one Board and the whole of distribution under one Board.

(b) That though two months may be given for objections to be lodged against the first proposed rates in any trade, that one month should be sufficient time for objections to subsequent proposals to be sent in.

(c) A fortnight should be quite long enough for the Minister of Labour to make up his mind about sanctioning the rates, and where the Minister does not see his way to sanction the rates laid down by the Board he ought to give a reason for so acting, within that period.

(d) Facilities for obtaining at any stage legal advice on questions relevant to their work should be given to the Board, and they should have the opportunity of expressing their views themselves to the Minister's legal adviser.

(e) Inspectors' reports should be available for the Board and it should be possible to ask questions in respect to those reports.

(f) Questions of scope should be referred to the Boards, and where the views of the Boards do not coincide co-ordinating machinery should be set up.

(g) The unions should in my opinion be given power to take cases of non-compliance with the Acts to local courts similar to the local munitions tribunals. I have already given instances of how we have been able to recover wages due to our members under Statutory Rules and Orders, 357. Schedule "U" (handed in—not printed) gives instances of how we have been able to recover wages due to our members under the Trade Boards Acts by application direct to the employer or threat of legal proceedings. But the whole machinery of prosecutions for non-compliance needs simplifying and speeding up in as economical a way as possible. The honest law-abiding employer ought to be safeguarded against the unscrupulous ones. The Ministry takes too long to get a settlement on cases of non-compliance reported to it. In one case we reported on November 18th, 1920, and a settlement was not reached until March 18th, 1921. Another reported February 17th, 1921, was not settled until July 7th, 1921.

(h) In all notices, simplification of language should be aimed at and as little reading matter as possible inserted.

(i) The utmost freedom possible should be given to the Boards and interference from Montagu House reduced to a minimum.

In conclusion, I am of opinion that low rates of pay, particularly in the case of women, are detrimental to the national interest. As bad as underpayment is for men, it is infinitely worse for women, putting as it does the future of the nation in pawn to the present.

For 30 years this Union has striven to organise those employed in distribution, and it has been only partially successful. The state of things which we have shown to exist prior to the setting up of the Trade Board in the Dressmaking Trade, and still exists for those employed in distribution, shows how necessary it is for the law to step in and protect this section of workers against the worst effects of our economic system.

10 January, 1922.]

Mr. P. C. HOFFMAN.

Men ...	56 0	59 0	62 0	65 0	68 0	71 0	74 0
Women ...	45 0	49 0	50 0	52 0	54 6	56 6	60 0

Night Watchmen, Doormen and Gatemen—6s. per week.

Foremen, Forewomen, Clerks in Charge and Stock-keepers—10s. above minimum rates.

Assistant Stock-keepers and Charge Hands—5s. above minimum rates.

WORKING CONDITIONS.

Weekly Payment.—That employees are to be given the option of recovering their minimum wage weekly, but the accounts in respect to salary and commission will be made out monthly, and any difference that may be due to make up their minimum rates will be added thereto.

Living-in.—That living in or out be optional. That a deduction of 20s. be made for adult assistants who live in entirely, and 10s. for those adults who have dinner and tea in. That there be for those employees who desire to live in a committee elected to help control living-in conditions along with the firm's representatives. That during the meal interval assistants be allowed to leave the premises, and suitable sitting-out accommodation be provided on the premises.

Hours.—That there be a maximum working week of 48 hours, and all time worked over this to be paid for at the rate of time and a half, to be arranged within two or three months.

Work done Sundays and statutory holidays to be paid for at double-time rates.

Holidays.—That there be one day's holiday for each month's full service up to 12 days for 12 months' service, with full pay. That during the holiday period an allowance be made in addition to wages, 12s. 6d. for those who live in entirely and those who board in.

In the case of those assistants whose wages are supplemented by premiums or commission, payment during holiday shall not be less than the minimum wages.

Sickness.—The firm desire to place on record their opinion that the National Health Insurance funds are not properly administered, and that if they were allowed to administer the funds contributed by themselves and the employee they could pay full wages for six weeks during sickness.

10 January, 1922.]

Mr. P. C. HOFFMAN.

[Continued.]

The firm are prepared to consider any scheme which may be brought forward by the union to deal with the question of payment of wages during sickness. In the meantime, they agree to pay one week's wages to married men on production of a doctor's certificate.

Scottish Retail Drapers' Federation.

STATEMENT SHOWING SCALE OF WAGES AND CONDITIONS OF LABOUR AGREED UPON BETWEEN THE SCOTTISH RETAIL DRAPERS' FEDERATION AND THE NATIONAL AMALGAMATED UNION OF SHOP ASSISTANTS, WAREHOUSEMEN AND CLERKS AS MINIMUM RATES FOR ASSISTANTS IN RETAIL DRAPERY BUSINESS.

Scale of Wages Applicable to Retail Drapery Salespeople in the Cities of Edinburgh, Glasgow and Dundee.

Age not less than	Period of Experience.	Men.	Women.
		<i>s. d.</i>	<i>s. d.</i>
16	1st Year	20 0	20 0
17	2nd "	24 0	24 0
18	3rd "	30 0	28 0
19	4th "	36 0	30 0
20	5th "	43 0	32 0
21	6th "	50 0	35 0
22	7th "	52 6	37 6
23	8th "	55 0	40 0
24	9th "	57 6	42 6
25	10th "	60 0	45 0

In the case of all other towns and districts in Scotland the rate of wages shall be the above rate less 10 per cent.

In the case of assistants entering the trade aged 17 or 18, the rate of wages shall be that applicable to age 16, and in the case of those entering the trade at a later age, the wage shall be that applicable to the age of two years earlier. This shall apply to assistants up to age 21 years. In no case, however, shall the minimum commencing wage be higher than that applicable to age 19. The wages thereafter for the next three years shall be paid at the successive annual rates above-noted, but all late entrants shall automatically be put on to the prescribed rate after three years' service.

Commission shall be reckoned as part of wages. If the average of wages and commission over each period of 13 weeks falls below the prescribed rate, the difference shall be paid to the assistant.

The above rates shall also be applicable to clerks, packers, mail order assistants, parcel sorters, stock-room assistants, porters and lift operators up to the age of 21, when the minimum scale for this class of assistants shall end—wages thereafter to be paid according to ability.

Notwithstanding the above scale, assistants presently earning more than the above rate shall not suffer any reduction in their present rate of remuneration while in the service of the same employer.

Nothing in this agreement shall prevent employers paying higher rates to specially competent assistants. The period of service, and age of each employee at the trade, shall be vouched by proper credentials from the employer under such a scheme as may be mutually adjusted.

The maximum employment shall be 48 hours per week exclusive of meal hours.

Notwithstanding the above scheme, it shall be competent to pay wages at a lower scale than the above in the case of sub-normal workers at present in the trade, such lower rate to be as may be agreed in each case between the representative of the Employers' Federation and the Assistants' Union.

Not less than 10 days' summer holidays with pay in the case of workers who have been 12 months in the continuous employment of a firm shall be given. Wages shall be paid also in respect of statutory holidays. In the case of assistants having less than 12 months' continuous service with the firm, holidays shall be dealt with proportionately. This arrangement, however, shall not alter the present practice in Glasgow and Edinburgh, of giving two weeks' summer holidays with pay.

This agreement shall continue in force for nine months from 1st January, 1920, or until the fixing of a scale by the Trade Board for the drapery distributive trade, whichever of these may be the earlier. The agreement shall not terminate as at said first period, but shall continue thereafter unless two months' notice of termination be given by either party. It is made without prejudice to the right of employers to submit to said Trade Board that a lower scale of wages should be fixed.

This agreement, notwithstanding the date hereof, shall come into operation on 1st January, 1920.

Glasgow, 5th February, 1920.

28th August, 1920.

AGREEMENT BETWEEN MESSRS. CHARLES RATTRAY & COMPANY, LTD., CANDLEBRIGGS, GLASGOW (WHOLESALE DRAPERS), AND THE NATIONAL AMALGAMATED UNION OF SHOP ASSISTANTS, WAREHOUSEMEN AND CLERKS.

23	55 0	23	38 0
24	60 0		

Note.—This Schedule was formulated by the employers when the cost of living stood at 120 per cent. above 1914, as shown by the "Labour Gazette" on 1st September, 1921, and was agreed with the Union in November, 1921, when the figure stood at 103 per cent. above 1914.

Conditions of Employment.

3. The rates of pay and conditions of employment set out in this agreement are *minima*, and do not prevent the payment of higher rates of wages, or the operation of better conditions of employment.

4. The above minimum rates are on the basis that neither board nor lodging is provided by the employer.

5. The above rates shall apply only to able-bodied employees who are not suffering from any physical defect which would impair their efficiency. The cases of employees who are not able-bodied or who have had no previous experience of the work in question shall be dealt with by agreement between the parties, and such rates shall be fixed as are reasonable, having regard to the circumstances of each individual case.

6. *Overtime*.—That overtime rates shall be equivalent to time and a half after 48 hours have been worked in any one week. Where the normal working week is under 48 hours ordinary time rates to be paid up to 48 hours. Payment for work done on Sundays and/or Bank Holidays to be equivalent to double time. Overtime to be paid exclusive of meal times.

7. *Hours*.—That the maximum working week shall be one of 48 hours, exclusive of overtime. Any employee working above these hours may by mutual arrangement be given time equivalent on the overtime basis to the excess worked in lieu of payment.

8. *Bank Holidays*.—All Bank and Public Holidays to be allowed at ordinary rates of pay, unless working, when Clause six will apply.

9. *Summer Holidays*.—Six days' annual holiday with full pay after six months' service before 1st August or usual holiday period, and twelve days' annual holiday with full pay after twelve months' service before 1st August or usual holiday period, if in the employ of the firm at the holiday period.

10. *Board and Lodging*.—That when dinner and tea or board and lodging are provided, a deduction shall be made as follows:—Dinner and tea, 10s. per week. Board and lodging, 20s. per week.

11. *Board and Lodging Allowance during Holidays*.—That the allowance when on holidays to employees who are provided with dinner and tea, or who live in, shall be as follows (Statutory and Public Holidays not included): Board only, 10s. per week. Board and lodging, 12s. 6d. per week. Provided always that the wages payable during holidays—including these allowances—shall not be less than the appropriate minimum rate.

12. *Living-in*.—That where the living-in system exists there shall be option to the workers to live out, if they so desire, by giving one week's notice.

13. *Alterations in rates of pay due to birthdays* to be made quarterly as from the first Monday in January, first Monday in April, first Monday in July, first Monday in October, as the case may be, with no back pay.

14. The above rates and conditions of employment are to apply only to those members of the Association who are parties to the Agreement, and to their employees in the area comprising the City of London and Metropolitan Police District.

15. *Date of Payment and Period of Agreement*.—The rates fixed by this Agreement shall be payable by the firms affected on the first pay day following 1st December, 1921, and the Agreement may be reviewed after 31st March, 1922, by either party giving one month's notice after that date.

10 January, 1922.]

Mr. P. C. HOFFMAN.

[Continued.]

SCHEDULE C.

SCHEDULE OF MINIMUM RATES OF WAGES FOR SHOP ASSISTANTS AND OTHERS.

As APPROVED AND ADOPTED BY THE COUNCIL OF THE DRAPERS' CHAMBER OF TRADE ON 20TH APRIL, 1920.

In relation to this Schedule there shall be Four Groups of Towns, based on the Ministry of Labour returns in regard to cost of living,

1. The Group of Towns where the cost of living is lowest.

This basic rate applies to this Group.

BASIC RATE FOR GROUP 1.

LEARNERS.		Male.		Female.	
Age.		s.	d.	s.	d.
15	1st 6 months	12	6	10	0
	2nd "	15	0	12	0
16	3rd "	17	6	14	0
	4th "	20	0	16	0
17	5th "	22	6	18	0
	6th "	25	0	20	0

2/6 per week added to pay for travelling where distance justifies it.

JUNIORS (after three years' term as Learners, but not to be regarded as Juniors until 18).

Age.		Male.		Female.	
		s.	d.	s.	d.
18	...	35	0	28	0
19	...	40	0	32	0
20	...	45	0	36	0

ASSISTANTS AND DEPARTMENTAL CLERKS.

21	...	47	6	38	0
22	...	50	0	40	0
23	...	52	6	42	0
24	...	55	0	44	0
25	...	57	6	46	0
26	...	60	0	48	0
27	...	62	6	50	0
28	...	65	0	52	0

BOOK KEEPERS, LEDGER CLERKS, SHORTHAND TYPISTS, SPECIAL POSTS.

Age.		Male.		Female.	
		s.	d.	s.	d.
21	...	50	0	40	0
22	...	52	6	42	0
23	...	55	0	44	0
24	...	57	6	46	0
25	...	61	0	49	0
26	...	64	0	51	0
27	...	66	6	53	0
28	...	69	0	55	0

Working Conditions.

1. The principle of Learners' agreement is approved, but in cases where Learners enter the trade between 14 and 15 years of age then for the period intervening between the Learners and Junior stage the Learner shall receive an increase of 5s. for men and 4s. for women per week.

2. The Chamber and the Union shall be signatories to the Learners' agreement, and the form of agreement shall be agreed upon by both parties.

3. Indentures or legal agreements for Learners at present in existence shall not be interfered with.

4. The national minimum rate shall be the Chamber's scale as amended and a sub-committee of the Chamber and the Union shall be appointed for the purpose of setting the districts.

5. In high positions, where equal responsibility obtains, there shall be equal pay, independent of sex.

6. The special rate claimed by the Union of £4 per week for Shopwalkers and Window Dressers specifically employed for the purpose shall be paid, but a schedule of rates for those qualifying for those

2. The next Group of Towns the Rates shall be advanced by 2s. extra.

3. The next Group of Towns the rates shall be advanced by 4s. extra.

4. The next Group of Towns the Rates shall be advanced by 6s. extra (including London).

For Learners in small Country Towns under 5,000 population the rate shall be—Male, 2s. 6d. less.

For Learners in small Country Towns under 5,000 population the rate shall be—Female, 2s. less.

PACKERS: (under 21 years of age) to receive the same rates as Learners and Juniors.

26	...	52	6	42	0
27	...	55	0	44	0
28	...	57	6	46	0

Deductions for Living-in, 20/- a week.

Deductions for Dinner and Tea provided, 12/6 a week.

Deductions for Tea provided, 2/6 a week.

positions shall be prepared and agreed between the Chamber and the Union.

7. Late entrants—age 16-21—to commence at agreed rates and arrive at not less than the minimum scale in four periods of six months.

Age over 21—to commence at agreed rates, and arrive at not less than the minimum scale in four periods of three months.

8. Where assistants live in, and it is found convenient and possible, it is recommended that Canteen Committees should be formed, and assistants serve thereon, these being elected by the assistants themselves.

9. No employee shall be paid less than the minimum rates unless an agreement has been made between the Employer and the Union. Exceptional cases shall be arranged between the employer and the Union.

10. General advances applied for, owing to increase in cost of living, shall be dealt with on their merits, due allowance being given for advances already made.

10 January, 1922.]

Mr. P. C. HOFFMAN.

[Continued.]

11. Holidays shall be one day for each month of service, twelve working days in a year, subject to a minimum of three months' service.

12. Wages shall be paid during holidays, such wages to be not less than the minimum.

13. The minimum rates are inclusive of commission or premium, which shall be calculated weekly or monthly, accordingly to the practice of the employer, but in either case not less than the minimum wage shall be paid.

14. Wages during Sickness.—Assistants in the employment of a firm for six months shall be entitled to six days, twelve months to twelve days, and over that eighteen days in any current year, subject to medical certificate. Contracts for the employer to deduct Health Insurance Sick Benefits, received by the employed during sickness, may be made as between employers and employed.

15. Reference.—The employer giving the reference shall send it on to the employer engaging the assistant, and that employer shall file it and keep it for inspection, and for the purpose of removing any doubt from the minds of the assistants the file shall be open for inspection by the fully accredited representatives of employers and employed.

16. That the maximum working week shall be 48 hours (exclusive of meal times). That overtime be time and a half. In cases where the hours are less than 48, overtime to be counted as from 30 minutes after the customary time for the cessation of work, and if more than half an hour be worked, it shall be paid for, as the first full hour at the overtime rate of time and a half.

This Amended Schedule of Wages and Conditions, based upon the Cost of Living, was adopted by Council of this Chamber, subject to the proviso that it be adopted by the Executive of the Shop Assistants' Union, and shall not be altered unless the Cost of Living varies to a degree warranting reconsideration of the Schedule.

N.B.—10th May, 1920.—This Schedule has been approved by the Executive Council of the Union, but they have not approved the proviso. They agree to the principle that in connection with any agreements come to a reasonable period should elapse—say, six months.

SCHEDULE D.

THE INCORPORATED ASSOCIATION OF RETAIL DISTRIBUTORS.

Schedule of Minimum Rates of Wages and Conditions of Employment to be operated as from 1st March, 1920.

Learners and Juniors—

SCHEDULE G.

The National Amalgamated Union of Shop Assistants,
Warehousemen and Clerks.

STATEMENT showing Scale of Wages and Conditions of Labour agreed between the Scottish Retail Garment Makers and Millinery Trades' Federation and the National Amalgamated Union of Shop Assistants, Warehousemen and Clerks as Minimum Rates for Retail Dressmakers and Millinery Assistants.

First 6 months—Girls under 15 years of age, 2d. per hour.
Second 6 months—Girls under 15 years of age, 2½d. per hour.
Second year—Girls of 15 years and under 16, 4d. per hour.
Third year—Girls of 16 years and under 17, 4½d. per hour.
Fourth year—Girls of 17 years and under 18, 6d. per hour.
Fifth year—Women of 18 years and under 19, 7d. per hour.
Sixth year—Women of 19 years and under 20, 7½d. per hour.
Seventh year—Women of 20 years and under 21, 7½d. per hour.
Eighth year—Women of 21 years and over, 8½d. per hour.

In the case of learners over 15 years of age entering the industry for the first time the rates shall for the first year be 1d. per hour less than the above rates.

The above minimum rates are to apply to the whole of Scotland. Nothing in this Agreement shall prevent employers paying higher rates to specially competent assistants.

10 January, 1922.]

Mr. P. C. HOFFMAN.

[Continued.]

The period of service and age of each employee at the trade shall be vouched for by proper credentials from the employers, under such a scheme as may be mutually adjusted.

The maximum employment shall be 44 hours per week, exclusive of meal times, with time-and-a-half for overtime. Overtime to start half-an-hour after closing time, said half-hour to be allowed for tea. Where an employee is engaged both as dressmaker or milliner and saleswoman, the working hours shall be the usual shop hours without overtime.

Wages shall be paid in respect of six statutory holidays, together with one week's summer holiday in the case of workers who have been twelve months in the continuous employment of the firm. In the case of workers less than twelve months in the continuous employment of the firm, one half day's holiday, with full pay, shall be granted for every complete month of service. Summer holidays shall be fixed, at the discretion of employers, between 1st July and 30th September.

While it is agreed that the abolition of stand-off-time is meantime impracticable, the employers agree to make the service as continuous as possible. The Employers' Federation, however, will give every assistance in endeavouring to arrange for dressmakers and milliners being included under a scheme of national insurance against unemployment.

One week's notice as to termination of employment on leaving shall be given on both sides.

Employees shall give regular and punctual service, and shall not absent themselves for the purpose of undertaking private or other work.

This Agreement shall be binding until 1st March, 1920, unless notice of the termination of the Agreement is given not later than 1st January, 1920. If such notice is not given, the Agreement shall continue in force year by year thereafter unless notice is given not later than the 1st January in any year.

A Committee of three representatives of employers and three representatives of the employees shall sit in each district to settle from time to time any points arising in connection with the application of this Agreement.

The Agreement, notwithstanding the date hereof, shall come into operation on 7th April, 1919.

JOHN CAMPBELL,
JOHN M. CROSTHWAITE,

On behalf of the Scottish Retail Garment
Makers and Millinery Trades Federa-
tion.

NEIL S. BEATON.

SCHEDULE P.

Aberdeen.

Mr. Thomas Brown,
22, Bridge Street.

26th July, 1921.

Mr. F. Rose, M.P.

DEAR MR. ROSE,

Re *Employers' Agitation against Trade Boards.*

Referring to our conversation regarding above, on 20th instant, I herewith forward particulars of the methods adopted and the position taken up by Aberdeen employers, with copies of correspondence which has passed between the Minister of Labour and myself regarding same.

When visiting my branches in Banff and Elgin-shires in October, I learned that a petition (copy enclosed) was being placed before the assistants in various shops, chiefly drapers, against Trade Boards. In some cases veiled threats of dismissal if they refused to sign were made, but it is almost impossible to secure satisfactory evidence in such cases.

In other cases, assistants were under the belief that they were signing a petition against the Unemployment Insurance Act.

As those assistants who were members of our union were immediately warned not to sign any petition without first submitting same to their branch for consideration, this attempt appears to have been frustrated.

Just previous to the visit of Dr. Macnamara, statements began to be made in the Aberdeen Press that Trade Boards were causing unemployment, and on the 7th January the "Aberdeen Free Press" made the statement that 400 workers in the dress-making trade of Aberdeen were permanently dismissed or on short time as a result of the Trade Board.

On the 11th January a deputation from the Chambers of Commerce, Aberdeen, met the Minister, at which Baillie Sangster, on behalf of the dress-making trade, made strong statements regarding the paralysing of this industry by Trade Board Regulations.

This particular Trade Board's Regulations had only commenced in September, 1920.

Owing to the number of experienced dressmakers who had taken up war work, an exceptional number

of learners who had been engaged in Aberdeen during the war and since; to give one case only, Miss Bagrie, Union Street, had at May, 1920, six learners to one experienced hand. In addition, it has to be recognised that the method of mass production in the clothing trades has become much more general since 1914 than previously, and consequently the amount of retail bespoke production would be less. In view of these points I contend that, even if unusual unemployment could have been proved in this industry, it was not in consequence of Trade Boards. When I met the Minister of Labour with the deputation from the Trades Council I made this contention, and further stated that in Aberdeen the dressmaking employers, by agreement with the union, were paying considerably higher rates than those fixed by the Trade Board.

So that even if they could prove the rate of wages was crippling the trade (which I do not admit), that would not be proving that the Trade Board rate of wages was injurious.

As to the statement that 400 workers had been dismissed, this is entirely false. At the greatest estimate, there were 600 dressmaking employees in Aberdeen, of which at least 500 were members of this union, and out of the latter only 50 were unemployed at that particular time. Now, only 13 are on our books as unemployed, in spite of a small lock-out of 14 members from Miss Bagrie's two weeks ago because they declined to cease membership in a trade union. One firm (Essiemont & Macintosh) closed down two workrooms permanently in December. The staff of each workroom was immediately engaged *en bloc* by competing firms. This closing down has been quoted as a glaring example of the effects of Trade Board Regulations, ignoring the fact that not a single employee was left unemployed in consequence. Further, at least 20 operative dressmakers have commenced business on their own account since this Trade Board began to operate; in several cases they now employ a fair number of assistants.

I trust these particulars, with the attached correspondence, will assist you to combat the agitation against the Trade Boards, and will be pleased to supply any further information required.

Yours faithfully,

(Signed) THOMAS BROWN,
District Secretary.

SCHEDULE Q.

Returns of attendance at L.C.C. Dressmaking Training Classes, 1918. (*Handed in—not printed.*)

10 January, 1922.]

Mr. P. C. HOFFMAN.

[Continued.]

SCHEDULE R.

Memorandum on the training of Salesmen and Saleswoman prepared by L.C.C. (Handed in—not printed.)

SCHEDULE S.

Copy of form of learnership agreement drawn up by Drapers' Chamber of Trade and N.A.U.S.A.W. & C. (Handed in—not printed.)

SCHEDULE T.

Comparative table of profits in important drapery firms. (Handed in—not printed.)

SCHEDULE U.

Instances of arrears of wages recovered by N.A.U.S.A.W. & C. for members under Trade Boards Act. (Handed in—not printed.)

8292. *Chairman*: Mr. Hoffman, you are the London Organiser of the National Amalgamated Union of Shop Assistants, Warehousemen, and Clerks, are you not?—I am.

8293. Are you a member of the Dressmaking and Women's Light Clothing Trade Board for England and Wales?—Yes.

8294. You have given us a statement, which I will take rather shortly, and you can emphasise any point you desire to dwell upon. You say that distribution is an unorganised trade, and you give us some figures relating to the persons employed in the distributive trades. You say a good many of them are juveniles?—Yes. There are about 1½ million employed persons in the distributive trades, of whom only 20 per cent. are organised, according to official figures. A large number of those who are employed are young persons under the age of 21 years.

8295. Then you say that the Drapery Trade has been an underpaid occupation for a large proportion of those employed in it, as compared with other classes of workers?—Yes.

8296. You give some striking figures in your statement as to the wages paid to these people?—That is so.

8297. That would be in 1917, I take it?—1916 and 1917. You will also see in Schedule A that these figures go right down to 1920.

8298. Let us take 1920 in Schedule A. What cases do you wish to refer to there?—You have there young persons 19 years of age with three years' experience getting 13s. 6d. a week. You have men assistants 30 years of age in receipt of 35s. in 1920, and women in receipt of 25s.

8299. Is that in 1920?—Yes. Then there is the case of men assistants in the furnishing trade 18 years of age receiving 12s. 6d. a week. There is another assistant 25 years of age receiving 30s., and another assistant 35 years of age in receipt of 30s. a week, with dinner and tea.

8300. Then take the women.—There is a woman 32 years of age in receipt of 20s. 6d. a week, with 5s. 6d. commission.

8301. Would she be living in?—Yes, she would be living in.

8302. Then there is one 21 years of age getting 12s., I see?—Yes; she is an assistant in the haberdashery department, 21 years of age. She is receiving 12s. a week and 1s. a week commission, and is living in.

8303. These have all been brought before the Trade Board, I take it?—There is no Trade Board for this trade. This is the drapery trade. There are further figures on the next page.

8304. There is a Trade Board for dressmaking and women's light clothing?—Yes, and there is the Hat Cap and Millinery Trade Board. I am speaking of drapery as regards distribution, as far as shop assistants and clerks are concerned.

8305. We have had a good deal of evidence about the Trade Boards which deal with drapery for some purposes, but you are speaking of the distributive position?—Yes. I shall refer to dressmaking presently.

8306. *Mr. Pugh*: Are these rates fixed by agreement?—No; that I am coming to in a moment.

8307. *Sir Arthur Pease*: Are these normal workers who are getting these wages?—Yes.

8308. Are you sure of that?—Yes, I am positive.

8309. Why should a man go on working at these rates when he could get employment in other industries at higher rates?—Why are not the assistants organised?

8310. He could leave this trade if he could get a much better wage in another trade. Why does he not go?—He could, but he did not. He probably had no other trade at his finger tips except the drapery trade, and he still remained there. He had been used to those conditions.

8311. *Lord Weir*: You do not give us these as typical wages in the drapery trade, do you?—I will tell you how I got at these. The wages that you have here are got from the schedules which we issue to our members, or rather to persons when they become members of the union. When anybody joins our union he has to fill in his application form what wage he is receiving. When sufficient of the staff at a particular establishment are members of the union—that is when 65 or 70 per cent. are members of the union—and they ask that we should open negotiations for the operation of the minimum wage scales, we issue a further schedule asking what wages they are then in receipt of. These figures are taken from those schedules prior to negotiations being opened up with firms.

8312. Would those represent the wages payable to any substantial percentage of your own members?—I should say that these wages are very typical of what was in operation at this period throughout the drapery trade.

8313. Before they became members of your union?—Yes, or at the time of becoming members prior to our succeeding in reaching agreements with firms.

8314. But in a short period after these people became members of your Organisation, you were enabled to raise their wages very considerably?—Yes.

8315. So that those wages have very little connection with the wages paid to your members in the drapery trade?—Yes. They are typical of the wages that were being paid throughout the drapery trade at that time, and they are typical of what is being paid now in unorganised establishments.

8316. I confined my question to your members.—These figures apply even to our own members where we are not sufficiently organised to be able to reach agreements with firms in regard to a wage rate.

8317. *Dame Adelaide Anderson*: Where you have not got a certain number of members in a given establishment?—Yes.

8318. Do they need to be organised before you take any steps?—We do not open negotiations unless we have 65 to 70 per cent. of the staff organised.

8319. *Chairman*: Then you give us some other cases in Schedule E?—Schedule E gives cases taken from figures put in by my colleague Mr. John Turner, which have already been put before the Committee.

8320. Therefore we need not go into them?—That is so.

8321. I suppose these are derived from statements of persons who are becoming members of your Union?—Yes, these are statements which were made in the 1921 Inquiry.

8322. I see there is one firm which pays no wages to women assistants?—Yes.

8323. I see you say in your statement: "After they have served three years' apprenticeship without wages they are then allowed a small commission on sales"?—Yes.

8324. You go on to say in regard to another firm: "After women have served three years as an apprentice without wages, they are paid various rates from 2s. per week upwards, rising annually by 1s. until they reach an average wage of 12s. a week." Those are women living in, I suppose?—I am not quite sure about that.

8325. It must be so.—I should think so.

8326. You go on to give other instances, and then compare those wages with wages paid in other trades?—Yes, at that time, namely, round about 1913, 1919

10 January, 1922.]

Mr. P. C. HOFFMAN.

[Continued.]

and 1920, I give in my statement the wages that were operative in other occupations.

8327. Then you go on to give some quotations from newspapers about the poverty of the pre-war shop assistant?—Yes. I give those in order to show that there is a general admission in the drapery trade that things have not been as they should be. There is a general admission right down to the present time to that effect. I quote here from Mr. Malin, of Messrs. Thurman & Malin, who states: "Perhaps the shortage was caused by the fact that nowadays there was a reluctance on the part of youths to enter the trade as apprentices. Rightly or wrongly, the tradesman and his shop were not favoured by the well-educated youth of the present day." There has been in the past an admission that the trade has not been as it should be, and there is an admission on the part of traders to-day that it is not as it should be.

8328. Then in 1916 the Drapers' Chamber of Trade put itself in communication with the Union in order to find out what ought to be done to improve matters?—Yes.

8329. And I understand, as a result of that conference, both sides recommended that a national conference should be set up in order to regulate working conditions in the trade, but that that recommendation was not carried out?—It was not carried out at that time. It has occurred since, but at that time it was not carried out.

8330. Ultimately, I understand, organisation took effect, and the membership of your Union went up apparently very rapidly, and you began to negotiate with large firms for wage agreements?—Yes, and I am putting before you samples of the agreements which were arrived at with firms in various parts of the country.

8331. I have looked through those. They are very interesting; there is a whole number of agreements?—There is quite a number of agreements both with local Associations—Drapers' Associations and groups of employers—and with individual firms.

8332. What proportion of firms do you think would be covered by agreements?—A very small percentage of the whole.

8333. *Lord Weir*: A small percentage of the whole, but firms representing a substantial percentage of workers, I take it?—Yes, but a small percentage of the total number of persons employed in the trade.

8334. *Chairman*: It would be about 20 per cent., would it not?—Yes. I should say it was true that up to that time there had been very little, if any, regulation of working conditions in the drapery trade, so that even this remarkable success that we had from 1918 to 1920 was really insignificant compared with the whole number of persons employed.

8335. Has the effect of your success in raising wages in certain firms had any effect upon other firms?—Yes, I think it has. It undoubtedly had a general effect.

8336. They saw trouble coming and they put up the wages?—Yes.

8337. *Mr. Layton*: There seems to be an enormous difference between the wages agreements with various firms. If you take any of them they vary very much. You have no standard schedule you have endeavoured to apply, have you?—Yes. We had our own scales which were drawn up at our Annual General Meetings in 1918, 1919, and 1920. We sought to get those scales put into operation and they were our guide; but naturally there was variation with each firm with which we came into touch, and the agreements which were reached varied.

8338. They were nearly all with individual firms, were they not? You did not reach agreements with Chambers of Trade, did you?—I am coming to that in a moment. We did reach an agreement with the Draper's Chamber of Trade, but that agreement was not carried out, as I will show you presently.

8339. *Mr. Pugh*: There is one with the London Employers, I see?—That is quite lately. That is immediately operating with the Army and Navy Stores, but it is hoped that a number of other firms

in the West End of London will agree to operate that scale. I shall know definitely whether they will agree or not after the 24th January.

8340. I see this is called the London Employers' Association?—Yes.

8341. Does it cover a fairly large number of houses?—Yes. The London Employers' Association is dealt with by me later on.

8342. *Sir Arthur Pease*: I see that your rates are rather different from any others we have had, in that they go up according to age to a comparatively late age—up to 28?—Yes.

8343. In nearly all other trades it is 21, although some go up to 24 and 25. Do you find that satisfactory?—Our experience and the experience of employers now is that there should be a reduction in the age, and we are agreeing to that. We feel now that 28 was too far to go. If you will notice, this agreement with the London Employers' Association, for example, now only takes the males up to 25 years of age, and the women up to 24.

8344. *Mr. Pugh*: Is that a standard, or above that do you depend upon the class of work and responsibility?—In all our agreements we have with employers, it is agreed that there shall be advances for merit and responsibility and experience on top of these rates.

8345. Regardless of age?—Yes.

8346. *Mr. Layton*: Do you think that age is a satisfactory basis for rates? You have agreements with London firms by which the rate is varied at 6-monthly periods. Do you find that is a satisfactory basis?—We have altered that now. That agreement is in operation still with this particular firm, but you see that as far as the London Employers' Association agreement is concerned, which probably will operate there too after the end of this month, we no longer go on the 6-monthly periods; we are going on the 12-monthly periods.

8347. *Chairman*: Then there was a question of a Trade Board for the Drapery Distributive Trade, and I think there was a conference as to whether there should be one Board or more for the distributive trades?—Yes. I wanted to draw attention to the fact that the Employers' Associations have been consulted in regard to the setting up of a Trade Board for distribution.

8348. There was a Committee, and they recommended one Trade Board for the whole of the distributive trades, did they not?—Yes.

8349. Did that go back to the conference?—That went back to the conference, and it was accepted there.

8350. And then, notwithstanding that, the employers wished for a separate Drapery Trade Board?—Yes. Notwithstanding that, the employers, especially in the drapery trade and in the grocery and other trades, asked for a separate Trade Board, and at their meeting on October 21 and 22 a Resolution was carried by the Drapers' Chamber of Trade to the effect that a Trade Board for the retail textile distributive trade should be established at the earliest possible moment.

8351. *Mr. Pugh*: I think you asked that there should be one Board?—We asked that there should be one Board for the whole of the distributive trades.

8352. In that case how would you arrange for adequate representation, having an unwieldy body such as that?—I should have committees.

8353. District committees?—No, national committees, but committees for each group of the trade.

8354. *Chairman*: Then there was a certain amount of discussion, and, finally, you say, that an agreement was arrived at with the Drapers' Chamber of Trade?—Yes. In view of the fact that a Trade Board was going to be set up, and the applications which we were receiving on behalf of drapers' assistants for a revision of their wages, a number of firms when we made application referred us to the Drapers' Chamber of Trade, and, in consequence of that pressure, and the fact that a Trade Board was going to be set up, a series of conferences were arranged between the Drapers' Chamber of Trade and ourselves.

10 January, 1922.]

Mr. P. C. HOFFMAN.

[Continued.]

8355. That is only history, and I will take it quite shortly that you had an agreement?—Yes.

8356. Then, on page 12 of your statement, you say that in 1918 and 1919 there was a good deal of discontent and strikes?—I wanted to point out that it was clearly understood by the Chamber when we entered into that National Agreement with them in regard to wage rates, that it was anticipated that a Trade Board would be set up, and that until that was so it was only worth the paper it was printed upon.

8357. Then there was trouble, and then I think the Incorporated Association of Retail Distributors came in, and there was a scale of wages drawn up, was there not?—Yes. They drew up their own scale without discussion with ourselves. That scale was based upon age, just the same as all our previous scales had been.

8358. And from that history your inference is that the employers expected a Trade Board?—Yes, and planned accordingly.

8359. Then you say, on page 13, that, with the depression in trade, there came an alteration in the attitude of employers towards Trade Boards?—Yes, and a campaign against the Boards was actually organised by the Employers' Association.

8360. Mr. Poulton: To which Association do you refer?—The Incorporated Association of Retail Distributors decided in January, 1921, to "promote a campaign for the suspension of existing Trade Boards, and to secure that the various powers exercised by the Minister of Labour should revert to the original Ministries." The utmost publicity was to be given to that through the Press, and through Parliamentary action.

8361. Chairman: We have seen the result of that.—The result of it is this Committee of Inquiry, I think.

8362. That campaign you say went on?—Yes.

8363. There is not much on page 14 to which you need refer, is there?—Only that it is not uninteresting to note that they did even encourage rebellion against the law on the part of employers. The "Drapers' Organiser" gave prominence to the circular which had been issued by the Incorporated Association of Retail Distributors, drawing attention to the fact that a number of employers had decided that they would not pay the rates, and the paper goes on to say that the risk of not paying those rates was considerable, "but it may be worth taking purely as an advertisement of the defects of the Trade Board system."

8364. We are not much interested in quotations from newspapers. Then you say that there was a circular sent out tending the same way, and then you come to business in paragraph 18. You say that the contention of the employers "is that the effects of the decision of the Dressmaking Board have been (1) to throw workers out of employment, (2) to prevent learners being employed, (3) age rates lead to lack of initiative and reduction in the standard of efficiency, (4) that the handicraft trade is being killed." Then in paragraph 19 you say that the dressmakers were 25 per cent. organised in the past, and again you give particulars of low wages paid to dressmakers.

8365. Mr. Pugh: Are these wages weekly?—Yes, there are particulars of low wages that were paid prior to the Trade Board being set up.

8366. Chairman: Those are not distributive, are they?—Well, they are in dressmaking workrooms attached to drapery establishments.

8367. Then you give some more details on page 17. You refer to the strike in November, 1916, and then you refer to agreements with employers' associations. On page 18 you refer to a number of agreements. Then you refer to the wages prescribed under the Wages (Temporary Regulation) Act, and in paragraph 23 you say that the first meeting of the Dressmaking and Women's Light Clothing Trade Board was held on January 20, 1920, and rates were made which you say were agreed. That means that both sides agreed to that, does it?—Yes. It is not true to say, as has been said, that those rates were fixed by the appointed members. They were not. They were rates agreed by both sides.

8368. Tell us in what sense they were agreed. Were they rates put forward by both sides?—No, we asked for something higher to begin with.

8369. And they asked for something less?—They offered something less.

8370. Did the appointed members intervene and use persuasion?—We had conferences, as the result of which ultimately one side proposed, and the other side seconded, the rates as they were afterwards fixed.

8371. They were a compromise?

8372. Mr. Poulton: Was that without the appointed members voting?—Certainly without the appointed members voting. It was a unanimous vote.

8373. Mr. Pugh: You are dealing with objections now, and you refer to appointed members. Do you consider that the appointed members are a necessary part of the Trade Boards, or would you think that there is an alternative which would be better?—Yes, only I should like it to be said that, as far as my experience is concerned, I have nothing at all to say against the appointed members. There might, however, be an advantage in having one of the appointed members drawn from a panel of employers, and another drawn from a panel of employees, so that when the Chairman is endeavouring to come to arrangements between the sides he shall have with him those who have some knowledge of the employment.

8374. That would be setting up a form of arbitration inside the Trade Boards to dispose of matters which the employers' and workers' representatives on the Boards could not settle themselves?—Quite so.

8375. Would you have anything outside of that, or would you consider that that would be all-sufficient?—I think that would be quite sufficient.

8376. Sir Arthur Pease: Would you give the Chairman power to settle a rate when neither side agreed to it, as an umpire?—That is what it would mean supposing he gave his casting vote, but my experience is that he has never exercised it in that way; we have always been able to reach an agreement.

8377. The Memorandum sent to us by one of the Chairmen explains very carefully that he has not the right to fix a rate; he can only give a casting vote?—That is so.

8378. Would you give him the further power that he should, after hearing both sides, actually fix what the rates were to be?—No.

8379. You would not?—No.

8380. Mr. Pugh: Arising out of that question, the tendency would be, would it not, that the confidence of the Board in its Chairman would tend to be undermined?—I think so.

8381. And, therefore, if you had to have someone who really had to decide a disputed point, it would be better that it should be someone outside—an umpire if you like, or an arbitration court?—I would sooner have the two appointed members and one Chairman, and, if possible, one of them on each side, drawn from a panel of employers and employed; and the Chairman would endeavour to reach a settlement on all points, and I think he would succeed.

8382. But if he did not?—If he did not, then the three persons concerned could give their votes.

8383. Would not that have the same effect, so far as your Chairman was concerned, as would follow if, as is now suggested, the Chairman had to decide upon points of dispute between the two parties?—If the Chairman has to give his casting vote one way or the other, it has the same effect as the Chairman himself fixing the rate, of course.

8384. You know that in Wages Boards which exist in other industries, the Chairman does not settle, but the parties have a right to go outside, either to an arbitration court or to an umpire, who is agreed upon.—There might be an advantage, if a Board could not settle, in going to a body like the Industrial Court and placing their case before them, but, personally, I do not think that it is ever likely to happen.

8385. You think that if you had something like you suggest it would probably minimise the extent of the intervention of the Government Departments? I am

10 January, 1922.]

Mr. P. C. HOFFMAN.

[Continued.]

in favour of giving as much freedom as ever is possible to the Board itself, and having as little interference as possible from the Ministry of Labour or from Montague House.

8386. *Sir Arthur Pease*: But you include the appointed members in the Board?—Yes.

8387. *Chairman*: Then you mentioned in your statement the fixing of the rates in May, 1920; and I think there was a variation in November, 1920, and then another variation in July, 1921?—Yes.

8388. You put in a schedule, Schedule I, containing comparative tables of agreements come to in the London area, compared with Trade Board rates. I suppose in the London area the rates would be higher than elsewhere?—No. If you will refer to the agreements in Scotland and so on, you will find that even there the rates agreed to reach up to 11d. per hour, and, as a matter of fact, have gone beyond it, in Sheriff Fyfe's award of a few months ago he fixed dressmakers' rates at 53 per week in Scotland.

8389. *Mr. Pugh*: Is it the London Employers' Association Agreement that you are referring to?—Yes, the comparative rates.

8390. *Chairman*: These rates are London rates, are they not?—Those are London rates. In order to make it quite clear, I have just taken London only, and from those it will be seen that there is very little difference between the Trade Board rate in 1920 for learners and the agreement which was come to in 1918; and that agreement, as you will see from the list of members of the London Employers' Association, covered nearly the whole of the London firms who employ dressmakers.

8391. This looks as if the Trade Board rates were equal to the London rates. Is that right?—The 1918 agreement—

8392. I am not troubling about that, but take May, 1920, the first Trade Board rate. That seems to have been exactly the same as the standard London rate of February, 1920?—Yes, excepting only that as regards qualified hands in London, for junior hands we had a rate of 37s. and for senior hands 44s.

8393. Yes, in London. So far as they go the Trade Board rates are equal to, and in fact are the exact equivalent of, the standard London rate.—As a matter of fact the Trade Board sat in January, but the rates were not fixed until May.

8394. *Lord Weir*: And those were the rates which you afterwards unanimously agreed were bad rates; is not that so?—In January at the first meeting of the Board the rates were unanimously agreed to.

8395. But later on you agreed, both the employers and yourselves, that those learners' rates were almost stupid rates; is not that so?—No, not as far as London is concerned.

8396. I thought that was what was meant when you said that there was a mistake in the learners' rate, and you reduced it 50 per cent.?—Yes, but not for London.

8397. *Chairman*: The Trade Board reduced the rate?—Yes, the Trade Board reduced the rate.

8398. For London, the country, and everywhere else?—Yes, but the Agreement for London stood, as far as we were concerned.

8399. *Mr. Pugh*: The Trade Board decision did not interfere with your London Agreement?—That is right.

8400. *Chairman*: But the rate was originally fixed for the whole country at 9s. for learners?—Yes.

8401. Later on it was reduced to 6s.?—Yes.

8402. *Mr. Poulton*: According to this schedule, your agreement of July, 1921, is practically the same again as the Trade Board rate?—Yes, but there is an addition to that of 1s. per week for learners who are employed in the centre of London.

8403. *Sir Arthur Pease*: But in this case the agreement with the employers was modified to bring it down to the Trade Board rates?—Yes, excepting that those employed in the centre of London in the case of learners received 1s. per week more.

8404. *Mr. Layton*: Taking the 1920 agreement, did the Trade Board come to the decision that it was appropriate to apply to the whole of the country the

London level of rates?—Not quite that, because the agreement which was arrived at by us with the London Employers' Association in February anticipated the fixing of the rate in May. The decision had been come to by the Board and our agreement in London was modified accordingly.

8405. This figure for February, 1920, was a private arrangement to anticipate the operation of the Board?—Yes.

8406. *Chairman*: Since then the Board have proposed further reductions?—There have been further reductions proposed recently.

8407. In the new rates you propose to distinguish between London and the country?—Yes, between London and the country areas. We are proposing three areas. As a matter of fact, even our organization with the drapers themselves have anticipated that; when we came to that national agreement with the drapers we agreed in that case to four areas.

8408. *Mr. Layton*: What were they?—One London; then the next—

8409. *Sir Arthur Pease*: What did you include as London; that is the point, I think?—Ten miles from Charing Cross—and then the next group of large towns and then the small towns, and then the strictly rural areas.

8410. *Mr. Layton*: When did you agree on this principle—in 1920?—1918.

8411. It was not given effect to, was it?—We agreed to that in conference with the Drapers' Chamber of Trade, and wherever assistants were organized, when drapers' assistants did organize and we had to go to the Chamber of Trade on behalf of our members—and they went to the Chamber as well—the agreement was fixed up with that firm based on the national arrangement which we had come to.

8412. *Chairman*: What was your limit of population for large and small towns?—A small town was 5,000 and under. Then we had a reduction in the lowest rate for learners.

8413. And the larger up to what figure; it is small towns 5,000 and under?—Yes, places of 5,000 and under.

8414. *Sir Arthur Pease*: That is rural?—Yes, that is rural.

8415. *Chairman*: I was asking about small towns.—Well, the agreement was really based upon the cost of living according to the Board of Trade publication of 1912. I think you have had a copy of that booklet; it is a little green booklet which I think Mr. Turner placed in front of you.

8416. Yes. The towns were named, were they?—Yes, the towns were all named in that, and we took the group. London was the 100; then there were all those towns there under 100 down to 89; and then from 89 down to those of 5,000 inhabitants and under—under 5,000 inhabitants.

8417. *Mr. Layton*: But how came it that you did not give effect to that principle on the Trade Board?

—Well, I should say because there was no request, no definite proposal made from the other side, from the employers' side. As far as the workers' side are concerned we put forward proposals, and if the employers had come forward with some constructive arrangement, then I have not the slightest doubt but that agreement would have been reached, and satisfactory agreement. As a matter of fact no constructive proposal came at all from the other side.

8418. *Lord Weir*: Your proposal was on a national basis?—Our proposal was on a national basis. I think we were guided largely by what had occurred under Statutory Rules and Orders, 357. There the Interim Court of Arbitration fixed a national rate of 7d., and that rate was fairly generally operative; there was no great opposition to it, and we felt that in its application a national rate would be simple, following the line of Statutory Rules and Orders, 357.

8419. *Mr. Layton*: At the same time the principle of differentiation was approved by your organization?—As an organization, yes.

8420. As a sound principle so long as differences in cost of living existed?—Yes.

8421. And you only put forward the flat rate principle for simplicity?—For simplicity.

10 January, 1922.]

Mr. P. C. HOFFMAN.

[Continued.]

8422. Because the Trade Board could enforce it, perhaps?—Yes, for simplicity, and owing to the fact that there was in operation a national rate.

8423. Yes; in other words, it was by way of continuing the war principles and regulations, to some extent?—Yes, there was the prescribed rate under Statutory Rules and Orders 357, but that was not passed until 1918.

8424. Quite, but still it was war legislation?—It was war legislation, yes.

8425. And would your organization consider it right now to abandon that principle in favour of differentiation? Did you propose this variation of scale?—The employers put it forward, and we met them upon several occasions.

8426. But you accepted the principle?—Yes, accepted the principle and reached an arrangement.

8427. *Chairman*: You think it right?—We think it right.

8428. *Sir Arthur Pease*: In fact, if you had to put the minimum so low as would be necessary in a rural area you would have no protection for a London employee?—No; no protection for London.

8429. Or even for the big towns?—Quite.

8430. *Mr. Layton*: I do not quite understand how, in spite of the fact that your Organization has recognised, and had recognised for a long time, the need of differentiation between districts, you came to apply the London rate as a universal national rate?—Well, you see it would not be accurate to say the London rate, because as a matter of fact the London rate was rather lower than that. The agreement we reached in February with the Employers' Association was anticipating that the Board would fix what it had already agreed to in January.

Mr. Layton: It was putting up the rate.

8431. *Chairman*: But then you agreed on a rate above the London rate for the whole country?—No; the London rate of 1919 was 8s.; the first rate for the first six months for learners.

8432. I thought you said just now that the London rate was lower than that which was agreed to in February, 1920?—Yes, at the time of the setting up of the Trade Board, which was in January 1920; the agreement was come to with the employers in February, 1920.

8433. *Mr. Layton*: That was in effect a raising of the existing rate?—It was in effect a raising of the existing London rate.

8434. You put up the London rate, and you made that increased London rate applicable to the whole of the country?—No, not quite as you put it now. What really happened was that a new rate was agreed to by the Trade Board; an entirely new rate.

8435. Yes, higher than the London rate?—It was higher than the existing London rate, yes. That is for the learners, but not for the experienced hands.

8436. Does not the same thing apply there?—Oh, no.

8437. Then what is the meaning of your figures here? That "other workers or assistants"; I pre-

(*Adjourned for a short time.*)

8451. *Chairman*: Mr. Hoffman, you were going to speak next about slack time; that, I understand, means suspension of work during part of the year?—The bane of the dressmaking trade has been the question of slack time, that is, the suspension from work for months at a time, or working three-quarter time or half time. It was customary in some cases for workrooms to be closed down at the end of the season, which in the case of Court dressmakers would be from August, for three months. The staff were unemployed, of course, during the whole of that time.

8452. How have you dealt with that in your union?—We have not been able to deal with it. We have had one conference with the employers to see whether any method could be arrived at for getting over the difficulty, but nothing has been done yet. The only proposition that we have put forward is that, as the shop staff are practically guaranteed work during the whole of the year, so the dressmaking staff ought to be guaranteed work during the whole of the year.

sume that is the big class; 28s., and it goes up to 34s. and becomes the Statutory Trade Board rate?—Yes, but there is twelve months' difference. There is a twelve months' interval, and the cost of living went up.

8438. Was the Trade Board rate the rate that came into existence?—That was the prescribed rate under Statutory Rules and Orders 357.

8439. But it was the rate you had fixed by collective agreement?—Yes.

8440. You had accepted the statutory rate?—Yes, we had accepted the statutory rate.

8441. As the basis of your negotiations; therefore it was your agreed trade union rate when the Trade Board came into existence?—Yes.

8442. You put it up 6s. and made it the universal rate for the whole country?—Yes.

8443. *Dame Adelaide Anderson*: What was meanwhile the rise in the cost of living; was that an element?—Oh, yes, it was an element.

8444. *Chairman*: Mr. Layton has put to you what you did in May, 1920; that is, to apply the raised London rate to the whole country. That was not wise, was it?—I agree; I quite agree that I, for one, if I were to go over the whole ground again, would not do quite the same thing; but I ought to say in that connexion that we have not been helped at all by the employers' attitude in regard to the matter. We were concerned all the time in getting a decent wage for the experienced women. If they had come to us and said, "Look here, if you will give us something for the learners during a time when they are not earning anything, when we have to teach them, if you will give us something in the case of the learners we will give you something in future years," we could have come to some arrangement; but they did not.

8445. I do not want to attribute blame to anybody; but, as a matter of fact, looking backward now you rather agree that the Board made a bad mistake in fixing that rate?—Yes.

8446. Then the question of setting up a Board for the needlework trade came in, and there were conferences, and you thought the easiest way was to have one Board for the whole of the clothing trade, and sub-committees?—Yes.

8447. But other associations insisted on separation?—Yes.

8448. *Lord Weir*: That was for distribution apart from production; or do you mean both?—No, we have always looked upon the dressmaking as merely production, and you cannot very well say, "I am going to separate dressmaking where it is carried on in a draper's shop as apart from dressmaking which is carried on at, say, a Court dressmaker's."

8449. What I understand is that when you speak of the clothing trade you mean both the production of clothing and the distribution?—No, not the distribution; production only.

8450. You are only speaking of production?—Only of production.

8453. *Lord Weir*: Does that apply more to the bespoke part of the trade than to the ready-made or factory part?—I can only answer for the bespoke side of the trade.

8454. You are speaking only for the bespoke side?—Yes; I am not touching the wholesale side of the trade at all.

8455. *Mr. Pugh*: There is a Board there, is there?—There is a Board. I think perhaps it ought to be made quite clear that the Dressmaking and Women's Light Clothing Board covers both the wholesale trade and the retail trade—both the ready-to-wear and the bespoke. I think perhaps in the questions you put to me this morning that point might have been brought out; perhaps I ought to have pointed out to you that the rate fixed under the Wages (Temporary Regulation) Act, for example, covered the whole of the trade, both the bespoke and the wholesale trade, and that when the Board came to meet in January,

10 January, 1922.]

Mr. P. C. HOFFMAN.

[Continued.]

1920, in order to go over the whole position, they had in mind that simple national rate and the effect that it was going to have both upon the wholesale side of the trade as well as the retail. If the employers' side had come to us at that time and said: "We want a different rate for the retail trade from the wholesale" we might have come to some arrangement for giving a lower rate in the retail for the learners provided we could pick it up after some years of experience. But they did not come to us so we had one rate.

8456. *Dame Adelaide Anderson*: But is it not in the retail dressmaking that this evil of slack time, or total absence of employment in the summer, is worst?—It is very bad, and was very bad pre-war.

8457. Could you have a lower rate in operation during the time they are at work in order to meet the time when there is no employment at all? Employers have got to save to meet that.—My opinion is that the rates which have been fixed by the Board, bearing in mind the fact that there is this slack time, have been very low. It ought to be said that when the rates were fixed slack time had, practically speaking, been done away with, as it was during the whole period of the war. There was competition for what staff was left. A number of dressmakers had gone off into munitions, and so on, and there was naturally competition upon the part of the employers for what dressmakers there were left, and there was a shortage.

8458. There was a shortage of trained dressmakers?—Yes, and the employers naturally kept the workers on during the whole of the time, and we were not faced with slack time during the period of the war. Therefore, really, as a matter of fact, now when there is this slack time, which as I will show in a moment is very tremendous, the rates that are fixed are not sufficient to carry the girl over during the whole of the year.

8459. *Mr. Pugh*: What I wanted to get at was, have you discussed this matter of slack time on the Board?—No, not on the Board. We have had one or two meetings with the Employers' Association, and that is all.

8460. *Lord Weir*: It has been suggested to us that the difficulty is that the Trade Board system tends to exaggerate slack time; that is if they have to pay what they consider a high rate then they use the labour very rigidly.—I have to answer that by saying that when the low rates were in operation—instances of which I have given you on page after page—slack time was just as general as it is now. As I say, workrooms were closed down for whole months at a time.

8461. *Dame Adelaide Anderson*: How far back would your knowledge of that go—50 years?—Miss Tyler, who follows me with her evidence, was a practical dressmaker and can go right back to the time when she was 14 years of age.

8462. But so far as your knowledge goes it was at least as bad in the past when there were low rates?—Absolutely.

8463. *Chairman*: Then you give us details of unemployment—Schedule N, I think it is—from December, 1920, onwards, and you give the number as 44,800 in December, 1920, 62,500 in January, 1921, 58,200 in February, 1921, and then there is a considerable reduction?—Yes; that is in March.

8464. And it runs on more or less until October?—Yes. Those figures are taken from the "Labour Gazette."

8465. Then you give a month's percentage. What is that a percentage of?—That is the percentage of dressmakers employed per month. That is the percentage of the total number who are insured persons.

8466. Would these figures show the people working part time as employed or unemployed?—These are people unemployed—they were registered as totally unemployed.

8467. So that some of these unemployed in the latter months may have been doing slack time?—Some of these from March onwards, do you mean?

8468. Yes; they may have been working slack time?—Yes, they may have been, but I have not got

the short time figures by me. What usually happens is that the girls register. If they are unemployed for a week or a fortnight they would register as being totally unemployed, even if they were suspended.

8469. But suppose they were working half a week?—Then they would describe themselves as being on short time.

8470. *Lord Weir*: In which case they would not register at all. This only shows the totally unemployed, does it not?—Yes. You will see there that December, January, and February are the months when work is slackest in the bespoke dress-making trade, and you will notice from March on, when we get down to somewhere near normal, the month's percentage in the dressmaking as compared with the month's percentage of all other trades reporting which have employment exchanges, is well under the general unemployment. These figures are borne out by our own register in London of our unemployed members and by the Union's national figures in regard to women who are unemployed.

8471. *Chairman*: Of course, this would not show the learners?—This does not show specifically the learners. It would cover all workers employed.

8472. Then you say that another factor which may make for unemployment in the dressmaking has been the improvement in making-up by the wholesale trade. That was a tendency which had begun, I gather, before the Trade Board was instituted?—Yes. The war helped that side of the work very much indeed. There was an improvement in the ready-to-wear trade, that is in the wholesale making-up.

8473. *Sir Arthur Pease*: Would not the reason for this unemployment being so large in December, January and February, be very largely due to the high price of materials at that time?—Do you mean in January and February of this year?

8474. Yes; of wool and other materials?—No; it is not higher than it has been all through. Employers have raised the cost of material and the making of dresses all the way through during the whole of the war period.

8475. Would not improvement in employment be due to the price of materials coming down?—No; I do not think it has got anything to do with it.

8476. *Lord Weir*: This is a seasonal curve which is reproduced year after year going back, is it not?—Yes; I am absolutely positive that it is. These 20,000 unemployed are certainly above the normal.

8477. I am not asking about the degree; I am only asking about the characteristic curve of unemployment?—It would show up high always in January.

8478. *Chairman*: Then on page 24 of your statement you refer to learners and apprentices?—Before going on may I point out that it has been urged, of course, that it is these Trade Board rates that have caused the unemployment in dress-making. I ought to express my own opinion that that is not so. The fact that we have had agreements up and down the country—copies of which have already been put in to you—which in some cases are higher than the Trade Board Rates is sufficient to show that unemployment cannot be due to Trade Board rates if persons in those establishments are unemployed. There are other causes. Take London. In London we have had these agreements with the Employers' Association since 1918, and members of the London Employers' Association have been operating those rates. You had Mr. Pegg from John Barker's, and Mr. Barnard from Thomas Wallis & Company, before you. Both of them said that unemployment has been due to Trade Board rates, yet in their own workrooms they have been operating the agreement come to with the London Employers' Association and ourselves, which in some respects has considerably higher rates than the Trade Board rates.

8479. To be fair, I do not think they were speaking of their own workrooms?—Mr. Pegg was.

8480. Mr. Barnard was not?—No, Mr. Barnard was not.

8481. Take this rate of 9s. for learners. We have been told by many witnesses and in many letters that the effect of that rate had been to discourage drapers

10 January, 1922.]

Mr. P. C. HOFFMAN.

[Continued.]

from taking learners at all. Is not that true?—I only say that in March, 1919, under the Wages Regulation Act we secured a prescribed rate of 8s.

8482. That was a voluntary agreement, was it not? No; that was under Statutory Rules and Orders, 357.

8483. *Chairman*: That was in the war, of course?—That was enforced in March, 1919. That went up to 11s. for the second six months, and 16s. for the fourth six months. There was very little difference between that rate and the subsequent Trade Board rate.

8484. Yes, but it may still be true that those rates together, the 8s. and the 9s., have had the effect of discouraging drapers from taking learners, is not that so?—Well, that may be so. All I have to say is that I am quite sure that it is not due only to the operation of the Trade Board rate. It is a very funny thing. We have had these agreements with Employers' Associations all over the country before ever a Trade Board was set up. Learners' rates were agreed to in Scotland; learners' rates were agreed to in London.

8485. *Sir Arthur Pease*: Not 9s.?—No, not at 9s., but still they were gradually increased right from 1915 in Scotland.

8486. *Mr. Pugh*: Were they fixed on an age basis?—In Scotland, first of all, they began to be fixed upon learnership—the first six months of learnership—but subsequently they came on to age.

8487. By voluntary arrangement?—By voluntary arrangement.

8488. *Sir Arthur Pease*: But the condition of trade in the last 12 months has been utterly different from what it was in 1919?—I quite agree.

8489. A learner's wage which might have been too low in 1919 might be too high to-day?—Yes, but really I cannot agree that a difference of 1s. only in a learner's rate in one six months is going to discourage learnership.

8490. But you have the other general conditions to take into account in comparing with the present time?—You mean the conditions of trade and so on?

8491. Yes.—Yes; at the present moment it is a very unfortunate thing; it is purely a coincidence that the Trade Board rates came into operation with the end of the boom in trade. It is most unfortunate. The whole question of discussing the setting up of the Board took over 12 months, and it is a most unfortunate thing, of course, that the Trade Board rates did become operative just as trade began to slide back.

8492. *Chairman*: It would have been the same thing if the Trade Board had been set up earlier. The rates would then have become depressed at the time when the slump began?—No; the slump would begin in the Spring of 1920 in the retail trade.

8493. Yes.—We began to feel it in the Spring of 1920.

8494. That was the date when the Board fixed its rates?—That was the date when the Board fixed its rates.

8495. You go on to say that there was an agreement with the London employers, or rather an announcement by the London employers, that learners would be paid 6s. for the first six months and 8s. for the second six months. That is page 24?—Yes. I am here referring to the dearth of learners, but before we get on to that may I just draw attention to the letter received from our Aberdeen Secretary, a letter which he sent to Mr. F. Rose, M.P., in which he draws attention to this: "As to the statement that 400 workers had been dismissed, this is entirely false. At the greatest estimate there were 600 dressmaking employees in Aberdeen, of which at least 500 were members of this Union, and out of the latter only 50 were unemployed at that particular time. Now, only 13 are on our books as unemployed, in spite of a small lock-out of 14 members from Miss Bagrie's two weeks ago because they declined to cease membership in a Trade Union. One firm (Essiemont and Macintosh) closed down two workrooms permanently in December. The staff of each workroom was immediately engaged *en bloc* by competing firms. This closing down has been quoted as a glaring example of the effects of Trade Board regulations, ignoring the fact that not a single employee was left unemployed in consequence. Further, at least 20 operative dressmakers have commenced business on their own account since this

Trade Board began to operate. In several cases they now employ a fair number of assistants."

8496. *Lord Weir*: What is the date of that letter?—26th July, 1921.

8497. *Chairman*: Can you tell me where that statement about the 400 workers is to be found?—You mean the 400 workers being dismissed?

8498. Yes.—No, I am sorry I cannot.

8499. *Dame Adelaide Anderson*: On the 7th January apparently the Aberdeen Free Press made a statement?—Oh, yes, just previous to the visit of Dr. Macnamara: "The statement has been made in the Aberdeen Press that Trade Boards were causing unemployment."

8500. *Chairman*: Is there anything more about learners?—Yes. The London Employers' Association issued a pamphlet in 1917. I have that pamphlet here; it is called: "The steady employment for girls in the dressmaking, ladies' tailoring, millinery, and allied trades. Details of improved pay, hours and general conditions." This was issued for the purpose of encouraging young people to come into the dress-making trade. It was a fair attempt on the part of the employers then voluntarily to try and do something to improve conditions. It was before organisation had stepped in and the London Employers' Sub-Committee was formed to make certain recommendations, which they did. Now there was a dearth of learners at that time, and previously, just as there is and has been amongst drapery shop assistants. There is still a dearth of the right sort of young people coming into the trade.

8501. What is the date?—This pamphlet was issued in July, 1917, for the purpose of encouraging young people to come into the trade.

8502. As regards 1921 we have evidence just the other way—that there are any number of learners wanting to come in, but employers will not take them because of the rates?—Well, I agree that there is certainly in London an improvement in the position of learners who are coming in, but I am going to put it down to quite other reasons than Trade Board. I want to say that it is due to the Trade Board rates and to the general improvement in conditions which have been secured by organisation that girls have been attracted to the trade, and also to the system of training which is being undertaken under the L.C.C. schools.

8503. That answer does not refer to my question at all. We have had evidence from, among other people, the Director of Education of the City of Liverpool, that there were the names of many girls upon the books of the Committee who wished to be employed at dressmaking, but there was no chance, because the employers constantly say that owing to the high rates fixed by the Board they could not afford to take them. I am contrasting that with your statement about July, 1917?—Yes. Well, the only answer I can give to it is that in London there is now no dearth of learners.

8504. This was in Liverpool?—And I put it down to the general improvement in conditions.

8505. It is not the dearth of learners; again you are not dealing with the question. There is a superfluity of learners but a dearth of places for them?—Oh! Well, of course, upon the other hand, one of the main reasons for the slack time in the dressmaking is, and has been, because there are too many people in the employment. If there were not as many people employed, employers would tend to keep them on the whole year round instead of discharging them.

8506. Then you refer to the training of girls, and you say, no doubt quite truly, that the Union has striven to encourage training by those entering both the dressmaking and the drapery trade?—Yes, and in the drapery.

8507. And you produce, I think, some material referring to that. You had an agreement with the London Employers' Association as to training?—Yes.

8508. That is in 1918; and you give a record of attendances at the L.C.C. extension classes?—Yes. It says under the system of part-time education carried out in the employer's time without deduction from pay.

10 January, 1922.]

Mr. P. C. HOFFMAN.

[Continued.]

8509. That is the trade school for girls in Barrett Street and the trade school for girls in Bloomsbury and the trade school at Hammersmith?—Yes.

8510. *Sir Arthur Pease*: If the girls were working part time do you think it is taken into account in the wages fixed at all, although the actual hours are not deducted?—You mean when they attend the school part-time?

8511. Yes?—No; it is taken into no account at all. No deduction is made from wages at all.

8512. But is it not borne in mind when the wage is being fixed?—No, it is recognised in London to-day that the scheme of training under this system is excellent and is complementary to the training which is received in the workroom, and there is very considerable improvement in the work of the girls since these classes have been in existence.

8513. That is not my point. I quite realise that if, say, a girl was off for two or three or four hours, or whatever it is, those hours would not be deducted from the pay, but would not that be taken into account in some way in the actual wage received?—That is not our experience. The whole of the firms whose girls attend these classes are operating the working conditions which have been arrived at between the London Employers' Association and ourselves.

8514. *Chairman*: I see you say that the system of apprenticeship has broken down?—In the drapery.

8515. Do you mean it has been superseded by this system of classes?—No. I should like you to separate the dressmaking workrooms from the distributing side. In the retail workrooms you now have a system of learnership. In the drapery the whole system of apprenticeship has broken down years and years ago.

8516. Which—productive or distributive?—On the distributive side it broke down years ago, and the Drapers' Chamber of Trade and ourselves sought to put some system into operation in lieu of apprenticeship, and a form of learners' agreement was drawn up, a copy of which you have had submitted to you.

8517. That is working well, is it?—No, it is not in operation, unfortunately. It is like the scale of wages that was drawn up by the Drapers' Chamber of Trade with ourselves, and the scheme of training which was drawn up. I am afraid the employers had very high ideals during the war, which they have lost sight of now that trade is bad.

8518. *Lord Weir*: Were those two schemes you mentioned agreed on before the Trade Board?—Oh, there is no Trade Board for drapery distributive.

8519. I have one other question about the learners. You say the effect of the learners' rates has been that they are now receiving better training and being kept for dressmaking work instead of being used to run errands as formerly. Well, who runs the errands now?—I do not know that errands are run now.

8520. You mean you have done away with running errands?—Miss Tyler reminds me that they usually employ one person for that purpose.

8521. And how is that person paid according to the Trade Board?—That person would come under the class of "All other persons; 18 years of age and over."

8522. But suppose she was under 18?—Then she would be paid according to the age.

8523. She would be a learner?—Yes.

8524. Then what is the point of it?—There would be only one at any rate in each workroom who would be running errands and would be over 18 years of age, of course.

8525. *Dame Adelaide Anderson*: The message running is concentrated more?—Yes.

8526. In the hands of an adult?—In the hands of an adult.

8527. Have they developed other methods of labour saving for the carrying of messages?—Well, take the question of matching, for example. An adult would do that work instead of using little girls to run all sorts of odd errands at odd times. It is more properly regulated now.

8528. In former days the young workers did this most of their time?—Yes, in the first six months practically all their time—just running on odd jobs. They were at anybody's beck and call.

8529. *Lord Weir*: It is rather difficult to establish why they should change their old practice, because they pay the learner just the same rate as the person they send on the errands. It does not seem to make any difference?—Well, it does. When they were receiving very little or no money, it did not matter what they were doing; they did not trouble about teaching them during the first few months.

8530. *Dame Adelaide Anderson*: Having become more valuable they think of the training to make them still more valuable?—Yes.

8531. *Sir Arthur Pease*: But they put somebody else in to do the work whom they have to pay more?—Yes; but instead of using all the girls, or several of the girls, to run the odd jobs, they now have one person only to run them all.

8532. But they pay that person more than the girls?—They pay that person. I do not think it would run to that all told. The number of girls that used to be put on to all sorts of odd jobs meant in fact a great deal more than one person doing just what was necessary, because perhaps a great many of these jobs were not really necessary to be done.

8533. *Mr. Pugh*: As a matter of fact, with standard payments they have had to organise their work to better advantage, and therefore, instead of using anybody and everybody, they have some one person to do the work?—Yes.

8534. *Chairman*: Wage by age you rather defend, do you?—Well, I only say that, that it has been agreed to by employers in the drapery trade, both wholesale and retail, by agreement with ourselves, and the Employers' Associations have put it into operation voluntarily where it has been drawn up without consultation with this organisation at all.

8535. *Mr. Pugh*: On this point it has been submitted here in the case of girls who were kept at school to a later age, say 16, that there is a difficulty in getting them into dressmaking because on account of their age they have to be paid the remuneration fixed for the particular age, and therefore, not having had experience, employers will not take them on. Have you anything to say about that?—Well, representations have been made to the Board in regard to that very matter, and the Board is now proposing to alter the practice and is putting rates in for first, second, third, and fourth year of learnership.

8536. Irrespective of age?—Irrespective of age, yes.

8537. Then the Board is really tackling that problem?—The Board is tackling that problem.

8538. *Sir Arthur Pease*: And you approve of that?—I do not think in practice it is going to make very much difference. I think that those who come in after 14 years of age to the dressmaking are very, very few, excepting those who in the London area have gone to the day training schools and are there from 14 to 16 during the whole of the day. Generally speaking, the girls come into the dressmaking at 14 years of age; but the employers say that there is a grievance; all right, well, let us try and meet it.

8539. But it would be very serious to prevent the girls staying on at school for another two years?—Oh, yes. I would not do anything to prevent that; that ought to be encouraged rather than otherwise.

8540. *Mr. Pugh*: Supposing a girl goes to a training school, and is there for two years, do the employers regard that as equivalent to two years' training in their establishment?—As a matter of fact, they have no difficulty at all in placing the girls from training schools at wages above the Trade Board rates.

8541. There is no difficulty?—There is no difficulty at all.

8542. *Chairman*: Now, may I go to your suggested alterations on page 30?—If you will excuse me, I should just like to say this—

8543. I have looked through the other pages. I thought they were rather argument than evidence?—Well, they are; but I did want to point out that, in my opinion, and in the opinion of the rest of my members on this matter, I do not think it is true to say that the Trade Board rates are killing the hand craft. If the hand craft has to get through, it has to get through on its merits as against the wholesale trade, and I think that it ultimately will, and it may

10 January, 1922.]

Mr. P. C. HOFFMAN.

[Continued.]

be that the Trade Board rates will help employers in this direction rather than do the other thing; because it will compel them to concentrate upon the training and organising in the workroom.

8544. First, you suggest improvements in machinery?—Before we come to that, I just wanted to say that the trade can afford to pay. It is not that the drapery trade cannot afford to pay the rates of wages. It has been said before you, I know, that these rates would be ruining the trade, causing them to lose a tremendous lot of money. Well, all the evidence we have to give goes to show that the trade as a whole is still in a very flourishing condition, and I have put in a table of profits from both London and provincial drapery firms, which shows that they can afford to pay a living rate of wages for everybody who is employed in the occupation.

8545. *Dame Adelaide Anderson*: Are those the very largest firms—the very largest businesses?—No, not the very largest. The list of firms I have here includes firms in the provinces like Binn's, of Sunderland; Dickson & Benson's, of Middlesbrough; Evans & Owen, of Bath—not the largest by any means of the employers—and Wright's, of Middlesbrough.

8546. *Chairman*: These are large firms?—Oh, they are not the smallest firms.

8547. Well, they are large firms, and they include the largest, do they not?—They include the largest, yes.

8548. I have your list here, and although I do not know many drapers by name, I seem to know nearly all these—Gorringe, Barker, Dickens & Jones, Evans, and so on?—Yes, but the next sheet gives the provincial firms as well.

8549. *Lord Weir*: The period, you will agree, is a very abnormal period—the working represented?—Well, I do not know. The *Stock Exchange Gazette* for November 22 reviews the wholesale and retail drapery prospects for the coming year. It says that in the wholesale section, while the profits have dropped considerably, "lately there has been decided indications that there are better things in store" and prices will become stable. Stocks are light. Of the retail trade they say that fluctuations are likely to prove less marked than in the wholesale companies. "During the second half of the year there has been some improvement (in the demand) specially noticeable during the pending Christmas trade." The *Stock Exchange* takes a very healthy view of the drapery trade.

Lord Weir: You will see the balance sheets when they come in!

8550. *Chairman*: I am afraid these are not the kind of firms that made the complaints at all. These are large prosperous businesses. The complaint we had was from small people?—I understand that the Retail Distributors' Association represent quite the biggest stores in the country, and they have given evidence.

8551. I have rather in mind the evidence of the letters produced by the Drapers' Chamber of Trade, many of which came from very much smaller people than these?—Yes, but whilst that is so, if a limited company is doing as well as is indicated here; whilst we have no means of knowing exactly what the position is of each private firm it is fairly indicative of what the state of the drapery trade is.

8552. I am not sure of that. It is pointed out to me that whilst your first page goes down to 1919, your second only goes to 1918, and does not go to 1919 at all?—There are 1920 profits in some cases on the second page.

8553. There are none for 1919?—No; 1914, 1918 and 1920. It is only the dividends that I have got out. This was got out rather hurriedly.

8554. Why have you dropped out 1919 altogether?—The figures were not available. I got the figures from one of the trade papers; I have it here. This is what I have taken it from (*indicating*) and they only go up to 1918 here, and I have had to search through subsequent numbers of the trade Press for the 1920 position.

8555. You have got 1919 for the first page?—Yes, because they were published in the trade Press.

8556. Are you ready to go on now?—Yes.

8557. First, you think it should be possible to include all branches of the trade under one Board?—Yes. It has been represented to us that distribution was not a trade—that whilst grocery was a trade and drapery was a trade, distribution legally was not a trade. We had interviews with the Law Officers of the Ministry of Labour on one or two occasions, and pointed out to them that buying and selling at least was a trade and might very well come under the Trade Boards Act.

8558. We will not argue the legal point. I agree it could not be done under the existing Act, but you would like it altered?—Yes.

8559. *Mr. Pugh*: Is there any body of opinion in favour of one Board? I rather think that your colleague, Mr. Turner, suggested three Boards. He divided them into three?—Yes. Our view is that if we could not get one Board, then we should be glad to have three, as long as we could have a co-ordinating committee.

8560. And you do not see any practical difficulties in regard to the different classes of trade that would operate under distribution?—There is not the slightest difficulty in the world. We have agreements, and if we can get an agreement with the Army & Navy Stores covering every section of distributive workers in their employment, there ought to be no difficulty at all in a Trade Board setting up an equal rate.

8561. *Chairman*: If you had three Boards you would have to deal specially with cases like the Army & Navy Stores, would you not, in order to prevent competing rates in the same house?—That is why I suggest a co-ordinating committee, in order to avoid overlapping in the big stores.

8562. If there were only three the difficulty would not be so great?—It would not be great at all.

8563. *Lord Weir*: Following on the present system, how many different Boards does it look as if you might have?—If they are going on as they are, it might mean 30 or 40 Boards for the distributive trades.

8564. *Sir Arthur Pease*: And the complications would be very great?—They are bound to be great.

8565. And might cause a great deal of unrest among the workers as well as among employers?—I think that point has been slightly exaggerated. There should, of course, be every endeavour possible made to remove difficulties. One does not want to create difficulties, one wants to remove them. I do not overlook the fact that in a firm like Harrod's, for example, they have agreements with separate Trade Unions covering engineering, electric light workers, carpenters, vehicle workers, furniture removal workers—in fact, I think, they have 30 or 40 different agreements covering small numbers of workers. There is no complication at Harrod's because of that, and there is no unrest at Harrod's because of that. I think it might be easily exaggerated if one were to say: You will get unrest amongst the distributive workers because there are varying rates. I do not think they would care, but one ought to prevent any likelihood of it if one can, and at least mitigate any likelihood of inconvenience. That, I think, is what ought to be aimed at; certainly we should do so.

8566. There are difficulties to be got over even where the arrangements are voluntary. Even in the organised trades there is a demarcation between one trade and another which has caused considerable difficulties?—Yes.

8567. *Mr. Pugh*: I suppose your argument would be that a duplication of machinery for similar classes of occupation tends to create difficulties?—Yes.

8568. *Sir Arthur Pease*: You would put the distributive trades under one or three Boards, I understand?—Yes, with a co-ordinating committee.

8569. *Chairman*: But you would prefer one to three, you think?—Yes.

8570. *Sir Arthur Pease*: One trade struck me as being rather different, and that is the butchering trade as regards distributive purposes. Would you put that in with the drapery and so on?—No, I should put it in with the provisions if we were setting up separate Boards.

10 January, 1922.]

Mr. P. C. HOFFMAN.

[Continued.]

8571. But I thought you said you would prefer one Board?—If we had one Board I should have separate committees dealing with each trade. A committee was set up during the war laying down a scheme for training disabled men coming into the distributive trades. We had to lay down what were the likely conditions in the particular trade. We had representatives from butchers and hairdressers, in fact all sections of the trades were represented on that committee, both employers and employed, and we were able to draw up a memorandum covering the whole of the distributive trades except the hairdressers. We laid down what a man ought to expect for a wage at that time on coming into the distributive trades.

8572. *Lord Weir*: Would those sub-committees not become practically little Trade Boards for each of the trades?—No; they would mainly be concerned with dealing with their own difficulties. For example, they might say that the question of learners in the butchering trade might differ from the question of learners in the drapery trade, and the question of learners in the grocery might differ from the question of learners in the drapery; but as far as an adult rate is concerned, there can be no difficulty at all. The same minimum rate for all salesmen might apply right through.

8573. *Chairman*: Each committee would report to the Board, I suppose?—Each committee would report to the Executive Board.

8574. *Sir Arthur Pease*: Would you have the appointed members sitting with the sections, or only with the Board?—Only with the Board as a whole.

8575. Then it would be purely negotiations between the two sides of the Committee?—Yes.

8576. *Dame Adelaide Anderson*: The business of the Board would be to co-ordinate all these proposals that came up?—Yes.

8577. Salesmen in butchers' shops might propose something that was incompatible with the rest, and the Board would have to unify and co-ordinate?—Yes, and these committees would be useful, more particularly in those branches of the occupation which are bordering on the manufacturing side. For instance, take wholesale grocery. You have bacon washing, and that sort of thing. In butchering you would have sausage making, and so on. Those are semi-manufacturing processes, and are incidental to distribution. I think it is on those matters that these committees would be most useful.

8578. *Mr. Pugh*: They would be able to help the general body on their own peculiar trade difficulties?—That is right.

8579. *Sir Arthur Pease*: I would like to follow up the question I asked you before with regard to these committees. Suppose they did not agree on anything, then they would report to the Board which sat for that section; but you would expect the committee to reduce the number of points which the main Board had to settle?—Yes.

8580. And just to put up the main points on which there was a difference?—Yes.

8581. That would be the method on which you would expect them to work?—Yes.

8582. *Chairman*: Then with regard to the time for objections, you would reduce the two months to one month in the case of variations only?—Yes, that is so.

8583. Then the Minister of Labour you would cut down to a fortnight?—Yes. What is more important is that he ought to give reasons if he cannot sanction the rate. He has hung up the Grocery Trade Board rates now, for example. We do not know why he has hung them up; in fact, no one knows.

8584. I think he has given reasons. I believe I have seen his letter?—It is only recently, then. I have not heard anything.

8585. Are you on the Grocery Board?—No, I am not on the Grocery Board.

8586. Then you say facilities for obtaining legal advice should be given to the Board, and they should

have the opportunity of expressing their views to the Minister's legal advisers?—Yes.

8587. *Mr. Pugh*: At present they have no contact with the legal advisers?—No contact at all, so that we do not know quite what we can or what we cannot do. We have to address a question to Montagu House in order to find out exactly what we can do.

8588. *Sir Arthur Pease*: Is there no opportunity of explaining verbally what your difficulties are?—No opportunity at all.

8589. It is simply a written statement?—That is so.

8590. *Dame Adelaide Anderson*: That must be very unusual. In most cases in life there are opportunities for conversation before formulating a written communication?—There is nothing of the sort. If we want a definition of a class of worker, for example, we have to write. We have had a difficulty on the Dressmaking Board in regard to defining exactly what is meant by what in the trade is termed a "senior hand." We had to get down to the question of definition. We have the Secretary of the Board, who is a very great help indeed, and he is able to draft something which he thinks will go through. That is put through to the Minister, and then the Minister returns it or alters it and says: "This is not sufficient," and it has got to be altered in some way. All that could be avoided if we had a legal adviser and if, when we were in a difficulty about an exact definition fitting a class of worker, we could have direct communication from the Minister as to what ought to be done.

8591. *Chairman*: Before you make a proposal, you mean?—Certainly not afterwards.

8592. It is before you make a proposal that you want to do it?—Yes.

8593. *Sir Arthur Pease*: You really want help to draft your proposal?—Certainly, if we are in any difficulty or any doubt.

8594. In fact, you want a fresh mind looking at it from an outside point of view?—Yes—from a legal point of view.

8595. A detached point of view as well as the legal point of view. You want someone who has not been immersed in all the detailed discussion?—That is so. We want something done so that we can arrive at a decision. The workers' side and the employers' side are often agreed as to what they want to arrive at and what they want to do, and there is the difficulty of putting it in legal form so that it will hold and become operative.

8596. *Chairman*: I am told that some of the Boards do send their draft proposals to the Ministry with a view to having legal advice upon them before they are actually adopted. Perhaps you were not aware of that?—I was not; but that again makes for considerable delay.

8597. It means an adjournment?—Yes, and additional cost.

8598. *Lord Weir*: Are there occasions on which you can have an official of the Ministry come to help you?—We have had representatives of the Ministry down on one or two occasions, and we have asked questions. We have asked questions, for example, on inspectors' reports, and they have not been able to answer with regard to those reports.

8599. *Chairman*: But they also come down to see you about objections as to the rate and so on, do they not?—Yes, and then we have been able to tell them that since that there has been a new rate, so that the objections to which they speak do not now apply.

8600. Your point is that you would really like to have a legal adviser at the Board?—Yes, when occasion warrants.

8601. Before you make up your proposal?—Yes.

8602. And he would give you his advice then, and you would alter your proposal if necessary?—Yes.

8603. And in that way delay and reference back would be avoided?—Yes, and expense.

8604. Then you say inspectors' reports should be available for the Board, and it should be possible to ask questions in respect of those reports?—Yes.

8605. *Mr. Pugh*: Is there any contact between the inspectors and the Board at the present time?—No.

10 January, 1922.]

Mr. P. C. HOFFMAN.

[Continued.]

8606. Does the Board know what is going on as far as the inspector is concerned?—I think we have had one report down since the Dressmaking Board has been in existence.

8607. *Chairman*: You get summaries, do you not?—Yes, a summary has been sent through.

8608. *Dame Adelaide Anderson*: Do you make requests that such and such points should be investigated and reported on?—I do not know that we have had occasion to do that.

8609. *Chairman*: Then you say that the question of scope should be referred to the Boards?—Yes, and where the views of the Board do not coincide, co-ordinating machinery should be set up.

8610. Then your next point is that the unions should be given power to take cases of non-compliance with the Acts to local courts similar to the local Munitions Tribunals. That is a point, I think, which we were discussing this morning, although not with you?—That is so.

8611. Will you just explain a little what you mean by that suggestion?—We were able under the Wages (Temporary Regulation) Act to recover quite large sums of money that were due to our members from employers who had not paid the rates that were prescribed. Our local officials, and even our local members, were able to bring cases on behalf of their colleagues before the local court and get those payments back. Now that is quite a simple piece of machinery.

8612. And you confine it to the recovery of money due?—It was so upon those occasions, but I see no reason why such simple machinery should not go further, and there should not be a power to see that the rates are enforced.

8613. To fine and imprison?—To fine.

8614. *Mr. Pugh*: And imprison?—Why not? That should be the consequence of not paying the fine.

8615. *Chairman*: What kind of tribunal have you in your mind?—The Munitions Courts were set up, and I think an independent Chairman was appointed by the Ministry of Labour, if I remember rightly. There were panels of employers and workers who were drawn upon, when occasion warranted, for the local courts.

8616. Would you give to that kind of tribunal the power to fine and imprison in preference to the existing Criminal Courts?—Why not?

8617. I ask you if you would. If you do not like to answer "Yes" or "No," do you do so?—I say I see no reason why not. I am thinking at the moment of a large number of Orders that have been issued under the Trade Boards Act all over the country affecting many thousands of employers and millions of workers. At the present moment the utmost that we have to deal with them is a small inspectorate which is dealing with the whole question. The consequence is that thousands upon thousands of employers are not paying these rates.

8618. That is the inspectorate point, which is quite a different point?—The present machinery is not functioning, and I am thinking that these local courts simple in their structure and in their operation—would cost very little. They would certainly be less costly than a huge army of inspectors.

8619. *Mr. Pugh*: But you propose to use them to some extent as arbitration boards, because there are some classes of cases you are discussing, one is there might be some question as to what the employer was entitled to pay under the orders or agreements entered into, and the other is a case where he will not

(*The Witness withdrew.*)

pay. Would not you consider a development on the lines you suggest, which is semi-arbitration, of course, was rather a dangerous one, and would it not be better to confine breaches of the law to the present courts?—At the moment we are in the position that an ordinary person cannot take a case to a court. You have to have legal advice and legal assistance in the County Court. The only place to recover is at a County Court, and the worker has to obtain legal assistance in order to go there. That is a very costly proceeding, and a fairly lengthy one.

8620. *Chairman*: You are speaking there of a civil remedy. The remedy in the County Court is a purely civil remedy. Do you confine your observation to that?—No; what I am suggesting is that courts similar to those that were set up under the Munitions Act might very well be set up under the Trade Boards Act.

8621. You call them courts, but of course they are not courts, but are tribunals with certain limited powers. They have not power to affect a man's liberty. You recognise the distinction, do you not?—Yes, I do.

8622. A member of the public might fairly say: "I do not mind if I am confined or imprisoned by one of the Courts of the land," but to be subject to imprisonment by a Committee appointed in the way in which these tribunals are appointed is a very different thing?—I am only struck with the fact that there are thousands of employers who are not paying these rates, and that those employers who want to pay them are penalised accordingly.

8623. *Lord Weir*: Your suggestion would only affect about 20 per cent.—the organised portion. Your suggestion it would not help the unorganised worker?—If the unorganised worker knew that there were means of redress at hand legally without having any legal expenses, he would use it.

8624. *Dame Adelaide Anderson*: You propose that individuals should deal with these matters?—Certainly.

8625. *Chairman*: Your statement does not say so; it says the unions should do it?—I will amend that and put it that anybody could use it.

8626. *Dame Adelaide Anderson*: Would not you feel inclined to amend the other point? It is the first interest of every individual to maintain the safeguard of personal liberty?—Yes, but here are employers who are not carrying out the law, and the point is to get at them and to get them to carry out the law.

8627. But you do not want to burn down the house in order to do that?—No; I would not burn down the house to roast the pig.

8628. *Mr. Pugh*: You do not, I suppose, get these cases brought before your Board, but if it were understood that the Board itself would intervene in these cases, would not you get just as ready a response on the part of those who were not receiving what they were entitled to, to notify their cases to the Board as you would to a court of the kind you suggest?—No; the Board is a long way removed, after all is said and done, from the worker, while the court is local.

8629. You suggest you could not operate through the Board?—Not through the Board.

8630. You know that it is done by the trades where Wages Boards exist?—Yes; in the organised trades.

8631. *Chairman*: Then you say that notices should be simpler. We need not dwell on that. Your next point is that the utmost freedom possible should be given to the Boards?—Yes.

MISS MARY TYLER, called and examined.

The Witness handed in the following statement as her evidence-in-chief:—

MEMORANDUM OF EVIDENCE OF MISS MARY TYLER, Organising Secretary, Metropolitan Needlework Section, National Amalgamated Union of Shop Assistants, Warehousemen and Clerks. Member of the Dressmaking and Women's Light Clothing Trade

Board (England and Wales). Member of Corset Trade Board. Member of London Country Council Advisory Committee and Needlework Training.

My Experience.

I have had experience as a practical dressmaker for about 14 years. I commenced work at 14 years of age at Peter Robinson's of Oxford Street at a com-

10 January, 1922.]

Miss MARY TYLER.

[Continued.]

mening wage of 3s. per week, working from 8.45 a.m. to 7.30 p.m., 2 p.m. on Saturdays. I had three-quarters of an hour for dinner, and half an hour was allowed for tea. Starting September I received my first advance in the Spring following of 1s. per week and a promise of another 1s. when completing twelve months. The following Spring I had another 2s. and received yearly advances afterwards of 2s.

When I was 17½ years of age I was in receipt of 9s. per week. I succeeded in obtaining a position elsewhere as an assistant at 13s. per week, but they requested me to stay on at Peter Robinson's and they would give me 13s. per week, so I remained. On becoming a junior skirt hand, I received 16s. per week. I was then 18½ years of age.

When I was a competent hand I received 21s. per week, and was about 21 years of age. I received other advances up to 25s. at 25 years of age. When I left the firm in 1918, I was the third in charge of the workroom and was in receipt of 28s. per week with dinner and tea.

From the commencement of the war the working hours were gradually decreased until in 1917 we were employed from 8.30 a.m. to 6.30 p.m. and 1.0 p.m. on Saturdays. The wages which were paid to me were a fair example of those prevailing in the West End of London up to 1918.

Up to 1917 no holidays, bank holidays or annual vacations were paid for; no pay was given during sickness. It was unusual for anyone to be paid overtime, but at Peter Robinson's it was a custom when overtime had to be worked for a notice to be put up stating how much we should receive, but we could never make out how the figures were arrived at.

Learners.

It was a usual thing for young girls during the first 12 months to be used as "trotters," that is, they had to run on all sorts of errands, fetching in food, taking out parcels, and other errands of that sort, so that the trade was not taught to the girls during the first twelve months.

Slack Time.

The most hateful thing about the whole of the dressmaking was the slack time. I was not put on slack time until I reached the age of 16. Up to this age I had to complete work left unfinished by the workers who were in receipt of the higher pay, who were stood off whilst those who were on the lowest pay remained at their work. Slack time means that either girls are suspended for a period or are on part time employment. The periods when this usually took place were January to March, July to September, and November to December. In July or August always two or three or four weeks were given off without pay and called "annual holidays," so that for six months of the year girls had not received a full week's pay. This was the usual thing throughout London.

Under these conditions, the workers had to resort to other means of supplementing wages earned during the day's employment.

It was not an unusual thing for them to continue working at home on private orders well into the early hours of the morning, and at week-ends. It was impossible to live on the wages provided. For those who could not look to their parents for support, life was an absolute nightmare. It was literal slavery to keep the wolf from the door. In the case of girls living in London, but away from their homes, it was impossible to support themselves through the slack periods. The wages earned in the busy time were not sufficient to provide for the slack times, and many broken lives of girls can be attributed to the conditions under which their trade was carried on. In consequence of the bad state of organisation, if the protection of the Trade Board is removed, workers will be faced with exactly the same conditions again, and the trade in consequence will suffer.

Organisation.

In 1917 the increasing cost of living compelled the girls to look round for means of improvement. Nothing had been done by employers to raise wages

to meet the cost of living, though it is true to say that we felt it a little bit easier to get advances at that time than previously, specially due to the fact of the numbers who left the trade and went into munitions.

Gradually the girls joined the Union, and had done so in such numbers by 1918 that negotiations were opened with firms all over the West End in order to secure improvement. Ultimately agreement was reached with the London Employers' Association (copies of which have already been placed before the Committee). The immediate effect of improvement in the conditions of employment has been that learners are taught their trade on entry, so that the whole time is properly utilised. This, combined with the training that the Loudon County Council schools have provided, has helped to improve the whole class of dressmaking work.

Dressmaking Overcrowded.

There is no dearth of learners in London at the present time, but in view of the overcrowded state of the dressmaking trade, it would be just as well if learnership were discouraged for a while. When the war was on the girls left the occupation to go in for munitions; there was scarcely a skilled dressmaker, and slack time was abolished: that is to say, that though the seasonal trade remained, girls were kept on the pay roll because employers did not want to lose their services when the busy time came round. If there were fewer employed, there would be no slack time. The Unemployment Insurance has helped to make slack time less promiscuous, for instead of leaving at 4.30 each day the workers will have one week off in four, so that they can claim benefit.

Higher Rates before Trade Boards.

When the Trade Board rates were first fixed we had an agreement in London, covering most of the West End firms, which gave to the skilled hands higher rates than those fixed by the Board. The rates paid in London for skilled workers by the London Employers' Association have always been in advance of Trade Board rates from the first day of fixing up till to-day, so that it would be untrue to say that Trade Board rates have in any way damaged the employers who were operating an agreement with the London Employers' Association, or the more favourable agreements which we were able to secure with unassociated firms.

Dressmaking a Livelihood.

It is untrue to say that girls came into the dressmaking with the idea of it being nice to know how to make their own and their children's clothes when married. A man does not become a carpenter or french polisher so that he can make his baby's cot, neither do dressmakers enter the trade in order to make the family clothes; they enter it because they have to earn their own living.

Killing the Handcraft.

In my opinion Trade Board rates have had nothing at all to do with the killing of handcraft trade. Prior to the war "the ready-to-wear" garments were being sold in increasing numbers. When I first went to Peter Robinson's there would be about two alteration hands to twelve dressmakers; when I left, in 1918, there would be almost twelve alteration hands to two dressmakers. It was not the Trade Board, therefore, which caused this; it was the improvement in the ready-to-wear garments. In my opinion there will always be a ready demand for the individual garment because of its individuality, and if dressmakers and drapers desire to hold their own against the garment made under factory conditions they must do so upon their own merit and skill, and in my opinion the improvement of wages must tend to improve the skill of the dressmaker. Employers will see that the girl is taught as soon as ever she enters the workroom, and only those who show aptitude will be kept. In my opinion Trade Boards have been a great blessing to the dressmaking trade.

10 January, 1922.]

MISS MARY TYLER.

[Continued.]

Improvements. More Inspectors.

In my opinion the best improvement that can be made in the machinery of the Board is to secure more systematic inspection in order to see that the rates are operated. I see no reason why the Home Office inspectors who come down to see that the Factory Acts are carried out should not have power to inspect the books of the firm in order to see that Trade Board rates are paid.

Fewer Boards.

In my opinion it ought to be possible to set up one Board for the whole of the Clothing Trade, because there is so much overlapping. The Minister has had to set up a large Committee composed of two representatives from each of the Clothing Boards in order to define scope of each, but this is well-nigh impossible. It would be very much better if there was one Board, with sub-committees for the various branches of the clothing trades.

8632. *Chairman:* Miss Mary Tyler, you are Organising Secretary of the Metropolitan Needlework Section of the National Amalgamated Union of Shop Assistants, Warehousemen and Clerks, are you not?—Yes.

8633. And you are a member of the Dressmaking and Women's Light Clothing Trade Board, and a member of the Corset Trade Board?—Yes.

8634. Also a member of the London County Council Advisory Committee on Needlework Training?—Yes.

8635. I think you have had experience as a practical dressmaker for about 14 years?—Yes.

8636. You commenced work at the age of 14 at Peter Robinson's at a commencing wage of 5s. per week?—Yes.

8637. Working, you say, from 8.45 in the morning to 7.30 at night, and 2 o'clock on Saturdays?—Yes.

8638. You had a certain time allowed for meals, of course?—Yes.

8639. Then you advanced by 1s. a week the next spring, and the following spring by another 2s., and when you were 17½ you were in receipt of the munificent wage of 9s. per week?—Yes.

8640. Then you not unnaturally obtained a position elsewhere at 12s. per week, and your employers said they would keep you at that rate?—Yes.

8641. Then on becoming a junior skirt hand you received 16s. per week when you were 18½ years of age?—Yes.

8642. And when you were a competent hand you received 21s. a week, being at that time about 21 years of age?—Yes.

8643. You go on to say in your statement that you received other advances up to 25s. at 25 years of age?—Yes.

8644. You left the firm in 1918, when you were third in charge of the workroom, and received 28s. per week?—Yes.

8645. Then during the war the working hours decreased somewhat?—Yes.

8646. And some overtime was paid, but you say not on any fixed principle?—Not on any fixed principle.

8647. *Sir Arthur Pease:* Was it as much per hour as the ordinary working time?—We were not paid, previous to there being an agreement, on an hourly basis. It was all worked out on a weekly sum, and it always seemed impossible to work out how they arrived at the overtime. We would say that in the case of a hand receiving about £1 per week, the overtime paid would be somewhere about 5d. to 6d. an hour.

8648. It would be rather more than the hourly rate for the rest of the time?—No. We should have worked longer than 48 hours a week then.

8649. The overtime payment per hour was fully equal to what you were getting per hour for the rest of the week?—It was not worked out on any understood basis at all. If you take 6d. per hour at £1 per week, we should be working over 48 hours, and that would not be equal to our ordinary time, would it?

Sir Arthur Pease: 6d. would be a little more.

8650. *Chairman:* Then with regard to young girls, Miss Tyler; when they were taken in to learn, were they taught the trade from the beginning?—When I first started at 14 years of age, the first 12 months was used in running from the showroom to the workroom, and in getting errands for the older hands, such as getting food for their meals and going to and fro matching silk, and different things that were required in the work. In between whiles, when you were not running these errands, you would perhaps sit down with one of the hands and do a little practical work; but it was always recognised that for the first 12 months your time would be spent running to and fro.

8651. I suppose a bright girl would pick up a good deal of general knowledge in that way?—It would just depend how much time you had.

8652. An office boy in any office is in that position. Then you have something to say about slack time?—Yes. You have already had something on that subject from Mr. Hoffman. From as far back as when I entered the trade it was quite the usual thing for slack time to be worked. It is at the present time given in rather a different way from what it was in those days. Previously the workers would come to work, say, each morning, and go off either after three-quarters or half of the day had been worked. Now that the trade is covered by the Unemployment Insurance Act, slack time is arranged in most cases somewhat differently, and possibly the girls would have one alternate week completely off, or one week in four completely off. Therefore it may not appear at the present time to look just the same as it did pre-war, but it really works out practically to be the same thing in the length of time given off.

8653. The difference is that they get the dole?—They can claim under the Unemployment Insurance Act.

8654. I suppose a girl working part time like that would not have enough to live on?—Quite so.

8655. And she would have to make it up in some other way, such as by working at home, or something like that?—That was the usual practice amongst the girls in the trade.

8656. *Sir Arthur Pease:* Do you mean a girl worked at home only in slack times, or would she be working at home when she was working full time?—Those things would be governed partly by the girl's circumstances, and according to what responsibilities she had. Those who had responsibilities would always be doing work apart from the work on which they were employed during the day. Of course, it would be necessary for them to endeavour to get more work still if they were working slack time.

8657. But even if they were working 10 or 12 hours a day, would they still be working at home?—Yes.

8658. At dressmaking?—Yes, that was the trade in their hands, and that would be the means by which they would supplement what they had earned outside.

8659. And they might be working 14 or 16 hours?—Yes.

8660. *Dame Adelaide Anderson:* Was that common?—Yes.

8661. They sought other earnings while they were engaged on full time, so as to provide for slack time?—It was not so much a question of providing for slack time as it was that the money they received from the firm was not sufficient for them, and they had to supplement it.

8662. Even when they were fully employed they had to supplement it?—Yes.

8663. *Sir Arthur Pease:* Did you do that yourself?—Yes.

8664. *Chairman:* Then I think during the war the cost of living went up, and an effort was made to get the wages raised?—That is right.

8665. *Mr. Pugh:* There is just one point on the previous paragraph, if you do not mind. Miss Tyler says: "In consequence of the bad state of organisation, if the protection of the Trade Board is removed workers will be faced with exactly the same conditions again," and so on. Are you applying your-

10 January, 1922.]

Miss MARY TYLER.

[Continued.]

self in particular to the 1918 Act, which provides that where there is no satisfactory organisation Trade Boards may be adopted? Suppose we did away with the 1918 Act, for instance, would you think you were sufficiently protected by the 1909 Act?—Yes, I should think so.

8666. The 1909 Act is where the rate of wages prevailing in any branch of the trade is low, then intervention may be made. The 1918 Act says where no adequate machinery exists for the effective regulation of wages. In your statement you say "In consequence of the bad state of organisation." Are you thinking of the 1918 Act?—Yes.

8667. *Chairman*: Once you have got your Board it does not matter which Act you have got it by?—Quite so. I want them to retain the Trade Board for the dressmaking trade.

8668. *Mr. Pugh*: You had your Board under the 1909 Act, had you not?—No.

8669. *Dame Adelaide Anderson*: You say: "In consequence of the bad state of organisation." You came in because of the insufficient organisation?—We had previously come under the Wages (Temporary Regulation) Act, and then we came under the Trade Boards Act in 1918.

8670. *Lord Weir*: I presume, of course, that in the natural development of things the dressmaking trade would have come under the 1909 Act. You have told us of exceptionally low wages. I mean a case could have been made for dressmaking under the 1909 Act, could it not, seeing that the wages were exceptionally low?—The wages were exceptionally low.

8671. *Chairman*: What has been the effect of the Trade Board?—In what way do you mean?

8672. Of course it has raised wages?—Yes.

8673. Then what about the learners? What has been the effect as regards the learners?—I say in my statement that the usual thing for the young girls during the first twelve months was to be used to run all sorts of errands, and they were not taught their trade at all during the first twelve months. Mr. Hoffman showed to you a pamphlet which the employers drew up to endeavour to improve the trade. In that they made provision for the first two years for learners, because at that time there was a scarcity of learners, and they were endeavouring to improve the trade. At the same time not only did they endeavour to improve the wages, but they tried to improve the conditions under which the girls came in. That would have some bearing on the discussion you had just recently about one girl doing the errands which the other girls would do. That really meant, taking a large firm like Peter Robinson's, for instance, that each room would have about two of these young girls, and there might be twenty rooms on the firm. Those errands that the young girl would do, such as getting food for the older hands and going outside the firm entirely, would be given to the one girl, who would perhaps be an adult. It would usually be someone about the age of 18 to 20. Therefore all those young girls would be relieved of the whole of that kind of work, and it would tend to give them more time in the workroom to devote to the learning of their trade. They could also go to the trade schools. The trade schools are able to give individual attention to the children, and to teach them things which it was not possible for the older hands on the firm to teach to the girls. They had not the time to teach the young girls. Therefore the firms themselves reaped a great deal of benefit from letting the young ones go to the trade school, because they got much better returns from the girls for the time they were working. That was partly why the employers were so keen to give them the trade school training. It meant that the girls began to learn their trade at an earlier period. As far as my experience of the learners goes and of the time when the higher rates came into operation under the Trade Board, fairly soon after the 9s. rate came in there were proposals to reduce that rate on the retail side of the trade, and it was reduced to 6s., although the learners' rate remained at 9s. for the wholesale trade. That was done because higher

rates should be given to the more skilled people, and it was recognised that in the retail trade during the first six months and the second six months they were not of the same value in the firm as in the wholesale trade. The rates were reduced quite soon after they were fixed, as you will see, to 6s. I do not feel that all the importance that is put on the 9s. rate is necessary as far as the placing of learners and the number of learners unemployed at present is concerned, because after the war period, when it came to the placing from the schools of the young people there were not so many openings in other trades, and that is why there was a much greater number waiting to go into the dressmaking trade. During the war there were the various munitions works and offices which were only too glad to take the young girls in, and the dressmaking suffered because they went to other trades. But since then these girls cannot find employment in the other trades, and they are now waiting to come into the dressmaking; so that, taking the view right over a period, I do not think the 9s. rate had such a serious effect on the learners coming into the trade as perhaps has been given voice to.

8674. Is there any dearth of learners now?—There is no dearth of learners.

8675. You say it was just as well that learners should be discouraged. What do you mean by that?—You have had experience from the employers that great numbers of learners would be employed when they could get them quite cheaply. That meant that when they came on and were getting more to the skilled end of the trade, the trade was so overcrowded. Immediately an employer began to get a little busy he could engage as many people as he wanted, and at the moment the work began to fall off, numbers of girls would be put off and would be out of work. The trade was too crowded with young girls, and in consequence as they got older it was overcrowded with skilled workers.

8676. We were told that girls sometimes want to come in as learners with the idea of just learning dressmaking, and then using their knowledge at home. Do you say that is not true?—That is not true, taking it generally. You may possibly find a few girls that would enter the trade with that thought in their mind, but, generally speaking, it is not true, because you have now such good training given in the Polytechnics and trade schools for that trade, that the people who want to use their knowledge only in that way can get it from those schools, and they do not need to actually come into the trade merely to learn something for their own use.

8677. *Sir Arthur Pease*: Has not a girl to declare that she is going into the trade before she can enter such a school?—I have no knowledge of such a rule.

8678. *Chairman*: Have you any experience of village dressmaking?—No, I have no experience of village dressmaking.

8679. *Dame Adelaide Anderson*: In the previous paragraph in your statement you say: "The rates paid in London for skilled workers by the London Employers' Association have always been in advance of Trade Board rates from the first day of fixing up till to-day, so that it would be untrue to say that Trade Board rates have in any way damaged the employers who were operating an agreement with the London Employers' Association or the more favourable agreements which we were able to secure with unassociated firms." I understood from a table we saw this morning that the Trade Board had adopted those rates with the Employers' Association?—No.

8680. That is not so?—It is not so. (*Mr. Hoffman*): I am very sorry if I was not quite clear. I felt at the time there was some misunderstanding over that.

8681. I wanted to make that clear because it seems a very important paragraph?—(*Mr. Hoffman*): I thought at the time there was some misunderstanding over it, and I would like to get it cleared up now if I may. The first column gives the agreement which we secured in the retail trade, because all of these

10 January, 1922.]

Miss MARY TYLER.

[Continued.]

are for the retail trade. The agreement which was secured in the bespoke trade with the London Employers' Association in July, 1918, runs from 8s. for learners for the first six months up to 24s. for assistants, that is, girls who are not responsible for their own work at all, but who just do finishing. They might be of any age up to 30, 40 or 50 years of age. Then the junior hauds get 28s., and the senior hands 34s. That is the agreement with the London Employers' Association in 1918.

8682. For retail dressmaking?—(Mr. Hoffman): For retail dressmaking. The next column gives the prescribed rate that was fixed on the advice of the Interim Court of Arbitration under the Wages (Temporary Regulation) Act in March, 1919. We made representations to the Minister that it might be 12 months before a Trade Board was set up; that this was an under-paid occupation; that he had power under the Act of prescribing the rate in order that the aftermath of the war should not send wages down all over the place, so he fixed that rate in March, 1919. In May, 1919, we came to another agreement with the London Employers' Association, and in that agreement with the London Employers' Association we adopted the prescribed rate with a slight improvement here and there for juniors.

8683. And is this also for retail?—(Mr. Hoffman): All of these are for retail. That agreement covered the retail and gave us for junior hauds 32s. and for senior hands 38s. Now the Trade Board which covered both wholesale and retail was set up in January, 1920.

8684. And the second half of the sheet relates to wholesale, does it?—(Mr. Hoffman): No.

8685. Then the whole is retail?—(Mr. Hoffman): The Trade Board rates cover wholesale and retail. Our agreements with the London Employers' Association cover only retail. We met the Employers' Association in February, and they said to us in effect: "Now look here, we have come to an agreement on the Trade Board in respect of one section of workers. It will not come into operation till May. We will anticipate the Trade Board rates in our agreement with you, and we will agree to these rates up to 34s. for assistants and other workers. In addition, we will agree in respect of skilled workers for 37s. a week for senior hands and 34s. a week for junior hands." In May, 1920, the Board fixed a rate for both the wholesale and the retail up to 34s. at 18 years of age and over.

8686. *Chairman*: That is all exactly what I understood this morning. There is nothing new in this. It tallies with what you said this morning.—(Mr. Hoffman): I rather thought there might be some misunderstanding.

8687. There is no misunderstanding at all.—(Mr. Hoffman): I was afraid that perhaps I had misunderstood, because I had the feeling that I was giving the impression that the London agreement was imposed by the Board upon the rest of the country, and that is not so.

Mr. Pugh: As a matter of fact, the Board adopted what you had settled with the employers.

8688. *Chairman*: You told us just what you have said now, namely, that the Board provisionally came to this agreement, I suppose somewhere about January, 1920, and then the employers brought up their agreement with those figures, and in May, 1920, the Board made them legal and enforceable?—(Mr. Hoffman) Yes.

8689. *Dame Adelaide Anderson*: Then that modifies this paragraph in Miss Tyler's statement to a certain extent?—(Miss Tyler): In what way?

8690. You said that the Employers' Association have always been in advance of the Trade Board rates from the first day of fixing up till to-day?—That is quite true. The rates paid in London for skilled workers by the London Employers' Association have always been in advance from the first day up to to-day. The highest rate on the Trade Board is 10½d. per hour, and our rate with the London Employers' Association to-day is 11d. per hour.

8691. So that the Board adopted an earlier agreement with the Employers' Association?—No; it was

not an agreement definitely with the London employers that they adopted.

8692. Then these are really minimum rates?—Quite.

8693. And the employers give higher rates?—Yes.

8694. *Lord Weir*: The point is, I think, that your trade union agreements provide for rather a better rate in London than the Trade Board rate?—Yes.

8695. Which was arrived at by voluntary arrangement?—I think the question was that this paragraph was not quite in accordance with what was in operation to-day. Is that what was meant when Dame Adelaide Anderson said it wanted modifying?

8696. *Dame Adelaide Anderson*: It seemed to me that the information we got this morning was that the Trade Board had adopted the employers' agreement?—As far as the 18 years of age was concerned, but not as far as the skilled workers were concerned. The sentence in the paragraph begins: "The rates paid in London for skilled workers by the London Employers' Association have always been in advance of Trade Board rates."

8697. *Chairman*: Then your next point is about killing the hand craft. You say that in your opinion Trade Board rates have had nothing at all to do with that?—Quite so.

8698. But it is rather due to a change of principle?—Yes; it is really a change of principle. Long before there was a Trade Board for the dressmaking trade—you might say before the war—that alteration in the way in which the dressmaking trade was conducted had occurred, inasmuch as the bespoke trade were concentrating and improving their trade, with the result that customers who used to come into the shops when I first went into the business, and would always have a bespoke costume made, at the commencement of the war, or even before that, came in and bought a ready-made costume and had it altered on the premises. That showed that the work of the trade had so been turned round that a lot more ready-made work was sold in the shop.

Lord Weir: You say: "In my opinion, there will always be a ready demand for the individual garment." What do you mean by "ready"?—Some people will desire it in so far as there is something different in the bespoke garment.

8700. Surely the magnitude of the demand would depend on the cost in relation to the article? If you put up the cost, the demand would go down?—Not altogether. There are some customers who want something quite individual.

8701. But there will be fewer and fewer of those customers as the price goes up?—What should tend to make the price go up?

8702. Well, for instance, the higher rate.—No, materials. The cost of materials advanced, taking it just during the war period, very much more in comparison with what the rates of the workers did.

8703. *Chairman*: With regard to inspection, you think it should be more systematic? Do you suggest that the Home Office Inspectors should come down and see that the Factory Acts are carried out and should have power to inspect the books of the firm in order to see that the proper wages are paid?—Yes, I think it would tend to enlarge your army of Inspectors and it is only, to my mind, by getting the trade to pay the rate throughout the trade, and not just merely sections, where either by agreement or because they feel that the Inspector will be down on them, they comply with these rates, that you will get satisfaction.

8704. They do look at the books for some purposes, do they not?—It is not the custom.

8705. *Dame Adelaide Anderson*: Only for piece-work particulars?—Yes; well, that would not apply in the bespoke, on the retail side; and you see they come in and inquire from the girls if they are under certain ages and are working beyond their usual hours, and they see if the water is all right, and things of that kind, and it seems to me that while visiting the firms they could also take on this portion of the work of inspecting the books, and it would enlarge your number of Inspectors.

10 January, 1922.]

Miss MARY TYLER.

[Continued.]

8706. *Sir Arthur Pease*: When a girl is being paid, has her pay-note to show how the money is made up?—That would depend upon the system of the firm, but mostly the firms make out a slip showing so many hours at so much and that would show the number of hours worked during that week.

8707. I was thinking more of piece rates.—That would not apply with the retail side; or there are but very very few places where that would apply.

8708. You have no experience of the other side?—I have no experience of the retail at all.

8709. *Lord Weir*: You speak in the last paragraph about one Board for the whole of the clothing trade. Do you mean both production and the distributive side?—No.

8710. Once again, it is production?—Yes; making up.

8711. *Dame Adelaide Anderson*: That is, you would have one Board for the wholesale cap and

millinery and retail dressmaking and all the rest of it—shirt making?—Yes, with various committees to deal with the trades as outlined in the distribution, because we do so frequently get at our Boards questions of scope which come up between the Clothing Board, and it is impossible to define, in many cases, where one Board ends and another begins; and you get in a lot of cases amongst the bulk of the Clothing Boards, their basic rates run so much on a level, that it makes so very little difference. There is a little difference in some. At the present moment we have the dressmaking and light clothing; we have two rates for the learners there. That is one Board, but we have two rates for the learners. The retail is a lower rate than the wholesale; yet it is one trade, and it works quite orderly.

8712. *Mr. Pugh*: Are you thinking of both women's and men's clothing?—Yes.

8713. You would combine the two?—Yes.

(The witness withdrew.)

Mr. A. CONLEY and Miss A. LOUGHLIN, called and examined.

The witnesses handed in the following statement as their evidence-in-chief:—

EVIDENCE of Mr. A. CONLEY, General Secretary of the Tailors' and Garment Workers' Trade Union; representative of workers on the following Trade Boards:—The Tailoring Trade Board (Great Britain), from March, 1916, and the two Boards which were established in its place in January and February, 1920, namely, the Readymade and Wholesale Bespoke Trade Board (Great Britain) and the Retail Bespoke Tailoring Trade Board (Great Britain); the Shirt-making Trade Board (Great Britain), from 1920; the Corset Trade Board, Hat, Cap and Millinery Trade Board (England and Wales), Dressmaking and Women's Light Clothing Trade Board (England and Wales), Wholesale Mantle and Costume Trade Board (Great Britain), from their inception. Member of the Trade Boards Administration Committee, 1921, appointed by the Minister of Labour to make recommendations with respect to the work of the Trade Boards and the administration of the Trade Boards Acts.

Preliminary Statement.—The Tailors' and Garment Workers' Trade Union is the largest trade union in the clothing industry; and has over 200 branches in Great Britain and Ireland. The last official return of membership shows that on December 31st, 1920, there were 86,761 members, of whom 19,841 were men and 66,920 were women. Any worker employed in any of the operations incidental to the manufacture of male or female clothing or attire is eligible for membership of the union, which has representation on the following Trade Boards:—

Readymade and Wholesale Bespoke Tailoring (Great Britain).

Retail Bespoke Tailoring (Great Britain).

Shirtmaking (Great Britain).

Shirtmaking (Ireland).

Corset.

Wholesale Mantle and Costume (Great Britain).
Coffin Furniture and Cerement Making (Great Britain).

Hat, Cap and Millinery (England and Wales).
Dressmaking and Women's Light Clothing (England and Wales).

Dressmaking and Women's Light Clothing (Scotland).

Dressmaking and Women's Light Clothing (Ireland).

Wholesale Mantle and Costume (Ireland).

Readymade and Wholesale Bespoke Tailoring (Ireland).

The union is strongly in favour of the retention of all the existing Trade Boards in the clothing industry and the progressive application of the

Trade Board system in accordance with Subsection (2) of Section 1 of the Trade Boards Act, 1918.

(1) *Conditions in the Tailoring Trade prior to the establishment of a Trade Board.*

Conditions in the readymade and wholesale bespoke tailoring trade prior to the establishment of the Tailoring Trade Board, and indeed for some time after the Trade Board was constituted in November, 1910, may be truly described as chaotic. The employers were unorganised; the workers were only in the early stages of organisation, and the women, in particular, were practically without organisation of any sort. The inevitable result was that wages, conditions of labour, and the prices of clothing varied not only from district to district and from town to town, but from shop to shop within the same town. Disputes were of frequent occurrence, largely owing to the diversity of conditions, and there were occasions when eight or ten strikes would take place in one town within a week; sometimes one shop or factory would have a succession of disputes at short intervals. Wages or earnings for women of 18 years and over varied from 5s. to 30s. a week, and a wage of from 7s. to 10s. for a week of over 50 hours was far from unusual, especially amongst that class of workers designated as "finishers." Similar variations existed in the wages and earnings of male workers, and there were many sensational cases of underpayment. In Hebden Bridge men were receiving from 18s. to 24s. for a week of 58 hours, and in the Eastern Counties 16s. to 21s. was considered a sufficient wage for adult male workers. The wages of both men and women were in many firms subject to deductions for alleged inefficient workmanship, and damage to garments, and fines for breach of regulations, some of which were arbitrary and the source of considerable hardship to many of the workers.

(2) *The establishment of Trade Boards in the Clothing Industry.*

Readymade and wholesale bespoke tailoring was one of the four trades to which the Act of 1909 applied without a Provisional Order. The Tailoring Trade Board was accordingly established on 23rd November, 1910, for those branches of the trade which were engaged in making garments to be worn by male persons.

The Board of Trade was empowered to include any other branch of tailoring in which the system of manufacture was generally similar to that prevailing in the wholesale trade, and in 1915 the scope of the Board was enlarged to include "that section of the retail bespoke trade in which at least three persons or two female persons (in both cases excluding cutters and trimmers) are engaged in making one garment." The Tailoring Trade Board came to an

10 January, 1922.]

Mr. A. CONLEY and Miss A. LOUGHLIN.

[Continued.]

end at the close of 1919, and two Boards were established in its place—the Readymade and Wholesale Bespoke Tailoring Trade Board (Great Britain) and the Retail Bespoke Tailoring Trade Board (Great Britain). Meanwhile a Trade Board had been constituted for the shirtmaking trade on 6th February, 1914, but it was not till the latter half of 1919 and the first few months of 1920 that Trade Boards were set up for other sections of the clothing industry. The necessity for these Boards was clearly illustrated in the course of proceedings before the Court of Arbitration in March, 1919, when figures were produced to show not only that a wide variation existed in the wages and bonuses paid to workers in the dressmaking, light clothing and corset trades, but also that many workers, particularly unorganised workers, had received little or no advances since 1914, although the cost of living had then risen by 115 per cent. according to the "Labour Gazette." As a result the Minister of Labour issued Wages Order 357, fixing obligatory rates of wages for the members concerned.

(3) *Results of the establishment of Trade Boards in the Clothing Industry.*

(a) *Trade Boards and Wages.*

The first rates fixed by the Tailoring Trade Board on the 19th August, 1912, of 3jd. an hour for women and 6d. per hour for men were carried by the votes of the Appointed Members; the protests of the workers' side at the inadequacy of the rates were recorded in the minutes. No general advance to the workers resulted, and not more than one-third of the women and one quarter of the men received rises in wages as an effect of the determinations of the Trade Board. At a meeting of the Board on 15th and 16th July, 1914, a resolution was carried raising the minimum rate for women to 3jd. an hour. Although the standard adopted in this instance was a very low one, advances in the minimum time rates obtained through the medium of the Trade Board and the Committee on Production were never in adequate proportion to the rise of the cost of living. It was found, however, that whilst the minimum rates for male workers were advanced on several occasions, there was not always a corresponding increase in the rates paid to the more skilled workers, and that there was a decided tendency in certain factories and localities for the minimum to become the maximum. This was both unfair to the workers concerned and harmful to the relationships between employers and employed and consequently the principle of the uniform minimum rate was abandoned and the rates fixed by the Tailoring Trade Board on 1st December included three separate minima to furnish some protection for the special classes of male labour. The differentiation was carried still further by the Readymade and Wholesale Bespoke Tailoring Trade Board whose first determinations, effective from 16th August, 1920, made separate provision for fourteen classes of male workers. Other Trade Boards have benefited by this experience and fixed varying minimum rates according to age, skill, and training.

(b) *Trade Boards and the Worker.*

The general effect of Trade Boards on wages in the clothing industry has been to abolish some of the grosser cases of underpayment and some of the most flagrant anomalies. Material benefit has accrued from the prevention of arbitrary fines and deductions from the weekly wage, the compulsory payment for waiting-time in the factory and the general substitution of 48 hours as the normal working week. Wages, however, seldom kept pace with the rise in the cost of living. Minimum rates were proposed by the Retail Bespoke Tailoring Trade Board and the Shirtmaking Trade Board when the cost of living was 130 per cent. and 141 per cent. higher than in July, 1914, respectively, but no advances were given subsequently, although the cost of living rose to 176 points. It is true, however, to state that many women are now in receipt of a higher minimum than

prevailed before and during the war, and in many cases there was a noticeable improvement in their standard of living prior to the present Trade Board depression. Nevertheless, none of the present Trade Board rates represent the utmost the various classes of workers may earn, but only the minima to which they are entitled for their work. Agreements are in existence between the trade union I represent and employers' associations affecting thousands of workers under which wages and piece-work earnings are 50 per cent. and over higher than the Trade Board rates.

(c) *Trade Boards and Unemployment.*

When the Tailoring Trade Board first fixed minimum rates in 1912, many employers prophesied that serious unemployment would be the inevitable result. These prophesies were not fulfilled; a certain amount of reorganisation inevitably took place, and there was some temporary displacement of labour in the early stages of the Board's existence, but nothing in the nature of widespread unemployment followed, and the greater part of the trade was entirely unaffected. To-day similar prophesies are being made, particularly in trades which have not any long experience of Trade Boards, but there is no evidence to show that the present unemployment is to any extent due to, or increased by, the determinations of the Boards. Allegations have been made by Scottish employers in the retail bespoke tailoring trade to the effect that businesses have had to be closed down entirely on account of the regulations of the Trade Board. Inquiries have been made through the branches of the trade union in Scotland, and replies which have been received from 57 of them indicate that no such result has been observed; instances are indeed given of new businesses being started since the establishment of the Retail Bespoke Tailoring Trade Board. Another allegation which has been frequently made is that the Trade Boards have resulted in the transference of trade from the retail to the wholesale manufacturer and thus caused displacement of labour. This transference is undoubtedly taking place to a certain extent, but it is no new problem. The rapid and continual growth of that class of trade termed "wholesale bespoke" or "measure order" trade in wholesale tailoring factories and also of multiple shop establishments; that is to say, factories manufacturing clothing to be supplied direct to the customer from the firms' own retail shops—prior to the setting up of Trade Boards may be taken as an indication of the amount of trade which was being transferred from the retail to the wholesale side.

(d) *Trade Boards and the Relations between Employers and Employed.*

All who were present at the early meetings of the Tailoring Trade Board testify to the bitterness which characterised the long debates on the subject of equitable rates for men and women. Reference has already been made to the frequency of disputes in those days. The meetings of employers and workers necessitated by the Trade Board procedure has resulted in a steady improvement in their relationships and a consequent decline in the number of disputes. The difference between the atmosphere of the early meetings and those which have recently taken place can only be described as phenomenal, and must be largely attributed to the effect of the Trade Board in bringing both sides together. In 1916 the Tailoring Trade Board was instrumental in settling a serious dispute which had arisen in connection with the substitution of women for men in the cutting room and which was threatening to effect the supply of khaki clothing at a time when it was badly required. Many other disputes have been avoided owing to the establishment of more uniform conditions and the growth of organisation amongst workers and employers due to the Trade Board. On the majority of the Boards of which I am a member the proceedings are at present of a more or less harmonious nature, and my experience tends to prove that the

10 January, 1922.]

Mr. A. CONLEY and Miss A. LOUGHLIN.

[Continued.]

longer a Trade Board exists the more satisfactory becomes the relationship between the employers' and workers' sides.

This aspect of the effect of Trade Boards was noted by the Committee on the Administration of Trade Boards, 1921; and is supported and emphasised by the following extract from this Report:—

"We desire, however, to record our opinion that Trade Boards have been a potent means for securing and maintaining industrial harmony in the trades for which they have been established. It will be recalled that the establishment of Trade Boards in trades which were insufficiently organised to establish a Joint Industrial Council was recommended by the 'Whitley' Committee as a means of improving relations between employers and employed, and that the National Industrial Council of 1919 advocated the immediate establishment of Trade Boards in the less well organised trades. We consider that the almost entire absence of industrial unrest in trades covered by Trade Boards, even in the difficult periods, during and after the war, of extreme and rapid fluctuations of money values, is a great tribute to the power of a Trade Board to settle rates of wages on a firm basis. It is significant that during the last few days both the Wholesale Mantle and Costume Trade Board (Great Britain), and the Dressmaking and Women's Light Clothing Trade Board (England and Wales) have, as a result of their first year's experience, unanimously passed resolutions expressing their sense of the value of a Trade Board."

(e) *Trade Boards and the Organisation of Industry.*

It is generally admitted that the Trade Boards have had a beneficial effect on the management of the clothing industry. In the tailoring trade, where an exceptional diversity of processes and conditions existed, the firms which were maintaining their positions solely by reason of low wages were compelled to reorganise the management or to adopt some other means of competing successfully with other firms. More efficient machinery was introduced in many cases, closer supervision and better organisation of work was instituted; learners were more carefully trained in order to ensure that they earned the rates. Another effect of the Trade Boards has been the diminution of homework, so that clothing is made in more healthy conditions and there is less danger of infection being conveyed to the purchaser.

Equally important and beneficial has been the stimulation to organisation on both sides prior to the Trade Boards Act, 1909. The employers in the wholesale clothing trade were generally unorganised and the organisation of the workers was unsatisfactory, especially amongst the women. This has now been changed, and representative organisations of both employers and workers are in existence. It is not true, however, to say that the clothing industry is now sufficiently well organised to dispense with the necessity for legal protection for the workers. Some measure of protection is now afforded by the Trade Unions in the larger towns, but the fact of the trade being so widely scattered has prevented the organisation from being completed, and numbers of workers would be entirely unprotected if the Trade Board machinery were withdrawn.

(4) *Proposals for Improvement of Trade Board Administration.*

(a) I desire to call attention to the various recommendations set forth in the Majority Report of the Committee appointed by Minister of Labour to make recommendations with respect to the work of the Trade Boards and the administration of the Trade Boards Acts, dated 4th March, 1921, and to urge the desirability of bringing those proposals into operation.

(b) I am opposed to the shortening of the period of two months at present in operation under Section 3 (5) of the Trade Boards Act, 1918, during which objections to the proposals to fix wages may be

lodged; firstly, on the ground that, if the period were reduced, it would become extremely difficult if not altogether impossible for District Committees, that have been or may be appointed, to function; secondly, on the ground that the fluctuations in the cost of living may be expected largely to decrease if not to disappear, thereby removing the reasons for frequent variations of rates. In the event of a reduction of the time at present taken being considered imperative, I venture to suggest that it may be sought in the period allowed to the Minister of Labour under Section 4 (2) of the Trade Boards Act, 1918, for consideration and confirmation of rates—namely, one month.

(c) I further desire to suggest that the administration of the Trade Boards, particularly as regards the enforcement of rates, would be greatly strengthened and improved by the establishment of local committees of employers' and workers' representatives on somewhat similar lines to the local tribunals established under the Munitions of War Acts and the Wages (Temporary Regulation) Act, 1918.

(Signed) A. CONLEY.

SCHEDULE.

PARTICULARS OF TIME RATES AT PRESENT BEING PAID TO CERTAIN CLASSES OF MALE AND FEMALE WORKERS UNDER AGREEMENTS WITH VARIOUS MASTER TAILORS' ASSOCIATIONS.

Tailors.	Time Rates.		Rate per hour. s. d.
Grade 1.—To male persons 18 years of age and over who are engaged on the making of Try-ons Canvassing, Making Button Cuffs, and Lining Sleeves			1 9
Grade 2.—To male persons 20 years of age and over who are engaged as Baisters-out and to do work included in Grade 1			2 3
Grade 3.—To male persons 20 years of age and over who are engaged as Baisters-under, Fitters, also to do work included in Grade 2			2 6
<i>Tailoresses.</i>			
Grade 1.—Finishers 18 years of age and over with three years' experience			1 3
<i>Underpresser and Second Machinists.</i>			
To Lining Makers and Underpressers under 18 years of age			1 6
To Second Pressers and Second Machinists			2 0

No worker shall, as a result of the above arrangements, suffer a reduction in wages.

8714. *Chairman:* Mr. Conley, you are the General Secretary of the Tailors' and Garment Workers' Trade Union?—Yes.

8715. You represent the workers on the following Trade Boards: the Readymade and Wholesale Bespoke Trade Board, the Retail Bespoke Tailoring Trade Board, the Shirtmaking Trade Board, the Corset Trade Board, the Hat, Cap and Millinery Trade Board, Dressmaking and Women's Light Clothing Trade Board, and the Wholesale Mantle and Costume Trade Board, all for Great Britain or England and Wales?—Yes.

8716. Now first let me take your Union. It is a large Union, is it?—The Tailors' and Garment Workers' Union.

8717. It is a large body, is it?—It is the largest body comprised solely of workers in the various sections of the garment industry.

8718. It had 86,000 odd members, I see, on 31st December, 1920. How many are there now?—I could not give you the change of numbers. We know there will be some drop in the numbers, but it

10 January, 1922.]

Mr. A. CONLEY and Miss A. LOUGHLIN.

[Continued.]

will be 6 or 8 or perhaps 9 weeks before we have our complete records in.

8719. Then what proportion of the members are men, and what proportion women?—I give the numbers here showing that.

8720. I see. More than three-fourths are women apparently?—Yes, about.

8721. Then your Union is represented on a number of Trade Boards—13 of them I see?—Yes.

8722. Your Union is in favour of the retention of all the existing Boards in the clothing industry, and the progressive application of the Trade Board system in accordance with Sub-section (2) of Section 1 of the Act of 1918?—Yes.

8723. Before the Tailoring Trade Board was formed, conditions you say were chaotic?—Yes.

8724. Employers were unorganised, the employees were only in the early stages of organisation, and the women particularly were practically without organisation?—Quite.

8725. I think this Board was formed under the Act of 1909, was it?—Yes.

8726. As a result of that state of matters the wages, I suppose, varied very much?—Very, very much indeed.

8727. And were some of them low?—Very low.

8728. You give the figures for women of 18 years of age and over from 5s. to 30s a week?—Yes.

8729. And you say that a wage of from 7s. to 10s. for a week of over 50 hours was far from unusual, especially among finishers?—Quite.

8730. You also say that "Similar variations existed in the wages and earnings of male workers and there were many sensational cases of underpayment"?—Yes.

8731. And you give cases. Then the readymade and wholesale tailoring, as you say, is one of the four trades scheduled to the Act of 1909. The Board was established in 1910 for those branches of the trade which were engaged in making garments to be worn by male persons, and in 1915 the Trade Board was enlarged to include any other branch of the retail bespoke trade in which at least three persons or two female persons (in both cases excluding cutters and trimmers) are engaged in making one garment. In 1919 the Board was superseded by two Boards, the Readymade and Wholesale Bespoke Tailoring Trade Board and the Retail Bespoke Tailoring Trade Board. Meanwhile the Shirtmaking Board had been established, and in 1920 Boards were set up for other sections of the clothing industry. Then you say this, which I have not followed: "The necessity for these Boards was clearly illustrated in the course of proceedings before the Court of Arbitration in March, 1919, when figures were produced to show, not only that a wide variation existed in the wages and bonuses paid to workers in the dressmaking, light clothing and corset trades, but also that many workers, particularly unorganised workers, had received little or no advances since 1914." What Court of Arbitration were you referring to there?—I was referring to the proceedings before the Court of Arbitration which resulted in the Wages Order 357. I may say that the report of the proceedings shows that there were, I believe, seven or eight cases taken that week in connection with the various sections of the women's light clothing trades, and the first morning the employers, prior to the Court giving any consideration to the evidence, agreed with the workers' evidence as to the advisability of a rate being prescribed, and I think my memory is correct in saying that the representatives of employers in the following cases found a similar agreement with the workers' representatives.

8732. That was under the war legislation?—Quite.

8733. I have taken you shortly through that because I think it is really undisputed. Then you come to the results of the establishment of Trade Boards in the clothing industry. "The first rates fixed by the Tailoring Trade Board on the 19th August, 1912, of 3½d. an hour for women and 6d. per hour for men," were carried by the votes of the Appointed Members,

the workers protesting. You say no general advance resulted from that. In 1914 the wage for women was increased to 3½d. an hour minimum. Certain advances were made, but you say that, although the minimum rates for male workers were advanced on several occasions, there was not always a corresponding advance in the rates paid to the more skilled workers. There was a tendency in certain factories and localities for the minimum to become the maximum. This, you say, was both unfair to the workers concerned and harmful to the relationships of employers and employed, and consequently the principle of the uniform minimum rate was abandoned, and the rates fixed by the Tailoring Trade Board on the 1st December—what year was that?—1919; I am sorry I missed that.

8734.—included three separate minima to furnish some protection for the special classes of male labour. The differentiation was carried still further by the Readymade and Wholesale Bespoke Tailoring Trade Board, whose first determinations, effective from 16th August, 1920, made separate provision for 14 classes—cutters, fitters up, tailors, pressers, machinists, and so on. Just tell me, once more what is the purpose of that?—Of the 14 classes of separate rates?

8735. Yes.—The origin or the purpose is solely due to the different degrees of skill as between one class and another—the different occupations and different degrees of skill required.

8736. So you are regulating wages, not according to the cost of living of the worker, but in proportion to his skill?—Mainly, although we have always paid regard to the cost of living in arriving at our basic figure.

8737. That would be the lowest figure?—The lowest figure upon which we build up the rates for the other sections.

8738. *Dame Adelaide Anderson*: Is it because the skill cannot be maintained on less? Do you really connect it with the cost of living for that particular skill?—I do not quite follow you.

8739. You really are regulating according to value, and not according to the needs of the worker, for that particular kind of skill?—Apart from the basic figures that is the minimum rate for other classes of workers we pay regard to the degrees of skill as between one section of workers and another. I should add that, in addition to the degrees of skill, we have also paid regard to the description of work. There is included in these 14 classes a class of worker described as a presser in the clothing trade. That is a very arduous and very unpleasant sort of occupation. It is the one departure from the regard we pay to skill.

8740. *Lord Weir*: You would not suggest that it was more arduous, for instance, than the work of a steel works labourer?—I am not quite as familiar perhaps as you may be with the steel worker, but I should be surprised to find that the steel worker's occupation was more unhealthy than the presser's occupation.

8741. So the differentiation, you say, is based on the unhealthiness and the skill?—And the labour, the hard labour and so forth. It is the hardest task, I think, in the manufacture of clothing.

8742. *Dame Adelaide Anderson*: And the amount of sustenance that would be necessary to maintain the worker in efficiency?—Quite.

8743. The words "human machine" have been applied to the labourer a good deal in connection with competency and efficiency—that you cannot get out of a machine more than you put into it?—Yes.

8744. *Chairman*: Would the presser or the cutter want more sustenance than a packer or a porter?—I should say certainly in respect of the presser, but with regard to the cutter we have dealt with that class of worker on the ground of the skill required. We say that a cutter never really finishes learning his trade.

Chairman: I quite understand that.

8745. *Dame Adelaide Anderson*: But many a girl presses in the wholesale clothing trade—pressee her

10 January, 1922.]

Mr. A. CONLEY and Miss A. LOUGHLIN.

[Continued.]

own garments, her own work?—Very seldom—the making and pressing of garments are two distinct operations, and girls are now engaged solely in pressing throughout the whole of their working hours.

8746. The whole time?—The whole time, but not with the same implements as the men use. Generally they are found pressing on what are termed Hoffman's machines.

8747. That was the kind of machine I had in mind; girls do use Hoffman's pressers?—Quite, and a few men do; but the majority of male pressers use the hand irons which are heated by gas and forced air, or by electricity generally, and they are very heavy irons—16 lbs. or more.

8748. Weighted, generally, so as to move easily?—Certainly, yes.

8749. You would not suggest that they were heavier to operate, or more unhealthy than the Hoffman presser?—Oh, no. I think it is held in our trade by those who have worked on both systems with the hand iron and the Hoffman machine, that the Hoffman machine is the unhealthier of the two.

8750. *Chairman*: Then you say: "The general effect of the Trade Boards on wages in the clothing industry has been to abolish some of the grosser cases of underpayment and some of the most flagrant anomalies. Material benefit has accrued from the prevention of arbitrary fines and deductions from the weekly wage, the compulsory payment for waiting-time in the factory, and the general substitution of 48 hours as the normal working week." Is that the normal working week in your trade?—Forty-eight hours, yes.

8751. But you say in some cases rates exceeding the Trade Board rates are paid, and you give an instance of an agreement under which the rates paid are 50 per cent. and over higher than the Trade Board rates?—Yes. These agreements are mainly applicable to the worker in the wholesale tailoring trade coming under the heading of sub-divisional workers. I can show you the rates of wages that have been agreed upon as between the employers and the union representatives.

8752. What is the meaning of sub-divisional workers?—That is very hard to describe to you. It is a term we use in the trade. I, personally, am of opinion, and my colleagues agree with me, that it is almost, if not entirely, impossible, to draw a line of demarcation between the sub-divisional trade and the factory trade. As a matter of fact, in actual practice the wholesale tailoring trade is generally sub-divisional trade—made on a sub-divisional system—but we have used that term instead of referring to the workers as the Jewish workers. They are mainly Jewish workers employed in this section of the trade, generally in the employ of sub-contractors who are either (1) making trade up for the retail merchant tailor, or (2) for the wholesale clothing manufacturer. The bulk of the people are employed by sub-contractors in making trade up for the merchant tailors.

8753. Are these London workers?—London and throughout the Provinces in all the large industrial centres where clothing is manufactured.

8754. *Lord Weir*: Is it largely piecework?—With the exception of a class of worker described as the tailor in master tailors' shops, yes.

8755. The sub-divisional work enables you to apply piecework?—Yes.

8756. *Chairman*: And you say on the formation of the Trade Boards there was some temporary displacement of labour in the earlier stages?—Quite.

8757. Has that righted itself by now?—It righted itself, speaking within my knowledge, within six months of the first rate being fixed. At that time, of course, you will bear in mind that under the 1909 Act the rate ran provisionally for a period.

8758. Yes, six months, I think?—Quite, and during that six months' period the workers who were dismissed from the various places seemed more or less to change over from shop to shop, and the problem righted itself.

8759. Of course, it is common ground that the wages should have been raised at that time; in some cases it was absolutely essential to prevent sweating, and that had the effect of ultimately transferring labour from one place to another?—True, although it may be said that at that time we listened to the very same sort of argument or prophecy from the representatives of the employers, as we are now listening to on Boards more recently established.

8760. Yes, but apart from what may have happened in 1910 or thereabouts, we have had evidence that some workrooms have had to be closed on account of Trade Board rates in more recent years. What do you say to that?—It would be a very exceptional case, as far as my knowledge extends in the various sections of the industry. My attention has not been listening to on Boards more recently established.

8761. Do you deal with Scotland?—Yes, mainly in the Wholesale Tailoring Section, and in the Retail Tailoring Section. We have the whole of the organised workers in the Retail Bespoke Tailoring Trade in Scotland, with the exception of perhaps some 40 or 50 who belong to another Union.

8762. *Lord Weir*: Have you a complaint from those working in the country shops; I mean do you get no reflection in your Union of the letters that we have had from employers as to the rates being so high as to throw the rural worker out of employment?—If you read my statement further on, you will find that we have conducted an inquiry, and I purpose putting in some 60 letters from various towns in Scotland. I have the original letters with me, and I have duplicates of them to hand in to this Committee, and we find in some of these letters that instead of businesses closing down since the Retail Tailoring Trade Board was established, it is quite the reverse—businesses have been opened up since the Trade Board was established.

8763. It would be represented by your own state of employment—the state of employment of your own members?—I do not follow that.

8764. I say that if that is so it could be very simply represented by giving us the state of employment of your own members?—That we are unable to give you at the moment, because there are members in the retail end of the trade who have not been insured in our organisation for unemployment benefits, and therefore records of unemployment have not been kept. It is on the factory side that our men generally have been in the unemployment benefit section, but my latest information from our retail branches, particularly Scotland—I am dealing mainly with Scotland as regards the retail side—is to the effect that at the moment the state of employment is somewhat similar to what it would be at this time of the year in 1913 or 1914, or prior to that—in years gone by.

8765. Nothing more abnormal than in those years?—Quite commonly the men were rather disappointed, because I understand they were led to believe that they were not going to witness the amount of slackness that they had witnessed in pre-war days, and it appears from the reports which come to me that the employers are mainly responsible for building up this idea, that when we got through the war and when things became somewhat settled again the trade was not going to be quite as bad as it had been in pre-war days as regards such extended periods of slackness between season and season.

8766. *Sir Arthur Pease*: Was it the employers who built up that idea?—I understand so.

8767. *Chairman*: I should like to have copies of those letters. Will you please affix to them a copy of your circular letter which brought them in?—I am afraid I have not that with me, but I could send it as soon as I return to Leeds. One of my colleagues sent the query out, one of our officials who deals more or less solely with the retail section of the trade.

8768. It would be convenient to have the questions as well as the answers.—Will the copies of the letters do, or would you like the originals?

10 January, 1922.]

Mr. A. CONLEY and Miss A. LOUGHLIN.

[Continued.]

8769. Oh, certainly, we will take copies. (*Copy letters handed in.*) Then you refer to the better relations between employers and workers which have arisen from the working of the Trade Boards, and also you say there has been a growth of organisation amongst both workers and employers, due to the war?—Yes.

8770. How far has that proceeded now?—At the moment?

8771. Yes—so far as workers are concerned, what proportion are organised?—Perhaps you would assist me, Sir, by saying to what section of the industry you are referring?

8772. Tailoring?—Wholesale tailoring?

8773. I should like to know both as regards the wholesale and the retail bespoke?—I have to take it in two parts, because on the one hand the wholesale tailoring was badly organised prior to the establishment of a Trade Board, whereas in the retail there was a substantial measure of organisation on the part of employers and employees.

8774. I want to know what progress has been made in each?—The progress made in the retail section of the trade has not been much, if any; I doubt whether any real progress has been made in the direction of organisation on the part of the workers; there may have been some on the part of the employers. As regards the wholesale tailoring trade, there has been a considerable and a steady progress made. At the moment it would be, I think, more or less correct to say that between 40 per cent. and 50 per cent.—or not quite 50 per cent.; between 40 per cent. and 45 per cent. of the workers are organised.

8775. That is in the wholesale trade?—The wholesale tailoring trade. In the main centres of the industry the percentage of organisation will be found to be relatively larger than in the scattered parts of the country, in the rural districts and in the small villages and towns.

8776. *Lord Weir*: Has it been suggested for the wholesale branch or the wholesale trade that the organisation has now developed to the extent that the Board might be done away with, and a Joint Industrial Council formed?—Some of our workers have thrown out suggestions of that character where they happen to be attached to what may be described as strongly organised sections of workers in various towns. They look at it from a local point of view, and they think that without a Trade Board they would be able to attend to their own interests; but, from a national point of view, we have recognised that without a Trade Board it would be exceedingly difficult to protect the less well organised sections of the people. It is true to say that in many small places there is very little, if any, organisation, and without a Trade Board our experience teaches us to believe that wages would quickly go down to somewhere near the level that did obtain prior to a Board being established.

8777. In those small places?—Quite.

8778. *Dame Adelaide Anderson*: The Act of 1918 provides for such cases?—Yes.

8779. *Lord Weir*: I asked that question very largely because you have now gone on with your Trade Board to such a large extent on wage regulation. It looks as if when you fix 14 different rates for skilled labour you had become very highly organised?—Well, of course, there are two ways of looking at it. On the one hand, when the second Act came in, the 1918 Act, giving Boards power to fix wages for special classes of workers, we took it as our duty to proceed to utilise those powers and to fix these rates for the special classes of workers.

8780. But there is no change, surely, in regard to the duty upon the member of a Board in the two Acts. Where in the 1918 Act does it say that you must fix rates for the different classes?—I did not say you must; it says a Board may fix rates for special classes of workers.

8781. It is not mandatory; it is permissive?—Quite.

8782. And, due to your experience on that Board, you felt that you would exercise the permissive

power?—It would be fair to put it that way, yes. On the other hand, regard should be paid to my statement that on the 1st December, 1919, we had brought the basic rates up, and at that time we fixed three rates. That was our first departure from the one rate for male workers. We fixed rates of 1s. 1d., 1s. 3d., and 1s. 5d. That was our first step in the direction of utilising those powers.

8783. *Chairman*: Have you given us all these letters—all the answers you had?—Those are the whole of the replies we have received, yes.

8784. Then you point out some by-products of the Trade Board, in the improvement of organisation and of machinery?—Yes.

8785. And the reduction of home work?—Yes.

8786. You can speak to those facts, can you?—I can.

8787. Then as to proposals as to improvement of Trade Board administration, you call attention to a report of the Committee of March, 1921, and you support it. You were on that Committee, I think?—I was, yes.

8788. Then you are opposed to the shortening of the period of two months; do you mean as regards first rates and new rates?—I am opposed, and our union is opposed, to the shortening of the period of two months in the case of an old Board similar to the Wholesale Tailoring Trade Board. We do not carry that opposition to the extent of saying the same thing would apply with the more recently established Trade Boards; but taking the Wholesale Tailoring Trade Board and bearing in mind that for a period of years that Board had District Committees in existence and therefore had some knowledge of how these District Committees functioned, when the Board was dissolved and two Boards were established in its place, the wholesale and the retail, the employers' and workers' representatives on the Wholesale Board at the first or second meeting of the new Board decided that prior to re-establishing District Committees they would endeavour, after exploring the position, to arrive at an understanding or agreement as to the feasibility or otherwise of proceeding to re-establish District Committees. That investigation or inquiry has not taken place. We were jointly dissatisfied with the way the District Committees had functioned in the past. We looked upon the holding of these District Committee meetings as in some way a waste of money in so far as the various people on the Committee were called together from various parts of the area and the meeting continued for 60 minutes or 90 minutes, and became a sort of formal gathering, and very little business, if any, was transacted at those District Committee meetings. The workers' and employers' representatives agreed that if District Committees were to be re-established something more than what had transpired would have to be put into operation to justify the holding of these District Committee meetings. Now, as I say, we have not explored the question. Any member on either side of the Wholesale Board would be quite in order to raise at the next meeting the question of re-establishment of District Committees and to state reasons why they should be established. Assuming those District Committees were established—I believe there were some seven District Committees—from our point of view we consider it impossible to hold the meetings of those District Committees and allow the necessary time for objections in anything less than a period of two months. Therefore, from a practical point of view, we say that if District Committees are going to be established, or allowed to continue where they have been established, it would prove very very difficult, if not impossible, to shorten that period of two months, as the period in which objections may be lodged.

8789. I do not quite understand how the District Committee is concerned with it. The two months would run from the date when the Board proposes the rate?—Quite, and during that period the District Committees have to be convened and the proposals submitted to the District Committees, and

10 January, 1922.]

Mr. A. CONLEY and Miss A. LOUGHLIN.

[Continued.]

those committees in the past had an opportunity of expressing their views upon the proposals.

8790. The District Committees of what body?—Of the Central Trade Board.

8791. Surely they would have to be consulted before the rate was proposed and not after?—They might be consulted by individual representatives of the Board, but they would not be consulted as a committee. The committees were not called together prior to a Board issuing proposals.

8792. Really! That is very curious, surely?—So far as my knowledge extends, speaking of the old Boards, I have no recollection of any District Committee being convened except during the proposal period.

8793. Will you assume that other Boards might act differently, and might consult their District Committees before they definitely proposed their rate? In that case do you think that the two months might be cut down?—It might be, but then does it not strike you, Sir, that even after a District Committee had been consulted prior to a proposal being issued, surely one must bear in mind that possibly the proposals that were issued would be something different to what had been before the District Committee prior to the proposal being issued, and there would be just as much need, if not more, for the District Committee being called together after the proposals were issued as for consulting them prior to the proposal being issued?

8794. That is your view. You know that nearly everybody else takes the view that one month would be enough in the case of variations?—I agree, but, on the other hand, I am of the opinion, and my colleagues who have sat on Boards for a number of years hold similar opinions, that many of the views that have been formed during recent months, or during this last year and a half, are not formed for what may be termed normal legislation; and if we were back in normal days and some measure of stability had been reached, it is beyond me to think that we are going to witness the modifications of rates every two months or every three months.

8795. Then you suggest the establishment of local committees of employers and workers?—I do.

8796. *Lord Weir*: What view do you take of the suggestions which have been made for a single Clothing Board—the grouping of the Boards?—There is a great deal to be said for and against the idea. Our people—and when I say that I mean the people in our organisation interested in or connected with certain Trade Boards for various sections of the trade—have held varying opinions. Some think that two or three Boards might be put together; others have gone to the extreme and said that all the Boards might be put together.

8797. You are a member of a very large number of Boards yourself. What is your personal opinion?—I am afraid that once the thing was put into operation unforeseen difficulties would arise. It is true to say from actual knowledge of the circumstances that there is just as much difference between one section and another section of the garment industry as there is between the garment industry and an entirely different industry; and, moreover, regard has to be paid to the fact that where you have got one section of the trade covered by a Trade Board for a considerable number of years and all the reorganisation has taken place, even on the employers' side, you will find some measure of dread that when they are joined up with another section of industry on the same Board their rate of progress or administration may be handicapped by the section that had only come along in recent days.

8798. So that you really disagree: your personal opinion is that they should go on as they are?—No, I do not say go on as they are. I believe from my knowledge and experience that it may prove beneficial in practice to take one step at a time and to join the sections of the trade that are more closely cognate, more closely assimilated.

8799. For example?—For example, the wholesale tailoring and wholesale mantle and costume trades.

8800. Is that about as far as you would go?—At the moment, yes.

8801. *Dame Adelaide Anderson*: You would make it progressive?—Oh, certainly.

8802. According to the social development and economic development, and the custom and experience in handling Trade Board questions?—Yes.

8803. With regard to home work, I should like to know how you think that the Trade Boards have brought about a diminution of home work?—How?

8804. Yes, how; what was the link of cause and effect?—Well, prior to the establishment of a Trade Board and the fixing of a minimum rate of wage for the woman worker, the woman worker outside—that is the home worker—had no measure of protection, and more often than not she would not be paid the same price for the work as the girl in the factory. Lack of organisation was responsible for many evils. Many women home workers might never see the head of a firm. They might have to secure their trade from some foreman or person who had the power of giving out work to women who had been employed in the trade in days gone by. When the responsibility was placed on employers for seeing that their prices yielded not less than the minimum rate to the ordinary worker there was a decided tendency to make room in their factories, in their establishments, for as many women home workers as would go into them; and whereas in days gone by, prior to the establishment of the Trade Board, it was customary in such a place as Leeds, for instance, on any working day from Monday to Friday, to find women with children wheeling their work to and from places where they were centrally gathered, now it is very seldom that you see that sort of thing.

8805. I quite understand that home work has been diminished, but I wanted to know how you think it was caused. I understand that the only advantage of home work to the employer was that it was cheaper in former days?—Undoubtedly.

8806. It is the bringing it up to the same level of cost that has led to the progress of home work?—I would put that forward as one of the main reasons.

8807. *Chairman*: Miss Loughlin, have you anything to add to what Mr. Conley has said?—(*Miss Loughlin*): I agree with most of the evidence given by Mr. Conley, but I think that the idea was that, on the evidence submitted which was agreeable to the colleagues of Mr. Conley, the members of the Committee might like to ask us questions on our experience either on Trade Boards or as having some knowledge of the trades that we represent on those Boards.

8808. You are a member, I think, of the Dress-making and Hat, Cap and Millinery Trade Boards, Readymade Tailoring, Shirtmaking and Wholesale Mantle and Costume Trade Boards?—Yes, that is so. There is just one thing I should like to add, a personal experience previous to being a trade union official. I worked in the wholesale tailoring trade and also worked in the mantle and costume trade. You have had employers who state that we have representatives on the Boards who have no knowledge of what obtains in various sections of the industry. Well, speaking from general knowledge as a pieceworker who has worked in every section practically of the clothing trade—because during slack periods it is quite easy to switch off from the wholesale tailoring trade and go into a mantle and costume factory, or even into a shirt factory—if you have a knowledge of machining you can make garments and understand the technicalities of the work in a very short time. I have experience previous to the first rate being fixed in the Tailoring Trade Board in 1912, and there are many things to be said for Trade Boards. I remember that there was no general increase given to the girls in the factories when the rate was first established at 3½d., but there was better organisation introduced into the factories. Previous to the rate being established the girls had to wait hour after hour in the factory, and they dare not ask to go home because there was no organisation, and if they did ask to go home there was a

10 January, 1922.]

Mr. A. CONLEY and Miss A. LOUGHLIN.

[Continued.]

possibility of missing a turn of work. Well, after the rate became operative and the employers had to pay for waiting time, it paid the employer to reorganise his workshop or workroom and reorganise his cutting-room, whereby the girl could have a day in or a day out, or half-days during the whole of the week if there was not any work for her.

8809. That is the waiting-time section in the Act which you are thinking about?—Exactly, and it did away, for one thing, with unequal distribution of work; and even in the wholesale dressmaking to-day the same process is going on as was happening when the Tailoring Trade Board was scheduled. You always had this in a factory, that probably the girl who gave work out had a number of favourites, had a number of her own particular personal friends to whom quite naturally she would give what is termed better-paying work; she would give it to those particular girls sooner than she would to the girl who is not so friendly with her. Well, the Trade Board means that any girl with experience over 18 years of age has got to receive a certain rate, which means that the foreman tells the girl who gives out the work, or it may be the foreman himself, that there has got to be a more equal distribution of work, and each girl, instead of receiving perhaps bad work the whole of the week, receives her share of the good work which is going during the particular week. Instructions are also given to the passer, the presser, the foreman, not to keep girls waiting at the tables—not to keep girls waiting, as I know we have had to wait, hour after hour, because the foreman has been gossiping somewhere instead of attending to his business. That has been done away with through the Trade Boards, and it does not follow that the employers' pay roll at the end of the week is any higher, or was any higher, following the Trade Boards Act being established, than it was previous to the rate being established. And the same process is going on at the moment in wholesale dressmaking and every section of the light clothing and the cloth hat and cap section of the wholesale side. It is easier to reduce wages or keep low wages than it is perhaps to spend a little thought and time and energy on seeing to it that your machinery is up-to-date, and so forth. It is more difficult to improve your organisation than it is to reduce the wages or keep the wages of the girls low.

8810. The Board has led, as Mr. Conley has said, to better organisation?—Exactly.

8811. *Dame Adelaide Anderson*: And to more efficient output?—Much more efficient output.

8812. *Sir Arthur Pease*: During what period was this improvement made?—Following 1912.

8813. All the time from 1912?—(*Mr. Conley*): Yes.

8814. Not only since the War?—(*Miss Loughlin*): No, since 1912. The first rate fixed for the Wholesale Tailoring Trade was 1912, and you would find if an investigation was made that, taking the whole of the sewing trades, although some of them were not scheduled under the Act, we are paying similar rates of wages; for instance, in the mantle and costume

trade. The rate for the same girls in one town is the same, and you cannot get a girl to work in the mantle and costume trade who may be able to get higher rates of pay in the wholesale tailoring trade or in the hat and cap trade, or the shirt trade, and so forth. That has meant that a gradual increase of organisation throughout has been adopted in most of the wholesale trades as a result of the Trade Board Act.

8815. *Lord Weir*: The 1909 Act?—The 1909 Act.

8816. *Sir Arthur Pease*: You are speaking rather of the big establishments, are you not?—Not necessarily, because you can have the whole in a very, very small way. A man can commence with one girl, and the next time you go and visit the employer he may have twelve girls, or twenty girls, and so on, and still it is the making-up under the wholesale system.

8817. *Dame Adelaide Anderson*: Do you remember any improvement in that direction following on the application of the section requiring written particulars to pieceworkers to the wholesale tailoring trade, when a pieceworker had to have information before she began her piecework as to what kind of work was to be done and the rate she was to get for it? Perhaps you do not remember so far back?—(*Mr. Conley*): I remember scores of cases in pre-Trade Board days where our union dealt with complaints received from pieceworkers, not knowing what price they were to be paid for their garment or portion of a garment. This grievance very quickly disappeared in the main after the establishment of the Trade Board.

8818. After the establishment of the Trade Board. My question was whether the initial kind of organisation which was necessary to inform a worker as to what she could earn before she began on her piecework helped organisation, and helped in improving efficiency?—It considerably helped.

8819. That began in about 1902?—I should say about 1902. Yes, it would have a very direct bearing on the improvement.

8820. It prepared the way for the Trade Board?—It did, yes.

8821. *Lord Weir*: What she is going to earn appears on the piecework list?—?—It is what she is going to receive for it, and after the Particulars Clause in the Factory Acts came in it was laid down that a girl on piece should receive a paper showing how much was to be paid for that garment, and in the mantle and costume trade particularly it was a seasonal grievance when the samples were being made up that very often the firm would desire the girls to get on with the work and see what they could do at it prior to a price being stated. The union's contention was always: "If you are unable to fix a price because it is a new garment coming through, put the girl on time. Pick out your own girl, or girls, whom you can trust, and say to them, 'Whilst you are making that garment under supervision we will pay you 3½d., or 4d. or 4½d. an hour, as the case may be.' " Then they would not be charged with not complying with the Particulars Clause.

(*The Witnesses withdrew*).

(*Adjourned to to-morrow morning at 11 o'clock*).

11 January, 1922.]

MISS SUSAN LAWRENCE.

[Continued.]

NINETEENTH DAY.

Wednesday, 11th January, 1922.

PRESENT:

THE RIGHT HON. THE VISCOUNT CAVE,
G.C.M.G. (*Chairman*).
THE RIGHT HON. LORD WEIR OF EASTWOOD.
DAME ADELAIDE M. ANDERSON, D.B.E.
MR. W. T. LAYTON, C.H., C.B.E.

SIR ARTHUR F. PEASE, BART.
MR. A. PUGH.
MR. A. MACCALLUM SCOTT, M.P.
MR. H. D. HANCOCK (*Secretary*).

Miss SUSAN LAWRENCE, called and examined.

The witness handed in the following statement as her evidence-in-chief:—

I desire to draw attention to certain points in Mr. W. F. Impey's evidence and, in particular, to his statement that piece prices should not be fixed by a Trade Board.

As far as the Pin, Hook, and Eye Board is concerned, the only piece prices fixed have been for homeworkers. These workers, under the Trade Board, have a lower time-rate, and piece-work basis time-rate than in-workers. It was stated by Mr. Impey that it has been suggested that piece rates should be applied to other workers. It is true that an individual at the Board suggested that when the same work was done "in and out" the same piece prices should apply. The suggestion was made when discussing the piece-work basis of certain juveniles engaged in carding—as an alternative to the suggestion of a piece-work basis varying with age—a method which, in the opinion of the workers, is objectionable, as tending unduly to encourage the employment of children and their dismissal on reaching maturity. With this exception (affecting but few persons) the piece-work question on the Pin, Hook, and Eye Board is a homeworker's question. The Commission should realise that in dealing with out-work in carding, they are dealing with workers who have been exceptionally badly paid, and whose powers of resistance are at a minimum.

On the first point, I desire to put in the results of two enquiries made by the officials of the Trade Board in 1920 and in 1921. These are appended. The first relates to a time when wages were unregulated.

I desire to draw particular attention to the yield per hour for hooks and eyes (no allowance being made for wrapping or for cotton). It will be seen that this is estimated at 2-3d. per hour for sizes 1, 2, or 3, and at 1-875d. for size 8.

For snap fasteners, the estimate out-rate earned varied, as is seen by the paper, from 1-7d. to 3d.

Since that date a series of very elaborate tests have been made. Of them, I put in the reports of the last test. It will be seen that the times taken by homeworkers correspond very closely to the times taken in September, 1920. It will be also seen that the indoor carding of snap fasteners shows much better time. These workers work in a team, and each girl is not merely supplied with a back-board, but uses it. In the conditions of homework, where the whole family often turns to out-carding, the single back-board provided does not go very far.

Considering the wages earned by homeworkers before the institution of the Board, I think it is no exaggeration to say that we are here dealing with sweating; and that no precautions can be too great to prevent so lamentable a state of affairs.

Further, we are dealing with workers who have an especially low power of resistance. They are scat-

tered and almost unorganised; though the beginnings of a homeworkers' league have been made.

The work is easy enough. The amount is at present very small, and there are far more women ready to do it than can find employment. It is frequently done as a family job, i.e., the children on their return from school are set down to two or three hours carding.

The output of the women varies very widely, some being nearly twice as quick as others.

The work during the day is done with many interruptions, though a long spell of evening work is customary.

Under such circumstances, a time rate affords no protection whatever.

The women can only time their work with difficulty, and generally only in the evening. They often, as has been said, are helped by the children. The homeworkers' league has repeatedly asked selected workers to time themselves, but in spite of elaborate explanations, it was often found that the worker had received help during the test. Further, the question of whether the worker is really "normal" is a question needing much experience to decide. Very elaborate individual investigations would be needed in the case of every disputed wage; and putting aside the very real difficulty of inducing workers to give evidence or make complaints, the amount of investigation needed would be prohibitive.

Every Board dealing with homeworkers has felt the force of these contentions, and has fixed piece rates.

The plea of the employers against piece rates is (as far as homeworkers are concerned) merely a plea for no regulation; and the figures of the official test of September, 1920, show what is meant by no regulation.

Pin, Hook and Eye and Snap Fastener Trade Board.

Report on tests carried out under the supervision of Trade Board Inspectors in the work of:—

- (a) Carding safety pins.
- (b) Bunching safety pins.
- (c) Carding snap fasteners.
- (d) Carding hooks and eyes.

The whole of the arrangements preliminary to making the tests were carried out by representatives of the Trade Board.

The tests themselves were controlled and supervised by inspectors whose reports are appended.

In each case the conditions of work were favourable, a warm light room being provided and the work selected and arranged to suit the convenience of the worker.

Although the workers tested had not been supplied with home-work for the last two months they declared their output had not suffered in consequence.

11 January, 1922.]

MISS SUSAN LAWRENCE.

[Continued.]

It will be noted, however, that in the case of the snap fastener tests by outdoor hands the workers refused to use the "back-boards" provided by the firm, declaring they would hinder rather than help through their inability to manipulate them. It is doubtful therefore, whether, under these circumstances, the test can be called a strictly representative one, because it is now customary for back-boards to be supplied by the firm who gives out the work to be carded.

The following summaries of tests will serve to indicate the time taken on the various kinds of work:

Carding Safety Pins.

Of the 13 workers selected only 5 attended a factory for the purpose of test, 4 of these workers appeared to be an excellent type of homeworker, working throughout the test industriously and adopting the most economical method of working.

Carding mixed safety pins (punched cards).

Time per gross.

(Signed) W. E. COUNSELL.
29/12/21.

Enquiry into the Carding of Hooks and Eyes by Homeworkers. (September, 1920.)

Only one firm in the Birmingham area appears to employ homeworkers for the hand carding of hooks and eyes. This firm employs about 30 workers regularly on the work.

11 January, 1922.]

Miss SUSAN LAWRENCE.

[Continued.]

For the purpose of obtaining information 17 workers were visited in their home and 13 supervised tests were made.

Cards.

In most cases cards appear to be marked into spaces indicating where the hooks and eyes are to be placed. A number of workers complained of having to card japanned hooks and eyes on dark cards, which, owing to lack of colour contrast, made the work more difficult.

Hooks and Eyes.

This work generally appears to be of the ordinary swanbill pattern or the patent spring pattern.

For the purpose of report, hooks and eyes and hooks and bars have been treated as one and the same, workers generally appearing of the opinion that the time taken on each is about the same.

The homeworkers fetch all work from and return it to the warehouse on completion. It is usual for workers to tie up their work in bundles of one dozen cards before returning it to the firm. Workers state that this bundling and the final parcelling of work averages 15 minutes per gross cards.

As in the case with safety pins and snap fasteners the work is weighed out to the workers and weighed in on its return. Hooks and eyes are supplied to workers in separate packets, different sizes also being in separate packets.

About half of the work given out is japanned, the remainder being nickelled or brassed.

There would not appear to be strict uniformity between the sizes of hooks and eyes made by different firms, e.g., one firm's No. 2 size may be as big or bigger than another firm's No. 3 size.

The size numbers however appear to be as follows:—

00. 0. 1. 2. 3. 4. 5. 6. 7. 8.

Workers appear to be agreed that excluding the midget sizes 00 and 0 (which are very seldom given out) and the large sizes 7 and 8 (also very seldom given out) there is no material difference in the time required to card the remaining sizes 1 to 6. Over 90 per cent. of the work appears to be on sizes 1 to 4 and of the ordinary swanbill pattern.

Japanned work.

Workers are very definite that japanned work takes longer to card than bright work on account of the former sticking and being consequently more difficult to sort out. It is also stated there is more waste with japanned work.

Work.

Workers purchase their needles and cotton which they use for carding. The cotton at present costs them 1d. per 150 yards, which it is estimated would do about 2 gross cards containing 36 hooks and eyes stitched top and bottom. The cost to the worker is therefore about 1d. per great gross of hooks and eyes.

Workers also provide their own wrappers and twine which they use for making up their work parcels to carry work from and return to the warehouse.

No hand carding was found (except inexperienced time-workers) in any of the factories visited; it was not therefore possible to obtain indoor evidence on output to compare with that of the homeworkers.

The evidence obtained from tests shows:—

Time taken by Ordinary Homeworkers.

Size No.	Pattern: Swanbill or Spring.	Bright or Japanned.	Tests on self sizes.	2 rows stitching top and bottom.	Time taken per gross cards hooks and eyes or bars.		
					Number of hooks and eyes per card.		
					24	12	8
00	None carded at time of enquiry.						
0	Dit to						
1 }	Swanbill.	Japanned.	Yes.	Yes.	None.	6½ hours.	None.
2 }							
3 }							
4 }	None carded at time of enquiry.						
5 }							
6 }							
7 }	Swanbill.	Japanned.	Yes.	Yes.	None.	8 hours.	None.
8							

Spring pattern hooks and eyes take longer than swanbill owing to extra difficulty on looping.

Japanned and bright work paid same rates although former is stated to take longer than the latter owing to work being more difficult to sort in addition to extra waste.

Cotton, needles, wrappers, and twine are provided by workers.

Time taken to handle and parcel work is stated to average 15 minutes per gross cards. This time is not included in the times set out in above table.

The workers tested adopted the following method of working:—

- (1) Arranged work.
- (2) Sewing on eyes or bars on cards.
- (3) Looping hooks on to eyes or bars.
- (4) Sewing hooks down to card.
- (5) Bundling cards in dozen lots (tying each lot separately, finally parcelling work for returning to firm).

Prices Paid.

Pattern and Price per Gross Cards.

Size Nos.	Swanbill.			Spring.		
	No. per card.			No. per card.		
	24	12	8	24	12	8
Ordinary— 1—8	2/6	1/3	—/11	2/8	1/4	—
Midgets— 00—0	—	1/5	1/1	2/8	1/4	—

11 January, 1922.]

Miss SUSAN LAWRENCE.

[Continued..]

The yield per hour, no allowance being made for wrapping and tying or for cotton and needles, would appear to be as follows:—

Size.	Pattern.	Pence per hour.
1, 2 or 3 ...	Swanbill (japanned) ...	2·3
8 ...	Swaubill (japanned) ...	1·875

Enquiry into the Carding of Snap Fasteners by Homeworkers.

Enquiry shows that only two firms in the Birmingham area employ homeworkers on the carding of snap fasteners (with one additional firm who occasionally employ a few outdoor hands).

The total number of homeworkers who are fairly regularly employed on the work at the present time does not exceed 60.

All the firms in question were visited, and 15 workers were also interviewed at their homes for the purpose of obtaining evidence of the time taken to card the different kinds of work.

Cards.

The cards are all punched for the easy insertion of the fastener backs. No complaints were forthcoming about the cards being either unduly thin or thick.

Fasteners.

It appears to be the rule for all fasteners to be given out in packets, a separate packet for each size of fastener.

The fasteners are nickelled, brassed, or japanned. Enquiry showed the japanned work takes about 20 per cent. longer to card than does the other work, owing to the greater difficulty of fitting the fastener tops, which need more pressure in snapping.

All fasteners are uniform in size and weight, the standard sizes being 00, 0, 1, 2.

The cards usually contain 36 or 24 or 12 fasteners each.

Self sizes (not mixed) are principally used in carding.

Work.

All workers fetch the work from the warehouses and return it after completion.

To check loss of material it is customary for firms to weigh out the cards and fasteners, weighing in again on return of completed work.

In some cases firms provide workers with wrappers and twine with which to parcel the work, in other cases the workers provide their own.

Some firms supply their workers with boards in which there are moulds which the workers fill by shaking fastener backs into position, afterwards fitting the card over the backs (studs), and snapping on fastener tops (this latter operation is usually done by workers snapping with both hands). Using these back boards would seem to have the effect of increasing output by about 15 per cent. over that of the old method where the worker holds the card and inserts the studs with the left hand, fixing and snapping tops with the right hand.

The amount of bright and black work appears to be about equal, the black taking, as already mentioned, about 20 per cent. more time than does the bright work.

During the inquiry no carding other than that of 36 fasteners per card was found. Although the test times given below relate to this particular number of fasteners, time estimates were obtained from workers as to the time it would take to card the 12 and 24 lines.

The time taken and estimated are those for an ordinary experienced worker working diligently. Work, bright. Back board (tray) used.

Size of fastener.	Time taken per gross cards.		
	36 per card.	24 per card.	12 per card.
	(Time of test.) hrs. mins.	(Estimated.) hrs. mins.	(Estimated.) hrs. mins.
00.	6 0	5 0	3 30
0.	5 15	4 15	3 0
1.	5 0	4 0	2 0
2.	5 0	4 0	2 0

The above times include 10 minutes per gross cards to allow for worker counting and parcelling the work ready for its being returned to firm.

To the above times add about 15 per cent. where no back boards are used; to the above times add about 20 per cent. where black work is carded.

The average piece rates now being paid are as under:—

Size of fastener.	Price paid per gross cards.			
	36 per card.	24 per card.	12 per card.	
	s. d.	s.	d.	
00.	1 6	1	6	
0.	1 6	1	6	
1.	1 6	1	6	
2.	1 6	1	6	

Yield in pence per hour of the rates paid at present based on the above times:—

Size.	36 per card.	24 per card.	12 per card.
00.	3·0 (estimated)	2·4 (estimated)	1·7 (estimated)
0.	3·4 (test)	2·8 "	2·0 "
1.	3·6 "	3·0 "	3·0 "
2.	3·6 "	3·0 "	3·0 "

Provision should be made for those cases where the worker supplies paper and twine.

8822. *Chairman:* You are a member of the Pin, Hook and Eye Trade Board on the workers' side?

—Yes.

8823. You also represent the National Union of General Workers?—No, not on this occasion. I represent for this purpose the Home Workers' League, Birmingham Branch.

8824. You wish to call attention to some points in the evidence of Mr. Impey?—Yes. Mr. Impey made two points. He desired first of all that there should be one time rate, and one time rate only, for the trade, and, secondly, that the fixing of piecework rates should be removed from the scope of the Board. I want to deal with these two points particularly with reference to home workers. The only persons for whom piecework prices have been fixed on the Board are the home workers. Mr. Impey stated in his evidence in reply to a question by you, that suggestions had been made that piece prices should be extended to other workers. I want first of all to say that the only suggestion of that kind was made by me, and was made in order to meet the difficulty of the competition of the juvenile in-labour with adult out-labour, the suggestion by

11 January, 1922.]

Miss SUSAN LAWRENCE.

[Continued.]

the employers being that the piece prices for the juveniles should be on a piecework basis, varying with regard to age. That we consider highly objectionable; it would mean that if a girl of 14 did the same work as a woman of 18 she would get less money for it, and we thought that objectionable, and the suggestion was thrown out by me that in and out-work should have the same piece price. That was only a suggestion; it has not been pursued.

8825. You are speaking of a discussion at the Trade Board—not here?—It was stated here that a suggestion had been made, and I wanted to explain that suggestion. Now there are two points, first of all, the time rate basis. We obtained without very much difficulty a 9d. time rate and a 10d. piece price basis for the in-workers.

8826. That is for women, is it?—Yes; that was originally; it is not so now; it has been lowered since. When it came to the out-workers the employers entirely refused to give the same time rate or piece basis rate for the in-workers and pressed—enforced it in fact—that their rates should be very much lower.

8827. For out-workers?—For out-workers. Now the reason will be seen, I think, in the position which I venture to place before the Committee. Those tests will show that whereas the position of the in-workers was, on the whole, a settled position, a position of people with more or less fair rates, the position of the out-workers was very different; that you were there dealing—I am not exaggerating—with a sweated condition of the trade; that their position was very much lower than that of the in-workers; and that to raise people who were earning at that time, some of them, 2d. and less per hour on full rate was, in the opinion of the Appointed Members, I think, too great a jump; that in dealing with a sweated section of a trade you do need to proceed by two stages, and that is a state of affairs which repeats itself in many Trade Boards. You find very often that the bulk of the occupations are already earning a reasonable living wage, and that you have to deal with the sweated occupations on a different level and by different stages. Now then I come to the tests. I have put in two sets of tests made by the officials of the Trade Boards for home workers, the first test of September, 1920, and the last test made within the last few months. There have been other tests. There was a test by the officials presented to the Board in October, 1920, with which I will not trouble this Committee, because it repeats substantially the results of the other two tests. There was a test made by the employers which I think I will hand in, because they attach a good deal of weight to it. I do not attach very much weight to it. It was a test by two persons, and they certainly worked at a rate which no experienced person would have believed they could keep up.

8828. *Lord Weir*: Which is the latest one; which is the test taken at the latest date, the one headed "Private and Confidential" or the other one?—They are both private and confidential, I think.

8829. They are not dated?—They are not dated. You will see that the first one compares the results of the September, 1920, one.

8830. That is the more recent one?—That is the most recent.

8831. *Mr. Pugh*: Is that the one carried out under the supervision of the Trade Board Inspectors?—Yes. I have not put in any tests which were not carried out under the supervision of the officials. Now the first test shows that the hook and eye people were then earning in September, 1920, from 2-3d. per hour to 1-875d.; that is to say, from just over 1½d. to 2½d. Those were the hook and eye people.

8832. *Chairman*: Let me find that, please.—I will hand it to you if you like. I have a spare copy.

8833. I have it, but whereabouts on that page shall I find the figure you have just given?—Perhaps I had better hand you the original. (*Document handed.*) It is on page 4 of the original, and then I shall refer again to the last page.

8834. It begins on the page which commences on the first line: "The cost to the worker"? Just let me understand; were these women?—These were women homeworkers.

8835. Who were set to work at a piece rate?—They were set to work; they were timed, and the amount of money earned was on the basis then being paid.

8836. Not the Trade Board piece rate?—No. This was the preliminary investigation before the Board fixed their rates.

8837. Then at that wage, at the price then being paid, they were found to be earning 2-3d. per hour?—That is for hooks and eyes.

8838. And 1-875d. in another size?—Yes.

8839. Was this carding, or what?—Carding hooks and eyes at home. You will see two pages further on in the original the amounts then earned according to the official investigators for snap fasteners. That, you see, was from 1-7d. to 3d. at the prices current before the Trade Board began its operations.

8840. *Mr. Pugh*: That is estimated, is it not—1-7d. to 3d. That is the last paragraph?—Yes, they took the workers; they tested them, and you will see that in the hook and eye tests no allowance is made for the cotton.

Lord Weir: What *Mr. Pugh* points out is that the low figure is an estimated figure; the actual test figures are 3-4d. to 3-6d.

8841. *Chairman*: That is 36 per card?—Have you the same page, *Lord Weir*?

Lord Weir: Yes, I am on page 4. You made the tests on 36 per card, and you estimated the others?

Sir Arthur Pease: They are all estimated, are they not?

8842. *Lord Weir*: No, first there are three tests?—No, I think it is all right.

8843. 0, 1 and 2 at the rate of 36 per card were real tests; the others are estimated?—Just one minute. It says: "The yield based on the above times." Here are the times—the times taken by gross cards you will see on the first page: 6 hours to 5, 5 to 4, 3 to 2. Those are the tests. Those are the actual times taken. The price paid by gross cards is also a fact; the estimate is merely estimated on smoothing out the average. You see you have the times which vary from six hours to five hours in the tests. You have got the prices, and the yield per hour is based upon the average of those times and the actual prices. The times are correct, but vary; the prices are correct.

8844. Is it not really the case that if the girl was working on size 1 and putting 36 per card, she would definitely earn 3-6d.?—No, if you look you will see that there are four workers who took different times over the cards—oh, no, I beg your pardon, you are quite right; I have got it wrong. Some of these are tests and some of these are estimated workers' times. That is quite right. I got a little mixed up.

8845. The variation is so great?—I am very sorry to have delayed the Committee. Then you will see, if you look two pages further on, what the snap fasteners were estimated at at that time. That was 1-7d. to 3d. Snap fastening is rather complicated, and the later tests present more variety than those of the hooks and eyes. Since that date we had a test by the Trade Board in October of last year, with which I have not troubled you because it more or less repeats. We had a test which you have got—in December, 1921, I think it was—with comparisons of the times taken in September, 1920. We had a test given by one of the employers, who brought a couple of workers down to the Board, who did snap fasteners, and did them 20 per cent. quicker than the official test. It was a short test and a quick test; and finally the Homeworkers' League have taken repeated tests. I have not put those in because I considered that, though they were good *prima facie* evidence, they were not absolute proof. You ought to have a skilled investigator present during the whole time for a satisfactory test.

8846. *Chairman*: What are these tests intended to lead up to?—These tests are intended to lead up to

11 January, 1922.]

Miss SUSAN LAWRENCE.

[Continued.]

the amount of work which a woman can do under homework conditions in an hour. That is evidence for fixing the piece prices.

8847. And following that up it leads to piece rates?—Yes. Our tests on the whole confirmed the official tests, but showed a much wider range of variation. They were tests carried on, not in the presence of an investigator, but by women who had had instructions to time themselves. They showed a considerably wider range. They are not worth so much credence as the official tests, but they do afford a certain amount of corroborative evidence.

8848. *Mr. Layton*: Might I ask with regard to the reference to this hook and eye test on page 3 of your first statement—that is, I imagine, what you are calling the official test—whether that is the basis for the 2-3d. and the 1-875d., because I notice that the workers B, C and D are classed there as sub-normal?—Yes, but if you will look further on—and I am coming to the September test, the recent test—

8849. That is the last test?—If you will take the carding of safety pins you will see that the times correspond very closely to the September times. At the bottom of the first page you will see A, B, C, D and E. You will see the times put out varying from 57 minutes upwards.

8850. That is the recent test?—Yes, the last one. You will see that the difference between this and the September times are not very great. That is carding safety pins. But if you will look on to snap fasteners you will see again that the snap fastening without backboards, taken in September, 1920, corresponds pretty accurately—as accurately as you can expect to get in tests of this kind—with the most recent one. That is at the bottom of the second page—snap fasteners.

8851. *Lord Weir*: In connection with the question of the use of better facilities, such as the backboards, I notice that your inspectors, or the people who conducted the tests, value backboards at about 15 per cent.?—Yes.

8852. If that is so, why did the Board value them at 33 per cent.?—Because the employers would not let us value them at 15 per cent. only.

8853. Really the whole of this question is a question of whether the piece rates are ample or not?—No, that is not the point of my evidence. My evidence is intended to show that in these complicated and difficult conditions piece prices are the only possible protection to the worker.

8854. Surely the Board have carried that out, because they have fixed nothing but piece prices for the home worker?—Yes. But my point is that Mr. Impey said that it was objectionable that the Board should have that power. What I am trying to bring before this Committee is the very complicated and difficult conditions with regard to the out-worker, and that this power of fixing piece prices is essential.

8855. My recollection of Mr. Impey's main point was that he objected that a Board should fix piece prices where the process and the facilities would vary, by which I think he meant the factory rather than the home work.—In his evidence in-chief on the second page, the fourth paragraph, he says as to piece rates, "These should not be fixed by Trade Boards at all." I do not want to contradict members of this Committee, but this is what alarmed me.

8856. *Mr. Pugh*: I think in his summing-up he says that in the view of the Employers' Association the operation of the Trade Boards Act should be limited to what they held to have been the original intention of Parliament, viz., that of fixing a general minimum time rate, and that they should not fix piece rates, and so on. Is that where your evidence is tending to?—It comes in his conclusion, and it comes in his opening statement, and the object of my presenting this somewhat tangled and difficult evidence to the Commission is that they should be aware of the extreme difficulty under which any fixing of wages for home workers is involved.

8857. *Chairman*: If you look later on at Question No. 5746, he says: "A home worker might say that some arrangement about piecework is necessary;

but that is a very limited portion of the amount of wages paid in this industry."—He says that there; he asks that there shall be no piece prices fixed, and as a matter of fact the employers on the Board—got through the Board a proposal to scrap all the piece prices for home workers; they got out a notice of proposal to do away with all the piece prices, and I am informed that they are going to press the fixing of that at the next meeting of the Board and leave these women on a time rate.

8858. *Dame Adelaide Anderson*: How can you fix a time rate for home workers?—Well, you cannot; it means that they will be unregulated. That is what has happened at the Board; the employers carried a proposal to scrap the piece prices. I am told that at the next meeting of the Board they are going to press very much that those piece prices should be scrapped. They come here and say to you that there should be no piece rates, and that is what has brought me up here to-day.

8859. *Mr. Layton*: Do the employers assume that Trade Board rules about time rates are in theory at all events, or would become, applicable to home workers?—Their feeling is that we should fix a basis piece price; that the employers should then fix piece prices so to correspond with it, and that the workers, I understand, should be left to their individual powers of protesting if the piece prices fixed do not yield the time rate. What I want to say is this: I want this Committee to remember that you are dealing with people who have been receiving prior to the operations of the Board a cruelly low rate of wages; that you are dealing with people who have an especially low power of resistance. They are scattered; there is only the very small beginning of an organisation; there is very little of this work at the present time compared with the number of workers who can do it, and the competition is acute. It is done, not as a single job but as a time-rate job. I habitually find the workers work the children after school for two or three hours, and I want to ask under those circumstances what possible protection to the workers could a time rate be? The work, except in the evening, is done at odd times. The workers work when they get a spell of it; they call together everybody who can lend a hand, and they find it difficult to time themselves; they find it impossible to allow for the amount of assistance they have got. A time rate would under those circumstances be no protection whatever to the worker even if you put on one side the extreme difficulty of obtaining complaints from the worker with regard to any infringement of the Act. That is a thing which I know is extremely difficult. You can do it after some years, but it is very difficult in the earlier stages. You would have to have, even if you could get the complaints, an elaborate individual investigation in the case of every disputed wage, whether or not the piece price for the worker did actually yield the time rate or whether the worker was or was not subnormal.

8860. *Chairman*: Are these piece rates fixed with the intention that they shall yield the time rate?—Yes.

8861. Or something more?—No. Unfortunately for the home worker we have only got a 7½d. basis piecework price.

8862. And that to an ordinary worker would yield the minimum time rate?—No. They have not got the minimum of the rest of the workers. The Board chose to fix for them a special minimum of 7½d. only. The piece prices were intended to translate the 7½d. per hour into actual terms of piecework.

8863. *Sir Arthur Pease*: The workers in the factory have a minimum of 7½d.?—No. Now they have come down to 7½d.; they had 9d.

8864. And the home workers 8d.?—No; the home workers have not been reduced yet because there has been a considerable discussion about these piece prices, and the matter is still in the air. But originally it was 7½d. outside and 9d. inside.

11 January, 1922.]

MISS SUSAN LAWRENCE.

[Continued.]

8865. What is it now?—Now the thing is rather in the melting pot. They have carried a proposal to reduce the in-workers to 74d., and they have carried a proposal to scrap all the piecework prices. Whether or not either of those will be fixed is a question which I cannot answer yet.

8866. *Mr. Pugh*: Does that mean carried by the Board?—The proposal was.

8867. Has that been carried with any unanimity?—There was no unanimity of any kind.

8868. Then how was it carried?—I was not present when they scrapped the home-workers' piece prices, and I cannot speak as to that. The other was carried by the Appointed Members.

8869. *Lord Weir*: Is it usual for out-workers to be paid at a lower rate than the factory hands?—No, it is not usual. I am not a member of the Tailoring Board, but I do not think it is so there. It is very usual when you get a class of workers moderately prosperous and a pool of really sweated work to make differential rates, anyhow for a time, so as to pull up the sweated ones slowly. That is very usual, and that is one of the grounds why we want the Boards to fix more than one minimum time rate.

8870. As a matter of fact, in this particular trade the number of out-workers is very rapidly decreasing, is it not?—Yes; there is the slump.

8871. Apart from the slump?—I do not think so, apart from the slump. I think it is the slump, as far as I can judge.

8872. *Chairman*: Have they devised any machinery for doing these operations?—There is only one factory which does indoor carding, as far as I know. They have got for the hooks and eyes sewing machines, and they have got back-boards for the snap fasteners. When the trade revives the employers will have to choose whether they will incur rent and overhead charges or whether they will give the work out. I do not know which way their decision will go. At present there is no accommodation in the factories for anything like the amount of carding done outside.

8873. *Dame Adelaide Anderson*: It is all in Birmingham or round about, is it not?—I do not know of any other place.

8874. *Sir Arthur Pease*: But there is no piecework rate fixed for the factory, is there? There is only a piecework time rate?—There is only one factory of which I know which does carding inside, and through discussion on the Board that particular job has for these two years escaped without any rate being fixed for it. It is a very serious dereliction of duty on the part of the Board.

8875. Is there not a piecework time rate for that factory?—No—not for carding inside.

8876. *Lord Weir*: Is it a dereliction of duty? It is a permissive duty, is it not?—It is the duty of the Board to fix minimum rates for the workers.

8877. *Mr. Layton*: The minimum time rate would apply, would it not?—Owing to very great difficulties and very violent discussions, the carding inside has never yet been subject to a Trade Board rate. It is only one factory, employing juveniles. It has never yet got this rate.

8878. *Chairman*: As a matter of fact, is a fair piece rate paid in that factory?—It is a piece price.

8879. Is it a fair piece rate?—I do not think the rate inside is good enough.

8880. Do you know what it is?—I could not say. It is very difficult to say what they are getting.

8881. *Sir Arthur Pease*: Is it equal to what is paid to the home workers?—It is very difficult to say what they get—very difficult indeed.

8882. *Chairman*: Then it is very difficult for you to doubt whether it is enough or not?—I want them to get the rate fixed for the other workers.

8883. I know, but if you do not know what the rate is which is being paid, how can you tell us it is not enough?—I have been through the factory, and I have talked to the girls. I have got an opinion about it, but I have not got sufficient knowledge to tell this Committee exactly what the girls are earning.

8884. *Lord Weir*: I wish to take that a little bit further. You say there is a factory where girls are employed carding and they are unprotected?—Yes.

8885. Surely they are protected. I see that the female workers over 18 years of age employed in carding have a piecework basis time rate?—Other than carding hooks and eyes.

8886. *Mr. Pugh*: Why is that exception made in the decision of the Board?—Because the question is so violently controversial that the Board have never been able to come to a decision.

8887. I suppose if you carry that out to its logical conclusion, the Board may come to no conclusion at all?—It is a very unfortunate position.

8888. *Sir Arthur Pease*: You started by saying that the outworkers were paid less than the workers in the factory, and now we have got it that there is no rate fixed for the workers in the factory?—I have not made myself clear. Carding, other than hooks and eyes, has a rate fixed by the Board. The people who have never come under the Board are the in-carders for hooks and eyes. I am afraid I put it very badly. Carding "in" has got a rate; carding "out" has got a rate; excluded from all rates is the in-carding hooks and eyes.

8889. *Dame Adelaide Anderson*: What is the peculiar difficulty about carding a particular little object?—It is generally done inside by juveniles. There has been a violent controversy on the Board, which has never yet been settled, as to whether there should be a piece price differing with age for the juveniles. We object to that.

8890. It is with regard to fixing a rate according to age?—Yes.

8891. And it is work so simple that it is suited for juvenile labour rather than adult labour?—It is exceedingly simple work.

8892. Then is the out-worker hook and eye carder generally a juvenile or an adult?—They always have the children to help them. To a great extent they are juveniles.

8893. But inside in this particular process it is juvenile work?—It is only a tiny factory.

8894. *Chairman*: The whole point of your coming here to-day is on the piece rates for this work?—There are two points: That the Board ought to have power to fix piece prices, otherwise this class of worker is utterly unprotected; and that the Board ought to have the power of fixing varying minimum rates for different classes of workers, otherwise you have either to make a revolutionary change in the sweated occupation, or you have to depress the people who are already earning a reasonable wage, and do them no good at all.

8895. *Mr. Pugh*: But what are you going to do in this case where you say you have not been able to do anything?—We are going to do it next time.

8896. You are?—Yes.

8897. There is some remedy for that?—Yes; we shall do it.

8898. *Chairman*: I want to understand exactly your second suggestion. You say, I have no doubt with perfect truth, that there are some industries where, owing to their history and to the nature of the industry, you cannot put up the minimum rate at one bound to what you would like to make it?—Yes.

8899. And therefore you say there ought to be power to fix varying rates?—Yes.

8900. For different classes in the same industry?—Yes.

8901. How does that follow?—May I give you an illustration from another trade?

8902. I can understand your inferring that you must have separate Trade Boards for different industries, so that each Board might have regard to the history of the industry with which it deals and go moderately in its work, but how does it follow that you ought to have varying minimum rates in the same industry?—An industry will cover many sub-heads of different occupations that have a different history. May I give an illustration from another Board? There was a Board set up to cover waste products. There are three sections of that Board—the

11 January, 1922.]

Miss SUSAN LAWRENCE.

[Continued.]

marine store dealers, the paper stock and the woollen waste. The Board had pretty clear sailing with regard to the paper stock and the woollen rags. There were more or less settled rates which could be made uniform. They had very little information with regard to the marine stores. The employers pressed it very much that in dealing with that class of people we were dealing with very small people, to whom a violent change would be very dangerous; that it was imperative to give them, at any rate to begin with, a lower rate than the other two branches of the trade, where there were large firms and trade union agreements existing and so forth, could bear. You got under one Board a subhead in an entirely different stage of industrial development. With regard to the Pin, Hook and Eye Board, the metal workers in Birmingham are some of them organised. They have got traditions. The out-workers' question is utterly unexplored, and nobody knows anything about it. You must have power to deal differently with a section of different standing and different organisation.

8903. Really, what you say is directed to the different sections of an industry, and not so much to different grades in the same section?—This out-work business is a different grade of the same section.

8904. I am not sure that it is a different grade. It is a different class of worker?—If you go all through—hairpins, pins, hooks and eyes—you will find at the top of that section very skilled people indeed sometimes, and you find at the bottom workers with regard to whom the employers know nothing. It is an utterly different stage of development. The people who do the machinery work are highly skilled men about whom everything is known, and their position is well recognised. Then you go right down to these poor old women outside who are unorganised, who are perfectly ignorant, and who need very special treatment. It is sometimes between two industries, but in this case it is between classes of workers making the very same article at different stages.

8905. I am not trying to refute what you say, but thoroughly to understand it. I think it is common ground—almost universal ground—that the low class of worker whom you have just described must be protected by law, and I can follow your thesis that where you have different sections of workers, each section having its own special history and so on, you must empower the Board which covers them all to fix different minima for different sections. But when you have done that you come to the higher worker whom you have also just described—the man who is known and very likely protected by trade unions and so on. What I want to know is whether you think the Board should have power to fix the high minimum for him such as he would expect as his standard rate of wage?—I think it is sometimes necessary. You do have certainly a fear, and I think it is sometimes the case, that where you lift up the bottom man you may do it at the expense of the superior man unless his wages are also protected.

8906. On the other hand, if you lift up the bottom man it may be to the profit of the superior man?—It may or may not.

8907. He will say: "That is the lowest wage I must be paid"?—It may act either way.

8908. We were told by very experienced trade unionists that that had been the effect?—It is very often the effect.

8909. They want to get the basis wage and then the other grades will see that they get their proper sum above that?—It very often happens that way, but it may happen the other way. It depends entirely on the circumstances of the trade, and you cannot tell until you have explored the trade, which way that will work. Then I want to say that between the skilled machinist and the carder there is a grading up of people. The ordinary girls in this trade were, in the opinion of the Minister of Labour, deserving of protection. Where are you to draw the line? You say the home-worker wants a rate; you say the girl in the factory wants a rate; you say the people who are above the ordinary girls want a rate. Where are you to draw a line at all unless the Board are to fix varying minima?

8910. *Mr. Pugh*: In other words, when you get beyond the point where your Board operated, unless you had there the force of strong trade union opinion and organisation, you might not get a satisfactory rate fixed at all. The tendency might be to sink to the higher of the compulsory minimum rates?—Yes.

8911. That might be the tendency?—There is that difficulty, and you may have in the same job people who need protection—people who need the low rate; people who need a moderate rate, and people who need a higher rate, and unless the Board have the power of fixing varying minima, I do not see how you can have anything sufficiently elastic to meet all the necessities of a particular trade.

8912. *Chairman*: You say people need a higher rate. A good deal depends on what you mean by that. Do you mean that they are entitled to it having regard to the value of their work, or that they cannot live without it?—There is a living rate which we have fixed; there is the subnormal rate which we fix in some cases, and then you do not wish to do harm to the people who have secured by custom a precarious but rather better wage.

8913. How do you do harm by protecting a lower grade than themselves?—You may bring them down to it. Such things do happen some times. It is not general, but it does happen.

8914. It really comes to this, that these grades are to be fixed lest the minimum of the higher rate of wages should be brought down to the level of the others?—It is partly that. I think there may in some trades be a certain danger, but my real difficulty is the machinery of the Board. I know that you must have some sections of workers who are not skilled at all—workers who need protection at varying rates. I do not see how a Board could say that no rates should be fixed for skilled workers, because if there is one thing which is more difficult to determine in a Court of Law than anything else, it is the meaning of the word "skilled." I do not know if I am delaying the Committee too much—I am afraid I explain myself very badly—but for the protection of workers who might be sweated, it is necessary to have varying minimum rates. I do not see how you can put any restriction on the operation of a Board as to which classes of workers should have special minima. If you told the Board they were not to fix more than one rate, you would do a great deal of harm either to the lowest workers of all, or to those a little above them. If you told the Board they were not to fix skilled wages, then you would have all those complicated difficulties which come from trying to decide what "skilled" means. I speak from experience on this, because I should say three-quarters of the work of the Special Arbitration Tribunal on which I sat during the war was necessitated owing to the Minister having given a pledge that the skilled worker should have the skilled rate. It was as difficult as anything I have ever known to determine what was meant by "skilled."

8915. I do not think that anybody ever suggested to us that no rates should be fixed for skilled workers. It has always been put in the other way—that the Boards should be confined to fixing one minimum rate of wage?—Yes; and I protest against that.

8916. How do you say that would injure the lowest grades of workers?—You say the Board should fix one minimum rate. Take this question of the out-workers.

8917. I mean one rate for men, one for women, and one for children?—There again, I say if you fix in this rate the minimum rate suitable to the conditions of the out-workers, which are so very much depressed, you would not be doing any good at all to the workers inside the factory. If, on the other hand, you fix it, as I tried to get the out-workers' rate fixed, on the wage substantially agreed for the in-worker, then you would have produced such a revolution in the out-work trade as would, I think, have knocked out-work out of the market altogether.

8918. *Mr. Layton*: What would have happened?—It would have knocked outwork out altogether.

11 January, 1922.]

Miss SUSAN LAWRENCE.

[Continued.]

8919. Would it have all come into the factory, because this carding of hooks and eyes is done practically outside the factory?—In the ordinary way it is done so now. What would happen if you fixed workers' wages at five or six times higher than they were? I should say that probably they would not be paid. Either they would not be paid, or there would be a violent change from "out" to "in," and while a gradual change from "out" to "in" might be a good thing, a catastrophic change would be too great for the industry.

8920. I understand the difference is represented approximately by the general minimum time rates which were 7½d. and 9d. and are now 6½d. and 7½d., so that the market is already diminishing?—We shall pull up the out-worker to the in-worker in the course of a certain time, I have no manner of doubt. But my point is that either you have got to treat the lowest class in a too revolutionary manner and make too great a change and upset the trade very much and make Trade Boards very unpopular, or else you have to leave the people who are above the extreme sweating line.

8921. Do you think it would have a disastrous result if you allowed only one rate to be fixed?—My whole point is, you want a range of minimum rates.

8922. There are only two now?—In the Waste Board we had either three or four.

8923. But was that for the same reason?—It was for the same reason substantially. A part of the trade was in a very much more depressed condition than the other. You have to make two bites at a cherry when you are dealing with absolutely sweated people. When you are dealing with poor people you can put them on a reasonable wage at once. When you are dealing with people down in the depths no Appointed Member will let you jump them up at once. It does not happen so; it cannot be done.

8924. Lord Weir: With regard to the Waste Materials Board, the Minister attempted to meet the requirements of a trade which was really an "in" trade?—Yes.

8925. There were very many different branches of the waste materials trade. There were four Birmingham Boards for the metal trades, I believe?—We made our divisions. The Board is a Board. It made its subdivisions according to the nature of what it thought proper. If it had not had the liberty to fix three or four minimum rates it could not be operated at all satisfactorily.

8926. It divided itself into three branches?—Yes, that Board did.

Mr. Layton: But is not that rather a different question from the question of fixing rates for people doing the same sort of work, because part of them are working under what are called sweated conditions, and the others are in factories?

8927. Chairman: Those two points I have been trying to keep distinct.—They are distinct points; but the necessities of the case point to the fact that the Board should have freedom to fix more than one minimum.

8928. Mr. Pugh: Is the claim for greater powers on the part of the Board to arrange their affairs according to the circumstances with which they are faced in a particular trade?—Yes. I have seen a good deal of evidence directed to proving the theory that the Board should fix one minimum. That seems too rigid. You may have one article manufactured in its different stages by people with very different traditions and very different positions and with whom you must deal differently. On the other hand, you may have sub-heads of work which also demand different treatment on account of their different history.

8929. Chairman: There are two things: Sub-heads of work I follow, because it is a minimum for the particular branch of the trade you want fixed.—Yes.

8930. But the other question is quite a different one?—It is quite different.

Dame Adelaide Anderson: That is, the need of the worker.

8931. Chairman: The question is whether you are to have regard not only to the living needs of the worker but also to some extent to the position and value of the worker. It is only when you do that that you can get grades. But I am interested in your point about the necessity of going slowly, which you put with great force. Would not that be met by saying to the Board: "Fix your minimum suited to the lowest class first. True, for the moment, it will not by law help anybody else, but other people will get the benefit because they will be able to point to this as being the very lowest wage of all by reference to which their better wage must be fixed either by agreement or by collective bargaining"?—See how it would work with the Pin, Hook and Eye and with the Button Boards. You had at one end of the trade these isolated people who wanted separate treatment whom there were reasons for not treating at once as well as they ought to be treated. You have the great bulk of the workers in the trade needing a minimum wage. If you could not have had the separate minima you would have had to say that all the in-workers' progress must depend on what you were able to do for the out-workers. That would be a cruel position. Suppose, for instance, the girls inside these factories were earning 15s. or 17s. and the out-workers were earning 10s. You might well not be able to pull up your out-workers to more than 15s., and it would mean that you have to leave people who were very badly off, and needed protection, alone for three or four years until you could deal with the people who were dealt with according to special circumstances. It would stultify the Pin, Hook and Eye Board, as far as the main workers were concerned, if everybody inside had to mark time, until you could bring up the out-workers. It is a difficult problem. It could be done, but it is a slow business.

8932. Sir Arthur Pease: Are the wages which are paid called minimum wages or are they the actual standard wages which are paid?—Inside there are people getting better than the minimum, certainly.

8933. I do not mean a few would get better wages, but is there a large body getting better wages? Are they real minima, or are they standard wages practically?—I have not got the detailed figures. I can only say that from what the employers have said on the Board, I think a very large proportion are minimum wages.

8934. Mr. Pugh: But are any rates which are not minimum rates settled by the Board or by separate negotiation? As a matter of fact, are there any rates settled for workers in the trade which are not settled through the Board as minimum or standard rates?—There are a few, I think, but the agreements are mostly on the men's side, of which I do not speak with much knowledge.

8935. Chairman: Would the point we are discussing be met by enabling the Board to fix a separate rate for out-workers?—Not wholly, because you may have in-workers. The variety of trade is so difficult. When you take up Trade Board work you continually find that most of it is on a fairly reasonable level, but with pools of sweating in it. To deal with the absolutely sweated part of the industry, whether it affects sections of workers or whether it affects the locality or the sub-head, is a thing on which the Appointed Members very rightly and justly always insist on going slowly. They will not have a violent revolution in the trade, and you have very often indeed to take the particular group and deal with it separately.

8936. Mr. Layton: Are there not cases of factory workers who have been dealt with in that way and have been given a minimum which the Appointed Members considered less than a minimum living wage?—I do not believe the Appointed Members would say it. I would say it sometimes.

8937. But most of the Boards have one minimum rate in a factory—a time rate?—It is very much

11 January, 1922.]

Miss SUSAN LAWRENCE.

[Continued.]

better, and I should prefer for simplicity of administration to have one rate where circumstances allow.

8938. But are there any cases where more than one minimum rate has been fixed for factory workers?—I have given you the Waste Material Board.

8939. I do not think that is really quite the same. We are really talking there of three or four trades?—On the Boards on which I am, it is necessary in waste materials, it is necessary in pins, hooks and eyes, and in buttons.

8940. But in pins, hooks and eyes, is there a differentiation in the factory?—Yes. It is not necessary, as far as I know, in aerated water or in confectionery.

8941. What are the differences in the factory in pin, hook and eye?—In the case of the pin, hook and eye industry, the difference is with the out-workers. In the button industry it is with the out-workers. On the Waste Material Board the difference is between the different sub-heads. The Aerated Waters Board and the Confectionery Board do not need two rates.

8942. *Lord Weir*: You say the difference is sometimes in regard to the out-worker, and sometimes between the different sub-heads?—Yes.

8943. The out-worker, you say, is the very great difficulty?—Yes, administratively.

8944. And that applies in how many trades?—On the Boards on which I am there are three out-worker trades.

8945. *Dame Adelaide Anderson*: It is the case that in partly organised industries a minimum rate has

been raised in the earlier stages without proof of a rise in the cost of living?—Yes; that may have been so before the war.

8946. In wholesale tailoring, for instance?—Yes, they went up.

8947. They started with a minimum rate for women of 3d.?—All those Boards moved before the war. I could not say exactly what the figure was.

8948. They moved by degrees as the trade could bear it?—Yes.

8949. So that there was time for the trade to adjust itself to a different estimate of what a woman should be paid?—Yes, but it was more than that. The view taken was that the trade should be regularised. There was a low minimum which was worked up to a living wage.

8950. Has there been any case where a woman's minimum has approximated more nearly to a man's minimum at a later stage?—I could not answer that. They have varied independently.

8951. You do not remember about the tailoring trade?—No. I could not speak as to that without looking it up. What I am asking for is reasonable liberty on the part of the Board to fix varying minima, particularly when they begin their business. It adds a real complication on both sides if you have to-day one hard-and-fast rate for every single class of worker in the trade.

Chairman: We are very much obliged to you for discussing this question with us.

(*The Witness withdrew.*)

Mr. H. Dawson, called and examined.

The Witness handed in the following statement as his evidence-in-chief:—

STATEMENT OF EVIDENCE OF Mr. H. DAWSON, Chairman of the Workers' Side of the Stamped or Pressed Metalwares Trade Board (Great Britain).

1. *Scope of the Stamped or Pressed Metalwares Trade Board.*

The Stamped or Pressed Metalwares Trade Board covers a section of the brass trade, which is one of the staple trades in the Birmingham district. Although certain firms exist in other parts of the country, the majority, i.e., about 500 firms, are in the Birmingham district. Some of these firms do not employ more than a dozen workpeople, and this, together with the fact that many of them are situated at the back of other premises, makes it exceedingly difficult to organise the workers adequately.

A number of the larger firms belong to the Engineering and National Employers' Federation or to the Brassfounders' Employers' Association, but many firms, especially the smaller ones, are not in any employers' association.

2. *Wages Prior to the setting up of the Board.*

When the Trade Board was set up certain firms which had been covered by the Ministry of Munitions Statutory Rules and Orders, or had been raised to similar rates by the operation of the Wages (Temporary Regulation) Act, were paying from 43s. 6d. to 38s. to their women workers. On the other hand, it is undoubtedly true that a considerable number of the smaller firms, which had never been touched by organisation, were paying as little as 25s. per week.

3. *Lack of Machinery for effective Regulation of Wages.*

It is important to note that, even with regard to the firms paying the higher rates at the time of the

setting up of the Board, it could not be said that adequate machinery existed in these trades for regulating wages, since many of them were not covered by any employers' association, and great apprehension existed as to the position which would arise when the clauses of the Wages (Temporary Regulation) Act, as continued by the Industrial Courts Act, expired.

As the employers' evidence has laid stress on the fact that there was no justification for the setting up of this particular Trade Board, it may be useful to explain how the fears which existed in the minds of the Trade Unions have been realised.

Throughout 1920 negotiations were proceeding between the Engineering and National Employers' Federations and the unions concerned regarding the rates to be paid to the women covered by these Federations on the expiry of the Industrial Courts Act. In April, 1921, the employers finally offered a schedule of rates (which is attached (Schedule A)). After the most careful consideration, all the unions concerned rejected this schedule, on the following grounds:—

- (1) That the alteration of the adult age of women from 18 years to 21 was a vital question of principle, to which they could not agree.
- (2) That the basic rates proposed by the employers' federations were little better than the pre-war sweated rates.
- (3) That the operation of an automatic sliding-scale on an utterly unsound basis, and from a figure 11s. 6d. below the 43s. 6d. was unjust.

The employers, however, intimated their decision to enforce the rates.

In September, 1920, the Stamped or Pressed Metalwares Trade Board had fixed their first rate. It is perfectly true that the employers in the Birmingham area first reduced their rates, varying

11 January, 1922.]

Mr. H. DAWSON.

[Continued.]

from 43s. 6d. to 38s. per week, to the Trade Board rate of 9d. per hour, but in giving his evidence Mr. Ramsay failed to add that soon afterwards the employers in the Birmingham area who were not covered by the operation of the Stamped or Pressed Metalwares Trade Board reduced their rates still further in accordance with the sliding-scale rejected by the trade unions, or even to still lower rates.

It will thus be seen that the machinery for regulating wages as between the most powerful employers' association in the Birmingham area and the unions concerned, broke down completely, and that, far from having a disastrous effect on rates and organisation, the minimum of the Stamped or Pressed Metalwares Trade Board constituted the only protection for the workers in that trade. If this was the position with regard to the organised employers, with regard to the many unorganised employers evidence shows clearly that without a Trade Board matters would have been even more serious.

In sections of the metal trade not covered by the Trade Board, rates even lower than those paid by the organised employers are being forced upon the workers. In certain areas pieceworkers on full time are only earning about 16s. a week, which, translated into pre-war values, shows a wage quite as low as the sweated wage which the Trade Boards Act was passed to improve.

On this point Mr. Beck, in his evidence given on 23rd November, said: "You may take it that there is an effective means in every organised trade of keeping wages up to a standard of reasonable living to workmen," and Mr. Jackson on the same occasion, speaking on the same subject, claimed that there is no unorganised trade, and made a point of the satisfactory agreement between his organisation and the union in the harness and saddlery trade for rates lower than those fixed by the Trade Board. (See Schedule C.)

The real position with regard to this trade, on which my colleague Mr. Wright, secretary of the Harness and Saddlery Furniture Trades Association, will be prepared to give further evidence, is that at the time the agreement referred to was made, only a relatively small proportion of the total number of women workers employed in the district were organised. Owing to the scandalous wages prevailing in the trade, the union felt obliged to accept an unsatisfactory agreement as the only means of securing some improvement for its members.

A summary is appended showing the rates of wages which prevailed in this trade before the agreement was arrived at (Schedule B). Even at this date, in the section of the trade which is not at present within the scope of the Stamped or Pressed Metalwares Trade Board, I have established the fact that many employers are evading the agreement, and that rates less than £1 a week are being paid in certain cases for a full week's work.

It must also be stated that owing to the prevailing unemployment there is great fear of victimisation among the women, which deters organisation, and prevents complaints with regard to the evasion being reported to the trade union.

4. Skilled Rates.

We would strongly oppose the proposal of certain employers to limit the power of the Trade Board to fix skilled rates. Certain sections of the stamped or pressed metalwares trade require long training and considerable skill, and it is the practice of the better employers to recognise this skill by paying higher rates. If these higher rates are not made legally binding, unscrupulous employers would be able to take advantage of abnormal unemployment to try to force down the wages of skilled workers to the unskilled rates, and this competition would react equally unfairly against the workers and the better employers

and would even endanger the present system of voluntary agreements between the employers' associations and the skilled men's unions.

The evidence tendered by Mr. Jackson on this subject would lead to the conclusion that the employers had always been opposed to the fixing of skilled rates on the Stamped or Pressed Metalwares Trade Board, but a survey of the minutes will disprove this contention. At the meeting held on May 17th, 1920, when the wages of men were considered, after agreement had been reached on the minimum rates for male workers, the following minute appears:—

"It was agreed that the following Committee should be appointed to consider and report to the Board on special rates for special classes of skilled and semi-skilled workers:—

"Representatives of Employers.

Mr. F. M. Chandler,
Mr. H. Jackson,
Mr. A. S. Keeling,
Mr. J. W. Maddeley.

"Representatives of Workers.

Mr. H. Dawson,
Miss M. N. Symons,
Miss J. Varley,
Mr. C. J. Wright."

There was a short discussion at this point as to the desirability of fixing skilled rates for the female workers, but the presence of representatives of the women workers on the committee clearly proves the intention of the committee. Rates were eventually agreed upon and proposed by agreement between the employers and the workers without any interference on the part of the Appointed Members, and it was not until the fixing stage that the rates were opposed by the employers. It is, therefore, our contention that the opposition of the employers on the Board was not based on objection to the power of the Board to fix skilled rates, but that it was merely circumstances arising from the trade depression which led them to adopt this attitude, after taking part in the committee, which throughout worked most amicably.

5. Appointed Members.

In our opinion, it would be better if the Minister accepted a panel from both sides and selected from each panel a number appropriate to the particular Trade Board under consideration. We consider this would improve the efficiency of the Board and would at the same time meet the objection of the employers that Appointed Members have no knowledge of the matters with which they deal.

In connexion with the Stamped or Pressed Metalwares Trade Board, however, it should be pointed out that the Administrative Committee, consisting of four a side, with the Appointed Members, has settled four sets of rates out of five, without the votes of the Appointed Members.

6. Officials of Organisations as Members of Trade Boards.

A number of employers have emphasised in their evidence the presence of trade union officials on Trade Boards. On the other hand, it might be pointed out that on the Stamped or Pressed Metalwares Trade Board the employers are represented by Mr. Brown, of the Engineering and National Employers' Federations, Mr. Jackson, Chairman of the Harness Furniture Manufacturers' Association in Walsall, and Mr. Madeley, Director of the Brassfounders' Employers' Association. The workers' side is glad that such prominent members are represented on the employers' side, since they believe that they add greatly to the power of the Trade Board and lead to efficiency in working.

11 January, 1922.]

Mr. H. DAWSON.

[Continued.]

7. *Permits of Exemption.*

The Stamped or Pressed Metalwares Trade Board remitted this matter to the Standing Committee, which agreed that in all cases one member from each side should visit the firm concerned and interview the workers. I have visited firms in connection with about 20 cases with a representative of the employers. In all cases a permit has been granted and in about 14 cases we were able to persuade the employers to agree to a permit on a higher rate than that originally asked for. In our experience we know of no case in which the machinery of the Act has proved too limited to allow a permit to be granted when application was made, and we have not found that the system drives the less efficient worker out of employment.

8. *Machinery of the Act.*

We are of opinion that after the first proposal of the Board, the period for objections should be shortened to one month.

9. *Duplication of Boards in the Metal Industry.*

We are agreed on the Stamped or Pressed Metalwares Trade Board that many difficulties are created by two or more Boards operating in one workshop in the Birmingham area. Some of the cupped blanks are stocked, and then may be used in the production of several different articles that may or may not come within the scope of a particular Trade Board.

It should, however, be pointed out that originally the respective employers in the trades concerned were most emphatic in demanding separate Boards, and that the efforts made by the Stamped or Pressed Metalwares Trade Board to secure amalgamation of the four similar Boards in the area have been opposed by the remaining three Boards.

10. *Scope of the Board.*

The Board covers:—

The manufacture from metals (other than precious metals) by the processes of cold stamping or cold pressing (including cutting or piercing) of cabinet fittings, window fittings, curtain accessories, stationers' sundries, drapers' sundries, fittings for gas or electric light, fittings for suit-cases or handbags or purses, buckles, eyelets, ferrules, labels, collar studs, tie-clips, thimbles, photograph frames, stamped chains, bells, fancy nails (excluding the shanks); parts of safety razors (excluding the blades), parts of braces or suspenders, corset steels or busks, whistles, tin-openers, medals or any similar articles or metal parts of such articles.

Some of the articles mentioned in the schedule, such as cabinet fittings, fittings for gas or electric light, and stationers' sundries, over a large number of articles. For instance, a manufacturer of cabinet fittings as a rule makes a number of articles that the workers' side say come within the scope of the Stamped or Pressed Metalwares Trade Board—a case in point, we say that a stamped hinge is a cabinet fitting; the employers agree, but the department say that stamped hinges do not come within the scope of the Trade Board.

When the Trade Board was set up many of the members on both sides were under the impression that the scope was a general one.

On the 25th September, 1920, the following letter was sent to the Secretary of the Trade Board:—

"Dear Sir,

"We have some members at Long Eaton who are carriage and bobbin workers. These members I claim came under the Stamped or Pressed Metalwares Trade Board. The carriage and bobbin consists of three parts—the carriage, bobbin and coombs. Each of the parts is stamped or pressed from sheet brass or sheet steel, usually about an eighth of an inch thick. This industry is confined to Long Eaton and Nottingham, as thousands are used in the lace factory.

"There are 10 firms at Nottingham and 5 firms at Long Eaton. The number of workers, from enquiries I have made—women 400, men 400. If there is any doubt about this, I should be glad if you will be good enough to put it on the agenda for the next meeting.

Yours faithfully,

H. DAWSON."

I received the following reply, dated 19th October, 1920:—

"Sir,

"I am directed by the Minister of Labour to refer to your letter of the 25th September forwarded by the Secretary of the Stamped or Pressed Metalwares Trade Board (Great Britain) relative to the applicability of the rates fixed by the Trade Board to carriage and bobbin workers. In reply, I am to refer you to the definition of the Trade as given in the Appendix to the Trade Boards (Stamped or Pressed Metal Wares) Order, 1919 (a copy of which is enclosed for convenience of reference), and to say that carriages and bobbins do not appear to come within the scope of the Board as specified therein. I am to add that the question of the inclusion of such workers will be borne in mind when the amendment of the scope of the Trade Board is under consideration.

I am, Sir,

Your obedient servant,

F. W. LEGGETT."

These letters were discussed at the sixth meeting of the Trade Board held on 24th November, 1920.

No. 17 Minute reads as follows:—

"After consideration it was agreed that a communication should be sent to the Ministry of Labour to the effect that the Trade Board were unable to agree with the opinion expressed in the letter of the 19th October, and that in their view the minimum rates which they had fixed were applicable to workers of the description in question."

It has been the custom of the Department to express opinions on questions of scope submitted to them. Some of the opinions we have not been able to agree with—for instance, the Department expressed the opinion that workers engaged in carrying work, which was within the scope of the Trade Board, to and from the warehouse are within the scope of the Trade Board, but a worker carrying work from one department to another is outside the scope of the Trade Board, also a worker who carries work from one department to another, and occasionally to the warehouse is not within the scope of the Trade Board. On both sides of the Trade Board it was agreed that an employer who wanted to evade the payment of the Trade Board rate could easily arrange that no worker should continually carry work to and from the warehouse. We contend that all workers of this description are entitled to at least the minimum rate of the Trade Board.

I am pleased to say that the Minister decided some four months ago that in future all questions of scope should be first submitted to the Standing Committee of the Trade Board. This is a step in the right direction. The Board appreciates the action of the Minister in giving us an opportunity to express our views before a decision is given.

The only way to settle the question of definition is to deal with a process rather than the article manufactured, and to include everything made by the process of cold stamping or pressing other than certain specific exclusions.

In my opinion this difficulty has caused many employers, who were originally favourable, to oppose Trade Boards, but such an objection is really in the nature of an objection to the definition of this particular Board, rather than to the Trade Board system in general.

11 January, 1922.]

Mr. H. DAWSON.

[Continued.]

SCHEDULE A.

THE ENGINEERING AND THE NATIONAL EMPLOYERS' FEDERATIONS.

STANDARD RATES.

Female Labour.

7th April, 1921.

Age.	Basis rate for 47-hour week.	Cost of living bonus.	Total.	Fluctuating Factor on cost of living (See note).
	s. d.	s. d.	s. d.	d.
14	8 0	6 8	14 8	4
15	8 8	10 0	18 8	6
16	9 4	13 4	22 8	8
17	10 8	16 8	27 4	10
18	12 0	20 0	32 0	12
19	13 4	20 0	33 4	12
20	14 8	20 0	34 8	12
21 and over.	16 0	20 0	36 0	12

Note.—Every full 7 points of variation in the Board of Trade "Labour Gazette" are taken as the equivalent to the amount set out above, being based on 240 points as at March, 1921, and 100 in 1914.

Employers' representatives will meet Unions in three months on any question they desire to raise on basis rates.

Fluctuating factor on cost of living will operate on the ascertainment of the Board of Trade Cost of Living figures in the June, 1921,* "Gazette," and quarterly thereafter.

Piecework prices and bonus or basis times shall be such as will enable a female worker of average ability to earn at least 33½ per cent. over basis rate (excluding cost of living bonus).

The above rates of wages to be paid in the pay distributed in the week beginning Monday, 2nd May, 1921.†

SCHEDULE B.

SUMMARY OF INFORMATION obtained from a meeting of women trade unionists employed in the Walsall harness and saddlery trade, held in December, 1921.

(The rates of the agreement should apply in all cases, unless the firm is covered by the Stamped or Pressed Metalwares Trade Board.)

Firm A: Worker started work in 1916 (17 years of age, at rate of 8s. per week. Another worker started at the age of 18 in 1915, at 7s. per week.

Firm B: Pieceworkers, on filing, earned from 12s. to 15s. a week (pre-war), buying their own files; now earn from 25s. to 30s. per week. Pre-war cost of file 4½d., now 1s. Require from two to four files per week.

Firm C: Pieceworkers on drilling earned a maximum of 16s. per week, earning 17s. 6d. before the trade union agreement.

Firm D: Pieceworkers on tonguing earned 14s. to 16s. per week pre-war. Now earn 17s. to 19s. for a full week's work.

Firm E: Worker started aged 25 in 1916 at 14s. per week, receiving 18s. per week before the trade union agreement.

Firm F: Pre-war, aged 32, receiving 10s. per week. In 1917, receiving 10s. per week for 57 hours on war work, before the trade union agreement.

Firm G: Workers started at 3s. 6d. to 15s. before the trade union agreement. Firm now covered by the Stamped or Pressed Metalwares Trade Board.

* Afterwards changed to July, 1921.

† Afterwards changed to 23rd May, 1921.

‡ Schedule C.

These conditions, which are representative of the conditions which prevailed in the Walsall Harness and Saddlery Trade, show:—

1. Exceedingly low rates prevailing up to 1917, the date of the first agreement between the employers and the Harness and Saddlery Furniture Trades Association.

2. The fact that, although the information was obtained entirely from trade union members, even those members are in many cases not receiving the agreement rates, e.g., in some cases piece-workers are earning less than £1 a week.

Since the unions do not claim to represent the majority of the workers in the trade, they maintain that it cannot be held that there is adequate machinery for the effective regulation of wages.

Further information relating to the rates of wages paid to women of 18 years and over in the Walsall harness and saddlery trades at the time they joined the union, i.e., before they were covered by the attached Trade Union agreement (Schedule C).

Firm A: 1919—Pressworkers, 20s.; warehouse worker, 14s.

Firm B: 1920—Varying rates, 24s, 20s. for presswork.

Firm C: 1919—Presswork, 18s. 10d.; filling knobs and studs, 14s. 8d., 21s.

Firm D: 1918—Buckle worker, 20s.; driller, 20s.; painting clips, 17s.

Firm E: 1919—Buckle finishers, 18s. 6d., 19s. 6d., 17s. 6d.; wet presser, 16s. 6d.; hand-presser, 20s.; power press, 16s. 6d.; forewomen, 17s. 6d., 18s. 6d.; clerk, 25s.; filers, 18s., 13s., 18s., 20s.; forewoman presser, 22s. 6d.; buckle machinist, 13s.; sorters, 14s., 15s.

Firm F: 1920—19s., 15s. 23s. 6d., 16s., 26s., 18s.

Firm G: 1918—23s. 3d., 15s. 6d.

Firm H: 1918—21s. 8d., 14s. 6d., 16s.

Firm I: 1918—24s. 5d., 21s.*

Firm J: 1918—Pressworker, 20s.

Firm K: 1918—18s. 9d., 20s., 21s. 3d., plus 2s.-monthly timekeeping bonus.

SCHEDULE C.

THE NATIONAL AMALGAMATED HARNESS AND SADDLERY FURNITURE TRADES AND METAL WORKERS' ASSOCIATION.

DAY-WORK RATES FOR FEMALES.†

Classification.	Ages.				
	15	16	17	18	and over.
1.—Forewomen, order clerks and despatch clerks, responsible for the production of orders only...	d.	d.	d.	d.	d.
2.—Warehouse bands, store-keepers, buckle tongers, rollers and plating shop assistants	—	—	4½	5½	per hour.
3.—Sorters, wire-up and shacklers	2½	3½	3½	4½	"
4.—Filers, chippers, edgers and frazierers	2	2½	3½	—	"
5.—Bobbers, moppers, grinders, japanners, blackers and stampers ...	3	3½	4	5	"
6.—Press workers, capstan lathe operators, drillers and screwers	3	3½	4½	5	"
7.—Acetylene welders ...	3	4	4½	5½	"
8.—Electric welders ...	3	3½	4	5	"
9.—Braziers, brazed chain makers, and chain burr-maker makers	3	3½	4	5	"

* Have to buy their files, costing 1s. 6d. to 2s. a week.

† Note.—All rates subject to addition of 25 per cent. Pieceworkers to receive 12½ per cent. addition to rates for dayworkers.

11 January, 1922.]

Mr. H. DAWSON.

[Continued.]

A probationary period of six months shall be allowed for any female when first entering the trade at a wage to be agreed upon with the employers.

Where employees are paid by means of a standing wage and a bonus on all work produced, the total wages shall be considered as constituting the rate for a full week.

Plus a clock bonus of 25 per cent for any week of 48 hours or over, or where the working hours of the firm are less than 48 hours on the full week worked by the firm, married women and others having special arrangements respecting working hours with their employers not to be affected by the 48 hours, but to be paid the percentage on the hours agreed to between them and their employers.

Females receiving higher rates than the above not to be reduced.

The above day-work rates and percentages to be minimum rates and percentages.

Where employers are paying a higher clock bonus than shown above they shall be considered to pay the proper rate of wages if their employees' gross earnings are equal to the above rates with the clock bonus added.

To come into operation and be paid on all wages due on and after the first full pay day after August 17th, 1918.

Adopted at a meeting of the Joint Committee established to govern the wages and conditions of employment in the trade, held on July 30th, 1918.

Signed on behalf of the Workmen and the Society,

C. J. WRIGHT, Gen. Sec.

Signed on behalf of the Midland Counties Trades Federation,

JOHN TAYLOR, Secretary.

8952. *Chairman:* I think, Mr. Dawson, you belong to the National Brass and Metal Mechanics?—(Mr. Dawson): That is right.

8953. And you are Chairman of the Workers' Side of the Stamped or Pressed Metalwares Trade Board?—That is quite true.

8954. That Board covers a section of the brass trade which, I think, is mainly carried on in the Birmingham district?—Yes. The brass trade is in practically the same position as the woollen trades and the linen trades which are just in certain areas of the country. If you take the whole of the brass industry, you would find the majority of the brass work is made in the Birmingham area. The firms that are covered by the Stamped or Pressed Metalwares Trade Board alone number, according to the latest statistics from the Department, 842 firms. Nearly 450 firms out of that 842 are in Birmingham alone, that is leaving out certain districts such as Smethwick and out to Dudley and Wolverhampton. There is a large number of firms in the Walsall area that came under the Trade Board, but I have not counted them in the figures I have given for Birmingham.

8955. Before the Board was set up, what kind of wages were being paid?—Before the Board was set up the wages that were being paid in many establishments to the men were the agreed rates between our own organisation and the brass employers or the National Engineering Employers. The great difficulty is that many of these smaller firms only employ six or eight hands, and you could never find out what was being done with the smaller firms. Therefore, we had no records. That is as far as the men are concerned. The women in the larger factories come under the awards that have been given by the Minister of Munitions, and their wages were round about £2 2s. a week. At the same time it is quite true to state that in many of the smaller establishments when the Board was set up, these women were only getting 25s. a week. If you go into the figures you will find that the majority of the firms are very small firms. The few large firms employ far more workpeople than all the small firms put together.

8956. It comes to this, that an endeavour was made to arrange a rate by agreement between the union

and the employers, which broke down, and therefore you asked for a Trade Board?—There has never been a proper recognised rate in the Stamped or Pressed Metalwares Trade. As far as the men were concerned, where the employers were members of an employers' association, we were in such a position that we could enforce the rates, but where they were not we could enforce nothing. I think I might give an illustration in order to prove the difficulty in the case of the smaller firms. In 1919 we took a case to the Munitions Tribunal, where a firm named Messrs. Armfield refused to pay what we considered was the prescribed rate. The firm were military button and badge makers, and we contended that the brass workers who were stampers and dippers should come under our rates, and we took this case to the Tribunal, and they referred it to the Industrial Court. The case was heard at the Industrial Court in December, 1919, and the Award of the Court stated that there was no prescribed rate in this trade. So we lost the day, although at the time one of the four men whose cases we took up was getting 8s. a week less than the agreed rate for labourers in the engineering industry.

8957. That was under another system altogether, was it not? That is the war rate that you are speaking of?—No; I am not speaking of the agreed rates; I am only speaking of men now that were a portion of the agreed rates. Even if we had gone then on to the war rates with these men, and claimed just the war advances which had been awarded, the general war advances that had been awarded to the metal workers throughout the country, we had got a case for a conviction against these men; but the Court held that the war wages did not apply to these workers.

8958. That is what I understood; it is the war award that you are speaking of. Then you go on to mention the harness trade. You are dealing, I think, with the question of organisation; you say it was not sufficient to enable you to get the proper rates of wages apart from the Trade Board, and you give examples from the Harness and Sadlery Trade; is that right?—Yes. We give these illustrations for this reason, that in the Walsall area the rates have always been very low; and owing to the poor organisation amongst the women the union was forced to accept an agreement, because they were not in a position to hold out any longer against the employers. You see, when the employers know that you do not represent the workers, you cannot put up as good a case as though you did represent the workers; and at this particular time when this agreement was signed there would not be more than 10 per cent. of the total number of women in the trade union, and so the union concerned was in a very weak position in dealing with that particular question.

8959. Your conclusion from all that is that there ought to be a Trade Board: is that it?—Well, on the workers' side of the Trade Board we think that the Trade Board has not only done a lot of good for the workers, but it has also done a lot of good for the employers, because it has prevented sweating by the smaller employers, and that went on prior to the war with women and with men. Our rates in Birmingham for the men before the war were very low indeed, and it is only since the war that we have been able to get rates that compare favourably with the other trades.

8960. Then you think there ought to be power to fix skilled rates?—Certainly. If you took away the power to fix skilled rates we should be in a most difficult position at the present moment, because if there were only one rate, an employer to-day would be able to say to a man who was out of employment who was a skilled worker that he would give him a job at the minimum rate, and if he refused to accept that job the Labour Exchange might debar him from receiving unemployment benefit, because the employer had offered him work at the minimum rate, and I take it legally the Employment Exchange payment would be stopped. Now, if you take these skilled rates you

11 January, 1922.]

Mr. H. Dawson.

[Continued.]

find that some of the men that are on the classes of skilled rates on the Stamped or Pressed Metalwares Trade Board have got to be in the trade at least six years. We have three sets of skilled rates on the Trade Board; the first one is for a man working at the particular trade; there are no other qualifications. But the second skilled rate says that the man must be in the trade at least six years and must be able to do certain things. Well, from the point of view of fairness to the skilled workers, if you take away the protection that is afforded to them at the present time by reverting to just the one minimum rate, it would be most unfair all the way round, because the skilled worker would always have an easier chance of getting employment than the unskilled worker, because the skilled worker at the pinch would be able to take on the unskilled work, and so it would be an additional hardship on the top of the already many hardships that confront the unskilled worker.

8961. You say it is a hardship that the skilled worker should have a better chance of getting work than the unskilled worker?—I say it would be a hardship if the unskilled worker had got to compete with the skilled worker, and that would be to a certain extent true if you did away with the skilled rates.

8962. But is not it the fact that in every trade and employment the better-skilled man is more likely to get a job?—That is true.

8963. Is there anything unfair in that?—If there is no skilled rate for the worker in that particular industry, what is the man going to stick out for?—If there is a rate the man will not take on a job at less than the rate; but if he has not got a rate he is apt to take on a job at something less than he might have if there was a rate.

8964. *Mr. Layton*: Have you said anything about the organisation of the trade union? Have you got a large proportion of the men in the union?—The men are far better organised than the women.

8965. They are not strong enough to enforce the skilled rates on their own responsibility?—The men would be strong enough to enforce the skilled rates in some respects; but the bulk of the employers who come under this Trade Board are small employers, and you cannot enforce anything on a small employer like you can on a large employer. I am an organiser in the employ of the Brass Workers' Trade Union, and if I went to a firm which employed 200 men and said that unless they conformed to our rates I should have to report it to the Executive, and that the Executive might withdraw the men, they would see the seriousness of it straight away; but where it only affected possibly two men that would not have the same effect, because the men who are employed in the Stamped or Pressed Metal Trade would only comprise about 20 per cent. of the workers, and at a firm where they only employed six workers you would probably find one man and five women. So you see our difficulty in going to a firm where they employ one or two men and attempting to enforce our rates unless we have got the legal remedy to force the employer to pay the rates.

8966. But you spoke of the skilled worker competing with the unskilled worker—coming down and taking his work; that is what you were suggesting, is it not?—Yes.

8967. That suggests that in bad times he might do unskilled work; that is what you suggested, I think?—I say the temptation would be there.

8968. But why cannot he do that now with varying rates fixed? If a man is a skilled worker surely it is open to him to take unskilled work if he is out of a job?—That is quite true; a man could take it on; but on the other hand if you had no rates there would be nothing to prevent the skilled man from working at the bottom rate.

8969. But you were not talking of his doing skilled work at the low rate; you were talking of his competing with the unskilled labour, and I put it to you, is not that possible to-day, no matter what grades of wages you have fixed?—And it would be

possible the other road for an employer during a period like that which we are just passing through to get skilled labour at a lower rate than what the prevailing rate is to-day if it were not for the Trade Boards.

Mr. Layton: Yes; but that is not the point. 8970. *Chairman*: You think the object of the State should be to prevent that, and to regulate wages: is that your idea?—We think that the object of the State should be to regulate the industries as far as it is possible, and we on the Stamped or Pressed Metalwares Trade Board say that the relationship between the two sides to-day is better than when the Trade Board was first set up.

8971. *Mr. Pugh*: Supposing you did not settle these rates by your Board, you have no other means of settling them except by more or less individual negotiation between employer and workmen?—That is true.

8972. And is it your view, therefore, that having the Board machinery for collective bargaining, it is to the advantage of both sides that that should be utilised to the fullest possible extent in matters between employer and workman?—That is true. We had a very big fight in setting up our first set of rates on the Stamped or Pressed Metalwares Trade Board, but after we had set up our first rates we appointed a sub-committee of four from each side, and practically the whole of our rates have been agreed to by that standing committee without the votes of the Appointed Members; so that proves that the relationship between the employers' and the workers' sides is better to-day than it was when we first started; and it is hard to realise that some of the employers from our Trade Board have been before this Committee giving damaging evidence against the Trade Boards.

8973. *Sir Arthur Pease*: If a skilled man was employed as a labourer he would not be entitled to the skilled rate, would he?—No.

8974. *Mr. Pugh*: It would be an occupational rate, not a personal rate. The rate fixed is for the job and not for the man?—That is true. The skilled rates refer to certain sections of workers, and a man who was not at work in those sections would not be able to claim the skilled rates. Immediately he worked under the section where certain rates prevailed he would have those rates.

8975. *Sir Arthur Pease*: Is there any difficulty in deciding whether a man is in one of these sections or not?—We have not had any case yet where a difficulty has arisen. There may be difficulties, but we have not had one yet.

8976. But you said in some cases there was only one man employed. Surely he must be doing a little of everything?—Well, it would be easy for a firm to say that a man was working on skilled work a portion of the week and on unskilled work the other portion, but those cases do not arise, for this reason. A man who can do the skilled work, if he is doing a little unskilled work during the week, generally gets the skilled rate; the firms, as a rule, do not quarrel over that; they pay him the one rate.

8977. *Dame Adelaide Anderson*: And he is aided by women in these small workshops. Are the women doing the unskilled work in those places?—No; as a rule they have the man to do the setting-up.

8978. That is what I meant.—And then the women carry out the operations.

8979. The women are doing the repetition work after the skilled man has set the tools?—Set up the tools, yes; and if the man happens to be a toolmaker and makes the tools he would not come under the Stamped or Pressed Metalwares Trade Board; but if he is not a toolmaker, and he is simply a stamper and setter-up, he would come under the Trade Board rates.

8980. You say these agreements have been made by sub-committees of the workers and employers. Has the improvement that has come about not made the organisation strong enough to regulate the higher wages voluntarily to regulate the skilled rates voluntarily?—I should say, as far as the women are

11 January, 1922.]

Mr. H. DAWSON.

[Continued.]

concerned, the movement would be weaker to-day than it was when the rates were set up. That is brought about by so much unemployment, and when women have been out of employment for a few months they forget the trade union far more quickly than the men do.

8981. But are the women in the skilled classes?—Yes; in some of the industries, in some of the sections, we have got a skilled rate for women, and they are sections of the trade where skill is required. If you take polishing, that is a very dirty occupation, and we contend that polishing is not fit for women; but as women do it they get a higher rate than the general minimum rate. The occupation, in addition to being dirty, is at the same time dangerous, and anyone who has been working emery bobbin, or mopping on a polishing mop, when they leave it is an hour or two afterwards before they can get themselves clean and get the smell of the sand and the oil out of their clothes. If you sit next to anyone who has been at work in a polishing shop you will be able to tell immediately that they are polishers, because you can smell it on them.

8982. *Chairman:* What I am interested in is this. Supposing a man wants a brazier in a time of slump, and he says he can afford to pay a man 1s. 6d. an hour, and he advertises for a brazier, and a man comes to him and says, "I will take the job on; I have been six years at the work." The employer has got to say, "No, I cannot take you; you know too much; I must have a man who has had less than six years' experience, or else I cannot get him at 1s. 6d." That is right, is it not? That is the effect of your argument?—The man may—

8983. Oh, do say yes or no.—The man who had been at the trade for six years would be able to claim the second grade.

8984. Then say yes to my question; that is the answer, is it not?—Yes.

8985. He would have to reject him because he had six years' experience?—Yes.

8986. And if he knew anything about brazing aluminium then he would have to reject him unless he was willing to pay 1s. 9jd.; that is right, is it not?—I cannot agree with that, because it does not say that in the third grade. He has got to be able to braze all classes of metal.

8987. If he is an expert in brazing aluminium, or he is a charge hand with the duty of being responsible for all work and order in the shop?—That is true.

8988. Then if he is able to do that you cannot take him on at 18 pence an hour; you must pay him 1s. 9jd.?—1s. 9jd.

8989. It really is wage regulation, is it not?—In that comes part of the agreement that exists in the brass trade between the brass employers and ourselves, and those clauses are taken from the existing rate, and signed by both associations.

8990. This Order really embodies an agreement between the two associations?—Yes.

8991. Then you say a word about Appointed Members. You think there should be a panel on each side?—Yes; we think there should be a panel to be drawn from one on each side, because even on our Trade Board where we have had so very few differences of opinion we have noted that on more than one occasion one of the Appointed Members has voted on our side and two on the employers' side; so if it was simply left to the Chairman it would be far better for both sides.

8992. Then with regard to officials, you point out that the employers also have officials of their federations on the Board?—Yes, and we welcome that, because, after all, if the Trade Boards are to have any power at all they must have the people on who can conduct the business in a proper manner, and we are pleased that we have got three prominent employers on our Trade Board, because they must carry great weight with the other employers in the district.

8993. Then you refer to permits, and you say you have no difficulty. Then you say that the period for objections should be reduced to a month—that is,

after the first rate has been fixed?—That is after the first rate has been fixed.

8994. Then you say that difficulties are created by having two or more Trade Boards operating in the one workshop, and do you think that that might be met by combining some of the Boards?—Well, on our Board we are agreed that the other three Trade Boards ought to be amalgamated into one, but the employers themselves desired separate Trade Boards at the commencement, and acting on the instructions which were given by our Chairman, Mr. Jeeves, we had a meeting of the four Trade Boards in the Metal industry to try and get the employers' side and the workers' side to go back to the Trade Boards and press the Department for a scheme of amalgamation; but although the deputation from the Stamped or Pressed Metalwares Trade Board on both sides were in favour of it, there was no other Trade Board prepared to take up the matter, because I think some of the other three Trade Boards, which are smaller than the Stamped or Pressed, thought they might be submerged if they were taken into the Stamped or Pressed Metalwares Trade Board.

8995. However, you think there ought to be one. Now about scope, you have had some conflicts, have you not, with the Ministry?—Yes.

8996. And you say you are pleased that the Minister has decided that all questions of scope should be first submitted to the Trade Board before a decision is taken. That, you think, is right?—When the Trade Board was first set up, on both sides of the Trade Board the opinion was held that it was a general Trade Board—that it covered a multitude of things; but since then the Department have ruled that there are certain things it does cover, and certain things it does not cover.

8997. Then you say the only way to settle the question of definition is to deal with the process rather than the article manufactured?—Yes. We think that the only way to clear away the difficulty is to do away with the present Schedule and submit another Schedule that would give satisfaction on both sides. This is a difficulty that has been on for many months, and it has created opposition to Trade Boards on the employers' side of our Trade Board. We met the Department twelve months ago to-day in this building to try and get certain irregularities removed in the definition of the scope. We have not got that through yet, and that has been on now for more than twelve months, because correspondence was passing between the Department and ourselves before that date.

8998. That would be partly met by amalgamating the Boards, would not it?—Well, the same difficulties would exist then if the Boards were amalgamated, because some of the large shops have only got perhaps 5 or 10 per cent. of the workers under one Trade Board, and perhaps only 3 per cent. or 4 per cent. of the employees under another Trade Board, leaving the large majority of the workers outside any Trade Board; because when you take the articles that are enumerated on the list of our Trade Board you could make out another list half as big again of articles that do not come under the Trade Board and yet are part and parcel of the general stamped brass foundry of the country, and the one article is in and the other article is out, although in some instances the Department have ruled that some articles that we thought were in were out, and some articles that we thought were out were in; and in that respect we could say that we were surprised twelve months ago to-day when one of the members of the Department said that a bedstead mount came within the scope of the Trade Board. Well, there is nothing in the Trade Board definition; in our opinion, that is a similar article to a bedstead mount; but that was the ruling given, that they were in, and yet a stamped and pressed hinge was out.

8999. *Sir Arthur Pease:* Do you mean you would bring in press work done in the big engineering works, and so on? I mean, a lot of it is done by stamping and pressing now. Would you put those in?—It is really brassware that the Stamped

11 January, 1922.]

Mr. H. DAWSON.

[Continued.]

or Pressed Metalwares Trade Board applies to more than anything else; it is the small things, such as window fittings, cabinet fittings, gas fittings—anything like this would be under the Trade Board (indicating a brass ash-tray).

9000. *Lord Weir*: It is not confined to brass?—It is not confined to brass, but the bulk of it is brass.

9001. *Sir Arthur Pease*: But, for instance, a boiler of a locomotive is pressed; the firebox of a locomotive is pressed?—Yes; that would be hot stamping, and our Trade Board is cold stamping; anything of that description would be outside the Board. They give you a list—it is in my schedule which I have handed in—of all the things that come within the scope of the Trade Board, and we think it should be by process, and not by article; all things stamped up to a certain size or a certain thickness should come within the scope of the Trade Board other than specific exclusions.

9002. *Mr. Pugh*: You think that would avoid overlapping which arises from taking the article?—That is true; that would do away with a lot of overlapping, and it would save us a lot of confusion.

9003. *Lord Weir*: You believe that there should be a Trade Board for every industry, for every trade?—I think that in all trades where they are not strong enough to arrange and keep rates there should be a Trade Board set up, for it is far better to have a Trade Board than to have continual strife in any section of industry.

9004. *Dame Adelaide Anderson*: But if part of an industry were not organised, and part were well

Mr. C. V. WRIGHT,

9008. Have you anything to add?—I have a general statement which I should like to make. First of all, Mr. Dawson has been dealing with the amalgamation of four Trade Boards. Well, now, you take this as an illustration. I have got one particular firm in my mind, and I will give you the actual experience of members of my own family.

9009. You are connected with saddlery and harness furniture?—I am the General Secretary of the Harness and Saddlery Furniture Trade, and I may add that I have had 23 years' experience in these factories; I have worked both at Birmingham and Walsall; so that you will see I am not speaking without knowing something of the facts. Now, you have got four Trade Boards; you have the Button Trade Board, the Pin, Hook and Eye, the Coffin Furniture and the Stamped or Pressed Metalwares Trade Boards. Now, there are firms in Birmingham where the workers in the one shop, on the same machine, and working with the same material are interchanged on several occasions during the day, and come within the scope of all those Boards. That is our point from the Stamped or Pressed Metalwares Trade Board with regard to amalgamation. Now let us examine the Button Trade Board. In your Button Trade Board you have got workers sitting round the table, and employers, fixing prices for bone turning, pearl turning, buttons made from leather, made from metal, by the same process on the same machines that you use in the stamped or pressed metalwares trade; and also in the coffin furniture trade you have stampers, pressers, polishers, exactly the same as are covered by the Stamped or Pressed Metalwares Trade Board, sitting down making rates along with women who are employed on sewing machines. Now we suggest that the remedy is the remedy of process. For instance, in discussing the matter in this very building during last year, there was a question of scope being discussed, and I submitted two articles to Mr. Besso. One was a buckle; I said, does that come within the scope of the Stamped or Pressed Metalwares Trade Board? He said, Yes. I put another article down and said, Does that come within the scope?

9010. *Sir Arthur Pease*: What was the other article?—A bombas. I expect you will not know what that is, will you? Well, I will tell you what it is. A bombas is an ornament that is highly finished.

organised?—Well, even then it would be to the advantage of the community to set up a Trade Board in that organisation.

9005. For the whole, or for the part that was unorganised?—Well, I should say for the whole. With your permission I would like to go back now to the permits, because that was passed rather hurriedly. Now, the system which we have adopted on our Trade Board in granting permits is for one from each side of the standing committee to go and visit the firm and see the individual who has made the application for the permit.

9006. *Chairman*: That is very common on other Boards, too.—Yes; but the point I wish to emphasise is that certain employers have made a statement in front of this Committee that it is rather difficult to get permits. Now, in every case where a permit has been applied for in our Trade Board the permit has been granted.

9007. Somebody said that the process of getting the permit took time; not that it was refused.—I cannot give you the name of the member who made the statement, but he was referring to the old and infirm workers, and we contend that any employer has a right to ask for a permit of exemption if he does not think the employee is worth the rate. Then it is for the Trade Board, I take it, either to refuse or grant the permit; but in our Trade Board we have had quite a number of permits, and in the bulk of the instances, after we have seen the employer and the individual concerned, we have been able to arrange for a higher rate to be paid to the member than what was originally offered.

called and examined.

and is used in South America along the rein slides—an ornament. He said it did not come within.

9011. Sometimes cart horses have them?—No; they are only used in South America; cart horses do not have them. Now the fact was this: the girl who made the buckle made the bombas on the same machine, in the same shop and from the same material; and we say that the process should be the definition of the Stamped or Pressed Metalwares Trade. There has been the question also raised—that will apply in all these, and as far as the button trade is concerned they should be separated. The people who make, say, bone buttons, or pearl buttons, or cloth buttons, very rarely make the ordinary brass buttons which are simply stamped on a machine; they are made in a separate factory altogether; they are made in the stamped or pressed metalwares factories, and they should come within the scope of the Stamped or Pressed Metalwares Trade Board. Now, Mr. Dawson has been questioned and has been explaining about the question of skilled rates. We contend that all Trade Boards should have the right to set up skilled rates, especially from the point of view of the Stamped or Pressed Metalwares Trade Board. A skilled worker—and I am referring more to the women than anyone else—the most highly skilled of the workers in the Stamped or Pressed Metalwares Trade Board also do the most dangerous work, because it is operated by machinery, and you will find in the Birmingham district a large percentage of the women workers who are minding some part of their fingers through their occupation—through working on presses, stamps; there is the danger. There is another point about it. The work calls for a much bigger expense in the cost of clothes and boots on these skilled sections. They wear their clothes out more quickly because the machines themselves are rubbing their clothes; they have to use their feet on the presses, which wears the boots out; and that entails an extra cost to them, besides the extra skill that is required, and we contend that that necessitates a higher rate of wages than the minimum. There is also this—

9012. *Mr. Pugh*: Cannot you settle those matters with the Union?—You could not settle them with the Union, because this thing applies to women. I am going to make this statement, that there are not five per cent. of the women working in the stamped or pressed metalwares trade and allied metal trades

11 January, 1922.]

Mr. C. V. WRIGHT.

[Continued.]

similar to it that are organised; so what possible chance have you got of settling those things?

9013. *Dame Adelaide Anderson*: Have you ever tried to get protective clothing under the welfare provisions of the Act of 1916?—No, we have not.

9014. I mean, there is a possibility of getting protective clothing in industries where the workers need protection?—Well, in some sections—

9015. Protective clothing has been prescribed in some industries?—It is prescribed for dippers but not for polishers or stampers, and there are one or two other sections where it is provided. It is in the dipping section. Take jannappers: you will see a jannapper when she comes out of the factory is up to here, above the elbow (indicating), covered in japan, and it will take three-quarters of an hour to get that japan off her arms and face, and she has to wash herself in paraffin to do it. The result is that in these dirty occupations you will find that the women who are chiefly attracted to or put into these occupations are not what you might call the better class of woman; the better class of woman generally takes up the situations or the jobs that are in the warehouse, where the cleanest of the work is; and we contend that there is a bigger necessity for some extra protection for those people who are called upon to do this work, and therefore we state that skilled rates should be set up, and that the Board should have the power to set up the skilled rates.

9016. *Sir Arthur Pease*: You are not arguing on the skilled nature of the work; you are arguing because it is disagreeable?—I have put that point of view, but I should also like to put it from the other point of view as well.

9017. *Dame Adelaide Anderson*: The destruction of clothing is a necessary extra cost to the worker?—And not only that; it takes years of training and experience for these women to be able to accomplish this work. You take jannapping; they have got to have an eye for special colour.

9018. *Lord Weir*: A good jannapper will get good wages as a rule?—They do not. I can give you illustrations of jannappers who have not got 12s. a week. I can give you illustrations where they are not getting 16s. to-day.

9019. *Dame Adelaide Anderson*: Is that because they are unorganised?—Yes.

9020. *Sir Arthur Pease*: I want to be clear on this. There are two things; one is that there ought to be a minimum rate because they are skilled, and the other thing is because it is disagreeable work?—Yes.

9021. In the trade with which I am connected where the work is disagreeable—wet work, for example—there is a special rate given to everyone working in those conditions; but that is not necessarily a skilled rate; it is a rate for the disagreeable nature of the work.—Probably I may not have made myself quite clear. What I had really in mind and wanted to explain was this: that the skilled sections of the trade itself, or the dirty sections, are the sections where the more expense is called for, besides the skill. The unskilled work in this trade chiefly lies in the warehouse, and such as that—carding, boxing, packing-up. It is clean work, and there is no cost or expense as far as clothing is concerned in comparison with the other.

9022. There is no dirty work in the unskilled trades?—There may be some, but there is very, very little. Now, with regard to the rate, skilled and unskilled, in 1915, in the particular district to which I am referring now, there had been no attempt at organisation whatever. Organisation in Walsall, as far as the trade union is concerned, is of very recent growth; the men are not organised as they should be; so that as far as the women are concerned there is practically no organisation whatever in the metal industries—there is not 5 per cent.; the figure is less than 5 per cent. Well, now, in 1915 the average wage of the woman worker in the metal industry in Walsall and district, over 18 years of age, was about 10s. to 11s. per week. We tried, under the

auspices of the National Federation of Women Workers, to alter that, and probably we were somewhat at fault in the method we adopted. We approached the employers' organisation—the employers had an organisation—in order to get up an agreement, and in order to get a standard rate for the district at that particular time we were prepared to accept and sign an agreement of 12s. per week for a girl over 18 years of age. That agreement was drawn up and drafted, and when it was all ready for signing the question was raised by the employers, of whom Mr. Jackson, who has given evidence before this Committee, was chairman, as to the piece work price—as to what was fair—with the result that the agreement was held up; it was not signed. We went into the matter again. We submitted 25 per cent. as a basis of the day work, or 14s. a week. 14s. a week was agreed, and the new draft of the agreement was drawn up. Then when that was drawn up the employers again refused to sign the agreement. We had got no power to enforce them; we had not got the people; but the deplorable state of the women workers in that district was such that we were prepared to go to any extreme to which it was possible to go in order to get some advantage for them. When that second agreement was drawn up the employers said they wanted the word "skilled" introduced before the rates were given; so that the women, before they could have these rates of 12s. a week at 18 years of age—and that was the top rate—would have to prove their skill in the industry, and their experience.

9023. You say the top rate. I suppose they could earn more if they were on piece?—I have, practically, if not quite, the whole of the correspondence—

9024. *Chairman*: Surely we need not go into that. —I could leave it with you if you want it.

9025. We are not concerned with what happened in these negotiations. The Trade Board exists, and no one dreams of questioning it.—That failed. In 1917 we made another attempt.

9026. Need we go into these attempts?—We submitted these rates. I should like to go into this.

9027. What for? What are you trying to prove?—Well, it would show you the necessity for the Trade Board.

Chairman: We do not question that on this Committee.

9028. *Mr. Pugh*: Are these the present ones enforced?—No; that is the offer of the employers (handed); and you have got the pink one, which is the final settlement, and on that pink one the employers themselves insisted upon different rates being set up for skilled workers.

9029. *Lord Weir*: But, as a matter of fact, you are operating under the Trade Board rates to-day; these are all out of date, are they not?—I was only giving you that as an illustration. The Ministry of Labour have ruled that those particular operations do not come under the Trade Board on the question of scope and process. On the question of scope they are not covered; so that these people are actually working at those rates to-day, plus 25 per cent.

9030. *Mr. Pugh*: You argue that these should come under the Trade Board in view of the low rates?—Yes.

9031. *Dame Adelaide Anderson*: There is a very wide difference between a jannapper under Section 5 —?—That is jannapper 6d. an hour, is it not?

9032. Sixpence an hour as compared with a jannapper at shilling an hour.—Certainly. Now those rates have been adopted, and it proves the necessity of a Trade Board and the operation of skilled sections.

9033. *Chairman*: Is that all you wish to say?—I may be able to refer to a matter which I heard this morning—the question of home workers. I know some little bit about home workers; as a matter of fact, I have sisters-in-law who are home workers in all these sections of the trade, and the usual custom for the home workers to make up their rates is for the kiddies to be set round the table at night when they come home from school and help their mother with the work.

11 January, 1922.]

Mr. C. V. WRIGHT.

[Continued.]

9034. What is the conclusion you want to enforce upon us?—That the home worker could be given special consideration under all Trade Boards, and there ought to be inspection of home workers. You get it in the brush trade and in this.

9035. Is that all you have to say?—Unless there are any questions you wish to ask me. I may submit this to you. There is a summary of information that we made at a meeting of women in Walsall from different sections of the trade. It gives you the rates

(The Witness withdrew.)

Mr. ARCHIE HENDERSON, called and examined.

The Witness handed in the following statement as his evidence-in-chief:—

MILK DISTRIBUTIVE TRADE BOARD (ENGLAND AND WALES).

The 48-Hour Week.

The Trade Board's power of fixing the number of hours that may be worked to entitle a worker to the week's wage fixed has been questioned.

The sole value of a fixed weekly minimum wage is that it has a fixed relationship to a fixed number of hours. Any alteration in one of these primary principals renders the whole valueless.

It has been suggested, or it may be inferred from evidence already given, that there is some special difficulty in operating a week with a specified number of hours in the distributive trades.

I can understand its being thought to be difficult, but few of the difficulties are as real as they seem to be, and none are insurmountable, and upon a little examination and re-arrangement of work they are dispelled.

I deliberately choose the evidence given by an employer in the Milk Distributive Trade, as he was fairly clear in his objection, and the trade is one that apparently it would be difficult to work within a 48-hour week.

Milk is a commodity that presents peculiarity in handling.

It is highly perishable.

It should, if efficient service be given, be delivered to the actual consumer twice daily.

Its delivery necessitates a lot of detail work, as it is distributed in small quantities to many different customers.

To take these points separately:—

Milk is brought to the larger towns once a day by road or rail. Its delivery to the distributor is timed for the early morning. The early morning round is thus catered for. The earlier the second round can be delivered to the consumer, that is the sooner the milk can be used the better for all concerned. In this respect, the shorter the working day the better.

Our second point is the demand of the housewife for two deliveries of milk each day. The first delivery must be before breakfast time, and yet cannot be till after the bulk delivery from the producer. The result is that the first round begins about 5 a.m., or even 4.30, and finishes, of necessity, about 8 o'clock. To be of any use, the second delivery must be completed before mid-day. This, too, as can be seen, therefore tends to make a short day quite easy of accomplishment.

The third point is not aggravated by the short day. It is simply a factor in distribution of milk that existed before Trade Boards, and will continue to exist as long as we are wise enough to continue our family life.

Finally, when arranging our wages schedule on this Trade Board before the time limit was proposed, we were told by the employers that in fixing wages we should remember the shortness of the working day in this trade. Many employers would agree that they were working their men fixed hours almost identical with those stipulated by the Board for years before its existence.

Cost of Distribution.

This question was also mentioned in some evidence taken earlier. I gathered that there existed a fear that the rates of pay fixed by the Boards might tend

prevailing at the different works; the rates that are being paid to-day; and you will find that while these people are doing work of a similar character, the same processes carried out by several Trade Boards, simply because the article is not actually mentioned in the scope or definition of the Trade Board, they are working at these low rates. I think you have a copy.

Chairman: Yes. Thank you for your attendance.

to increase the cost of milk to consumers through them increasing the cost of distribution.

There exist no figures that I have found that will give us the actual cost of distribution of milk.

Taking, however, those of Mr. Smees, when giving evidence to this committee, we find that the men deliver 40 gallons a day on a fair round. I have deducted one-eighth from this to get a fair figure to cover scattered rounds, and so arrive at an average delivery per man.

This process brings us to 1,960 quarts per week. The wage of 57s. 6d. is consequently about a third of a penny per quart, or about 5 per cent. of the price charged to the consumer. Any slight fluctuations possibly caused by our schedules of wages can therefore have had no effect on the delivery prices. The roundsmen as a class represent by far the greatest part of the wages bill of a milk distributor, foremen, sterilizers, can-washers, shop assistants and clerks figuring in but a minor degree. I have a note made at a meeting of the Board that 7½ per cent. of the consumers' cost represents the distributor's total wages bill, but I cannot give my authority, as at the time of making the note I did not think the matter so important as it has now proved.

9036. Chairman: Mr. Henderson, you are connected with the Transport and General Workers' Union?—That is so.

9037. And you are, I think, on the Milk Distributive Trade Board?—Yes.

9038. And you come here especially to deal with two points; one is the 48-hour week?—Yes.

9039. You say, very truly, that the value of fixing a minimum wage for the week is that it has relation to a fixed number of hours?—Quite.

9040. Of course, it would be worthless unless you connected it with a number of hours; but you call attention to evidence given by an employer in the Milk Distributive trade as to the difficulty of working the 48 hours' week in that trade. Now, what do you say to that?—Well, I attempted to bring before your notice in writing roughly what was in my mind; but I would like to elaborate it.

9041. We will take this statement as part of your evidence?—Yes, as a sort of skeleton of it.

9042. So if you desire to add anything to it please do so.—As you say, it is quite obvious that the only value in fixing a minimum wage is that it has some relationship to a given number of hours, and I do not think I can improve on that. There was a suggestion, I thought, in some evidence that I read, that there were employers in the distributive trades who had a feeling that it was the nature of our trade—the nature of distribution was such that a fixed number of hours was rather difficult, and being fairly well acquainted with distribution and transport I tried to fix on the most difficult trade that I could imagine from the employers' point of view in stating definitely that I would like a specific number of hours, and it occurred to me that the distribution of milk is just the sort of trade that would appear on the surface to be the most difficult, because of its nature and the nature of the commodity itself, and the requirements of the people who consume the milk. Now, that I have tried to outline. For instance, one of the difficulties which occurred to me, and would occur to anybody, is that milk, being highly perishable, must be handled when it is available; it is not like haddock or coal, which you can keep in storage indefinitely.

11 January, 1922.]

Mr. ARCHIE HENDERSON.

[Continued.]

9043. Not haddock, surely?—Well, more or less indefinitely. I am thinking of Findon haddocks, of course. With regard to milk, its nature is such that hours make all the difference to it, and that adds to the difficulty in its distribution. Then there is the other point, that the consumer's requirements—and the main consumer from the milkman's point of view is, of course, the housewife—are such that she wants a delivery of milk twice a day to be of real service to her. Now there is no other commodity that I can think of in distribution where the actual requirements of the consumer are such that a dual delivery per day is absolutely necessary, at any rate if efficient service is given. Then the detailed amount of work introduced into the delivery of milk is such that probably there is nothing to compare with it. Coal is not delivered in the same detail as milk, and nothing appears to me to fit my case so well if I can demonstrate to you that we can fix a week even for this trade, which I hold to be the most difficult. If I can demonstrate that, I think the point I am striving to make will be established. Now I have tried to prove that even in the distribution of milk we have discovered in practice that it is possible to fix definitely the number of hours that a man can be expected to work, with the exception, perhaps, of very heavy rush seasons in a few watering-places, where the fluctuation of trade is absolutely abnormal. Take a place like Bournemouth, or Blackpool: with those exceptions—such exceptions as that—I do not think the employers have evinced any great difficulty in working to the schedule prescribed by the Trade Board, and that, roughly speaking—

9044. That has been done in practice, has it?—In actual practice.

9045. It has been found possible to do it within the limits laid down by the Trade Board?—That is so.

9046. I remember we had difficulties put to us—the early morning round, and then the long wait, and then the afternoon round?—Yes, the long wait is not so long. Customarily I am not up when the milk is delivered in the morning, but our second delivery is always before 12 or about 12 o'clock.

9047. *Lord Weir*: As a matter of fact, any difficulty connected with that was met on your Milk Board by a special allowance of an additional hour before the overtime was computed?—No; the reason for that was not quite that. The reason for it was that it was felt there was a close relationship between a milk roundsman and a man working as a road transport worker. It was felt that there was a close relationship between a man driving a milk cart and a man driving a hay cart or a meat cart, and that happened to be the condition obtaining in that trade, namely, that the first hour's overtime should be paid at ordinary rates. It was thought fair on our side of the Board that a similar privilege should be granted to the employers in this trade.

9048. It gives the employers a little more elasticity?—It does not actually, because they have to pay that overtime, but not at overtime rates. You do not get time and a quarter.

9049. They do not pay any actual overtime on the first hour?—If you were unfortunate enough to be a milkman, when you worked 49 hours in any given week you would get extra pay for the extra hour, but it would only be one-forty-eighth of your pay. There is an overtime payment made, but it is at the ordinary rate for the first hour. The reason for that, as I have stated, is that the road transport rate makes that allowance to the employers because of their request, and we thought it only fair in this trade, which is very closely allied to the road transport trade, that a similar allowance should be made. Arguing the case myself, I did not feel that we were entitled to expect that the Trade Board should give a more generous overtime than the trade which was negotiating under trade union conditions.

9050. *Mr. Pugh*: Does that apply to the man with a handcart as well?—Yes, it applies to the men with trucks and barrows.

9051. *Sir Arthur Pease*: We were informed that owing to the difficulty of varying quantities in London, an arrangement had been come to between the trade union and the milk trade which was really

outside the Trade Board. What they did there was to have a test round for a milk round and whether that round took seven or nine hours, if it was what a normal man could do, it was paid for at that rate?—There is no such arrangement made with the union. The unions concerned in this trade in London are very closely associated, and I should know of any such arrangement. I should be consulted before any such arrangement was made with the union. That a few employers may have over-ridden the power of the law and made such arrangements with their people I quite believe. If you have any such information I should be delighted to receive it and take steps accordingly.

9052. We were informed that the union knew of the arrangements here?—I should think not, because if so I would be informed and take the necessary steps to get the thing put right.

9053. I will not go so far as to say there is a signed agreement with you, but it was done in conjunction with the trade union; and it was added that the man going the round very often stopped for breakfast, or something of that sort, on the way. Having that arrangement that that was a round which ought to be done in the eight hours, or whatever the time was, they did not mind if he took nine hours if he took an hour for breakfast on the way?—You are probably more clear than I am on the legal side of that, but no mention of meal-times is made in our schedule, and if this arrangement exists we are not cognisant of it. It may have been made between employers and men. I will repeat that. I do not deny the possibility of that, but it is difficult for me to conceive that it has been made without my knowledge. I think it would have come to my knowledge. However, it may not have done.

9054. It was made for another reason. In London the milkman may be slack at the week-ends and may be more pressed in the earlier part of the week?—I should say there is no town in the country, and possibly in the world, where there is so little fluctuation as in London. The normal population of London on Sunday is practically the same as it is on Tuesday or Wednesday.

9055. I should have said in the West End?—There may be a little difference in the better-class neighbourhoods of London; but, on the other hand, that would be more than likely balanced by the fact that the better-class people would be likely to give week-end parties at their homes.

9056. They also added that the milk trade was most active in other parts of London at the week-ends?—It is possible that the housewife in the poorer parts might attempt to put a better dinner on the table and have something in the shape of a milk pudding. It is possible there is that slight fluctuation, but it would be known and it would be catered for. It would be a regular fluctuation.

9056a. *Chairman*: It was Mr. Trotman who gave us the evidence which Sir Arthur Pease refers to. Mr. Trotman said: "The matter was fully discussed with the trade union leaders and a working arrangement was come to with them, though whether it is correct or not I do not know, that any round should be tested by an average man, and if that average man could do the work within the time, that should form a sort of basis for the work." He was then asked: "Then a man might take eight or nine hours to go round, but if it has been tested by an average man he is not entitled to overtime," and he replied: "That is the position which has been taken up in consultation, I think, with the trade union." The next question was: "Outside the Trade Board?" and he replied: "I presume so, and I rather gather that that is not an infringement of the Trade Board Order, judging from the leaflet which they circulated." That is the evidence given before this Committee?—That final part suggests that it is something which has been made during the life of the Trade Board.

9057. It does rather?—I rather felt it might have been something which existed prior to the existence of the Trade Board.

11 January, 1922.]

Mr. ARCHIE HENDERSON.

[Continued.]

9058. However, you have got the authority now?—Yes.

9059. *Sir Arthur Pease*: My point with Mr. Trotman was that this arrangement was really breaking the rule of the Trade Board, although agreed to as a convenient arrangement between the representatives of the owners and the representatives of the employees?—I am wondering whether Mr. Trotman meant just what he said, with all due deference. In the course of our discussion on the Trade Board, we named all sorts of things we were prepared to do. I would say quite frankly: "I am prepared to put it to any test." If I thought my claim was just I would not hesitate, and it is possible we did in the earlier days of the Trade Board say: "If you think that we are unreasonable, put it to the test," and that is what Mr. Trotman meant to convey to you—that some such thing had been stated. I would not dispute that that is possible, but that it is a working arrangement I can absolutely refute.

9060. *Chairman*: Then your second point is as to the relation of wages to cost?—Yes.

9061. I think you put it at $7\frac{1}{2}$ per cent.—I do not know, because I cannot establish it. I do not want to make a statement that I am not in a position to prove.

9062. You have some idea that you were told it was $7\frac{1}{2}$ per cent.—Yes. I have a note in my Trade Board file that a statement was made to the effect that the cost of distribution of milk by the retailer is roughly $7\frac{1}{2}$ per cent.

9063. *Mr. Pugh*: Of the price?—Yes.

9064. *Sir Arthur Pease*: The cost of wages only or all costs?—I took it to be wages costs. I cannot imagine it can be all costs. It is too low to be all costs, I should think. I was wondering if I should say something about another question which is disturbing the minds of some of the employers, that is the question whether the Trade Board should be limited in its powers to the fixing of only one flat rate of pay, or whether our powers should be continued on the question of fixing more than one rate.

9065. *Mr. MacCallum Scott*: For the skilled men?—I would not classify them as skilled. For instance, here we have got a man in this trade, and in many trades, who is not in the lowest stratum of workers. In many trades in the distributive world the lowest stratum of worker is not the main workman. For instance, take ordinary road transport. The main worker of that trade is the actual driver of the vehicle we see on the road. The drivers are the main body of workmen, but there is a lower stratum of workmen than they, namely, the porters who load the vehicles. Now the difficulty in the way of merely confining a Trade Board to the fixing of one rate, which would be the lowest stratum of pay, would be that in many trades you would exclude from the operation of the Board the main workmen in the trade. I think it is right that I should put it before you.

9066. *Lord Weir*: It depends on the basis. If you get the Board to protect that low grade of worker then you have carried out the spirit of the Acts. There is a difference between protecting the low grade and regulating wages?—Yes and No. The tendency to-day is, in this room, meeting Government officials, fixing rates of pay, to use Trade Board rates as a guide for the purposes of comparison and for the purposes of argument. They take a Trade Board and they say: "These are the rates fixed by the Trade Board, and although the people we employ are not strictly in line with the people in this schedule, that is the nearest comparable trade." And the result of

the Trade Board rates to-day is that they are having a wonderful effect on the atmosphere of the negotiating room where trade union officials are meeting employers to fix rates of pay.

9067. *Mr. Pugh*: In other words, a rate that is fixed and sanctioned with the enforcement of the State tends to become the standard for any other trades which approach that for which it was fixed?—Yes. The employers have a right to say: "This is somewhere comparable with that Trade Board, and therefore this should be the rate."

9068. And, therefore, if the rates have to be fixed in a trade they should cover the whole of the workpeople employed?—The powers of fixing should be sufficiently elastic to meet the conditions of the trade, otherwise a Trade Board as an effective piece of machinery is going to break down. Quite frankly, I would prefer being without Trade Boards than to be in possession of a Trade Board that merely had the power of fixing the wages of the very lowest stratum in the trade, because the lowest stratum in the trade frequently is not the main bulk of the trade.

9069. *Dame Adelaide Anderson*: But is it not a worse difficulty than the numerical smallness if it does not give any clue to the main kind of worker? I mean if the work were so different from the work of the main body you would not really get a minimum?—What I have got in my mind is that in many trades there is the ordinary person who classifies himself as being engaged in that trade. We will take any trade any of us can think of. You associate with that trade a certain class of worker. Take the stamped or pressed metal worker. There are certain people whom we at once specify as being employed in that trade; but underneath them and above them there are people just as closely connected with the trade who are not so strictly classified as being in that trade—ancillary people. Now if you are going to cut out from us the power of fixing more than one rate then what rate are we going to fix? The main bulk of the trade may happen to be the middle stratum person.

9070. Would it not depend on the average degree of competence of the worker and the heaviness of the work?—No. I do not think I have been happy in the way I have tried to put my point. We will take the ordinary market trade. It is contemplated that they may come under a Trade Board. Take a market like Covent Garden. The average person that you think of in Covent Garden is the man who is handling the stuff at the stall. Underneath him there are three or four grades of different porters with varying degrees of skill. Some are capable of carrying one type of commodity and some another. Above that comes another stratum of worker—people with a certain elementary skill in calculating, who have a rudimentary knowledge of arithmetic and use that knowledge to help the salesman. Suppose you had a Market Trade Board, and that Trade Board was confined to the fixing of one rate, which strata of people are you going to choose for the fixing of that rate—the main stratum—the middle people—the people slightly better off, or the people slightly worse off who are underneath them? If you are fixing a minimum for the trade you must fix it for the lowest stratum, thereby having a tendency to bring down the middle and upper strata. If you fix the middle stratum you are going to take the under stratum up to that level, or you are going to specify that they are cut out, and so cut out from the purview of the Board the very people who should be in, that is, the people who have no chance of being organised unless they associate themselves with the main bulk.

Chairman: Thank you.

(The Witnesses withdrew.)

(Adjourned to to-morrow at 11 a.m.)

12 January, 1922.]

Professor L. T. HOBHOUSE, D.LITT., LL.D.

[Continued.]

TWENTIETH DAY.

Thursday, 12th January, 1922.

PRESENT:

THE RIGHT HON. THE VISCOUNT CAVE,
G.C.M.G. (*Chairman*).
THE RIGHT HON. LORD WEIR OF EASTWOOD.
DAME ADELAIDE M. ANDERSON, D.B.E.

MR. W. T. LAYTON, C.H., C.B.E.
MR. A. PUGH
MR. A. MACCALLUM SCOTT, M.P.
MR. H. D. HANCOCK (*Secretary*).

PROFESSOR L. T. HOBHOUSE, D.LITT., LL.D., called and examined.

The witness handed in the following statement as his evidence-in-chief:—

The Origin and Development of the Trade Board System.

Trade Boards were originally instituted by the Act of 1909, to meet the public feeling that had been aroused in connection with serious underpayment in certain industries. The method of dealing with such underpayment by the formation of a Joint Board of employers and employed in each industry affected had been devised by some of the Australian States and the system had been sufficiently successful to suggest its adoption in this country. The consequence was the passing of the first Trade Boards Act in 1909, which empowered the Board of Trade to establish a Trade Board in any trade "if they are satisfied that the rate of wages prevailing in any branch of the trade is exceptionally low as compared with that in other employments."

Three Boards were soon established under this Act, and after an interval a fourth was added. Very shortly before the war, four more Boards were added in Great Britain, making eight in all. These are the old Boards which still exist and have had a comparatively long and ample experience. The initial difficulties were considerable but two things may be said to have emerged from the experience of these Boards. The first is the effect on wages, namely that of levelling up payment in the worst sections or firms to the standard of the better, if not the best, employers. That standard might not be all that every worker could desire, but it was undoubtedly a very substantial improvement and it may be said that in these industries the more serious forms of underpayment were brought to an end. Secondly, in spite of divergencies of interests and opinions, the Boards settled down to a certain measure of co-operation. Both sides accepted the situation and made up their minds to do the best with it. Many points of contact and common interest were revealed, and this in particular that with the rate once fixed it was as much to the interest of the employers as of the workers to see that it was uniformly enforced. Rates could be paid when imposed upon every employer alike, which no individual employer could afford as long as he was exposed to the risk of being undercut by a competitor. It may be added that the apprehension which had been felt in Trade Union circles that the Boards would supersede the necessity for trade organisations and would thereby kill such germs of Trade Unionism as existed in these industries, proved to be unfounded. On the contrary some possibility of improving their conditions by collective effort arose for the workers for the first time. They realised the necessity for having skilled representatives to put their case, and the employers on their side discovered the advantages of having an organised body with which to negotiate.

In the meantime the demand of labour in general for a better standard of life had become more vocal

and force was added to this demand by the circumstances of the war—the higher rates of wages which labour, and particularly unskilled labour and women's labour, was able to command, the reiterated appeals to the patriotism of all classes, and the general feeling that if the country owed its preservation to the combined effort of all classes, it was just that all classes alike should find the country a place in which they could live a life worthy of civilised man.

As one result of this feeling, an Act for the extension of Trade Boards was passed in 1918. In this Act the Boards were no longer limited to trades in which the rates of wages were exceptionally low, but might be brought into existence where, in the opinion of the Ministry of Labour "no adequate machinery exists for the effective regulation of wages throughout the trade" and where "having regard to the rates of wages prevailing in the trade or any part of the trade, it is expedient that the principal Act should apply to that trade." It will be observed that in this paragraph two considerations are brought forward. The first is the absence of machinery for the regulation of wages, the other is the rates of wages actually prevailing. This latter consideration is very vaguely stated, but it may be taken to mean that the rates are in some respects, or in some parts of a trade, below the average of wages in general.

In the spring following the passage of the Act, when the war had come to an end, a National Industrial Council was established by the Government and the provisional Committee of that Council, consisting of employers and employed with a neutral Chairman, unanimously affirmed the principle of national minimum rates of wages. What the minimum rates should be, however, or precisely how they should be defined the Committee did not take upon itself to say. It suggested the appointment of a Commission for investigation and speedy report upon the question, and in the meanwhile urged the energetic extension of the Trade Board system. With regard to the establishment of national minimum rates, nothing has in fact been done beyond the production of a Bill on the lines suggested by the Council, which has never been pressed. But the extension of Trade Boards was pushed forward.

The first new Board under the Act of 1918 was the Tobacco Trade Board, which had its first meeting in the beginning of May, 1919, and from that time forward a series of Boards were rapidly established, until at the present time 44 Boards are in operation in Great Britain. The period that has since elapsed falls into two pretty sharply-marked divisions. For the first 18 months trade was booming, prices were advancing and labour was insistent in an endeavour to maintain the high standard of living which it had secured during the war, a demand which could only be realised by a continued increase in cash wages to keep up with the advances in the cost of living. Wholesale prices began to fall in the spring of 1920, but the cost of living still rapidly increased owing to the discrepancy between wholesale and retail prices,

12 January, 1922.]

Professor L. T. HOBBHOUSE, D.LITT., LL.D.

[Continued.]

and it was not till December, 1920, that the cost of living as indicated by the "Labour Gazette" figures, began to fall. The difficulties which had begun to make themselves felt in the early autumn of 1920, speedily increased, and in the spring of 1921, the trade boom had been definitely superseded by an exceptionally widespread and disastrous slump. It is this change which has brought about a reaction against Trade Boards, as against every agency designed to maintain the standard of living. It is perhaps already forgotten that in the first portion of this period the Boards acted as a moderating agency. By giving the workers confidence that advances would be secured in relation to the increase of prices, they did much for the preservation of industrial peace, and if there was frequent disappointment with the immediate results there was some compensation in the belief that the standard gained would rest under the security of the law.

Whatever may have been the effect of wages in other industries, of the Trade Board industries it would be generally true to say that advances in wages did not precede but followed the figures of the cost of living* in their upward course, and that workers had to exercise patience during the waiting period which the operation of the Act involves. Similarly, Trade Board rates lag behind the cost of living in its declension.† It is doubtless desirable to speed up the machinery of adjustment, and for this purpose legislative as well as administrative changes will be required. To these I shall return. For the moment I wish only to mention the "lag" in adjustment as one cause of complaint which is removable and does not touch the essence of the system. I would, however, point out another lag which embarrasses any method of wage adjustment, i.e., the slowness and the inaccuracy with which retail prices adjust themselves to wholesale. During the summer of 1920, while wholesale prices were falling in a manner which betokened a coming trade slump, cost of living was still rising. In consequence the function of the Boards about the time became very difficult. A proposal for an increase might be put out in June or July perhaps with the assent of the employers. It would come up for fixing perhaps in September or October, when employers were already apprehensive of bad times, while the workers could point to even higher figures of cost from those to which they had appealed when the proposal was made. It is not surprising that some of the rates when fixed should have required subsequent revision. What is more remarkable is that a new mechanism should have stood the strain of so sudden and so awkward a change as well as on the whole it has done.

Experience in connection with Old and New Boards.

My own connection with the Trade Boards began about the time of the passing of the second Act. Mr. Aves had been Chairman of all the Boards under the Act of 1909, and his position had served to give some unity to their administration. On his death the Ministry of Labour decided on a modification of the system and appointed several chairmen, professional men who were able to find time for a piece of public work. I was appointed to the Paper Box and Tin Box Boards, and held my first meetings in July, 1918. These were Boards with a well-established tradition, each side being organised with its chairman and secretary, and with a well-understood method of informal negotiation as well as formal discussion. In the spring of 1919 the new Boards began to come rapidly into being. I was appointed to the first of these, the Tobacco Board, and I subsequently became Chairman, in succession, of the Boot and Shoe Repairing Board, the Paper

Bag Board, the Dressmaking and Women's Light Clothing Board (England and Wales), the Hat, Cap and Millinery Board (England and Wales), the Rope, Twine and Net Board and the Wholesale Mantle and Costume Board. During the summer of 1920, I felt the work to be far too heavy and decided that I must resign several of the Boards. I was, however, asked by the Ministry to undertake the new Grocery and Provisions Board (England and Wales) and agreed to do so on resigning in compensation four Boards which appeared to have come into smooth waters, namely, the Paper Bag, Tin Box, Wholesale Mantle, and Boot and Shoe Repairing Boards. The remaining six I retained until December, 1921, when my term as Chairman of the Rope, Twine and Net Board came to an end. I may remark here that the Chairmanship of five or six Boards is, for a permanency, impossible. A man who has to make his living by a profession cannot attend to more than two or three Boards unless they are exceptionally easy. However, I have thus been connected with ten Boards and have, so to say, presided at the birth of eight, including two or three of the largest and most complex. In particular, the Grocery Board, the Dressmaking Board, the Boot and Shoe Repairing Board represent thousands and even tens of thousands of little businesses all over the country, while the first two represent a number of great concerns. It is needless to dwell on the complexity of the problem in such cases.

On a new Board everything has to be built up from the foundation. Few, if any, of the members had any previous experience of Trade Board methods or had definite knowledge of the legal powers of the Boards, or even a clear apprehension of the difference between a legal minimum and a trade agreement. On the employers' side men were frequently in the position of meeting to co-operate for the first time, and they had to begin by choosing their leaders and spokesmen. On the workers' side there were generally trade union leaders accustomed to stating a case, but there would be two or three unions in evidence holding different views and representing divergent interests. It was not always easy for the sides to agree among themselves and frequent applications had to be made for permission to retire "for a few minutes" which were apt to extend to more than a few. The appointed members were also, as a rule, strangers to each other. Where members of the old Boards appeared on either side matters settled down far more easily. Notwithstanding the lack of any recognised standard it was possible in several cases to arrive at a basic minimum time-rate at the first meeting, either by agreement or by the approximation of the sides to a point at which the appointed members felt themselves able to decide between them.

The Determination of the Rates.

This brings us to the central question of the principles and methods by which minimum rates are fixed. To begin with methods, it may first be observed that there are three possible ways in which a rate may come to be adopted—proposed or fixed as the case may be. The first is by agreement between the sides. This, in my experience, is the normal method in the case of skilled workers. The second is by the adherence of the appointed members to one side or the other. The third is by the abstention of the whole or a part of one side from voting, or the voting of some members of one side with the other. This is rare, but has occurred.

In no case are the appointed members arbitrators. They are simply members of the Board each with one vote like the rest. It is true, that in the frequent case in which the two sides are solid and opposed the appointed members have a casting vote, but even so they are not arbitrators. They cannot issue an award at which they have arrived independently after hearing the evidence. They are limited to a choice and it may be a choice between two rates of which neither completely satisfies them. In the concrete, the employers, say, propound a minimum rate for women of 7½d. per hour. The workers propose 9d. The appointed members think it ought to be 8d. But they cannot, like arbitrators, award 8d. They must either choose between 7½d. and 9d. or decline to vote. In

* It may be that in particular Trade Board industries the rise of wages increased cost of production. But the rise of wages in these industries followed at an interval on the increased cost of living.

† It is, however, to be remarked that employers frequently agree to anticipate the legal establishment of the rates by the action of their organisations, while it is not open to them now that wages are declining to anticipate in the same way.

12 January, 1922.]

Professor L. T. HOBBHOUSE, D.LITT., LL.D.

[Continued.]

practice they choose the latter course, until one side or other modifies its proposal. If driven to it they propound rates which they think reasonable. In the case in point, they would propound their 8d. as a basis for discussion with each side alternately. In general, several rates are under consideration at the same time, junior rates, men's and women's rates, piece-work basis rates, skilled rates, questions of definition, of overtime, even of the date at which the rate should begin to operate, and out of these emerges a scale which the appointed members and one side if not both can accept. The discussion reveals to the appointed members the points to which each side attaches the most serious importance, and these they endeavour to preserve while persuading them to throw over the essential, and maintaining as far as they can the points which they in turn consider most valuable. It is, however, always possible that a deadlock should ensue, and the meeting has to be adjourned without result. It will be seen that the appointed members are neither free arbitrators nor pure conciliators. Their function may most aptly be described as that of conciliators with a casting vote. But even this is not quite accurate. If the two sides agree, not by the persuasion of the conciliators but of their own will, the appointed members have no power to stay them, and it is possible, and in my experience has occurred, that they agree on something on which the appointed members are at least doubtful. In that case it is difficult for the appointed members even to criticise, as they will appear to be more royalist than the king or more democratic than the Jacobins, as the case may be. They can intervene with any effect only if they can urge that some resolution would be contrary to the public interest or would involve the Board in conflict with the Ministry. All such cases are very exceptional, but are worth noting as bearing upon the position of the appointed members. Again, it has, in my experience, occurred that one or more members of one side have voted with the other. If there are three appointed and, say, two employers transfer their vote, the appointed members are outvoted. It is, however, unlikely that there should be any such cross-voting unless the case for the side which gains the votes is strong enough to have already secured the vote of the appointed members. On one occasion a whole section of the employers voted with the workers and a prolonged controversy arose between two sections of employers. Finally, in one or two important instances the employers, having supported a proposal, have, in the interval between proposing and fixing, become impressed with the objections to it and have declined to vote. In such a case, whatever the appointed members do, the rate is carried by the workers' vote alone. All such cases are exceptional, but they are occasionally embarrassing and necessitate a qualification in my previous description of the function of the appointed members. They act as conciliators with a casting vote if the two sides are solid and opposed.

From methods I turn to principles. The Trade Board Acts afford no direct guidance to the Boards. But the difference noted above between the Acts of 1909 and 1918, with regard to the grounds upon which a Board may be established has a significance. In the first Act it is a matter of common knowledge that what is popularly called "sweating" was in question. In the second Act, besides "sweating" there was a question of the regulation of wages in cases where trade organisation was not strong enough to stand on its own feet, and it was contemplated by many that industries would be divided into two classes, the one governed by Trade Boards and the other by Joint Industrial Councils. Behind this was the hope of a further evolution by which the Trade Boards might be converted into "Whitley Councils," or some higher form might come into being which should combine the virtues of both methods.

In any case, since 1918, we find a double motive in the Trade Board system—the prevention of underpayment and the adjustment of wages and hours with a view to peace, good feeling and mutual co-operation. It will be shown that in Trade Board practice these

two objects have led in practice to different methods of settlement.

I will take first the question of underpayment. Underpayment has two meanings, the one relative and the other absolute. There is relative underpayment when a particular worker or section of workers is receiving less than a rate generally recognised as appropriate to the class of work. Employers, like other human beings, differ individually. Some are more, some less, liberal. Some aim at high organisation with efficient and willing workers at good pay. Others with less organising capacity place more dependence on a supply of cheap labour. In this sense underpayment may occur at any grade. Many professional men who are better acquainted with the art of doing a thing than with the art of getting paid for it suffer from this relative underpayment. So I am certain do many clerks. So may any one in an industry which is not sufficiently organised to have secured certain basic rates. What the rate is to be in such cases can only be determined, in accordance with the definition, by general practice of the trade. But the desire that once ascertained it should be made universal and compulsory is very intelligible. It is a protection at once to the "fair" employer and to that worker whose weakness is not in his industrial, commercial or professional capacity, but essentially in his bargaining power. From the nature of the case, however, the question what is the fair rate is a technical question. It must be determined by those engaged in the vocation itself.

Underpayment has a more absolute sense when it is so serious as to make no adequate provision for the physical necessities of the worker. Here we come to a question upon which an outsider is as well entitled to an opinion as any one concerned in a trade, a question of great importance to the community. Underpayment in this form is a menace to health, vigour and civilisation. Now the reasons why remuneration is inadequate in this serious degree may be personal to the worker or they may proceed from the operation of the economic system. In the first case, where the worker through physical or mental defect is unable to yield the "fair day's work" that corresponds to the "fair day's wage" special provision has to be made. It is primarily a matter of charity and perhaps of discipline. What concerns good economic organisation is that every industrial function should carry reward sufficient for the maintenance of a decent civilised existence. Such a system cannot be secured by any wage regulation alone. It involves general education and special training, it involves the fiscal system, it involves, in general terms, economic organisation devoted to such an end and not to incompatible ends. The peculiar function of the Trade Board in the matter is to secure, as far as it is in its power, that no general rate recognised for any process required in industry should fall below the standard indicated.

This standard must be sufficient to provide not only for workers but their dependants. There are those who argue that this part of the problem can only be solved by direct State provision for children and for maternity. We have to take things as they are and taking things as they are we find that while some needs, for example, the important and expensive need of education—are provided by the State, in the main, provision for the family is still left to the worker, and since while the children are young maternity is in itself a sufficiently exhausting function it follows that unless the adult male worker's wage is sufficient to maintain it the family will be ill provided for. Before discussing how this consideration will affect men a word is required as to its bearing on women's rates. Against the whole conception of a family wage it is urged that if women are regarded as heads of families their rate would be unduly high since relatively few women workers are responsible for a family. On the other hand, if women are taken as separate individuals responsible only for themselves, their wages would be unduly low as compared with those of men and the position of women who have dependants would be untenable. On this it may be remarked first of all, that for permanent and general application in industry it is impossible to have more than one scale of values. Whatever determines the

12 January, 1922.]

Professor L. T. HOBHOUSE, D.Litt., LL.D.

[Continued.]

minimum for one class of worker will be found to determine, in the long run, the minimum for all classes of workers who can in any way enter into competition with one another. Otherwise there would be undercutting. Supposing men's wages, that is to say, to be fixed at a certain point, the wages of women must follow suit. If, considering their value to the employer, the women were overpaid relatively to the men, they would be displaced by male labour, and if underpaid relatively to the men they would displace male labour. This would happen speedily where men and women are in competition for employment of the same kind. It would happen less speedily, but not less surely, where they performed different processes, by a gradual substitution of one process for another or even by the handicapping of one trade to the advantage of another. It is clear then, there could not be two different bases of permanent or general application. It is accordingly open to us to discuss the suitable basis for men without fear of doing injustice thereby to women.

Since the responsibility for maintaining a family falls ordinarily upon men it is clear that if it does not take the needs of a family into account, the minimum will be insufficient, but it is also clear that the needs of the family vary greatly with its number and the ages of its members. It has been shown that with the poorer classes of workers it frequently happens that the wages actually received are sufficient to support a wife and one child, but when the second, third and fourth children are born, the family falls below the reasonable minimum of subsistence, and thus is pinched and dependent on outside help until the time comes when the children begin to earn. In this way it has been shown by Professor Bowley that the proportion of working class families that pass through what we may call the period of submergence is much greater than the proportion who are in that condition at any given time. It must be confessed that wage regulation alone cannot fully meet the problem arising from variations in the size of families. In discussions of the basic wage the family of five has generally been taken as the standard, (1) because three children per family are requisite to replenish the population with a moderate rate of increase, and (2) because a wage suited to such a family would at least provide an approximation to a minimum which would be generally applicable. But to meet the needs of larger families, as well as all misfortunes, illnesses, and periods of unemployment, other measures will doubtless be found necessary. What these measures are does not lie within the limits of the present enquiry to determine. I refer to the matter only because I would avoid the misleading impression that Trade Boards alone suffice to solve the entire problem of securing a material sufficiency for all classes of workers. In fact, as will presently appear, it has not yet proved possible, even in time of good trade, to secure for all workers the standard calculated by experts on the basis of the "statistical" family. Families of four or five children, which are very numerous, are obviously at a still greater disadvantage.*

How is the standard to be reduced to figures? In February, 1920, Professor Bowley gave evidence in the Transport Workers Enquiry. His estimate, which was accepted by the employers, rested on a basis which he had worked out very carefully for himself, independently of the "Labour Gazette's" estimate of changes in the cost of living. It required for the dockers 73s. 6d. at prices then current and made an extra allowance of 3s. 6d. for the London dockers bringing him to 77s. This standard was suggested for

a man doing medium hard work, and allowed meat on a scale which might not be necessary for lighter workers. Some deductions would have to be made on this account in order to arrive at a corresponding minimum in the case of work involving no special exertion.

In "The Human Needs of Labour" published in 1918, Mr. Seeborn Rowntree estimated the minimum budget for a family of five at 35s. 3d. on the basis of the prices of July, 1914. This figure was intended to yield a fairly comfortable living of the simple kind that we should all desire to see universal but not one which Mr. Rowntree expected to be realised in the immediate future. He had earlier arrived at a "poverty-line" representing the very barest needs for human subsistence the figure for which on the same scale of prices was 26s. By the courtesy of Mr. Stuart, Mr. Rowntree's secretary, I am able to give the corresponding figures for February, 1920, which afford a useful comparison with Professor Bowley's figure, for December, 1920, when the "Labour Gazette" figures were at the maximum, and for December, 1921:—

	July, 1914.	Feb., 1920.	Dec., 1920.	Dec., 1921.
	s. d.	s. d.	s. d.	s. d.
Poverty Line ...	26 0	56 4	67 7	54 1
Human Needs	35 3	76 0	90 0	71 5

It will be seen that the movement of these figures corresponds roughly to those of the "Labour Gazette" Index though the movement is a trifle slower. It will be seen further, that Mr. Rowntree's higher figure is intermediate between Professor Bowley's figure for the country in general and for London. Considering that these two figures have been independently arrived at by two experts who have given the closest attention to the facts we are on pretty sure ground in taking a wage of 73s. to 76s. as providing a reasonably good basis of life in February, 1920. Between this and Mr. Rowntree's Poverty Line figure for the same month there is a margin of almost twenty shillings, but this figure confessedly did not provide a standard to which we should wish to see any class of industrious workers reduced if we could avoid it. If the upper figure represents rather more than we can expect to secure the lower represents something that is less than satisfactory. By dispensing with the special allowances for food in Professor Bowley's estimate I arrive at a scale of 65s. as a minimum for work involving no special exertion in February, 1920.† This is roughly half-way between the higher and lower Rowntree figures and is suggested here as a standard with which it may be useful to compare the actual rates fixed by the Boards. A rate in that neighbourhood could certainly not be deemed excessive while a rate of 56s. or less would be decidedly low and a rate rising to 70s. or upwards would be liberal.

In February, 1920, the "Labour Gazette" index number stood at 130. All the figures that I have given would vary in a rough but not exact relation to the variations in this number. The great majority of rates in the table which I append would have been proposed or fixed at a time when the index figure was moving between 120 and 150. In a few cases in 1920, it would have been above that limit while it is not until the last two or three months that it has fallen sensibly below. We cannot here speak with any exactitude, but during the period mentioned, Mr. Rowntree's lower figure would roughly move between 54s. and 61s., the upper figure between 72s. 6d. and 82s. 6d., and the intermediate figure between 62s. and 70s. 6d. Thus, the figure of 65s. may stand as a reasonable medium with which to compare rates fixed during this period, that is to say, all rates ruling till the present time or until quite recently when the cost of living has fallen more substantially.

For women Professor Bowley gave no estimate but in "The Human Needs of Labour" Mr. Rowntree gave a reasoned standard on the assumption that the worker had to maintain herself and no one else. I have again to thank Mr. Stuart for supplying me

* As to the alleged 'waste' involved in the "family wage," it may be pointed out that what will just barely suffice for a married couple with three children provides but a tiny margin for two children or one child, a margin which it is eminently desirable that the household should enjoy. A childless couple will be somewhat better off and a bachelor will have a modest margin,—not so great as it appears because he has to pay in one way or another for the house-keeping services which a wife performs gratuitously. A young man in this position can get a little ahead of the world and provide for the responsibility of marriage. When the worst is said the margin of the very modest rate above the bachelor's requirements is not extravagant.

† It should be said that Professor Bowley is not to be held responsible for this figure.

12 January, 1922.]

Professor L. T. HOBRHOUSE, D.LITT., LL.D.

[Continued.]

with the corresponding figures for the dates above mentioned. They are as follows:—

	Women.
July, 1914	30s.
February, 1920	40s.*
December, 1920	43s.
December, 1921	39s.

It will be observed that the variations in the case of women are decidedly less than those of the "Labour Gazette" index.

Mr. Rowntree gives no poverty line for women and the above figures are to be compared with the higher figures for men entered above. Any medium figure can only be conjectural. On the last three figures the deduction might be anything from 4 or 5 to 7 or 8 shillings. This would suggest 33s. to 35s. as a medium for the period in question, falling now to 32s. or possibly 31s. For reasons given above I do not regard this method of determining women's rates as adequate. Male and female rates must, in the long run, be proportioned to the respective value of male and female labour. But this much must be granted that the female rate ought not to fall below Mr. Rowntree's basis, i.e., the minimum required by a woman living alone to maintain herself, and if this is more than she would get by proportioning her wages to those of men then either her minimum becomes the basis and the men's rate must be raised or the exclusion of women from the particular industry must be faced. As a fact, in fixing women's wages Trade Boards have both considerations in mind. The argument that if a certain rate is fixed women will replace men or be replaced by them, as the case may be, is frequently heard. The argument that a certain wage is not sufficient to maintain a woman by herself is no less frequent. The truth is that through stress of economic circumstances, the male rate, though based on family requirements, is often fixed so low that when the women's rate is proportioned to it, it threatens to fall below the level of her personal requirements. The figures given below will illustrate the point.

A review of the rates actually fixed by the Boards will show that in general it has been possible to keep the male rates up to or a little above the poverty line but rarely, even in the boom period, to reach what I have taken as the medium point for the less skilled workers. On the other hand, highly skilled and experienced workers have had rates which in several cases exceed the most liberal interpretation of the minimum. To make this clear I have ventured to draw up a table† of the rates in operation between August, 1920 and 1st December, 1921. The first column shows the general minimum time rates applicable to all male workers not graded for any special reason. Such grading is determined in accordance with occupation, skill or experience, and in one or two cases area, or on the basis of all these criteria combined. For example, in the tailoring trade a measure cutter has one rate, a cutter of five years' experience another, a cutter of less than five years' experience a third. All such rates, where they exceed 65s. are noted in column 5. In general the grading clearly applies to selected classes of more or less skilled workers while there is a general minimum time rate applying to all other workers, but there are cases in which the classes are so numerous that it looks as if the lowest rates were the exception rather than the rule. I have no positive information to decide this point but to avoid giving a misleading impression I have formed a separate column headed "Lowest Rates," and have placed in it those lowest minimum time rates for adult workers which as far as I can judge apply only to a small section, leaving in my first column those which I take to apply to the bulk of the workers. I have, however, included in this column rates which are reached by every adult

after some years of experience subsequent to the age of 21.

Columns 3 and 4 show rates for adult female workers distinguished on the same principle. In column 5 as stated all rates for adult males above 65s. in August, 1920, are entered and in column 6 all rates for adult females above 35s. Later variations on these rates are subjoined. Where general minimum or lower rates exceed 65s. or 35s. they are repeated in columns 5 or 6. Rates per hour are multiplied by 48 if the weekly rate is not given. The first rates given under each head are those in operation in August, 1920. Later rates with the dates at which they came into operation are subjoined.

The first thing that strikes the eye in these tables is that of the minimum rates applicable to adult males. Generally only six exceed 65s. at any time. One of these (65s.) appears to be in a relatively skilled section of the chain-making trade, another is one section of the coffin furniture making trade where the rate for adults with five years' experience was fixed at 69s. 6d. in December, 1920, but reduced owing, as I am informed, to a depression in the coffin making business (through an exceedingly fine season which reduced demand) to 66s. in September, 1921. The third is the cotton waste reclamation trade (Great Britain) which was 66s. and has been reduced to 60s. The fourth is the perambulator trade where the minimum is 68s. The fifth is the retail tailoring trade where, after some years' experience, the minimum is 76s. and the sixth is the stamped metal trade where the minimum is 66s. In general the rates range between 54s. and 60s. Turning to the lowest rates we see the figures of 47s. (raised subsequently) in the coffin furniture trade, 43s. 9d. in the recently fixed rate in the jute trade and an abnormal rate of 26s. for outworkers of the pin, hook and eye trade, a case in which the men were not differentiated from the women who are the bulk of the workers concerned and for whom the rate was not doubt primarily designed.

A second point that emerges is that the predominant rates for women are from about 32s. to 36s., though they run down to 28s. in one or two cases—and even to 26s. in one case since the fall in the cost of living—and rise here and there to 40s. and even to 45s. in the boot and shoe repairing trade.

Are these figures determined in the main by relation to the male rates or by consideration of the requirements of the independent woman worker? To throw light on this question, I have compared the rates of column 1 with those of column 2, and those of column 3 with column 4, putting all high rates out of the question. I have then 60 fairly comparable pairs (including more than one determination by the same Board in several cases), and I get the following comparisons. The ratio of the female to the male minimum averages 57·2 per cent. and out of 60 pairs 46 lie between the ratios of 53 per cent. and 65 per cent. Only 2 are below 50 per cent., there are 7 between 65 and 70 per cent., and 2 of 100 per cent. These last are successive determinations of the same Board for a class of workers in which men, I understand, rarely occur. It would appear that where the unskilled labour of men and women is concerned the ratio tends to be uniform. If, further, we take the 11 male rates above 60s. we find that the ratio of the corresponding women's rates averages 55·4 per cent., which is below the general average, while if we take the 16 male rates below 55s. the ratio averages 64·3 per cent. The difference is material, and may be explained either by supposing that the higher male rates allow for some degree of skill, or that at the lower levels the "limiting consideration" of the woman's "personal" minimum came more consciously into play. While the index figure stood at 120 or more, Boards were reluctant to fix a women's rate below 34s., and still more reluctant below 32s. Even at the present time (December, 1921), 32s. would seem a fairly modest figure in view of what is said above, while at the peak of the curve it could hardly be below 36s. In general the rates will be found to range

* This is the best figure available, but, not as I understand, calculated so closely as the others.

† In preparation of the table I have had the kind assistance of Miss Sells.

12 January, 1922.]

Professor L. T. HOBBHOUSE, D.LITT., LL.D.

[Continued.]

between 32s. and 36s., and would, as far as one can form an estimate, be above the bare subsistence standard for the single women. They lie in the region of what I have tentatively taken as a medium standard, while many of the men's rates hardly reach such a standard. The reason is, I think, that the Boards are influenced by the relation of female to male rates as well as by the requirements of the independent woman worker. It must be added that to secure this standard the increase in women's wages was in general materially greater than the increase in men's wages. Rates for more skilled women will be found in the neighbourhood of 40s. or even 43s. and 45s., rarely above. These would yield Mr. Rowntree's more liberal standard, and in one or two cases leave a margin above it.

Whatever the method of arriving at women's rates, we find in the result that a medium standard for the independent worker has generally been approached, and probably in a large number of cases attained. In a very few cases the general minima have touched the more liberal standard, which is also reached by some of the skilled rates, but seldom passed even by them to any considerable distance.

The third point that will occur is that the majority of the Boards have fixed higher rates for special grades of workers differentiated primarily by their occupation, secondly by length of experience, and thirdly by skill. Doubtless the differentiation by occupation is really a differentiation by skill, but in some cases skill is directly referred to, e.g., in the definition of a fully qualified worker under the Dressmaking Board the fact that the worker makes up the garment without supervision is the essential point, distinguishing her from a merely "qualified" worker who makes up the entire garment under supervision. These higher rates, it will be seen, in general, range in the case of men from 68s. to 84s. A good proportion would be within the limit of the more liberal minimum rate above laid down, others would exceed it by three or four shillings, while others again would exceed it by 10 to 15 per cent. But in several Boards there are one or two grades running up to 96s., and even in one case to 107s. I find nine cases in all of one rate or another, at one time or another, in excess of 90s. In such cases we may take it that the Boards are not concerned with the consideration of the minimum living wage in its ordinary sense, but rather with what they conceive to be a fair return for skilled work.

Turning next to the women's rates we find ten general minimum rates at one time or another rising above 36s. a week. For work ordinarily done by men, the Boot and Shoe Repairing Trade Board fixed the same rates for men and women, viz., 65s. a week, but for patching, which is mainly done by women, they fixed 45s. The Corset Board had a rate of 39s. in November, 1920, which is now reduced to 34s. The Cottow Waste Board (England and Wales) had 37s. also reduced to 34s. The Paper Bag Board and for a while the Paper Box Board have had 37s., the Retail Tailoring 37s., the Ready-Made Tailoring 37s., and later 40s., the Tobacco Board 38s. 6d., and the Wholesale Mantle and Costume Board 40s. for a few months in this year, which fell to 34s. on a sliding scale agreement. Finally, the Milk Distributive Board has a rate of 40s. in the London area. The great majority of the rates range from 32s. to 36s. In the Coffin Furniture trade the lowest rate is 27s. 6d., in the Jute trade it is 28s., in the Pin, Hook and Eye trade it is 26s. for outworkers. Higher rates for skilled workers have also been fixed generally in the neighbourhood of 40s. or a little more, but occasionally running up much higher. Thus, in the Boot and Shoe trade the female minimum being the same as the male runs up to 96s., at least nominally. The Fur trade has one rate as high as 80s., the Milk Distributive Board reaches 52s. 6d. in one area and the Jute Board 61s. 4d. in one grade (since reduced to 52s. 6d.). The Perambulator Board for a time had 52s. for experienced workers in one grade.

In order to discover by what method these higher rates were fixed, I have gone through the Minutes of the Boards with which I have myself been connected; I have taken the limit of 72s. in the case of men and 40s. in the case of women and have examined the voting both on the proposal and the fixing of all rates above these figures. I find that in the Boot and Shoe Board all the rates in question were moved by the leaders of one side, seconded by the leaders of the other, and unanimously agreed. (In addition a rate of 80s. for foremen and managers was proposed by the Board but not confirmed by the Ministry. On fixing, certain amendments to the definition were rejected by 11 to 10, the majority being due to the appointed members and the substantive motion was carried by 11 to 7, therefore independently of the appointed members' vote.) In the Dressmaking Board the rate of 76s. for male cutters and 43s. for fully qualified female workers was proposed by the employers, seconded by the workers and agreed. When the Boards came to fix these rates the employers entertained some doubts and they abstained from voting, and the rates were carried without opposition. In such a case the appointed members, as their number is only three, whatever their opinions may be, had no power to affect the decision. In the Hat, Cap and Millinery Board rates ranging from 76s. to 84s. were proposed by the employers, seconded by the workers and agreed. Four objections were sent in from the trade and on the motion to fix the employers intimated that they supported the rates which were moved by the workers and agreed *nemine contradicente*. In the Paper Bag trade rates between 72s. and 82s. were proposed and fixed by agreement. In the Paper Box Trade a rate of 76s. 6d. was moved by the employers, seconded by the workers and agreed. In the Tin Box trade 68s. was moved by the employers, seconded by the workers and agreed. In the Rope, Twine and Net Board various rates for skilled male workers between 72s. and 82s. were agreed both in proposal and in fixing. The case of the women rope-makers under this Board was peculiar. A rate of 42s. was fixed for four months only, in order to prolong for that period the wages enjoyed by those workers under the Wages Temporary Regulation Act. The object was to discuss what rate was suitable for these workers and get it established without first bringing their wages down to the general minimum applicable to the rest of the trade. This proposal, which was a compromise, was at first supported by all the employers except their Chairman. When it came up for fixing six objections by the trade were received. The employers intimated that they were now opposed to the rate but abstained from voting, and it was carried by the vote of the workers without opposition. The Ministry of Labour, after some delay, requested the Board to reconsider the matter and the rate was then reaffirmed by the vote of the workers and of the appointed members, the employers abstaining. After three months' delay the Ministry decided to confirm the rate which they ran for four months and came to an end in seven months instead of four, as originally proposed after the termination of the Wages (Temporary Regulation) Act. In the Wholesale Mantle and Costume Board rates for skilled workers ranging from 68s. to 96s. were moved by one side and seconded by the other and agreed, and their subsequent reduction to 67s. and 84s. was I believe similarly agreed. I may add to these the proposals of the Grocery Board which were referred back by the Ministry of Labour and did not come into operation. The only male rate exceeding 72s. was that for clerks in the London area which was adopted after an amendment had been moved by the employers eliminating cash desk workers and carried by the votes of the appointed members against the votes of the workers. The rates for female porters and assistants, ranging in some cases from 41s. to 48s. were agreed. In the new proposal substituted for that which the Ministry had disallowed, female assistants in the London area

12 January, 1922.]

Professor L. T. HOBBHOUSE, D.LITT., LL.D.

[Continued.]

obtained 41s. This was originally agreed by the employers, but on fixing, the employers moved to omit it along with all rates for females above 22, and were defeated by the votes of the appointed members and the workers.

From this review it will be seen that on ten Boards there has been no case in which a male rate of 72s. and upwards has been carried by the vote of the appointed members against the employers. The only case in which the appointed members' vote has decided such a rate was that of the Grocery Clerks in which they decided against the workers. Of women's rates above 40s. there are two cases in which the appointed members voted on fixing a rate the employers had agreed to propose but declined to fix. If these ten Boards may be taken as typical, it is the predominant practice of the Boards to leave higher rates to be fixed by agreement.

I do not for a moment ask whether this is right or wrong. It must be borne in mind that the experts who have suggested the minima considered above have never put them forward as standard wages. They are basic minima below which, if economic circumstances permit, none should fall, but above which any may rise. Further, considering the wide margin of uncertainty in determining the basis, the local inequalities in the cost of living and the wide variations in family circumstances, it is socially desirable that where industry can bear it the more liberal interpretation of the minimum should be applied, and exceeded in cases where extra exertion or some degree of skill is involved. So far therefore as higher rates have been fixed without injury to a trade good has been done. On the other hand appointed members cannot pretend to judge of degrees of skill or measure their relative value. Hence, though in the course of the discussion they may form a view, they are chary of enforcing it, and the more so the higher the rate contended for. I fully admit that the record of votes does not tell the whole story, since pressure is brought to bear in negotiation. But pressure is applied to both sides and where higher rates are concerned is more likely to be directed towards the completion of an agreement which the two sides seem at bottom to desire than to the enforcement of a rate to which the employers are definitely averse. The chief exceptions to this rule, I think, would be cases in which the action of the employers at one stage or other of the negotiations has given the appointed members what they deem a sufficient ground for a decision.

With regard to minimum rates, and generally rates falling below or within the limits indicated above, the position of the appointed members is different. Here they have the cost of living to consider and undoubtedly they desire to secure what they deem an adequate living rate for all workers and are only deterred from doing so by strong evidence that the trade cannot bear such a rate. To such evidence, however, close attention is given and the suggestion which is occasionally made that appointed members habitually impose the employers' argument, and in substance impose rates automatically upon the trade, is not borne out by the facts. To test this point I have gone through the Minutes of four Boards whose decisions have been in special the subject of public or private discussion.

I take first the Grocery and Provisions Board. The first proposal of the workers on this Board was:—

	Male.	Female.
Clerks (21)	90s.	90s.
Assistants, Warehousemen (21)	90s.	72s.
Porters (21)	85s.	70s.

These rates were to be of national application. The first proposal of the employers was for three rates:—

- A. Rural District Council areas, except towns or villages in such areas of more than 10,000 inhabitants.
- B. All the country except A and C.
- C. The London area (viz., City of London and Metropolitan Police Area, except areas under Rural District Council).

I confine myself to the male rates in each case and to two ages, observing that the employers proposed to run the rates up to the age of 26.

	A.	B.	C.
Porters at 21	40s.	45s.	50s.
Porters at 26	50s.	55s.	60s.
Counter assistants and clerks at 21	45s.	50s.	55s.
Counter assistants and clerks at 26	55s.	60s.	65s.

On a second proposal the workers materially reduced their demands and the employers improved their offer by proposing the higher rates above-mentioned at the age of 21. These proposals were before the appointed members in August, 1920, when the cost of living was very high and still rising. They declined to vote for either side and a further meeting took place at which, after fruitless direct negotiations between the two sides, the appointed members themselves put forward a scale which, with minor modifications, was eventually accepted by the employers. As modified the scale had three areas, as in the original scheme of the employers, but the lowest area was limited to the rural districts and towns or urban districts of not more than 5,000 inhabitants. Taking only the ages of 21 and the highest age in each case the scale was as follows:—

	A.	B.	C.
Porters (21)	52s.	55s.	57s.
Porters (24)	55s.	61s.	63s.
Assistants (21)	54s.	60s.	62s.
Assistants (25)	58s.	68s.	70s.

This scale was moved by the employers and carried by them with the vote of the appointed members against a succession of amendments moved by the workers. It will be seen that it stands in much closer relation to the original proposals of the employers than to that of the workers. Rates for women and for clerks of both sexes were subsequently agreed. Unfortunately, when the rates came to be fixed in February, 1921, a considerable change had taken place in the industrial situation. The employers now desired alterations to which, in the light of the objections received, the appointed members were constrained to assent, and modifications were carried by their vote. The Ministry was unable to accept these modifications and in the situation which now arose the appointed members supported the workers first in certain intermediate proposals and then in endeavours to sustain those portions of the rates to which the Ministry could assent, but eventually the rates were cancelled and a new proposal with reduced rates was agreed between the parties on August 15th, 1921. When these rates came up for fixing on November 15th, 1921, the employers wished to postpone their confirmation till after the report of Lord Cave's Committee, or failing that, to make certain amendments. The appointed members, however, voted for the maintenance of the agreement of August 15th, though they voted for the employers in excluding apprentices.

On a review of these facts it will be seen that on the actual rates the view of the appointed members was, as it happened, more often in accord with that of the employers than with that of the workers. On the other hand, they consistently supported the workers in their endeavour to bring rates into operation. The long delay which has occurred in so doing has been due to a change in the economic position and to a close consideration on which the appointed members insisted, of the objections coming from employers in the country. It may, however, be remarked that no delay would have taken place and a succession of expensive meetings would have been avoided if the Board had been allowed a modest latitude of amendment.

I pass to the Dressmaking Board, where again it has been suggested that outside people ignorant of the trade have arbitrarily imposed impossible rates. With the skilled rates in the trade I have already dealt. Coming to the minimum rates I find that at the first meeting proposals for the male, female and junior rates were made and agreed by the two sides.

12 January, 1922.]

Professor L. T. HOBBHOUSE, D.LITT., LL.D.

[Continued.]

When the rates came to be fixed the employers expressed an opinion that the minimum rates for female learners would operate harshly, but in view of their former agreement they decided to vote for the resolution. Later on they proposed to reduce the junior rates and came to an agreement with the workers on this point along with others. The proposal was therefore agreed unanimously, and on fixing was agreed with one dissentient. In fact, upon this Board the appointed members have never carried a rate by their vote.

On the Hat, Cap and Millinery Board at the first meeting minimum rates for male and female adults were moved by the employers and, the Chairman being the only appointed member present, were carried by his vote against the workers. These rates were fixed by agreement, and the learners' rates were agreed. In April of this year a proposal for the reduction of the junior rates was carried by the employers and the appointed members against the workers. The fixing of these rates was agreed. In November of this year a general reduction of rates was moved by the employers, smaller reductions were suggested by the appointed members and were finally accepted by the employers, moved by them and carried against the vote of the workers by the appointed members. On the Rope, Twine and Net Board all the minimum rates, piece rates and skilled rates were agreed with the exception of female rope makers' rate as explained above. In June of this year a general reduction of rates was moved by the employers. At the instance of the appointed members the proposal was materially modified so far as the minimum rates were concerned, but with these modifications it was carried by the votes of the appointed members.

It is, of course, perfectly true that the voting does not tell the whole story. The appointed members exercise their influence in negotiation in the manner already described, and it is not suggested that the agreement arrived at always represents a rate which the side entering into it would have offered of its own free will. Nevertheless, it is an agreement and is, as a rule, honourably regarded as such. It is a rate for which the side is willing to take responsibility and from which it will not depart unless there is some change of circumstances or some new fact brought to light. Finally, it is not to be assumed that such an agreed rate represents the independent wishes of the appointed members any more than that of the other party. In fact, all three elements concerned on the Board habitually give and take something after the ordinary process of negotiations.

In view of these facts it is clear that any suggestion that the employers are helpless in the presence of the appointed members and have no real say in the determination of the rates is seen to be without foundation.

A similar allegation on the side of the workers might be no more and no less plausibly made and would be equally devoid of substantial truth. The residuum of fact is that in the presence of a third party neither side can get all things its own way.

As a matter of fact the new Boards have proceeded on much the same lines as the old ones, that is to say, by levelling up rates of wages to those which many employers were already able to pay, and it is comparatively rare that this levelling has been materially exceeded through any rules of the Board. From almost all the Boards the same tendency to a general acceptance of the position, the same development of a spirit of mutual good-will and co-operation has, in a greater or lesser degree, manifested itself, industrial peace has been kept and several Boards have testified to the good effects of the system upon the interests of the trade as a whole.

Difficulties and Drawbacks.

On the other hand the Trade Boards have had to grapple not only with the difficulties incidental to the extraordinary changes in the commercial position, but also with many problems of administration, some of which might have been solved by the exercise of more foresight.

To begin with, the new Boards were established without any adequate provision for the enforcement of

their decisions. A small group of highly skilled inspectors had been formed under the old Boards and had done admirable work, but they were wholly insufficient in number to deal with the task now set to them. The old Boards may have covered some 500,000 to 400,000 workers in Great Britain; the Boards now in existence are supposed to cover 3,000,000.

In some cases the machinery for notifying the rates proved inadequate, and the very existence of the Boards remained unknown to many of the outlying employers in some of the extensive trades now covered. The report of the inspection in the Women's Light Clothing and Dressmaking Trade during the eleven months after the first rate was fixed revealed surprisingly widespread ignorance of the law. Attention was drawn to this difficulty and remedies suggested by the employers as early as the second meeting of the Board. The majority of visits, particularly among small firms in the provinces revealed more or less serious breaches of the regulations, and in a larger number of instances it turned out that the employer had never even received the notice of the Board's determinations.

The consequence of such a chaotic state is that the employers who have taken care to inform themselves, who are desirous of conforming to law and treating their workpeople fairly, find themselves exposed to the competition of those who are either more ignorant or less scrupulous. Thus, the last state of the fair employer is worse than the first. The undercutting which it is the prime object of the uniform rate to prevent, becomes all the more serious when it is a question of a strict rule which "A" feels he is bound to observe while it is neglected by "B" or "C."

The Boards have no substantial power for enforcing their own decisions. A certain authority is indeed given them by the Trade Boards Acts, but they have no machinery for the purpose and no means of financing the machinery if they had it. They cannot order an inspection in any specific case or in any particular locality where they have reason to believe that it is required. They can only appeal to the Ministry, who have to decide between their needs and all other claims that are made at the same time upon an overburdened staff. Hitherto the Ministry would, I think, admit that it has found great difficulty in meeting its responsibility in relation to enforcement.

The question of scope has also presented a great deal of difficulty. The definition of each trade is arrived at after prolonged consultations, but it is naturally difficult to make it so precise as to avoid all ambiguities and uncertainties. It is admitted that, in the last resort, it is a Court of Law which must pronounce, but in substance scope is determined by administration, since, if a case is not brought before the Courts it is for all practical purposes excluded. The Minister of Labour has held that, as the administrative authority, it is for him to decide questions of scope.

The Boards, on the other hand, feel that they alone have the technical knowledge which enables them to judge the actual interlocking of one process with another in the conduct of industry. On behalf of the Ministry it is replied that the Boards do not necessarily contain any legal experts, and in the pursuit of practical considerations, are apt to overlook the niceties of definition which a Court would certainly insist. On behalf of the Boards it is rejoined that the necessary legal advice might be supplied to them with advantage, and that, with the aid of such advice they could arrive at the required determinations, while where a real difficulty is found they will be in a position to advise the Minister on any necessary modification of the order constituting the Board.

Legal Advice.

This brings us to the third difficulty from which the Boards have suffered. For the interpretation of the Act the Ministry has its legal advisers and it has very frequently happened that in the pursuit of what appeared to be its powers, the Board has been confronted with a veto from the Ministry on the ground that, in accordance with legal advice which the Ministry has received, some proposal of the Board is *ultra vires*. The Boards, on their side, have no legal advisers, and have, therefore, no means of meeting this opinion with an expert view of their own. It is strongly felt by the Boards that they need legal

12 January, 1922.]

Professor L. T. HOHOUSE, D.LITT., LL.D.

[Continued.]

advisers of their own to assist them in their smooth working of their determination, to keep them adequately informed upon the technical difficulties which are real and insuperable, and to aid them in avoiding technical faults in pursuing what is in itself a practical and reasonable object.

Revision and Amendment.

One of the legal questions that has arisen concerns the right of amending proposals when they come to be fixed. The Acts appear to assume, without definitely stating, that the rates proposed by the Board will, after the period for objections has elapsed, either be fixed or simply withdrawn. As a matter of fact, occasions have frequently arisen in which the Board would have wished to have fixed the rates in the main as proposed, but with some amendments of detail. In some instances the trade experts have made a slip in some small portion of a complicated list of piece rates. In other cases they have proof of wide-spread objection in the trade, say to some portion of the junior rates. In some instances cognate Boards have fixed junior rates on slightly divergent scales rather through the accidents of negotiation than through any *malice prepense*. In such instances the Boards would naturally wish for some power of revision, not in the interests of either side as a side, but for the convenience of the trade as a whole. While the Board of Trade took, as I understand, a more liberal view, the Ministry of Labour have held rigidly that no amendment is legally admissible unless it is of the most trivial description, and the Boards have been faced with the alternative of rejecting their proposals as a whole and putting out a new one to the country at the expense of some four months' delay or carrying through a series of rates which they believe to be in some detail objectionable. Whether the Ministry's interpretation of the law is correct or not, it has certainly hampered the Boards in their work, and they will require some further elasticity in this respect. It seems a most inconsequent proceeding to delay determinations for the sake of obtaining criticism from the trade and then to forbid any amendment based on such criticism.

Confirmation.

This brings us to the question of the present method of confirming the rates. According to the Act of 1918, the Trade Board first gives notice of proposal of a rate, then after a period of two months for objections, it must meet again to fix the rate, while the Minister, if he does not refer the matter back to the Trade Board, makes the Order confirming the rate. The Board in its turn gives notice of the making of the Order. The Minister, if he does not refer the rate back, has to make the Order within one month from the date on which he receives notification from the Trade Board, but if there are "special circumstances" which, in his opinion, make it necessary or desirable to postpone the making of the Order, it is open to him to do so; it is clear, therefore, that the Minister is not strictly bound by time, and at one period he in fact announced his intention of taking one month for consideration in all ordinary cases. The necessity for such an interval is only intelligible as giving time for objections from the trade to reach the Ministry and receive consideration. In fact, if the Minister is to be responsible for defending the Order in Parliament, he will naturally wish to be certain that he is justified in making it. But as we advance on this argument it will be seen that a double series of objections come into view. One, the objections sent in to the Board during the two months prescribed by the Act, and another—after the Board has considered these objections, and in spite of them fixed the rate—a second series of objections sent in to the Minister, but not necessarily discussed in the presence of the two parties nor settled with the aid of their votes. In fact, upon this interpretation of the Act the Minister becomes the decisive authority and the Board an advisory body, but an advisory body strongly handicapped by their limited

right of amendment. The Board cannot negotiate with the Minister; it cannot say, "If you feel any objection to this or that point, make such and such a modification." It is debarred from doing so because it has no power of revision. If, therefore, it were desired to make the Minister the rate fixing authority and the Board the advisory council, a completely different and much simpler machinery would have been the natural thing to establish.

It may, however, be greatly doubted whether either employers or employed would acquiesce in a system in which the determination of wages should pass into the hands of a Government Department. Such a determination is obviously open to political influences. The object of the Trade Board system is to discover a rate of wages which will provide a reasonable livelihood for the worker without causing dislocation in the industry. This rate, under the Trade Board method, is arrived at by the trade itself with the aid of an impartial element which endeavours to ascertain the facts of the case and is not guided by any extraneous consideration. It would be extremely difficult for a Government Department to hold itself aloof from the influences of political forces which in one trade may press one way and in another in the opposite direction, with the result that precisely where the workers are the weakest their interests would be most likely to suffer. The question of delay incidental to the Minister's method is also serious. The Act of 1918 contemplated a period of two months for objections to be sent in. When to this is added the time necessarily occupied in preparing, printing, and issuing the notices and the arrangements for summoning a meeting of the Board, and then the minimum month which the Minister requires, in practice the two months become four. In old days this formed a very serious difficulty when workers were impatient for an increase. At the present time it forms a difficulty which has perhaps been more readily admitted and acknowledged when employers are desirous of a decrease. Delay is injurious on both occasions, and to both sides, and it is far better that, if changes are to be made, they should be made promptly. What should be done by way of confirmation will be considered at a later stage, but here it will be sufficient to say that the delays that have taken place have added terribly to the difficulties of Trade Boards, and they will desire more promptitude and more certainty as to the date on which their decisions will come into force.

Inter-relation of Boards.

The difficulties of Trade Boards have been added to by their own multiplication. In many instances it has proved exceedingly difficult to demarcate one trade from another, and however successful demarcation may be there will always be numerous borderland cases. In many instances the employers find themselves under the authority of two, three or even more Boards, and the very same worker may at one time come under one series of determinations and another time under another. The result is a serious annoyance to many employers, a cause of uncertainty as to their actual duties, and a source of expense in the book-keeping and supervision required to that all the rates are duly carried out. There are also occasions for heart-burnings between workers operating side by side, with different rates under different Trade Board determinations. Immense friction might be avoided if a means of correlating all the decisions of allied Trade Boards could be found. In some instances this could easily be done by consultation if the revision of rates were allowed. Where junior rates, for example, differ in detail from year to year, there would as a rule be no difficulty, when two proposals have been set forth, in arriving by consultation at a uniform rate which both Boards could agree to fix. In other cases it may be necessary to amalgamate several Boards and with yet others it may be to establish some machinery of co-ordination, consideration

12 January, 1922.]

Professor L. T. HOBHOUSE, D.LITT., LL.D.

[Continued.]

of which will finally lead us back to the question of the confirming authority.

The Problem of Autonomy.

A review of all these difficulties shows that the relations between the Trade Boards and the Ministry of Labour have been less satisfactory than could be wished. To say this is not to impute blame on either party. The simple truth is that the Trade Boards do not possess powers commensurate with the responsibilities placed upon them. They are to propose, and after hearing objections, to "fix" rates of wages (this is the expression used in the Statute) but as a matter of fact they do not fix the rates, for the order is ultimately "made" (again as the Statute has it) by the Minister. They neither have the final decision upon the rate nor the freedom of a purely advisory body. Supposing their rate, however, to be confirmed, they have no control over its enforcement. They cannot decide the scope of its application. They are destitute of legal advice of their own to assist them in interpreting their powers. They are unable to amend any detail of a proposal which has been sent out to the trade for criticism and has encountered objections on certain points. Finally, each Board is a separate entity, and though their decisions may ultimately affect an allied trade, there is no regular means of establishing adjustment and correlation between them.

To remedy these defects it is necessary that the Trade Boards should possess some collective organisation of their own, not purely dependent on the Ministry of Labour. The inspectorate and all the staff would continue to be appointed as now by the Ministry and for disciplinary purposes would remain under its control. The Ministry would also supervise expenditure by regulation and any extraordinary expenditure would require its consent. The entire official staff should be under an official of the rank of an assistant secretary, if not a principal assistant secretary, and great care should be taken to avoid any duplication whereby the action of the Trade Board department might be reviewed by the staff of another department. The principal officer of the Trade Board office should report directly to the permanent secretaries of the Ministry and to the Minister himself. Subject to this supervision the Trade Board organisation should have control of the secretariat and inspectorate and have legal advice at its disposal. It should have power to determine questions of scope, to provide means of adjustment as between different Boards and to deal with the problems of revision and confirmation.

The Question of Confirmation.

This proposal at once raises the question of the ultimate confirming authority. It is not possible to leave the final decision upon the rates to each Board separately. This would be to put too great responsibility on the appointed members who hold the casting vote. It is equally undesirable to leave the decision in the hands of a Government department, in which it is exposed to political influences.

It remains that there should be a regular court to which the Minister should, in any case where he is not prepared to confirm it, refer the rate. It is suggested that the most suitable court would itself have the constitution of a Trade Board, representing employers and workers and possessing independent elements. Such a body might be called the Central Trade Board, and might be elected so far as the representative members are concerned, by the respective sides of all the Trade Boards. The appointed members might, as now, be nominated by the Minister, and ought, I think, to have had experience on Trade Boards.

The period for sending in objections at the same time might be reduced to one month and notice given through the Press. No objections should be entertained either by the Minister or the court which have not been sent in to the Board. Amendments should be allowed at the time of fixing and in the

case of appeal the Central Board would have the power to decide whether an alteration should, or should not be regarded as a fair amendment or, in the alternative, as constituting a new rate and requiring fresh proposal.

This body, through its committees, would be in direct control of the officers of the Board, the secretariat and inspectorate, and in direct touch with the legal advisers. The several Boards could then deal with questions of scope, again subject to appeal to the Central Board in case of a dispute between two Boards. Neither the single Board affected nor the Central Board could modify the Minister's definition, though they should have the power of referring unsatisfactory decisions to him for consideration. It is a question for consideration on which I do not offer an opinion, whether the decision of the Central Board on scope should be made authoritative by statute or whether it should be what I understand the Minister's opinion is now, a ruling which guides administration, but is subject ultimately to the decision of the courts.

Finally, the Central Board could provide for the adjustment of rates by calling, if necessary, a conference of two or more Boards and arranging for uniformity where that is practicable, or consenting to divergence where adequate grounds for it exist. Several allied Boards, might, I think, be amalgamated, the present Boards being formed into statutory committees which would have both the right of initiative and of criticism on any proposed rate, but not, I think, a vote. Finally, provision might be made for the case of employers who find several Boards concerned with one of their departments. Such cases might, I suggest, be referred to the Central Board, with whose sanction the set of rates applying to the majority of the workers concerned in the department might be adopted as the rates for that department. It is suggested that these alterations will obviate the principal difficulties which the Boards have encountered in their operation, and would provide the autonomy that is generally desired without endangering the relations between the several Boards or actually extending the power and responsibility of the appointed members on any single Board.

An alternative suggestion is that the appeal body should consist of a small council of representative employers and workers in equal numbers, with the Chairman of the Industrial Court as their president.

If a suitable appeal body can be agreed upon the question arises whether the Minister should merely register its decision, or should retain an ultimate power of reversal. On the other side it may be urged that if the final decision is the Minister's the main purpose of an appeal body fails, the door is opened to political pressure, and the Minister if only to secure his own position must have his own independent enquiry—an appeal behind the appeal. On the other side it will be maintained that Parliament will refuse to part with ultimate control and that there must be for the executive some loophole of escape from the consequences of a mistaken judgment. Upon the whole two things would seem to be essential to any system of appeal. The first is that under all normal circumstances it should be final and the confirmation of the Minister given without awaiting further criticism.

The second is that on appeal as in the first instance, all objections should be openly discussed and the two sides confronted. Hence if fresh objections reach the Minister he should communicate them to the Central Board. If the Minister should form a definite view from which the Central Board diverge the natural resort would be a conference between the Board and officials of the Ministry. Should this fail there might remain a reserve power of decision to the Minister in a case where he remained personally convinced on definite grounds formally adduced before the Central Board that there would be danger of grave industrial consequences from the confirmation of the proposal.

[Continued.]

The proposed National Minimum.

It was mentioned above that the National Industrial Conference in 1919 proposed a national system of minimum wages. This proposal has been revived in some quarters as an alternative to the Trade Board system, though it is sometimes forgotten that the Conference also urged the extension of Trade Boards. Different views may be taken about the value of a national minimum if understood as a single rate for each sex at a given age. In the view of the present writer it would be the natural outcome of the work of Trade Boards when it has advanced to a further stage and has covered the greater part of the field of the less organised industries, but as a substitute for Trade Boards the plan encounters more difficulties than appear on the surface.

In the first place, to determine the actual figure—a problem which is difficult enough in any given trade where the experience of both parties is available—will become vastly more serious when it is considered that whoever lays down a national minimum takes upon himself the responsibility of saying that no man or woman, boy or girl, is to have the opportunity of work of any sort or kind unless he can earn some specified rate. The almost inevitable result of this consideration would be that the rate at the outset would be fixed so low that it could not do much harm, but for the same reason might do no good at all. It is lightheartedly assumed in certain quarters that the minimum might vary by districts; but anyone on a Trade Board who has had to do with the fixing of district rates is aware of the extraordinary anomalies which arise from a delimitation of areas, even when that is attempted for a particular trade, by people conversant with that trade. Probably the clearest case for an addition to any general minimum on local grounds is that of London, where the worker has both high rents and fares to contend with, but even here it may be asked, "What is London for this purpose?" Some governmental area is necessarily taken, and governmental areas do not correspond with industrial conditions. The London area stretches out into rural districts, and where any wide discrepancy exists between the London and rural rates, anomalies and injustices are immediately felt. Again, it is clear that a national minimum cannot deal with piece rates. How it is to be enforced is a question which its advocates do not seem to have addressed themselves, nor is it easy to see what good system could be devised for the permits of exemption which are necessary under any system of minimum rates. It is possible to work up to a national minimum through the Trade Board system, but to undo that system which, when the worst is said against it, has done good work, would be a very retrograde step.

Occupational and Skilled Rates.

There are those who desire minimum rates, and recognising the difficulties of a national minimum concede to Trade Boards the function of fixing the minimum for each trade, but would restrict them to that duty alone; that is, they would eliminate differential rates for operations involving skill from the purview of the Boards.

On this, two things must be said. First, no one can desire that the majority of workers should be left with the bare minimum, which is all that is likely to be secured for the least skilled grades. The minimum itself, as has been said, cannot be made a precise figure and we must be guided in determining it largely by what we find will work well in practice. There is, therefore, a serious need for something a little more generous for workers above the lowest grades. Secondly, the determination of rates by the Trade Board method is superior to any other yet devised. It is superior to the unfettered individual bargaining which leaves the weak at the mercy of the strong, and to the collective bargaining which, without any standard to appeal to, degenerates into a fight and keeps the industrial world in unrest. It is superior to bureaucratic decisions which may be exposed to political influences and to the decisions of an arbitrator who may know nothing of a trade. It promotes co-operation, mutual concession and good

will, and draws out from both sides a real output of public spirit.

It would, therefore, in my judgment, be a retrograde step to limit Trade Boards to the determination of a single minimum rate for each industry. In some cases, indeed, to do so would be to shelve the main problem, for important instances could be mentioned in which the main body of workers in a trade are not of the lowest grade, but have a small number admittedly below them. In such a case any single rate would leave the main body uncovered. It must be added that in some cases the most important function of the Board has been the determination of piece rates. It can hardly be intended to take these out of their hands. As an intermediate course it has been suggested that, a basic minimum having been fixed in the present manner, any higher rate might be fixed by agreement between the sides, but not by the vote of appointed members. This, however, would not meet the case mentioned above. A method would have to be devised by which the rates of the main body of workers would be determined as now, even if they happen not to be the lowest rates. If such a method can be devised and the determination of higher rates left to agreement the alternative proposed would be less serious. But I see no clear evidence of any necessity for a change in the function of the appointed members and I should certainly regret any diminution of the present power of the Boards. What they need is more autonomy and greater elasticity subject to a properly constituted court of appeal, and it is through the practical good sense of the Boards in the exercise of their powers rather than by cramping them with restrictions that mistakes are to be avoided.

The Economic Effect of Trade Boards.

After all, it will be said, the final test is practical. A "fair" wage defined as above is doubtless desirable. Is it possible? Does it not automatically increase the cost of production and thus lower the value of money and so defeat itself, causing dislocation, loss and unemployment in the process? In answering this question we must discriminate. We cannot lightly assume that all increases of pay by reacting on the efficiency of the worker ensure corresponding increments of output. Where wages exceed the value of the product, where increments are used merely to obtain the old standard of earnings with less work this does not hold. This was sure to happen in the mood of relaxation following the war and the exceptional rates forced by trade union action in one or two trades have been a cause of trouble and poverty to other sections of workers. Similar consequences may have occurred here and there in the Trade Board industries, but in general, as has been said above, tendency of the Boards is to level up wages to those which the best and ablest employers are already paying or are, at any rate, prepared to pay if all do the like. The effect of such levelling up is that the type of employer who has maintained himself by underpayment is placed at a disadvantage, that inefficient and out-of-date methods can no longer be maintained and that the fairest and most capable employers come by their own. One has every sympathy with a form of production struggling against a rival with new methods. If the old form can adapt itself to the conditions and make good it has every right to a fair field. But the fight ought not to be waged over the bodies of the workers, and it here that the Trade Board, like the Factory Acts, intervenes with certain conditions that all alike must fulfill. If they can meet those conditions, the small firm, the outlying district, the old-fashioned process have every right to maintain themselves. So far as they fail the result is not necessarily that production is diminished or cost increased, but that production is transferred to those who can meet the conditions. An economic change which is otherwise long drawn out, to the disadvantage of the worker, is accomplished, not indeed without regrettable suffering, but with more speed and less injury to large classes of the population. The Trade Boards in fixing a minimum are bound to have regard to the least fortunate conditions and least favourable circumstances which they find in existence, but they are equally bound to have

12 January, 1922.]

Professor L. T. HORHOUSE, D.LITT., LL.D.

[Continued.]

regard to the needs of the worker, and they cannot neglect them in order to maintain methods or forms of production which might be replaced by better ones. Such replacement has been and will be the

economic effect of all regulation of industry from the Factory Act to the Trade Board determinations, and it is this which makes the improvement of working conditions economically possible.

TRADE BOARD MINIMUM RATES FOR MALES AND FEMALES BY TRADES EFFECTIVE UP TO 1ST DECEMBER, 1921.

N.B.—Under “general” minimum rates (Columns I and III) are included (a) rates laid down for adult males (or females) in general terms; (b) rates for adult males (or females) which, though not “general,” do not depend on specified occupations, but merely require some special condition of age or experience; (c) rates prescribed for “other workers” when special rates have been fixed for certain classes. If, however, classes are numerous, rates fixed for “other workers” are brought under Columns II and IV “lowest rates,” except in cases where there

is a still lower rate fixed for a specified class. Where the “general” rate exceeded 55s. (or 35s.) in August, 1920, it is repeated in Column V (or VI) with the word “general” in brackets; similarly with “lowest rates.” “Occ.” means a rate fixed for certain occupations; “exp.” that it is a rate dependent on certain length of experience; “area” that the rate holds only within a certain area. Rates in these columns (V and VI) are given only if they exceeded 65s. or 35s. in August, 1920.

9071. *Chairman*: Professor Hobhouse, you have been good enough to give us a memorandum on Trade Boards. Perhaps I may take quite shortly the earlier and historical part of the statement. You state that the Act of 1909 was passed in order to meet complaints as to serious under-payment in certain industries, and that the Boards regulating the trades scheduled to that Act which were formed shortly after amounted in Great Britain to eight in all?—Yes.

9072. There were also some Irish Boards?—Yes.

9073. Then the effect of those Boards was first a levelling-up of wages in the worst sections of those trades amounting, if not to everything that the workers would desire, at all events to a substantial improvement?—Yes.

9074. And there was a secondary effect, namely, that a certain measure of co-operation was produced between workers and employers?—Yes.

9075. Then, as you say, came the war with its results, and then came the Act of 1918 which altered the formula under which the Boards were to be appointed, substituting for the words referring to wages being exceptionally low, the provision that Boards might be appointed by the Minister whenever no adequate machinery existed for the effective regulation of wages throughout the trade. That was followed by the somewhat indeterminate expression: "Having regard to the rates of wages prevailing in the trade"?—Yes.

9076. You say that in your view those latter words mean that the wages should be somewhat below the average in order that the appointment of a Board should be justified?—Yes; I think that would be a reasonable interpretation, though it would apply to some part of the trade as well as to the trade as a whole.

9077. Then came the National Industrial Conference of 1919 which recommended, I think, a national minimum wage for all trades?—Rates of wages—it was plural.

9078. Yes. It was recommended that there should be minimum time rates of wages which should be universally applicable?—Yes.

9079. Those meant rates for men, women and children, or do you understand it to mean different rates for different trades?—I may say that I was Chairman of the Sub-committee which made that recommendation, and the honest truth is that I do not think the Committee had a perfectly clear view upon the subject. There was some controversy as to whether it should be the singular or the plural, and it was decided to leave it in the plural.

9080. But I think in the Bill which was prepared in consequence of the Report the suggestion was to have a national minimum rate for all trades?—I have not the Bill before me. I am only concerned with the recommendation of the Conference, which was to appoint Commissioners.

9081. *Mr. Pugh*: Here is a copy of the Bill. (*Handing same*.) You will see what it says?—Yes, I see it says: "For the purpose of inquiring into and deciding what such minimum time rates of wages should be, regard being had to the cost of living in the various districts, and any other matters which appear to the Commissioners relevant."

9082. *Chairman*: You are quite right; it is still left somewhat indeterminate in the Bill itself. Then consequent on the Act of 1918 came a multiplication of Trade Boards, and you say that at present there are 44 Boards for Great Britain in addition to the Irish Boards, and the tendency of trade during the formation of those Boards varied?—Yes.

12 January, 1922.]

Professor L. T. HOBBHOUSE, D.LITT., LL.D.

[Continued.]

9083. That is, in the earlier months after 1918 there was a boom in trade which continued, I think you say, as regards individual trades, down to December, 1920?—There was a discrepancy between retail prices and wholesale prices. You will recollect that retail prices began to fall in the Spring, and that was a warning. But so far as my Boards went, I did not feel any sensible difficulty until the Autumn. In the meantime the cost of living was still going up very rapidly, as you will remember, until it reached its apex in November of 1920.

9084. Trade was falling, but the cost of living was still rising?—Yes.

9085. Because the effect had not shown itself in the retail trades?—Yes. There was a great discrepancy in the retail and wholesale prices which was undoubtedly the cause of many of our difficulties.

9086. And I suppose at the beginning of 1921 the full effect began to be felt?—The effect began to be felt earlier than that; it was felt in 1920.

9087. I mean the effect of the fall in the cost of living. That would be felt in 1920 or the beginning of 1921?—Yes.

9088. Then came very naturally the strong feeling about the Trade Boards?—Quite.

9089. It is true, is it not, that the Trade Board rates tend to lag behind the cost of living?—That is so.

9090. That is, they do not rise so fast as the cost of living, nor do they fall as fast as the cost of living?—That is so.

9091. Partly, I suppose, because it takes time to realise the rise or fall, and partly because the transactions of the Board take time?—That is so. The principal thing is that the transactions of the Board take time.

9092. Mr. Pugh: Apart from that it would not be peculiar to Trade Board rates that they should lag behind?—I imagine not.

9093. Chairman: Then we come to your experience of Trade Boards, which is considerable. You have had personal knowledge as Chairman of no less than ten Boards?—That is so. Might I just say with regard to my statement generally that although I am solely responsible for it as it stands, I have shown it to Mr. Jeeves, who has had almost as great an experience as myself in this connection. He has discussed my statement with me, and he authorises me to say that he agrees both with my statement of my experience as Chairman and also with my conclusions, in a general way. Of course he is not tied to every word.

9094. You began by taking the Chairmanship of one of the old Trade Boards?—Yes—the Paper Box and Tin Box.

9095. Then you became Chairman of the Tobacco Board in 1919, then of the Hat, Cap and Millinery Board in January, 1920, of the Dressmaking and Women's Light Clothing Board in the same month, and of the Grocery and Provisions Board in June, 1920. In addition you have also been Chairman of the Tin Box Board, the Boot and Shoe Repairing Board, the Paper Bag Board, the Rope Twine and Net Board, and the Wholesale Mantle and Costume Board, but you have now resigned your Chairmanship in those cases?—That is so.

9096. So what you do not know about the procedure of the Boards is perhaps not worth knowing?—One can always learn.

9097. You deal first of all in your statement with the method adopted in fixing the minimum rates, and especially with the case of the appointed members. You say quite truly that the appointed members are members of the Board with one vote; they are not arbitrators in the sense that if the two sides differ they can decide?—That is so.

9098. We have heard a good deal about what some witnesses call "bargaining" in the presence of the appointed members. To some extent I suppose that is true?—Perhaps I may deal with that fully. I am bound to say I have been rather astonished that we

should have made the impression that we have made as I gather from one or two witnesses. I have had the evidence supplied to me by the Secretary, and I have read it with care and with great interest, and, as I say, with some surprise. I am extremely surprised at two things: first of all at the general statement that agreements are made under threats, as though a kind of bludgeon was used by the appointed members; and, secondly, at a statement which I am very much surprised to find in Mr. Cahill's written evidence, of which he was kind enough to supply me with a copy, to the effect that they are hardly to be regarded as agreements at all. I think you will find that he says that the question arises in the minds of employers whether any agreement of any Trade Board is really an agreement at all, on the ground that they came to this agreement *faute de mieux*, because otherwise they thought worse would befall them. That is entirely new ground to me in any trade negotiation I have had to deal with, or I may say in any negotiation in business life I have had to deal with. In these days I might have to buy a house. I might have to pay a price which I think is exceedingly stiff, which is the experience of anyone who buys a house just now. But if I make an agreement I make an agreement. I fail to understand Mr. Cahill's statement.

9099. The way it was put to us was—I do not know whether it was by Mr. Cahill or by somebody else—that the appointed members sometimes take up this position: Well, the employers have proposed a rate, say, of 6d. The workers propose a rate of 8d. We think that you ought to split the difference and accept 7d.; but if you employers stand out we shall have no alternative but to vote for the 8d. so as to get a rate fixed. Does that kind of thing ever happen?—No, it would not happen like that.

9100. I do not mean it would be put so shortly as that, but it was said that was the effect of the negotiations sometimes?—No, it is not the habit of anyone at all experienced in trade negotiations to say how you would vote under certain contingencies, or that you will vote with somebody else. It certainly is our habit to say: "We cannot vote for you on this proposal," and I think perhaps they draw the inference that we vote for the other side. Or we might perhaps have to remind them that the other side exists and had made an offer; or there may be an attempt made to press us very strongly. We might be asked: "How are you going to get a rate at all?" We say: "We will see what the other side have to say on the matter."

9101. That comes to very much the same thing, although in diplomatic language, does it not?—No, it is not enough that the other side has put forward a rate. The other side's rate may be just as disagreeable to us as the employers' rate, and we are still negotiating with both sides at once, or alternately.

9102. Has it ever happened to you to vote for a rate which you thought on merits either too high or too low in order to get some rate fixed?—No. When the negotiation is a very long one there are a great many rates mentioned. It is reasonable that the appointed members should keep an open mind, as the two sides keep an open mind, and that they should be prepared to give way on non-essentials and on small points as they expect the two sides to give way on non-essentials and small points. They do not make up their mind at a certain stage and say: "There the thing is fixed and now we will vote for that and nothing else." At every stage they try to keep their minds open. But I certainly should not go and vote for one side on a rate which I thought was unreasonable, because I thought the other side still more unreasonable. If I ever said: "Well, in this case we shall vote for the other side," it would be because we had got through them already a rate which we thought quite within the bounds of reason, and we were still trying to see what the alternative would be. It would be at the penultimate stage of affairs.

9103. I suppose it is rather a handicap to a Chairman and the appointed members that they cannot themselves decide. They can only be parties to a decision to which either one side or the other may

12 January, 1922.]

Professor L. T. HOBHOUSE, D.LITT., LL.D.

[Continued.]

come?—That is so; it makes it an infinitely more difficult matter than on an arbitration. If what is suggested is at all true it would be that we assume the position of arbitrators really, only in rather a clumsy fashion, and we have never assumed that position.

9104. You cannot?—That is so.

9105. Because you cannot say: "I think so and so, and it must be done"?—That is so. We should put it off, as a matter of fact, and that is what we did on the Grocery Board. I think it is only there and on the Rope Board that I have heard anything of this kind. On the Grocery Board we kept on putting it off. May I give an account of the way in which a negotiation ordinarily goes through? It will not take very long.

9106. If you please.—In the first place, you may have an agreement between the two sides—and that very frequently happens. Then the more normal thing is this: The two sides state their various positions, and your knowledge of affairs will tell you—I need not emphasise it—that they will state pretty advanced positions—each of them—and in public they will not give way on those advanced positions. Neither will move. That being so, you say: "We had better have a little informal discussion, and you then get through their advanced positions to what I may call their battle positions—the things the two sides are hopeful of getting and are keen about. If there is a discrepancy, as there probably is at this stage, you try to represent to each side the view of the other. You try to show what the other wants, and why they want it, and you say: "Do you think you could do this or that to meet them?" Then you get something, perhaps dropped rather than openly stated, from one side or the other, indicating where they might come to terms, and you take it to the other side and in that way you very likely arrive at an agreement, if you are fortunate, between the two sides. If you do not do that in the course of the proceedings, you discover the points which are essential, and you find yourself drawing nearer to one side or the other. You then pursue that apparently more profitable ground. But you do not use any threats at all; possibly you do not even disclose your own view. On the contrary, it is the two sides that are trying to get at your view all the while, and if you have any sense you keep it back. You then approximate to one side, and perhaps at this stage the other side, finding you are approximating to the one side, may find themselves more ready to come to an agreement, and an agreement may be reached. Failing that, the matter is put to the vote, and the vote is carried by the appointed members.

9107. You really are conciliators, but you have a small stick in your pocket?—Yes, a reserve power which gives us, of course, an influence. Then again a variant of that is that the appointed members may at an early stage find themselves in agreement with one side on principle, while the other side refuses to touch them on principle. The labour side may say: "We will not have a reduction." The appointed members may make up their minds that there must be a reduction. It then becomes simply a question of the amount of reduction and the particular form it has got to take. The appointed members in that case would find out where the shoe pinches most. I always put a lot of questions to the employers and try to find out where the trouble is. Then I try to find out from the workers' side what reduction would be most bitterly felt, and would be most disagreeable, and I think what the figures are in relation to what I know of the cost of living and the movements of other Boards and so on. In that way one forms an idea of what form the reduction should take and tries to guide the reduction into that particular shape and that amount. In that way the voting will ultimately be carried by the appointed members' votes. Then lastly there is a particular case which I think has given rise to this feeling. So far as I know I think it has only occurred on the Grocery Board. It is this case: The discussion has gone on for a long time. In the case of the Grocery Board we had nine full meetings, and at the beginning of the ninth meeting the two sides were as far apart

as ever, and the appointed members did not think that either of them were acceptable at all. Those are the rates which I mentioned just now—unreasonable rates which I would not vote for, but would rather put off, and we were faced with the difficulty of putting them off indefinitely. At that stage we thought the best thing to do was to make suggestions of our own, and we made a suggestion of a rate based upon all that we had heard and on the shape and form that the discussion had taken. Then we put these rates to the two sides and we said: "We are not tied to these rates, but we think these are about it, and we should like both of you to consider very seriously whether you cannot put forward rates in some sort of conformity to these. Anything that comes within reasonable compass of these we will very carefully consider." Then discussions took place. The workers' side did not approach us very nearly. The employers, on the other hand, soon came pretty close to our view. Nevertheless, they made very substantial alterations. I think we only had two areas in our proposal, and they introduced a third area. But as the discrepancy was not very great we accepted that—not exactly as they proposed it; we modified their proposals. Of course, if you like to put it in this way, you can. You can say that this was under threat in the sense of a consequence, namely, that if they did not produce rates which were near to those, we should not vote for them. But that is not to say we should have voted for the other side. It would, however, naturally be reasonable under such circumstances—the appointed members having put forward a rate—for the side which approximated to expect they would obtain their suffrages.

9108. Lord Weir: Would you say in your experience that the rates for skilled workers are usually arrived at by agreement?—My answer to that is in the affirmative. The appointed members, as a rule, form a clearer view of their own the lower the rate is. The higher the rate is the more we think it is outside our sphere.

9109. Mr. Layton: In your experience, have you found any difference in the skill in diplomacy, so to speak, on the two sides? You speak of the labour side taking up a specific attitude and showing not much readiness to modify their attitude. Would that be when you were coming down?—It is not true even about coming down. I was thinking of a particular case in which that occurred.

9110. That was only in a particular case?—Yes. I gave that as an example. As a rule, the labour side appear quite reasonable about coming down, speaking generally. Then you asked me as to whether there was any difference in skill in negotiations. Not in general. Sometimes one has more skilled representatives and sometimes the other.

9111. Mr. Pugh: I suppose there is some difficulty arising from the fact that generally you are dealing with people who have not had experience in industrial negotiations or the use of negotiating machinery?—That is so on a new Board.

9112. And then I suppose as greater experience is obtained, the tendency is rather towards agreement than otherwise?—That is so.

9113. Dame Adelaide Anderson: It is rare then for this kind of situation to arise where the appointed members have ultimately to put forward suggestions of their own?—I think it has only occurred in this one case as far as I know. But it has occurred more than once on that Board. I ought to say in justice to Mr. Stamper that he refers to a particular case. It was in answer to Dame Edith Lyttelton that he made his remark, and the case he referred to was one at which I was not present at the Board; but I should be exceedingly surprised to find that the situation was other than I have described.

9114. Mr. Layton: Do you find in your experience that you have been able to obtain from the employers adequate data for forming your own opinion?—In some cases I have obtained rather good data—as much as you could expect in the rather hurried way in which you do it.

12 January, 1922.]

Professor L. T. HODHOUSE, D.LITT., LL.D.

[Continued.]

9115. What class of data?—Take the highly-skilled people. You want data in order to get a rough estimate of the percentage of them that are employed. For instance, I remember in one case it was only 10 per cent.

9116. Do you get the cost?—Yes; I get a rough analysis of the percentage of the total labour costs. I get statements from the employers on that, and then a very rough statement of the percentage of one kind of labour cost to another.

9117. But you get sufficient information from the employers to show the effect of wage reductions?—No. Not always; sometimes I do. Of course, if I get that I should be in a very much better position.

9118. Is it through unwillingness or through lack of information?—I think it is lack of information. It is not unwillingness. I do not think I have had any difficulty about getting information from any side.

9119. Is this information given at the Board meeting, or would it be given privately?—It is generally given at the Board meeting, but sometimes they speak privately. However, I get what I can at the Board. Take the case of the Rope, Twine and Net Board. Mr. Buckpitt puts some quotation marks on some remarks which he attributes to me, but which I do not recognise—there is one phrase I am positive I did not use. Again, he quotes me as speaking of a small boat crossing the wash of a big liner, and he apparently took it that by the big liner I meant the big trades of the country. My feeling was that on the evidence they themselves had given me it was the general industrial situation, and particularly the depreciation of European currency, which was the cause of the greater part of their troubles. Theirs is largely an export trade. He spoke of the impossibility of competing with Germany and Belgium. He went into the question of the German mark and of the Belgian franc and the rates of wages and the impossibility of competing. That leaves you with a very confused and uncertain sense of what the effect of any reduction of any nature which you could at all contemplate is going to be. Of course, if you cut the wages down to nothing it would have a great effect; but any reduction you could contemplate would seem to be a small matter. That was the meaning of my remark.

9120. Lord Weir: What sort of information would you require?—We only get a very rough statement, and it is only from one side. We should like to know accurately the general relation of wages to the total cost, for instance.

9121. Do you not get that information when you require it?—I do not think they know it. They will give you a rough statement.

9122. The percentage of wage cost to total cost is what you would like to have?—Any one man knows it, no doubt, for his own business, but I do not think that they know it for the trade, and there may be many branches in a trade.

9123. You would require the collection of statistical information from every manufacturing unit in the trade?—To do the thing scientifically no doubt you would.

9124. That would be rather a big business?—It would be.

9125. Mr. Layton: I rather gathered that your view was that in fact you get all that is required to enable you to form a really reliable view so far as that is possible?—Yes; but more accurate information would help undoubtedly.

9126. Chairman: Before we leave the question of the Appointed Members, I want to put to you a suggestion which has been made to us from more than one quarter, namely, that instead of having, say, three Appointed Members on a Board you should have a Chairman appointed, with power to call in members from panels on each side?—Yes.

9127. So that they would be persons probably experienced in the trade or with some special knowledge which would make them suitable for that Board.

What do you say to that?—Do you mean *ad hoc* for a particular day, or permanently?

Chairman: *Ad hoc*.

9128. Mr. Pugh: To act as assessors?—In place of one's accustomed colleagues?

9129. Chairman: Yes. It might be *ad hoc* or it might be throughout a particular question?—That is a possibility. Of course, that leaves the actual decision to the Chairman. At present he can to a small extent shelter himself behind his two colleagues. The Chairman has got to conduct business and deal with people. It is very intimate; you are talking the whole time nearly. It is going on between you and the meeting nearly the whole day. At the same time you may have to vote. You may have to decide against one side and your position is not particularly comfortable. Sometimes it is remembered against you for a long time. If the responsibility is diffused the position of the Chairman is easier.

9130. You have a "Mr. Jorkins" to refer to?—Yes; you do rather want a "Mr. Jorkins." Might I just make one or two more remarks about the more personal side of the Appointed Members? Firstly, in Mr. Cahill's statement there is a prolonged narrative of events upon the Grocery Trade Board. I do not propose myself to deal with it further than by submitting to you my very slight and short narrative which I myself give. But I would not like you to think that I accepted that narrative of Mr. Cahill as more than one view. There are discussions going on constantly, as the narrative itself shows, between an independent element and the two sides. Probably each of those two sides would have its own narrative to give, and the two versions would not look at all the same; and if the Appointed Members gave theirs it would look quite different. I only wish to say that as I understand Mr. Cahill's evidence will be printed; but I am quite prepared, if you think there is any point I ought to deal with, to do so, otherwise I do not propose to trouble you on that matter.

9131. I do not think it is necessary.—In regard to Mr. Buckpitt's statement, I should like to say also that he speaks, I think inaccurately, of there being a deadlock when they came to ask for a reduction, and he rather twits me with inconsistency for having said in one place that we could always come to a decision and in another place that we could not arbitrate and come to a decision. You said just now that I had had such experience that I had nothing to learn, but I said that one can always learn. At present I should not say it is always theoretically certain that a decision will be arrived at. But, as a matter of fact, in this particular case there was no deadlock at all; it was simply that the appointed members agreed that there must be a reduction from the outset, and it was simply a question of determining the nature and extent of this reduction, the discussion of which followed very much the course that I outlined just now. In the course of the discussion it is true we had partially to displace an agreement which the two sides had arrived at, and that was a very unfortunate thing. The two sides had arrived at a grading of workers into four classes, and Mr. Buckpitt, who is a most energetic and useful member of the Board, had taken a very great part in arriving at this scale. For various reasons, with which I need not trouble you, we felt we could not give four different rates without raising some of the workers, which we thought it was impossible to do under the conditions of the trade. In consequence of that, two of these grades had to be telescoped into one. That is really the substance of his complaint. I think that deals with the criticisms of what might be called a personal character on the appointed members; but if any members of the Committee think I have not dealt with any point with which I ought to deal, I will be very glad to have a question put to me.

9132. Mr. Pugh: I rather gathered that what you did was to re-arrange an arrangement that had been come to by the two parties, and to which they had mutually agreed. To what extent would that operate on Trade Boards? Would not the general policy of the appointed members be that where the parties

12 January, 1922.]

Professor L. T. HOBHOUSE, D.LITT., LL.D.

[Continued.]

agreed they would accept that, or what would be their attitude?—They would accept it. It did not really amount to a re-arrangement exactly. One's greatest object as Chairman of the Board is to obtain agreement and to follow, particularly on technical and trade matters, the line on which the two sides appear to be together. The whole success of the Trade Boards, to my mind, depends on the extent to which agreement is come to. In this particular case it was a trade which had been in a state of great chaos, with absolutely no notion of scaling or organisation—it was just what any individual happened to give in any locality. The trade, owing to the influence of the Trade Board, thought it would set its house in order and would form a general scale or grading of the more skilled and second, third and fourth workers. They had done an admirable work and had agreed in setting out all these technical terms—things far beyond my understanding—in proper order. But it was an exceedingly difficult thing to introduce a grading of that kind, and to do justice to it at a time when you had to reduce wages, and at a time at which, in particular, some of the higher grades probably were expecting some increase. It seemed impossible to impose on the trade any increase. The consequence was that we had to make the differences in rates very small between the four grades, and we could not even find room for four; we had to reduce them to three. We preserved the grades and their names and specifications, and we gave the two lower grades the same rate. All the grades stand there, and when things are shaped more, either by a further reduction or a further increase, the whole scale will be considered, and it will be possible to apply it.

9133. As a general principle the appointed members direct their attention to getting the parties to agree amongst themselves, I gather?—That is their first object—to forward agreement.

9134. *Lord Weir*: Such an agreement might exist outside the Trade Board?—It might.

9135. You might, on the Trade Board, settle a grading of three classes, and the trade union outside might have settled four?—That is so.

9136. *Chairman*: Then I see you draw a considerable distinction between the two Acts. You say the Act of 1909 was intended simply to prevent sweating, and the second Act is intended to produce the State regulation of wages?—Yes. I think there was an idea behind the Act of introducing machinery for the establishment of minimum wages for various classes of people—minima suitable to the class.

9137. Going beyond the question of unfair or sweated wages?—Going beyond sweating; not necessarily beyond fair.

9138. Do you take the view that the intention was that the State should regulate the minimum wage for the different classes of worker?—I think that was the intention behind the Act.

9139. *Mr. Layton*: It is not specifically in the Act?—That is true.

9140. *Lord Weir*: As a matter of fact there is really no difference between the duties laid on the Boards under the two Acts, is there?—I think there is some difference, is there not? The new Act gives a normal day, and so on.

9141. But as regards rates there is no difference. There is a difference as to the conditions?—That is so.

9142. *Mr. Pugh*: The second Act is based upon the necessity of having adequate machinery for regulating wages throughout the trade?—That is so.

9143. *Chairman*: And that is the view you have taken?—Yes.

9144. *Mr. Layton*: Although the Act does not specifically say so, it is evident that it would cover the regulation of wages in all branches of a trade and might cover every conceivable sort of trade regulation?—We cannot touch the general terms of the industrial contract. We can really only prescribe a rate on conditions.

9145. *Lord Weir*: I would like to get it quite clear. The change in 1918 was a change in the con-

ditions under which the Act had been imposed?—That is so.

9146. The duty laid on the Board in regard to the fixation of minimum rates did not change as between the two Acts, but according to you you have interpreted it as if a very important change had been made?—We have taken the Act just exactly as it stood. I should have to compare the two Acts very carefully to make out that no change at all had taken place.

9147. I do not say there is no change at all, but in regard to the primary duty laid on the Board—the duty of fixing minimum rates—that was not changed?—If that is so, then the scope of the 1909 Act must have been very wide. I am not very familiar with it, because I barely came in under it at all. But we can fix a minimum rate for any class of worker. That is what we are to do. I am not interpreting anything; I am merely taking those words exactly as they stand.

9148. *Chairman*: But you could always do that?—Then you could have done under the 1909 Act all that we have been doing.

9149. *Lord Weir*: It has been put to you that you conceived the duty of the Board was the regulation of wage rates?—The regulation of wages; not exactly the fixation of standard rates. It is the regulation of wages to the extent of fixing a minimum for any class of worker for whom it was desirable to fix it. I think it is a question whether it is desirable to fix it for all classes of workers separately.

9150. You associate that with a change brought about by the 1918 Act?—If I said that, I said it incautiously. I do not know how far that was brought about by the 1918 Act.

9151. You point out the important significance of it?—What I said was there was a question of the regulation of wages in cases where trade unionism was not strong enough to stand upon its own feet. That, I think, is what has been said.

9152. *Dame Adelaide Anderson*: And it in fact involves further consideration of the different classes of workers?—Yes.

9153. Who are assumed not to be in a position to fix anything for themselves?—Yes, that is so.

9154. *Mr. Layton*: The implication of the 1918 Act presumably was that you could fix minimum rates for all classes of workers, but the class of workers for whom you would fix them were those whose rates were exceptionally low, because that is the phrase governing the Act of 1909?—That is so.

9155. Now the point is whether the object of the 1918 Act was to take the place of what in organised trades is the method of regulating wages?—Yes.

9156. And the difference is that it is the intention of the Act to produce that machinery?—I think it was.

9157. *Mr. Pugh*: That would be a proper construction to place upon Section 1 (2) of the original Act, which speaks of the rate of wages prevailing in any branch of the trade, a branch of the trade not being confined to an individual occupation in that branch, and therefore of necessity covering different occupations and probably a number of minimum rates. Would not that be a fair interpretation to place upon that section?—That you would have to consider branches?

9158. Yes, and not individuals. Therefore, if you have to consider more than one occupation, you must have a series of minimum rates?—Yes.

9159. *Chairman*: It makes a difference, does it not, because, is it not one thing to appoint an independent person like yourself to decide what is enough to enable a man or woman to live and to appoint the same kind of person to decide what are proper minimum rates to be paid to certain classes of skilled workers?—That is a point I have emphasised in my statement, as you will note as we proceed. I think that all the appointed members had that distinction very clearly in their minds; but I should add that this distinction is perhaps to some extent one of degree. You may have several grades. For your lowest grade you cannot secure what you think is a really adequate minimum wage; for the next grade,

12 January, 1922.]

Professor L. T. HOBBHOUSE, D.LITT., LL.D.

[Continued.]

perhaps, you can just secure it. When you get above that, then you begin to get more doubtful.

9160. When you come up to rates of 90s. and 100s., you are getting far beyond the question of subsistence, are you not?—Yes, at 90s. and 100s., you are.

9161. Some Boards have fixed rates as high as that?—Yes. I should very much doubt whether any appointed members ever voted on them; but I do not know.

9162. At all events, the appointed members had a right to vote on them?—Yes.

9163. I think you say yourself that the appointed members cannot pretend to have the experience or skill to judge in matters of that kind?—I think you must assume that you have got some common sense in your appointed members and that they will take that view.

9164. *Mr. Layton*: But would you encourage the Board to fix rates, or would you even go so far as to say it was its duty under the Act to fix rates for the main classes of workpeople; or would you leave it entirely to their discretion?—I should leave it to their discretion.

9165. You would not say it was their duty under the Act to fix the rates?—Our bare duty under the Act would be fulfilled if we had fixed a rate for all workers; but I do not think our moral duty would be fulfilled unless we had considered the lower grades of workers and fixed something more than a bare rate.

9166. That depends on what is meant by "lower grade"?—I have dealt with that, giving my meaning as concretely as I can, in my statement.

9167. *Mr. Pugh*: Unless you are going to consider varying rates, you come back to one rate for every grade of worker?—That is so. Of course, we get a good deal of criticism, I see in this evidence, to the effect that we appointed members do not consider grades of workers at all. In one case I see certain approval of a trade union proposal for a whole series of gradations of rates, and that was rather held up as what we ought to follow.

9168. *Chairman*: Some think you go too far and others think you do not go far enough?—Yes. I do not know that I fully answered *Mr. Layton's* question about the lower grades. May I develop that?

9169. If you please?—It is this way: If you make any attempt at defining what you mean by a living or subsistence wage you will find that the best experts on the subject allow a very considerable margin. I put aside all the differences there are as to what family you are taking. Even so, if you are thinking of the so-called statistical family you will find, as I say in my statement, that at the particular period which I take there is a discrepancy of 20s. between the higher grade of subsistence or comfort given by *Mr. Rowntree* upon one basis, and a lower or bare grade upon another basis; that is to say, if you took that criterion you would feel that it would be very undesirable that many people should be forced down to this lower level. That is what I mean by saying that if you had only succeeded in getting this lower level for all workers in the trade you would not have done your moral duty under the Act, provided you could get for other grades something rather better than this intermediate region.

9170. *Chairman*: I have read *Mr. Rowntree's* book, but what do you say is the distinction between the two?—The distinction is that his lower standard is supposed to be the very barest amount upon which his statistical family could maintain themselves in health, allowing for no contingencies and no little comforts.

9171. *Dame Adelaide Anderson*: No recreation?—No recreation, no newspapers, I think, and so on—allowing in fact nothing. Cutting everything down to the very barest and allowing nothing for contingencies. But the higher standard takes these reasonable amenities of civilisation into account.

9172. *Mr. Layton*: I think I am expressing your view in saying that you interpret it to be your duty to fix rates for all grades of workers in a less restricted manner?—I am now speaking of what I conceive to be the moral duty of the thing; that is,

of course, so far as the conditions of the trade allow. When we are convinced by the employers that it would only cause unemployment, we cannot help ourselves. You must not think that I have had these figures, which I have set out here, in a pedantic way, before me for years. I have not. I only set them out for your benefit.

9173. *Chairman*: You deal with the question of underpayment. That is I gather the payment of wages less than are sufficient to fulfil the bare physical necessities of the worker?—I explain that under two sentences later on. There is the relative and the absolute underpayment.

9174. Is that the same as the two rates you have mentioned?—No. By relative underpayment I mean a thing that may occur in any rank of life whatever. Even a man with £1,000 a year might be underpaid if the kind of function that he is doing usually brings £1,500 or £2,000 in the market. I certainly think that some professional men are underpaid.

9175. What is the purpose of your distinction?—I want to show there is a distinction between absolute and relative underpayment. What I go on to show is that relative underpayment is a technical trade matter. The object of my distinction is to show how it is that the settlement of the higher rates is left really to the two sides, and that the appointed members are virtually *désintéressés* in the matter.

9176. *Mr. MacCallum Scott*: The point is in your last sentence—it must be determined by those engaged in the trade itself?—That is so.

9177. *Chairman*: That is absolute underpayment really for the lowest grade. Relative underpayment applies more closely to the skilled grade?—That is so.

9178. *Lord Weir*: Do you think that it is expedient that these higher rates should be compulsory rates?—I think there is a great deal to be said for it. I do not know how far you carry it, but I think there you come to your Joint Industrial Council idea. There is a relative underpayment—a certain kind of sweating. You hear people using the term, and not without a certain amount of truth, about what are relatively highly-paid people. There are plenty of people who have great capacity in the professional world, and certainly even in the business world, as far as I have seen it, who are doing very good service and who are not getting the pay commensurate at all to their service. They do not know how to fight for their own hand, and there is a great deal to be said for the desirability of an acknowledged rate. Nearly all professions and trade unions concern themselves with such rates.

9179. *Mr. Pugh*: If you were simply applying compulsion to the rates of the lower workers, and you were not applying that to the other rates settled by the Board, the tendency would be that while the best employers would pay the rates agreed upon, the remainder would tend to the minimum rates or the rates that were compulsory?—I do not know whether they could quite do that, because they would have to leave their best men. To that extent, the skilled men can always take care of themselves. But I think that the fair employer requires protection just as much as the worker requires protection.

9180. The point I want to get is that the work of the Boards in fixing rates above the point of compulsion would be nullified by the inability of those constituting the Board to enforce their decisions. That, of course, would not apply in well organised trades, but you are dealing with disorganised trades, and in those circumstances do you not think that would be the principle?—Of course, it would have nothing but a moral effect if you merely had a resolution of the two sides.

9181. *Lord Weir*: How would you agree with this: Taking it broadly, there might be three classes of workers, namely, those who are unorganised and have little bargaining power, who are generally the lowest grades; then come the higher grade who have bargaining power because they are organised, and finally you come to the unorganised individuals who have a bargaining power because of their ability and skill. But, broadly, I take it the Trade Board is to protect the lowest class?—That is certainly its most

12 January, 1922.]

Professor L. T. HORHOUSE, D.LITT., LL.D.

[Continued.]

important function, but I would suggest that the Trade Board is fulfilling a useful function when it defines rates for any large class of worker, as long as that is done by agreement of the two representative bodies.

9182. Would you say that such rates should be compulsory?—Yes.

9183. *Mr. MacCallum Scott*: You say as long as it was done by agreement, apart from the appointed members?—Yes. My difficulty really about that is to say the point at which agreement should take the place of enforcement by the appointed members. The thing I am most clear about is that that point cannot be the absolute lowest.

9184. *Dame Adelaide Anderson*: You would perhaps also say that the nearer you get to dealing with relative underpayment, the nearer you get to its being undesirable to enforce it?—Yes. It is less important obviously to enforce it, and you come to the point at which it would be undesirable. I think, for an outside authority to intervene. I would draw a distinction between the intervention of an outside authority and the principle of enforcement.

9185. *Mr. Pugh*: You are not speaking about outside arbitration, are you?—No, I am speaking about the appointed members being the outside authority. But the point as to its being a matter of difficulty is correct.

9186. *Dame Adelaide Anderson*: You agree that compulsion becomes less desirable the nearer you get to the relatively proper payment?—It certainly becomes less necessary, but I still think, myself, there is a good deal to be said for it.

9187. But originally both the Acts were rather directed against actual underpayment than against relative underpayment?—Of course that applies on your setting up a wage for any class of worker.

9188. *Lord Weir*: Who are not able to bargain for themselves?—I do not think it occurs in the case where the class is mentioned. I think we must set up a general minimum time rate for all workers.

9189. But it is all governed by the words: "Where no adequate machinery exists for the effective regulation of wages"?—That governs the setting up of the Board.

9190. "And that accordingly, having regard to the rates of wages prevailing in the trade or in any part of the trade, it is expedient that the principal Act shall apply to that trade"?—That governs the setting up of the Board, does it not?

9191. It governs the setting up of the Board, but does it not lay down the object?—The spirit of the thing, you mean?

Lord Weir: Yes.

9192. *Chairman*: Then you deal with the subsistence wage and you say that the standard must be sufficient to provide not only for workers, but for their dependents, and I think in your calculations you assume for a man a family of five?—Yes.

9193. That is to say, he must be able to provide for himself, his wife and three children?—Yes.

9194. Of course there must be many cases where such a standard would give the man more than a bare subsistence?—Yes. I think it is desirable that they should all have more than bare subsistence, myself. But take the standard at what you may for a family of five, as I mention in a note which you will see a little later on, the margin is small if there are two children, and it is not very great if there is one child. Where there are no children there is a fair margin. Then the single man is not so well off as you might think. A wife's unpaid services are very valuable, and if you have to allow for the unmarried man that he has to pay a housekeeper and rent and so forth, that adds to his expense; but there is a margin in his case.

9195. I think you say a single man ought to have enough to enable him to contemplate marriage?—I think that is attributed to me somewhere. I think I was being badgered about a vote upon men of 21 and over, and I said that we had in mind that the man, if not married, would be contemplating marriage. But in that particular case we were not

bringing men of 21 up to the maximum. Our maximum was for men of 25, I think.

9196. *Dame Adelaide Anderson*: Up to that point the rate required by the man and woman would be equal. The woman would need a housekeeper if she was out all the day and was working, as well as the man?—Yes.

9197. So that it is really the family which is the extra charge?—That is so.

9198. *Lord Weir*: You agree that even in time of good trade, to secure for all workers the standard calculated on the basis of the statistical family, is still, unfortunately, an abstraction?—It is very difficult to get. I go into detail about that later, and I say that if you take the Rowntree standard, we have generally succeeded in getting what may be called the bare subsistence wage, which I do not think is adequate. But I do not think we have tried to get Mr. Rowntree's more liberal estimate, and we have only very partially succeeded in getting an intermediate figure which I have evolved really for the purpose of comparison now.

9199. *Chairman*: The Rowntree standard is that in the "Human Needs of Labour," is it not?—The one is, and the other is brought out in his poverty line.

9200. In the "Human Needs of Labour" he fixes the wage at 35s. 3d. for a man, and for the very lowest figure, 26s.?—That is so.

9201. And on those figures you say it would work out at 71s. 5d. for a man for the first figure, and 54s. 1d. for the second?—Those are the figures his secretary has supplied me with.

9202. And taking those together you arrive at a scale of 65s. as a minimum?—As a figure it is worth comparing these results with, may I put it.

9203. To-day that 65s., I suppose, would be reduced, having regard to the fall in the cost of living?—Yes.

9204. That 65s. was suggested as a figure to be compared with during the time when the "Labour Gazette" figures were varying from about 120 to 130 or 140 or 150.

9204. What would be the equivalent of the figure to-day?—It is impossible to say with any accuracy, because the Rowntree figures do not vary in mathematical proportion with the variations in the "Labour Gazette" figures. Professor Bowley's figures arrived on a different method, and I do not know how they vary at all. Therefore, you can only say in a rough way that there would be a further decline.

9205. And for women you arrive in the same way at a figure of 35s.?—The figures supplied to me by Mr. Rowntree's secretary were, 20s. for July, 1914, 40s. for February, 1920, which is rather a conjectural figure, 43s. for December, 1920, and 38s. for December, 1921. Those are the top figures—the "Human Need" figures. I have got no subsistence figures at all for them, but I suggest very conjecturally knocking off anything from 4s. or 5s. to 7s. or 8s. from those figures.

9206. *Lord Weir*: Would it be accurate also to indicate that those are York figures? They are based on the town of York, are they not?—I do not think that is quite so. I think they were only partially based on York.

9207. I thought the female figures were definitely based on York in the "Human Needs"?—Is that so?

9208. *Chairman*: Then you have given us a table of rates, which is very instructive. Those are rates fixed by the Trade Boards only?—Yes, I thought it worth while to get together for my own interest the rates generally, and particularly the high rates.

9209. You give in the first column, the general minimum fixed by the Trade Boards, and in the second column the lowest rates fixed by the Trade Boards?—Yes.

9210. What is exactly the distinction there?—I have explained that as well as I can. I am not using the term "general minimum" there in the sense used in the Act. I meant by "general minimum" a minimum which is applicable as a minimum to all workers of the sex in question.

9211. Not to all workers, is it?—There may be higher minima applicable to them, but those higher minima would include these lower minima.

12 January, 1922.]

Professor L. T. HOBBHOUSE, D.LITT., LL.D.

[Continued.]

9212. But then there would also be lower minima?—
N. I have not put any general minimum where there is also a lowest rate. In some cases there is a general minimum fixed for the sex, and that goes down in column 1. In some cases there is a whole list of rates—quite a number of classes—and there will be a bottom to those class figures. It is in such a case as that that I was not sure it would be fair to say that the Board had fixed this rate as a general minimum—it might apply to just a few—and that is what I have called the lowest rate.

9213. The figures in the first column, then, are also the lowest rates fixed by the particular Board?—
Yes; a lowest rate does not appear as well.

9214. I see in the case of the boot and shoe repairing there is a general minimum of 65s. and a lowest rate of 45s. given for females?—The 65s. for females exactly corresponds to the 65s. for males. That Board insisted upon fixing identical rates for the same operation; but patching work, which is done mainly, if not exclusively, by women, had a different rate for women—45s., I think.

9215. You have given another instance in the pin, hook and eye trade, where two rates are shown?—
I think we ought to have omitted the general minimum rates in those columns and only put the lowest rates.

9216. There is another case also in the wholesale mantle?—In the case of the wholesale mantle I think it was very difficult, because there is a very long list of rates. I think the reason of that is that the 65s. which is put down is for "Other Workers." Generally speaking, "Other Workers" are the lowest rates, but in this particular Board the "Other Workers" are not the lowest rates. There was a rate below the "Other Workers" for some special class.

9217. There are many similar cases. In the ready-made tailoring there is another case; there are two rates there?—They would all have explanations of that kind.

9218. Coffin furniture is another. I want to understand exactly what it means?—I could not say exactly why we put that in there without referring back to the data. I think I see what it is. That 60s. is for persons of five years' experience, as you see by a note there, and it is regarded as being a general minimum rate, in accordance with my explanation at the beginning, because it is a rate to which all grades of workers will attain if they continue in the trade after 21. But in the meantime those who have not got that experience, I presume, get 47s. and later 56s. 6d.

9219. Mr. LAYTON: Most of those cases refer to column 1 of your figures, do they not?—That is so. The real thing is I did not wish to suggest some of the lowest rates were general minimum rates, which would be rather unfair. Column 1 and column 3 are really substantially the minimum rates.

9220. CHAIRMAN: Then the points which you have made in your statement as to that table are three, I think: First, you say that only six of the general minimum rates applicable to adult males exceed 65s.?—Yes.

9221. Cotton waste, which was 66s., has now been reduced to 60s.?—Yes.

9222. Ready-made tailoring is 76s. and the stamped metal trade has a minimum of 66s. For women the dominant rates, you say, are from 32s. to 36s.?—Yes.

9223. Have you read Messrs. Rowntree and Stuart's pamphlet about dependants in the case of women?—I do not think I have read it. I read one book of Mr. Rowntree's about it, but not that one, I think.

9224. They arrive at the conclusion that, speaking generally, women do not have dependants?—I was aware of that conclusion. I think that is so in the majority of cases.

9225. Then you have worked out the ratio of female to male minimum averages, and it seems to be about 55 per cent.?—57 per cent.

9226. Lord WEIR: In connection with that, is it not rather necessary to consider whether the rates laid down for women tend rather more to be the rates paid to women than the rates laid down for men are paid to men, so that the ratio you have calculated simply on the rate might be a little inaccurate?—
I have no information on that; I could not say.

9227. Have you no information that shows that the rates laid down by the Trade Board for women as a rule are the rates paid to women?—I should think it is probable they are nearer to it; but we are constantly told by employers on the Trade Board that the minimum we are considering is not one that will be paid. They are constantly telling us that the minimum will be exceeded, and those statements are made in general as to the two sexes.

9228. CHAIRMAN: Then the third point that you make is that the majority of the Boards have fixed higher rates for special grades of workers?—Yes.

9229. And you point out that they range in the case of men from 68s. to 84s., and that in some Boards there are one or two grades running up to 96s., and even in one case to 107s.?—Yes.

9230. I understand you find nine cases in all of one rate or another, at one time or another, in excess or 90s.; and you add: "In such cases we may take it that the Boards are not concerned with the consideration of the minimum living wage in its ordinary sense, but rather with what they conceive to be a fair return for skilled work"?—Yes, that is so.

9231. With regard to women, you give similar figures. Then come those investigations, which I have read, and which we need not go through, as to the voting?—Yes. I thought it would interest you to see how far the appointed members had voted for any of the higher skilled rates.

9232. And your general conclusion is that they do not vote on those higher rates?—I do not think they use any influence at all except when there have been negotiations, and they think that the two sides have agreed, and then they think there is some backing down, when they try to keep the agreement going and to get it through. But substantially they have not determined the rates with regard to those higher figures.

9233. There is a passage on page 17 which struck me. You say: "So far, therefore, as higher rates have been fixed without injury to a trade, good has been done. On the other hand, appointed members cannot pretend to judge of degrees of skill or measure their relative value. Hence, though in the course of the discussion they may form a view, they are chary of enforcing it, and the more so the higher the rate contended for. I fully admit that the record of votes does not tell the whole story, since pressure is brought to bear in negotiation. The pressure is applied to both sides"?—Yes. Of course, that is made in quite general terms. I did not wish to suggest that because I had produced a record of no voting, that in itself was a proof of no pressure.

9234. Mr. PUGH: There is just one point on the words in the second, third and fourth lines of the second paragraph on page 17. You say: "It must be borne in mind that the experts who have suggested the minima considered above have never put them forward as standard wages." Does that mean they have always been put forward as minima which might be varied if circumstances made variation necessary?—It is rather in this way: They put them forward as the lowest which they think it is desirable that people should be earning, not as suggesting that people should not earn more if they are able to.

9235. The point I want to get at is this: The Boards have never proceeded on the lines that the rates they have fixed were permanent minima about which there could be no discussion as to their going lower?—No.

9236. So that every fixing of a rate has been the fixing of a minimum which only operated so long as the parties agreed that the circumstances justified the continuance of the rate?—Yes.

9237. Mr. LAYTON: In putting forward this exposition of your idea of how you would calculate the minimum, you do rather suggest that the governing

12 January, 1922.]

Professor L. T. HOBHOUSE, D.LITT., LL.D.

[Continued.]

consideration is that the minimum should be calculated on the cost of living?—Yes; but that in itself is an elastic figure.

9238. Yes, it is an elastic figure statistically; but there is obviously the difficulty that if you had a very large proportion of the wage earners of the country having their wages fixed on such a basis, you would thereby make much more difficult any alteration in the cost of living itself, because these wages obviously must enter into the cost of living to a considerable extent?—Yes.

9239. Is not that a very special difficulty of the present situation?—Yes. One moves in a kind of circle undoubtedly.

9240. I mean is it not the case that if you establish this as your basis you tend to make the wages very rigid?—Well, the people have got to live in the meantime. We are taking a pretty low estimate, as I have shown, of what people can live upon; and as soon as the value of money is more than will have an effect upon that. But you know better than I do that the circumstances governing the value of the coinage are very intricate indeed.

9241. Have you ever considered the fluctuations in other wage rates outside the Trade Boards?—I think they probably affect the minds of all parties concerned in coming to an agreement.

9242. I am looking at it from the point of view of the appointed members for the moment. Have you never had before you figures showing you the variations in the big standard trades?—They have been present to our mind, and they have sometimes been brought up by one side or the other. Sometimes there are trade agreements in which trades are involved, or are on the edge of.

9243. But if the Trade Board figures had moved during the last few months more rapidly, do you think that would have had a substantial influence on the cost of living?—I should rather doubt it. I should think the cost of living, so far as it was governed by wages, was governed much more by the large productive unions, such as the miners' unions and the railway unions and so on, than by our comparatively low paid industries.

9244. That might be the case if the whole of the distributive trades were brought in?—The whole of the distributive trades would have some effect on the cost of living. Of course, in the distributive trades the cost of wages to turnover is very much lower than it is in the productive trades. Mr. Cahill has given a figure, I think, of 5 per cent. in the retail, and perhaps 3 to 5 per cent. in the wholesale. I think he gave that more conjecturally. In the manufacturing Boards, if you ask for estimates, you get anything up to 60 or 70 per cent.

9245. *Dame Adelaide Anderson*: On page 13 of your statement you say that on the whole the increase in women's wages was materially greater than the increase in men's wages; that is women not skilled?—Yes.

9246. It does not apply to those who are skilled?—I do not know much about the women. We have only a comparatively few classes of skilled female workers, but I should say that the unskilled women have decidedly got a larger increase than the unskilled men, from the way in which their wages were fought for, and the information we got as to what difference our rate would make in practice. The impression on my mind is that proportionately larger increments were given to women than to men.

9247. It is a fact, is it not, that before the Trade Board Regulations came in, for a long time the women's wages had tended to be stationary?—Are you asking me that?

9248. Yes, I am asking you that. They did not advance in the same proportion as men's wages prior to 1909?—I do not really know about that, but I should suppose it was so.

9249. In any case, the need was very much greater in the case of the women?—Yes.

9250. *Mr. Layton*: Are you referring here to the increase as between the wages in 1919 and the wages now?—I am not sure that I have the actual passage.

9251. *Dame Adelaide Anderson*: It is page 13 of your statement. You say: "It must be added that to secure this standard the increase in women's wages was in general materially greater than the increase in men's wages."—By that I meant as far as I can judge the increase actually made when we set up the rate at the time.

Chairman: I see that Mr. Wolfe in his evidence confirms what you say. He says: "So far as the women are concerned, there is no doubt that the women in the Trade Board trades have had a higher increase than the women outside. Their percentage increases are higher than the men, and they are higher than women in other industries."

9252. *Dame Adelaide Anderson*: Showing where the great need was for protection against falling below the minimum scale?—Yes.

9253. *Chairman*: He also adds this: "There is this much to be said, that where the rate was unduly low it is not unnatural, or, indeed, improper, that there should be at least that increase."—I may say that in some cases we should have been inclined to put the women's rate rather higher but for the degree of disturbance we were assured that the rate we were introducing would make. You cannot make up all your leeway at once.

9254. *Dame Adelaide Anderson*: But this does not apply to the more skilled women. This is the general average?—Yes, I should say so.

9255. *Chairman*: Then we come to your statement on page 21 with regard to difficulties and drawbacks. You first mention the inspectors. I suppose you would agree that there are not enough of them to enforce the present system of Trade Board rates?—I believe they have been considerably increased, but that was certainly the case up to a comparatively recent time.

9256. You point out that a Trade Board cannot order inspection and can only appeal to the Ministry. What do you suggest as to that?—I make some suggestions a little later on which all depend upon a certain inter-relation or organisation of the Boards, which I think would enable the Boards in contact with a principal officer of Trade Boards substantially to obtain what inspection was required competently with the number that could be detailed for those services.

9257. *Mr. Pugh*: Is there any report made to the Board now with regard to failure on the part of the employers to carry out the decisions of the Board?—Yes; when an inspection has been held a report is sent of the result to the Board.

9258. But you have no arrangement whereby a workmen's representative on the Board can lodge a complaint to the Board that a certain employer is not carrying out its decisions?—We get things of that sort from employers sometimes, as well as from workers, and when we hear anything of that kind we communicate with the Ministry, and they co-ordinate their best to help us. They will send down inspectors to the particular place or district if they can—if they have got one available.

9259. Can you suggest in what way the Board itself can exercise power more effectively than is done at the present time?—I think the Board, acting through the Central Board that I have suggested, could fashion for themselves an arrangement with the inspector.

9260. *Chairman*: You suggest the formation of a Central Trade Board?—Yes.

9261. And I think I am right in saying you would give them some pretty wide administrative powers?—I think the administration must ultimately be in the hands of an official of the Ministry, but I think he should be in contact with the leading members of this Board. I conceive this Board as having its chairman and the chairmen of the employers and workers, and perhaps one other member from each side as a committee which would be constantly available.

9262. It would be a small body which would be in the main advisory?—Yes; you can say that its powers would really be advisory. But I think the

12 January, 1922.]

Professor L. T. HOBBHOUSE, D.LITT., LL.D.

[Continued.]

principal officer of the Board should consider, along with such a committee of my central Board, the disposition of the resources of the Boards placed in their hands by the Minister.

9263. *Mr. Pugh*: But that Central Advisory Board would hardly cover the cases where the employer was evading the law. You could not very well refer a matter like that to your Central Board. If it is a question as to what he is entitled to do under the Act or the decision of the Board, then it would be a dispute which could be so dealt with. But you could hardly refer a case there where the employer was evading his legal obligation?—I think in that case the Board affected should be able to call upon the principal officer of the Trade Board office to institute the necessary steps for enforcement.

9264. *Chairman*: Is that ever done?—Of course, under the Act they can enforce, but they have no machinery and no finance. They can correspond with the Minister about it.

9265. *Lord Weir*: Would there not be a tendency for that Central Board to be whole time?—I am suggesting that a committee of it would have to be permanently available. I do not think that the individual Boards could act quite in the same way as the body I am suggesting, because one Board might be a little too clamant; it would always be demanding attention and trying to get all the inspectors to itself.

9266. *Dame Adelaide Anderson*: The main purpose of the Central Board would be to co-ordinate rates, would it not?—Yes, and to act as an appeal body.

9267. Not to administer the Act at all?—No, it would not directly administer.

9268. *Mr. Pugh*: Would it act as an appeal court between the parties in the case of disputes?—In the case of an appeal against the decision of a Board, it should go to it.

9269. From either side?—Yes, either side.

9270. *Mr. Layton*: Would you allow either side to appeal always?—I think probably not; you would get too many appeals. I think it would be better for the Minister to act as a referee. That is not the right expression. I think it would be better for the discontented party to apply to the Minister, and the Minister, instead of deciding whether he would confirm or quash the rate, should refer the matter to the Central Board.

9271. At his discretion?—Yes.

9272. *Mr. Pugh*: And you would not give the same discretion to parties on Trade Boards with regard to arbitrating on disputed points as would apply to similar bodies in other industries?—Do you mean in case they had not come to an agreement?

9273. It has been suggested here that it is desirable to have some outside Court—the Industrial Court, or something of that kind—to which the parties could refer disputed points, and that that would prevent the present delay and would be more advantageous?—I think it is quite necessary to have an appeal. It might be to the Industrial Court, or to some such Court. That I think would largely have the effect that the Boards would become Boards of First Instance, and that no very crucial question would be decided by them, but that all crucial points would be taken to this Court of Appeal.

9274. *Mr. Layton*: In that event it would hardly be necessary for the Chairman or appointed members to have the right to vote?—Although their right to vote would be withdrawn, you could not dispense with your appointed members. The Chairman would be the Chairman without a vote. The Board itself would become a Board of First Instance, and any disputed point would go to this Appeal Court.

9275. *Chairman*: I suppose that would involve delay?—Yes, because the Appeal Court would get congested.

9276. If there was an absolute right of appeal against every rate or variation of a rate, you might get a very large number of cases?—It might be used in a pettifogging way, of course.

9277. Suppose you had your Central Board and every rate were referred, perhaps automatically, to that Committee, they could then co-ordinate. You

might still give the Minister the right to refer any rate to the Industrial Court if he thought fit. That Board, of course, would be used in all cases where there was serious controversy?—I do not see that the Industrial Court would be a better tribunal than my Central Board. The object of the Central Board is to get the workers in in the final decision.

9278. *Mr. Pugh*: You are rather proposing something which is both an Arbitration Court and a co-ordinating body, specially applying itself to Trade Board matters?—That is so.

9279. And you think that would be better than the ordinary Arbitration Court?—I rather think it would. On your Appeal Board you would have employers and workers, and I rather suggest appointed members, or at all events, a Chairman who has had experience of Trade Board work. You would have people from the same atmosphere, and they would judge pretty conclusively the arguments urged pro and con with regard to a particular rate. It would be less external than an Arbitration Court. The independent element is reduced to a minimum, as it is in a Trade Board.

9280. *Chairman*: Of course, the question of scope should be referred to it?—Certainly. I think you could give that body a statutory right, could you not, to say that its decision is final. But the Minister has never claimed that right. His decision is at present final only in the sense that it decides administration.

9281. But would it not be desirable to make it final subject to his consulting the Trade Board concerned and the Central Board?—I think there is a great deal to be said for that.

9282. *Mr. Pugh*: I suppose one may attribute a great deal of delay to the fact that no one has been able to bring about finality except on continual reference back?—That is so. Also, I think if you had two or three Boards with this semi-conciliatory and semi-arbitrary body between them, you would get questions of scope dovetailed into one another quite neatly and without trouble. If you have two or three Boards, they have conferences about scope, and they will not agree because they want to extend their territory, and also probably they have got different rates, and the question whether you are to be under Board A or Board B may decide whether you are to have 7½d. or 8½d. per hour.

9283. *Chairman*: After all, it is the Minister who defines the scope?—Yes.

9284. And there is some reason for saying that he, subject to consulting the Boards as well, should have the right to say what he meant, or, at all events, what he ought to have meant?—Yes. The employers on a Board very often say he ought not to have meant that.

9285. Somebody must decide?—Yes. I think the Minister could do so, but I think he would be wise if he put it to the Board.

9286. *Mr. Layton*: You would not object that there should be some modification of the power of the Minister?—I have dealt with that in some detail, and I would only retain it in a modified form. I give him a certain ultimate power, but I should think it very undesirable that he should really function as a court of appeal behind this suggested Central Board.

9287. *Mr. Pugh*: That Board would be able to deal with such questions as the amalgamation of different Boards?—Yes; I presume that is a power which could only be exercised by the Minister ultimately.

9288. I do not know if you have dealt with amalgamation?—Yes.

9289. *Chairman*: On the point Mr. Layton put to you, is it not desirable that the actual confirmation should be by the Minister, although no doubt he would make it after reference to the central body?—What I have said about that is what I should be inclined to stick to. May I repeat it? "If a suitable appeal body can be agreed upon, the question arises whether the Minister should merely register its decision, or should retain an ultimate power of reversal." What I am saying now is irrelevant to the question of what your appeal body is. It supposes that some appeal body has been agreed upon. My statement continues: "On the one side it may be

12 January, 1922.]

Professor L. T. HOBHOUSE, D.LITT., LL.D.

[Continued.]

urged that if the final decision is the Minister's, the main purpose of an appeal body fails, the door is opened to political pressure, and the Minister, if only to secure his own position, must have his own independent inquiry—an appeal behind the appeal. On the other side it will be maintained that Parliament will refuse to part with ultimate control, and that there must be for the executive some loophole of escape from the consequences of a mistaken judgment. Upon the whole two things would seem to be essential to any system of appeal. The first is that under all normal circumstances it should be final and the confirmation of the Minister given without awaiting further criticism. The second is that on appeal, as in the first instance, all objections should be openly discussed and the two sides confronted. Hence if fresh objections reach the Minister he should communicate them to the Central Board. If the Minister should form a definite view from which the Central Board diverge, the natural resort would be a conference between the Board and officials of the Ministry. Should this fail there might remain"—I do not wish to say more than "might"—"a reserve power of decision to the Minister in a case where he remained personally convinced on definite grounds formally adduced before the Central Board that there would be danger of grave industrial consequences from the confirmation of the proposal."

9290. *Mr. Pugh*: That would hardly be likely to arise, would it?—I do not think it would arise under the circumstances.

9291. *Chairman*: Of course, it would be a great convenience to have a body of this kind behind him?—I might mention that it would be possible for the Minister to establish an advisory body without renouncing any of his ordinary powers.

9292. Then you speak about amending proposals—that means amending proposals without re-publication?—Yes.

9293. And you think that might be done where the amendment is not very substantial?—Yes. I think it ought to be done in the case of anything that can be called a fair amendment. If you had a proper appeal body you could go to them and say: "Is this a fair amendment?" A fair amendment is one, I think, which arises out of the original proposal and in particular it arises out of objections which have been received to the particular proposal. We have had the very greatest difficulty arising from that.

9294. *Mr. Pugh*: There is a point on page 22 of your statement. You say there that the Boards cannot order an inspection in any specific case or in any particular locality where they have reason to believe that it is required. Do you advocate that the Board should have that power?—I would not like to say "order," but I think that the Board should be able to go, through its secretary, straight to the principal officer of the Trade Boards, who could give the order.

Chairman: I have passed over that because I think the proposals in that connection are found later on.

9295. *Mr. Layton*: I am not really clear as to what you mean by a fair amendment. It seems to me that a proposal for a radically different rate might be open to objection?—Yes. If a radically different rate passes the Chairman—which is unlikely—then I think it would be a fair ground of appeal.

9296. *Chairman*: It should not extend to trivial amendments, should it?—No. May I give a case which arose out of our area rates on the Grocery Board? The first areas we put in our proposal were the towns up to 5,000 inhabitants. We had a very large number of objections from the little towns of rather more than that, and we came to the conclusion that we could not sustain the higher rate for these little towns, and we wished to amend that and put 10,000 instead of 5,000.

9297. *Mr. Layton*: The difference being rather big—bigger than between those towns and London?—Yes, it was rather big on the amount. But it is essentially an amendment. I think any Parliamentarian would say that, and yet you have to go through the whole thing again.

9298. *Chairman*: It is true you might have a fresh batch of objections if you advertised that alteration?—Yes; that is perfectly true, and then the thing is never ending.

9299. It is a matter of degree?—Yes.

9300. Someone says: "This is a fair amendment"?—That is so. I want someone who can say that the thing is a fair amendment, as I suppose the Speaker of the House of Commons could do.

9301. Then you have dealt with confirmation. There, again, the argument comes first and the proposals come later. Then as to inter-relation of Boards, that deals with scope?—Yes, largely, but not only that.

9302. And co-ordination?—Yes. Employers complain very greatly of the fact that there are comparatively trivial differences in rates which compel them to have two scales, which compels them to have accountants and inspection of their methods to see whether they are paying each person exactly what is due to him; and, of course, there is jealousy between the people working near together. That ought to be stopped and it is easy to do it.

9303. An employer should be able to apply to some body to tell him which rate is applicable to his establishment?—Yes, I think the Central Board could tell him that.

9304. He could state that most of his business came under a certain category, and he could come under that?—Yes; or some department of his business.

9305. *Mr. Pugh*: That might carry amalgamation?—Yes. In other cases it is a question of rates. I mean a question whether a junior should go up 2s. at 17 years of age and 1s. at 18, or 1s. at 17 and 2s. at 18, is almost a chance, according to the course of the negotiations.

9306. *Lord Weir*: What amalgamation is possible?—I have not gone into great detail here as to that, but I think a considerable amount. I do not see why the Clothing Boards should not really be one. I think that you want probably a rather different constitution than you have now. I do not think you can do it without legislation. You would have to give some sort of autonomy to the present Boards or the divisions of trade represented by those Boards; but it would be a strictly subordinated autonomy. You would have to give them more power than district committees, which are really futile under the present Act, possess, but yet not absolute power. A committee might have a right of initiation, but I think you would have to reserve the decision to the Board as a whole.

9307. Do you think the question of amalgamation would be a matter which the Central Board you propose might regard specifically as one it should initiate and deal with?—Yes. All these Boards now to some extent have got their individuality, and they would be very particular about the terms under which they came into the amalgamation, and you want to be very particular how you have it threshed out. It should be done by employers and employees.

9308. It is advocated amongst the Boards themselves?—Yes, it is thought about.

9309. *Chairman*: Why are district committees so futile?—Because they have no powers. Of course, some powers might be confided to them, and in the case of large Boards might be confided to them with advantage, but their principal function is that of criticising a rate which has been proposed, and they must sit and pass this rate before the proposal can come up for fixing.

9310. Why cannot the suggestion for a rate be put to them before it becomes a proposal?—They are bound by statute to sit upon it after it has been proposed, I think.

9311. Only after it has been proposed?—Yes.

9312. I am not sure that you are right about that. It is Section 12 of the Act of 1909. Perhaps it has been altered?—"No variation or cancellation of such a rate shall have effect within that area unless either the rate or the variation or cancellation thereof, as the case may be, has been recommended by the district trade committee."

9313. Why should not that report be made before the proposal?—I suppose it might be, but then you

12 January, 1922.]

Professor L. T. HOBHOUSE, D.Litt., LL.D.

[Continued.]

would be bound to the rate which the district committees had recommended. If you get a dozen district committees you might have a dozen different recommendations. That course has never been followed.

9314. *Mr. Layton*: If you got a dozen recommendations, it does not follow that the district committees' recommendation must be followed?—It must be followed, or else the committee must meet again. If the district committee has recommended a rate, and the Board had adopted another rate, then that rate must be submitted to a further meeting of the district committee.

9315. The Board need not accept it?—No, but it must be accepted if it is to avoid that procedure of throwing the thing back to the Committee.

9316. *Chairman*: Suppose the Board said: "We are considering the fixing of a rate of 6d. and we will ask our Committees to report." They all report in their different ways—some for and some against; might not the Board then fix the 6d.—It might fix the 6d. but not anything else.

9317. If they said: "We think it should be 6½d." then they would have to refer it back?—Yes.

9318. *Mr. Layton*: If in any case the Board has made up its mind, and the appointed members have come to their decision, they are very unlikely to alter it?—That is so. I will not say the District Committees have not been of value. In one case they were of guidance to us, the reason being that the rate was contested when it came up to be fixed. In the interval, the District Committees had reported, and in several cases employers on those District Committees had been very much less unfavourable to the rate than the employers on the Board. Another thing is that these District Committees being endowed by statute with no real power, the proceedings are lifeless, and unless the whole matter is one of general agreement in the trade, the upshot of the District Committee meeting is that the workers resolve that the increase of rates is desirable, while the employers resolve that the increase of rates would be most prejudicial to the trade under present circumstances; that is all.

9319. But still there are cases where the District Committees receive consideration, like at Dundee in the case of jute, and at Bridport?—That was done by the Board.

9320. But it might be done by the District Committee?—Yes. At Bridport it was done very effectively without the District Committee. Please do not think I am against the District Committees at all. I have been several times accused of having ruled that we could not discuss District Committees. That is quite a mistake; but what I have constantly said is that I do not think that District Committees, as at present constituted, and with the powers at present given to them, are of very great value.

9321. Arising out of that, perhaps you could tell me this. Suppose you are going to differentiate between one place and another, is it better to do so by some scale of population, or by reference to the different cost of living, or by naming the dividing districts?—It is really very difficult to say. The line introduced originally by the Milk Distributive Board, followed by the Grocery Board, and now by the Dressmaking Board, is a population line, and that is based, I think, more on the cost of living than anything else. It is supposed, and I imagine that it is broadly true, that there are some elements in the cost of living which are less in rural districts than in towns—rent and tram fares are two definite things. When you get to a town these expenses go up, and when you get to London they are very materially higher. That is about as much as you can say. There is another consideration which might come up on some Boards—though I do not think it really has done so; it has not taken tangible shape—that is the consideration that in some manufacturing cases the outlying districts have heavier expenses. In some cases it is the urban districts which have the heavier expenses. On the Tobacco Board we got complaints that in the case of a small man in the outlying districts the cost of carriage pressed very heavily on him. That has produced this three-area division. It is not scientific

at all. The areas, as you know, freely inter-penetrated and go into one another, and what may be called a rural area may be the well-to-do fringe of an urban area. It is quite impossible, I find, to keep the run of these districts and know how their boundaries will coincide. Then there is another division. The south-west of England from the protests we get on the Boards appears to be behind the rest of England in its general wage standards. To a less extent I think some of the more rural areas—not in the strict sense of rural areas but in the sense of rural population preponderating—are behind the urban districts. This position has been accentuated in the south-western area by the peculiar and unfortunate situation of my own native county of Cornwall at the present time, with which I have great sympathy. Those are two possible lines of differentiation you could make.

9322. *Chairman*: There was a third which we had yesterday, namely, differentiation according to the cost of living in the Board of Trade return?—I do not think there is really any systematic account of the difference in the cost of living of any recent date. You might make a sort of map.

9323. I was thinking of 1912.—I have made inquiries here and there, and I have not been able to get at any really satisfactory account of the variations in the cost of living later than that, beyond the fact that we know of the enormous rents in London. I am assuming that the village rents are cheap. I do not know how far the present shortage of houses has affected them; but we must suppose that the rents are very much less there.

9324. *Mr. Layton*: Is there not a further consideration beyond the difference in rent, namely, that the economic advance in different areas of the country has reached quite different stages?—That affects what I said about the south-western district.

9325. And that the ability of different areas to pay wages varies?—That is so.

9326. And that unless you take account of those things you are going to affect the population and bring about a shifting of population?—I think that is so to some extent, but I do not know how to make my map on that basis, except that particular corner that I have mentioned.

9327. If you take the wages in other industries and see the variation between the different districts, is not that much bigger than anything the Trade Boards have introduced?—I do not know; I have not worked that out.

9328. Take the agricultural wages before the war and at present. There is a greater difference between the agricultural rates in Lancashire and Yorkshire and Cornwall and Norfolk than between the highest and lowest rates fixed by any Trade Board?—Is that so? The Cornwall Agricultural Committee refused to lower its rates the other day.

9329. Then there are variations in the wages paid by local authorities. They vary in a ratio of more than two to one—some are more than double?—In manufacturing industries where people compete with one another, the Trade Boards are a little bit reluctant in any way to accentuate those differences.

9330. Is that not likely to be the case if the interests of say London or one or two big centres predominate on the Board?—It may be so.

9331. Would it be applicable in the case of the distributive trades where there is no substantial competition?—The case of the distributive trades is rather different from the case of the productive trades. That point has been made by other people, and no doubt it will be borne in mind by this Committee. I quite understand the case for national uniformity where you are dealing with minima. You would still expect that in the better-off areas there would be some improvement on those minima, as you get actually advertised, and even arranged with a Trade Board in some cases. A particular industry or a portion of an industry may agree there and then to pay a higher rate.

12 January, 1922.]

Professor L. T. HOBDHOUSE, D.LITT., LL.D.

[Continued.]

9332. Do you not think that when a certain Board fixes a rate it may affect other rates?—I think that the general rate has a sort of attractive power, or is itself subject to various attractions. It is dragged down towards the position of the lowest areas, but it is also dragged up by the desire to get a decent minimum, and the consequence is it does not exactly fit. Of course, the more general your thing is, the less it would fit every case.

9333. Would you not accept that as an argument for considerably more differentiation than now exists?—Yes, I think that differentiation would probably be a good thing if you could get it really practically adjusted, and if you could get over the difficulty of competition.

9334. Have you not really ruled out differentiation by refusing power?—I am not refusing power.

9335. I mean the Government?—No, I do not think you have that. I think the Boards could do the thing, only it would be a very complicated thing to do, and very difficult to get the proper information.

9336. Suppose you had amalgamation in one sense between different trades so as to cater for the whole of the trades, but, on the other hand, divided your Board up into large areas, leaving the central Board which you yourself propose, do you think you might get better adjustment to the existing economic conditions?—I think that might be a good thing in the distributive trades; certainly it is quite an arguable thing. In the case of the clothing trade I suppose there is more competition because the ready-made processes have come in so much, and I think that objection would be entertained largely on that ground. But, as against your whole contention, I think there is a consideration which I should lay more stress on than you do—that, in so far as you are accepting the standard of a district, you are stereotyping it. The reason why one district has lower wages than another is very largely a matter of tradition, and the thing moves in a circle.

(Adjourned for a short time.)

9341. *Chairman*: I think we reached your paragraph headed: "The Problem of Autonomy"?—Yes.

9342. And it is there that you give your suggestions with regard to administration?—Yes. I have got written down here my ideas on that point rather more constructively. Perhaps you would like to hear them?

9343. *Chairman*: If you please.—"There should be a Central Trade Board to which rates should, if he deems it necessary, be referred by the Minister for confirmation, and to which all questions involving controversy and requiring adjustment between Boards, should be referred. This Board should have a Standing Committee, consisting of the Chairman and two members on each side, available for consultation with the officials of the Department. The Trade Board division should form a separate Department of the Ministry of Labour. There should be a General Secretary of Trade Boards, and a deputy for Scottish Trade Boards, with an office in Edinburgh. Assistant Secretaries should serve as Secretaries of each Board, but the General Secretary would be officially the Secretary of each Board. The General and Assistant Secretaries should be officers of the Boards. They are, however, appointed by and for disciplinary purposes subordinate to the Ministry, and they must furnish reports as required to the appropriate officer of the Ministry, namely, the Principal Officer of Trade Boards. A legal adviser to Trade Boards should be available for consultation by the Secretary or by the Boards themselves at any time. He should also make the necessary arrangements for any legal proceedings. He is not, however, an officer of the Boards," I suppose the legal officer does report in that way. I make that remark with trepidation, because I am not quite sure of the proper hierarchy within the Civil Service on that point. But if he is not an officer of the Trade Board he is available for their help. "The Chief Inspector and his staff are

9337. But if you refuse to recognise it, are you not creating unemployment?—If you go too far in refusing to recognise it, that is so.

9338. It looks as though that had in fact happened in the case of certain localities—in the rural districts?—Well, it is suggested. I am bound to say that the evidence we had brought before us on the Board about the causation of unemployment by our rates was not very strong. A few sporadic instances were gathered together. They were not merely from rural districts; if I remember aright, the most cogent was from Hartlepool. These cases seem to be very few.

9339. *Mr. Pugh*: I take it that trades connected with Trade Boards cannot, any more than any other trades, escape the effect of the present industrial depression?—That is so. Another trouble was at Portsmouth, which, of course, is not rural, though it may be a rather poor district, and Plymouth, I think, complained a good deal. I rather doubt whether it is correct that it is very strong in the rural areas, because I do not think it is the smallest persons that our rates have particularly inconvenienced—particularly the skilled rate which was so much controverted. I have no responsibility for that skilled rate, as I say in my evidence, and I speak about it in a detached way. But I was concerned about it, and I have known questions raised on the Board about the small dressmaker. The representatives of the small dressmaker said: "This is not going to touch the small dressmaker. She does not employ fully skilled assistants; she is her own fully skilled assistant, so to speak. She does her skilled work herself. She will employ a young girl possibly up to 16 or 17 years of age, and then that girl either goes back to her home or to something else."

9340. *Mr. Leyton*: Had you, in fact, some of the small dressmakers on your Board?—We had not got anyone who was actually a dressmaker of the smallest kind, but we had people who had been small dressmakers and knew the case from their own knowledge.

at the disposal of the Boards, but subject to general regulations laid down by the Ministry and supervised by the Principal Officer. The Principal Officer should have the rank of Assistant Secretary, or preferably (if he also controls the establishment of Trade Boards) of Principal Assistant Secretary. He should report directly to the Minister. Questions of scope should be decided by the Boards with the help of the legal adviser. If, however, there is any incompatibility between the views of two Boards, or if a Board rejects the definite opinion of the legal adviser, the question should be referred to the Central Board. Its decision should be final as the basis of administration, whether it should be made binding on the Courts by statute is a question left open here. The Ministry appoints inspectors and lays down general regulations as to method and expenditure. Any Board may require a special inspection, but if the demand is thought excessive, the chief inspector may refer the question to the principal officer who, after consultation with the Committee of the Central Board, shall decide whether it is to be carried out. The same principle applies to enforcement, 'legal adviser' being substituted for 'chief inspector.' The principal officer is then directly responsible for inspection and enforcement, though he will not override the recommendation of any Board without giving his reasons to that Board and also to the Central Board."

9344. Whom do you call the principal officer?—He is a person who is an official of the Ministry of the rank of Principal Assistant, or Assistant Secretary. He is in contact with the Trade Board, and the committee of the Central Board as a consultative committee could deal with him.

9345. You have not made a very clear distinction, have you, between the administrative duties and the wage-fixing duties of the Boards? In that memorandum you have assigned to the Trade Board a considerable number of administrative duties?—I have suggested that they should be able to call upon

12 January, 1922.]

Professor L. T. HOBHOUSE, D.LITT., LL.D.

[Continued.]

the inspectorate, but subject to the view of the principal officer and subject to the regulations which the Ministry lays down for the inspectorate.

9346. *Lord Weir*: That makes the principal officer the administrative head?—Yes, and he is an official of the Ministry.

9347. Would there not be two heads? There is the chairman of the Central Board?—I have not suggested that the Chairman should have more than advisory powers, but advisory powers with a certain element of compulsion in them. The principal officer should refer certain questions to him and hear his view before deciding.

9348. *Mr. Pugh*: But is the Board itself to be advisory also?—Not on the question of appeal. I dealt this morning with the question of appeal, you will remember.

9349. *Chairman*: *A fortiori* the Trade Boards in these matters of administration would be also advisory?—Yes, in matters of administration they would be advisory in this way, that they would have a direct claim upon the services of the inspector unless reason was shown to the contrary, as, for instance, if the inspector was wanted more urgently somewhere else.

9350. But the inspector would have to get his directions from the principal officer?—Yes, in the first instance.

9351. Because you cannot have two masters?—I do not think you can. But the secretary I would make the servant of the Board. At present he is between two masters, and he is often in a difficult position.

9352. *Lord Weir*: One of the points of advantage over the present system would be that the principal officer of Trade Boards would be your link between the Trade Board and the Minister?—That is so.

9353. And he would have nothing else but Trade Boards to deal with?—That is so.

9354. Whereas you are linked just now to officials who have got other duties as well as Trade Boards?—Yes. As a matter of fact, some slight step has been made in this direction in consequence of the report of the committee on administration, and we do get some contact with the Assistant Secretary.

9355. *Chairman*: But under your system the principal officer would be an Assistant Secretary or Principal Assistant Secretary?—Yes, that is so.

9356. So he would have a double aspect?—Yes, he is bound to have it. I have thought about it in many ways, and I do not think you can avoid this contact coming somewhere.

9357. It was so in the old days?—Yes; that is a return to the old days except that it varies the chairmen of the Boards. Mr. Aves was Chairman of all the Boards, and he was an official of the Board of Trade.

9358. *Lord Weir*: Which for a small Department was probably the best thing?—Yes.

9359. *Dame Adelaide Anderson*: The chief inspector in your scheme would be directly under the Principal Assistant Secretary at the Department?—Yes.

9360. And the Board would apply to the Principal Assistant Secretary?—They would apply first to the inspector, who would carry out their desires unless he had reason to the contrary.

9361. And to the chief inspector instructions would come that the Board required the services of someone or other?—Yes, for a special place for a special time.

9362. Then would a duplicate copy of the report of the inspector go to the Board?—Yes, I think that is very important.

9363. At the time that it goes to the chief inspector?—Yes. There has been an improved contact between the Boards and the inspector, and I think it still wants further improvement.

9364. *Chairman*: This would necessitate more frequent meetings of the Boards, would it not?—I do not think so; at any rate, I think it could be done by administrative committees.

9365. *Mr. Pugh*: Have not the Boards got standing committees?—Yes; they have administrative committees.

9366. *Chairman*: Each meeting of the Board costs them something?—Yes.

9367. *Dame Adelaide Anderson*: But there is a standing secretary, is there not, of each Board?—Yes.

9368. So that the Secretary of the Board could carry on any arrangement about inspection, and so on, and wait for the next meeting of the Board?—That is so, and he could also consult the Chairman, as he habitually does, on any question that arose between meetings.

9369. *Chairman*: There is one secretary to all the Boards, is there not?—Yes, but he would have an assistant secretary. Matters of routine and detail would go to the assistant secretary. If he saw that a thing required attention, he would refer the matter at once to the general secretary. He probably would have had an instruction from the Board or the administrative committee, and if there was a matter of doubt he would refer it to the chairman, as he does at present. Then if the Chairman thought it was something he could not decide, they would summon a meeting of the administrative committee.

9370. In order to avoid frequent meetings the Boards would have to devolve on their secretary considerable powers which would have to be exercised after consultation with their chairman?—I think that would have to be so.

9371. *Mr. Pugh*: I have in mind Boards that operate in other industries where a standing committee does all the administrative work of the Board, and the Board itself is not called together unless on very important matters affecting the whole trade?—Yes. That could be done very largely. It is done a good deal.

9372. *Chairman*: How large are they?—The Committees are, as a rule, six a side and the Appointed Members. Some are seven or eight a side.

9373. That is rather a large Committee?—That is rather a large Committee. I think it is probable that if more business devolved upon the Board on the lines I have suggested, small Committees or, perhaps, Sub-Committees of the Administrative Committee would be appointed and told to exercise these powers. As a matter of fact, the leading men of the two sides of the Board and the Board Chairman would probably be sufficient.

Chairman: How large are the Committees you are speaking of, Mr. Pugh?

Mr. Pugh: They run about six a side.

9374. *Lord Weir*: Naturally, the total amount of business to be dealt with by the whole Department would very largely depend on the powers it was decided to give to the Board?—That is so.

9375. *Chairman*: Have you considered at all the question of exemptions?—Yes. I can talk to you for a long time about that.

9376. I do not want you to do that, but I think they are dealt with by the Administrative Committee, are they not?—Yes. I think they are really dealt with rather satisfactorily, if I may say so, considering all things. The question of principle involved really is whether there should be an exemption for slow workers. About that I may say quite frankly that the objection to it, of course, was the fear that the whole rate would be undermined; that you cannot define a slow worker in quantitative terms, and therefore you get back on the rate like that. I have had a lot of experience in this, and I do not believe you would. I think the Administrative Committees would be perfectly competent to do that if you gave them perfect freedom. They take a lot of trouble. The two sides agree; they really have substantially the same interests. They think they have not. They begin by opposing one another, but that disappears at the end of the first discussion, and they discover that they all want the rate to be maintained unless there is good reason to the contrary. Now there is a certain form of slow working which I daresay it is quite impossible to define in abstract terms, but which you will know if you see it; and they will take pains that they do see it if they have a case of that kind. They probably would not give an exemption unless one of the Committee took the trouble to go down and see, as they constantly do, or else they get information from the trade union secretary or anyone in the trade they can trust, and they see whether the man is normal. The report is that you cannot say

12 January, 1922.]

Professor L. T. HOBBHOUSE, D.LITT., LL.D.

[Continued.]

that this man has got any physical defect, but really he is not worth more than one-third or one-half of the normal worker.

9377. Can you utilise the Labour Exchanges in that connection?—If you had sufficiently expert people. We have not done so for inquiries. What we have done is to make inquiries among ourselves on the Committee, and the two sides, as a rule, trusted one another extremely well. It generally comes to this: I say: "Who would deal with this district," and one of the workers says: "I think I can." The employers never raise any objection to taking the workers' estimate. In the same way, an employer will deal with the question. We say: "This rate is very low," and an employer will say: "I will undertake to see that the employer does give more if it seems fair," and he will make a very good bargain.

9378. *Lord Weir*: If you extended exemptions outside physical disabilities, surely that would make a very great call on employers?—It might make a call. There would be an element of experiment, I admit. But I do not think it would fail, because we get a good many applications which are really borderline cases. The physical or mental disability is small but when we have inquired into the case, we have found there is really substantial ground for it, and then we give exemption.

9379. It would help you very much if you had someone locally who could do it?—If we knew someone locally we could build that up. By correlating your Boards you get local men whom you can trust.

9380. *Mr. Pugh*: Do you adopt the practice of sending employers in your locality to investigate?—It has generally been people near by who can make it convenient to go. Sometimes we do it by correspondence, chiefly with the trade union secretary, whose verdict is generally quite sound. The trade union is in favour of exemption sometimes.

9381. *Chairman*: Does the question of enforcement come up much before the Boards?—Yes, it does a good deal, and they are always unhappy about it. They think there is not enough enforcement. My plan would get them all nearer to the business of enforcement, and they would be able to express their views to the principal officer, which would have a good effect—on them, I mean, as well as on him.

9382. Does that always come up in consequence of the report of the inspectors?—No, it more often comes up in the course of what somebody has said. It has come up in connection with the failure of a prosecution.

9383. What does the individual worker do in such a case? If he is a unionist, I suppose he goes to his union?—Yes. If he is not, I do not know what he does. I doubt if he does anything.

9384. I suppose he could complain to the Labour Exchange, or it might be arranged that he should have the right to complain there?—That would be a possibility. It is an idea which is worth thinking of, certainly. I do not think he ever complains to the Board. I cannot at this moment recall ever having received a letter or anything from a worker saying, "I am not being paid."

9385. The Board is too far off?—Yes.

9386. *Lord Weir*: If an employer feels he wants to complain against another employer, for example, what mechanism does he use?—I think he very likely approaches the Ministry. We hear of it on the Board. Those are the things we do hear of on the Board. I think you had better ask an employer that question as I should not like to say.

9387. *Mr. Pugh*: Would not the better and proper course be to complain to the Board itself?—In the case of an employer do you mean?

9388. In the case of either, as a matter of fact?—It might be perhaps that an employer might shrink from putting it into writing. He would be more likely to get up at the Board and say: "There are a lot of people in my neighbourhood who are not paying the rates." He might shrink from putting a

charge into writing; but I presume that has been done.

9389. I suppose complaints usually come from the workmen's side, where there is trade union organisation?—Where there is trade union organisation, no doubt; but that is just where the difference lies.

9390. *Lord Weir*: It is the unorganised man who wants to make a complaint whom you want to strengthen, is it not?—Yes.

9391. *Dame Adelaide Anderson*: You know that under the Factory Act the name and address of the inspector is posted up in every workplace. Is there any posting of the name and address of the Trade Board inspector?—I have never heard of that.

9392. Would you think it a good plan to follow that precedent?—Yes, I should think that is worth considering.

9393. *Lord Weir*: The real essence of it is that the Ministry of Labour is represented in each district?—Yes.

9394. And that seems to indicate the course which should be taken by the unorganised workers?—Yes. Of course you have to establish confidence on their part that the Labour Exchange will serve them in that way. That might be done. The Ministry of Labour has endeavoured to supplement its deficiencies in inspection—which it has always regretted—by means of the Labour Exchange. That is in regard to unemployment inspectors. I am afraid that is rather irrelevant. I was going to say that I think the supplementary inspection has not been very gratifying in its results.

9395. Which would make the factory inspector rather more suitable, having more or less the right training?—Yes.

9396. *Chairman*: I think we have finished with that subject. You have said what you want to say about the question of confirmation, have you not?—Yes.

9397. Then you have a paragraph on the proposed national minimum. I gather you find difficulties in a national minimum for all trades?—Yes; it is so difficult to say what the rate should be. We have so much difficulty in a single trade. If you have got a definite figure, or a definite system of establishing your figures, well and good.

9398. Of course the difficulties we have been discussing about statistics come out very strongly, and also differences in the history of one trade from another?—Yes.

9399. Therefore if you are to fix a national minimum for all trades either you must fix it so low that in nine cases out of ten it would have no operation at all, or if you take into account the higher-paid trades it may be fixed so high as to do injury to other trades?—That is my feeling of the danger and the difficulty. I should like to see Trade Board rates extended and perhaps at some time or other interstices and gaps filled up when we knew more about rates and what they ought to be; but I do not think we are at present ripe for a national minimum.

9400. The system of co-ordination which we have been discussing might lead towards that?—Yes.

9401. *Dame Adelaide Anderson*: I understood you to say this morning that one minimum for an industry, or a particular branch of an industry, would not be sufficient?—I do not think it would.

9402. Therefore so much the more would it be impossible to have a national minimum?—*A fortiori*.

9403. *Chairman*: Of course, piece rates would be impossible?—That is also another great difficulty. Of course, every rate has got its objections. The absolutely individual bargain which theoretically pays the man according to his worth is, from one point of view, ideal. It fails of the ideal because of economic circumstances which make people so unequal in their bargaining and so on. You substitute a rate. As soon as you substitute the rate you are going to have some irregularities and some difficulties about the adjustment of the individual. The individual never quite fits the rate. He is either a little better than

12 January, 1922.]

Professor L. T. HOBHOUSE, D.LITT., LL.D.

[Continued.]

the rate or a little worse than the rate. The wider the rate is the greater are those difficulties.

9404. *Lord Weir*: The safest thing would seem to be to protect those people who really require protection?—Yes; then to be safe you have got to get down too low to be of use. I think of myself as the Chairman of a great National Board and how I should ever have the courage to adopt a rate without thinking that it might throw a million people out of employment.

9405. In essence surely for a particular trade you do that?—Yes; and that has caused me sleepless nights already. The trade thing can be undone and revoked. The national thing would probably require an Act of Parliament and a General Election, and I do not know what.

9406. *Chairman*: In Australia there was a Commission set up which investigated and provisionally fixed a rate of so much a week?—Yes.

9407. Even there they had some of your troubles. You also have a point that there might be a constant agitation to raise or reduce the rate?—There would be.

9408. Then you deal with occupational and skilled rates with a suggestion that the Trade Board should be confined to fixing a minimum for each trade?—That, I take it, is one of the most important questions before you.

9409. The first point you make is that no one can desire that the majority of workers should be left with the bare minimum, which is all that is likely to be secured for the least skilled grades. You say that the minimum itself cannot be made a precise figure and we must be guided in determining it largely by what we find will work well in practice, and that there is therefore a serious need for something a little more generous for workers above the lowest grades. Would not that something be supplied by bargaining, either individual or collective?—No, because you have not got the help of these workers. They are not organised, even though they may be a little bit above the lowest level.

9410. You say they are not organised; but a great many are organised, are they not, and possibly the proportion would increase?—Of course, that is leaving it to trade organisations. The lowest grade may be quite a minority, you know, and the people just above the lowest grade may be the majority.

9411. *Mr. Pugh*: That would be rather assuming that something existed of which the absence necessitates the application of the Act, would it not?—Yes.

9412. *Chairman*: Would you prefer the highest rates to be fixed by the Board or by the organisations?—I think myself the Board is a very good rate-fixing authority. On a Board less depends on the possibly momentary strength—I do not care whether it is momentary or permanent—on the existing strength of the organisation. Sometimes the organisation would be stronger than the employers, and the Board would turn out to be the moderating influence.

9413. On the other hand, trade union leaders have a large experience behind them?—Yes.

9414. And they have also well in their minds that if they make a mistake the consequences may fall upon a large body of members?—Yes.

9415. Therefore that tends to make them exceedingly careful to go up to their rates and not beyond them?—The Board could never go beyond them. The Board could never think of putting down more than they asked for.

9416. I am not sure. It is a fact that many of the union rates to-day are lower than the Board rates?—Not more than the unions would ask for on the Board.

9417. But possibly more than the unions would feel it wise to insist upon in the event of the matter being left in their hands?—Rather than have a fight, you mean? I can imagine that to be so, but I should have thought they would have great difficulty in getting it. I am surprised at what you have said, and I think the unions must be very weak in those cases.

Suppose the unions came forward, and the employers said: "This is more than you have asked for as a union, and you are a strong union," I do not think the union would have much of a case.

9418. But you pointed out yourself, did you not, that the appointed members, who sometimes have the last voice, have not really the knowledge or the skill to deal with these higher rates?—No; but the two most likely things to happen are these. The most likely thing is that the appointed members would wash their hands of it; but if the appointed members thought it was a case in which they should intervene, it is very unlikely they would support the workers in a demand which exceeded what the workers had agreed to as a trade union rate, that rate being of a high character. That might happen, of course, where the trade union is very weak and had had to agree to a very low rate. As a remedy against mistakes of that kind, I have got my appeal board in my mind.

9419. What I had in my mind was not the case of a Board fixing a rate higher than that which had been accepted by a trade union in that trade, but higher than the rates accepted by the unions in the great industries of the country. Mind, I am only putting to you what is suggested—not your opinion at all—but I want to elicit your help?—My view is that along those lines you could suggest anomalies, and you could even pick out one or two of our rates which might seem rather extravagant, anyway to be enforced by law; but I should not myself ever apprehend any practical evil coming that way, provided you had got a proper court of appeal. On a single Board you might have one or two eccentric appointed members, of course.

9420. There is this tremendous difference which enjoins one to be very careful, that whereas the union rate is enforceable only by economic methods, the Trade Board rate is enforceable by law?—That undoubtedly gives you ground for pausing; but I find it difficult, on the other hand, to draw any particular line. If you are going to drive me back from this and say, because you cannot accept this you are going to force me back on to one rate, then I will presently indicate to you how I think a line might be drawn. But it would not be in the region we are discussing now; it would be lower down. I see difficulties in drawing any such line, and, on the whole, there is such a slight danger of serious trouble arising in this particular connection that I myself would rather leave things as they are.

9421. Cannot a line be drawn at a living wage?—If you are going to put that into figures you have to make up your mind what figures you are going to take. There is a very considerable range of difference. If you will take my higher figures I do not so much mind; but you would have to supply also machinery for the adjustment of this figure in the case of alteration of prices.

9422. Why should not the Trade Board be confined to fixing a living wage—a wage which is a fair and proper minimum wage, having regard to all the facts of the case? They know far better than you or I or anybody else.—When they come to deal with it they will find, according to my suggestion, very likely that the lowest class they come to is one for which they can perhaps secure just the bare subsistence wage, but not what I should call a living wage. That is where I will draw the distinction.

9423. I follow that, and I am impressed by it. It was put to us yesterday. But some trade unionist with great experience said to us: "Give us the bottom and then we will see that everybody above that grade gets paid a higher wage."—Of course, that may be so. I should not trust it in all cases.

9424. *Mr. Pugh*: That would be possible where you had a good organisation?—Yes.

9425. *Lord Weir*: That would depend in each trade on what was the character of the lowest grade?—Yes. If you will take the Grocery Board, for instance, if I may take that, or what are called the Distributive Boards, much the same would probably apply if they ever came into existence. I do not think there is any doubt that the bulk of the workers for whom we

12 January, 1922.]

Professor L. T. HOBHOUSE, D.LITT., LL.D.

[Continued.]

were originally intended to cater were the shop assistants. Below that there is a class of porters. There is common ground that there is a class or a grade not so skilled as the shop assistants—a grade to which the employers cannot afford to pay so much as they can to the assistants, and the workers agreed that they should have a lower remuneration. They are a minority, but a Trade Board for grocery which does not deal with assistants would, it seems to me, be Hamlet without the Prince of Denmark.

9426. *Lord Weir*: As I gather, your principle is to try and support protection for the majority grade in any particular trade?—It is a matter of descending importance as rates increase. I am most keen about protecting the lowest grade—the poorest worker. I am next keen about the next grade, and I remain exceedingly keen as long as you are in the region of that 20s. difference that I spoke about. I want to get the best terms I can so far as the trade allows, and I do not think anybody disputes that, employers or employed. When I get above that grade I say I am getting outside my sphere of competence. I wish anybody well who is trying to do better for himself; I wish him well, but I do not know how much he can get.

It depends on economic circumstances, and on his skill and so on, and I feel it is getting beyond me. But within that range I do want to be able to operate. I see great difficulty in defining that range, either by figures or by definition, such as, for instance, "Subsistence Wage" and "Living Wage." One must think of some other device if it is insisted that the Board's powers should be limited. As a suggestion, if it is very strongly insisted that the Board's powers with regard to higher rates should be limited, I would say, first of all, with regard to the higher rates generally, there are two alternatives: One is to cut them out of the Board altogether; the other is to cut out the powers of the appointed members and to leave it to the two sides to fix them. But, secondly, I would say this: The most important rates are those which affect what we call the living wage. With regard to those I have a suggestion which may be worth considering; that is, whether the Order constituting the Board might not assign the classes of workers for whom the minimum rates should be fixed. The Minister in making up the constitution of the Board gets a very intimate account given to him of the structure of the trade, and from that he gets as good a general idea as anybody can get at that stage of who are the classes that are upon this sort of level. That leaves it a matter of judgment as to what sort of classes should be operated on. Take my grocery case again. I have no doubt that the Minister's Order would have specified assistants and porters, and it might have specified clerks, some of whom are very ill-paid in the industry. As practice and experience developed, he could specify the classes in accordance with these general ideas of the Act, on which stress has been laid. I do not know how far that will meet your point, but it is the only thing I can put forward for consideration.

9427. *Dame Adelaide Anderson*: Would you add that the Board, on finding another pocket which had not revealed itself, of underpaid workers, should have power to add them?—I think that would be quite easy. They could recommend the Minister to do that; they would have to get his consent. You might find some unsuspected set of workers who were worse off than anybody.

9428. You say on a previous page: "The object of the Trade Board system is to discover a rate of wages which will provide a reasonable livelihood for the worker without causing dislocation in the industry." That is, there is a standard in your mind. Just as under the Factory Act it is a question of protecting the safety of limb and life and health, and establishing standard hours and so on, you want the protection of a sufficiency for the workers?—Yes.

9429. Something that will maintain them in working the machine?—Yes.

9430. *Chairman*: Does it cost more to maintain the shop assistants than porters?—I do not make a point of that. Perhaps it does cost the shop assistant a little more. He has got to make a little more outlay. In this particular case he has to be rather

better dressed, and so on; but in addition to that I do not think I am going to get the porter enough. If you could guarantee me that I was going to get the porter high up in the scale, and that on my Board I was going to do that, I would make my bow to the question; but I do not think I am going to do that. I do not think I am going to get my porter more than something rather low down in the sliding scale or intermediate scale.

9431. In your grocery scale there is only a difference of 3s. for men and 1s. 6d. for women?—Quite; but that 3s. is very valuable there.

9432. *Mr. Pugh*: On the two suggestions you have made, the first suggests the ruling out of the appointed members?—Yes.

9433. Assuming that the wages above that were negotiated by the Board independently of the appointed members, and there was a dispute, would you refer that to your central advisory body?—Yes, I think so.

9434. Taking your second suggestion, if you are going to attempt to define the classes of workers that would come under the operations of the Board, would that not rather tend to increase your difficulties so far as scope is concerned?—I do not think so. Why?

9435. Because there you have only regard to the scope?—Yes.

9436. But here you are taking certain of the workers, and I suppose you would have to define them in occupations and so on?—Yes.

9437. Would you not always have difficulties arising as to whether this or that person should be brought within the scope of your decision?—I do not think that would be a greater difficulty than we have already, because we have to make gradings on a good many Boards, and there is always a certain amount of difficulty as to what grade a person belongs to.

9438. But it seems to me, knowing fairly well where you stand with regard to the trade, you have not got to decide what workers come within the scope?—Everybody is in, you mean?

9439. Everybody is in?—I see what you mean. Well, I have not thought over that carefully, but at first blush I do not think it would make an impracticable difficulty at all.

9440. Would not you have complications on your Board as to whether this or that person was within?—"A person who is wholly or mainly employed"—that is the sort of formula. Suppose there were legal questions which arose about rates and, whether a man is a porter or an assistant, we have to determine which rate he should have. It is an arguable question, and in one or two cases we have failed to establish the grading, although the grading is there, because we have not the definition. It was admitted there was at one end a warehouseman and at the other end a porter, and that there was a distinction between them; but the gradation between them was so delicate that you could not get a definition.

9441. What kind of definition would you suggest? Would it be an occupational difference or classes?—I should think occupational. What do you mean by classes?

9442. You suggest that the class of workers should be specified. If you take in a class of worker, do you mean by occupation?—That is so. I think it would have to be by occupation. An occupational designation it would be. I think the Minister would have to worry that out.

9443. At any rate, that would not simplify matters?—No, it would not simplify matters. I am not putting this forward as an ideal, but I am putting it forward to rescue the classes that I particularly want to rescue, and which I feel would be left out if you reduced us to one minimum rate.

9444. *Chairman*: I have heard one suggestion which is not unlike yours, namely, that the Board should have power to fix two rates, one for the main body of ordinary workers and the other below that for some form of junior or ancillary workers. That would tend in the same direction, would it not?—Yes, but it would not satisfy me quite as well, because

12 January, 1922.]

Professor L. T. HOBBHOUSE, D.LITT., LL.D.

[Continued.]

I might feel that even in my main body there would still be considerable numbers who would not get satisfactory remuneration.

9445. Above your main body?—Yes.

9446. There we may be getting into the region where you cannot judge?—No; if we could get into that region I should not mind. I would rather have it my way. It leaves it to judgment, and, I trust, to judgment and experience more than anything else.

9447. *Lord Weir*: Coming back to the question of the influence of the Trade Board rate, how would a Trade Board to-day, under your principles, deal with the mining industry, for example, which is to-day almost a sweated industry?—The position of the mining industry is tragic.

9448. I think the same thing applies to some of the iron and steel men. In the iron and steel business there are some low-paid men who get very low wages—wages equivalent to the miners' wages. I give you those two cases—mining and iron and steel?—There is a tremendous economic difficulty. Under such circumstances, all I can say in general terms is that I should endeavour to exert such pressure as economic circumstances admitted, to help people who were really utterly underpaid according to your account, if it were true.

9449. The position is that the law is standing in the way of the re-adjustment, for example, of Trade Board conditions to economic conditions. In the organised trades it is not so. That seems to be a dangerous position for industry as a whole?—You mean it is slowing us down in the Trade Board conditions?

9450. Yes.—But do you think that the two million or three million people who are still very low-paid people and for whom we are catering are seriously obstructed?

9451. The serious thing is that there are two or three million highly-paid people who are affected?—They are the sufferers.

9452. And you appreciate that in the distributing trades, which are really domestic trades, they have under Trade Board conditions a very much higher level than people in the exporting trades?—That, of course, gives the worker his chance of a better ground of selection.

9453. You may replace underpayment by unemployment?—There is always that danger. There, I think, the Trade Board has some advantage over anything rigid. The Trade Board keeps this question of unemployment before it constantly. It never meets in these days without having this question put forward by employers very fully. There is nothing which burdens the conscience of an Appointed Member more than the fear that he may be causing unemployment by one of his decisions. The chief difficulty we have in this matter turns on the point of information. Supposing it is said to me: "Here is your rate of 8d. per hour, and there are lots of women unemployed." I say, "Suppose we agree to 7d., how many should we get into employment?" and no one can answer. If we went to 3d. or 4d., or even to 1d., employment would leap up, but the people would starve, or have to live on something else. If you talk about a reduction which would keep them without some sort of subsistence limit, no one can say what the result would be.

9454. *Chairman*: But still it is true that if the wages are so high that they cannot be passed on to the consumer without stopping the demand, then unemployment must result?—In a general way that is true, but you do not know the quantitative relations; that is the difficulty.

9455. *Lord Weir*: When one speaks of the operation of the economic system, one does not really mean the economic system of this country, but of the world?—That is so.

9456. *Chairman*: There is one point I have not put to you about the time for objections. It occurs to me you say that the time might be reduced to a month?—I think it might be reduced.

9457. In the case of changing rates?—Yes, in the case of changing rates. I should like to see smaller changes allowed with even less procedure, but I am not prepared with any definite scheme. The further you can go in that direction the more glad I shall be. I think to some extent all that has been said here about the effect of our rates on unemployment is largely affected by the speed of our procedure. If we had a really speedy procedure, we could adapt ourselves with more certainty. It would cut both ways. In good times we could raise wages with more confidence if we knew we could undo it again, if we felt we had gone too far. It has also been to some extent true as the curve was going down, because you felt you were committing yourself and you did not like to take off too much at one go. It is really very awkward with a descending curve. At one time you feel you ought to make provisions for further drops of a generous kind and then you cannot undo them; you cannot amend.

9458. *Lord Weir*: As a matter of fact, taking the theoretical time, if that theoretical time was not exceeded by hitches of one kind and another you could vary practically as quickly as variations take place in other trades?—Probably about two months.

9459. *Mr. Pugh*: If you have got automatic adjustments with a sliding scale it takes two or three months.—You see we have got to get out the notices; then we have got the two months for objections; then we have to arrange a meeting of the Board at the expiry of the two months, and that cannot always be done to the day or to the week; and then we have got the Minister's time to consider, which he now puts down at a month, so that it runs to four months.

9460. There is one difficulty. After the Board has come to a decision in regard to an alteration in the rate time has to be given for objections. If those objections go back again you may keep on almost indefinitely and you might not get a settlement at all?—That is so.

9461. Is it not possible that the Board, being a properly representative body, should come to a decision on alterations and that a great saving might be made by doing away with the necessity of subsequent objections?—The question of objections is rather a difficult one. One does not like to remove them altogether at any stage, because after all, though we call the Board a representative body, it is not strictly representative. It is not elective, and it seems to me impossible to devise an elective system because of the divergent interests. The workers whose interests are affected have not got control over the Board and there must be some provision allowing them to have a say. On the other hand, the objection system does not work particularly well if you are going to have very big Boards. If you were to contemplate, for instance, a single Distributive Board, you could imagine a malevolent person getting up an organised objection to a rate, when you would get objections by hundreds of thousands. The thing becomes very cumbersome. You are supposed to consider all these objections, but some of them are utterly monotonous. Some are useful, but you cannot make any use of them because you cannot amend. Others are mere diatribes about the Trade Boards, sometimes from workers and sometimes from employers.

9462. Would it not be possible to notify the trade of any intended revision and to get all their views in the first place before you settle what the revision should be?—You mean before the proposal stage?

9463. Yes. Or you might have representations made from a substantial body of the trade, either on the employers' or the workmen's side, and you could notify that the Board were going to consider a proposal of that kind and give an opportunity for the trade to express its views. When the Board had come to a decision, could not that be applied without further opportunity for objections?—That is worth considering, but I think perhaps the trade might feel that a certain protection was taken away from them

12 January, 1922.]

Professor L. T. HOBBHOUSE, D.LITT., LL.D.

[Continued.]

The objections have been a safety valve. After all, they think the Trade Board is a thing up in London and part of the Government.

9464. On the other hand, the grievance comes from the trade itself as to the delay. They cannot have it both ways.—That is so. On the whole, I do not see my way to recommending an alteration in the objection system at present; but I think what you say is well worth considering. Whether you could get your district committees as the channel for objections, and only perhaps in the end receive objections through them is, I think, also a question which might well be worth considering.

9465. *Chairman*: I suppose a public inquiry would not be suitable?—No, I think not. It would also be very long, especially for variations. You might have a public inquiry for the initiation of some rates, perhaps.

9466. And certainly before the initiation of the Board?—Yes. There are small things to be decided, and I do not know whether it is worth the while of your Committee to go into whether small amendments might not be decided on at these proceedings by permission of the Minister. Take what happened the other day with regard to the grading about which Mr. Buckpitt complained. There was a mistake in that, and one of the unfortunate parties got into the wrong grade at some stage of the proceedings. That was only discovered by one of the representatives of the workers when we came to fix, and we could not alter it—at least we thought we could not. It is possible that the Secretary approached the Ministry and succeeded in making the alteration. But that is a simple thing, and it undoubtedly would be against the rules as they have laid it down.

9467. That was discovered after the rate was fixed?—At the meeting when we came to fix it.

9468. And that was dealt with by your suggestions this morning?—Yes; but let me suggest that that was not discovered then but later. It was a very small thing to amend. You do not want to send out a whole set of notices to deal with objections like that. You might have points rather larger, but still points which are very simple, and I cannot help thinking again that if you had my appeal machinery and your principal officer at the Board with whom you would come into contact—there is nothing like an official with whom you can come into contact—then you might have a special permission for a minor variation without procedure.

9469. *Lord Weir*: Do you deal with home-workers on any of your Boards?—Yes.

9470. I take it that with regard to the protection of home-workers that is essentially a question of protecting piece-workers?—It is.

9471. You know of no others?—I do not know of any other possibility, and it is one which involves a certain amount of goodwill. Take the rope, twine and net trade. Mr. Buckpitt threw himself most energetically into the work of getting out the guarantee to home-workers, and I think it is largely due to him that that work succeeded.

9472. *Chairman*: He was not satisfied about the beatsters?—No; we have never heard the last of the beatsters.

9473. *Lord Weir*: The same with regard to fixing piece prices for factory work. Do you consider that a suitable function for the Board: that is, the creation of absolute piece prices?—I do not think I can draw a line of distinction between indoor and outdoor work. Piece prices are much more easy to administer than a piecework basis rate.

9474. What I had in view was that the question of facilities did not arise to any great extent in the case of home-workers. At a factory you might have a better method at one place than at another. To stereotype a piece price nationally would be very difficult?—You mean that the employer does not get the full advantage.

9475. Does not the employer require to go to the Board and get special piece-work prices?—He could get them, I think.

9476. With a good deal of trouble, and it involves the disclosure of a change in process?—Yes. I should welcome any further elasticity on that point, but I should be sorry to give up the determination of these rates. I think it would knock some Boards all flat, so to say. I am quite sure that the success of the Boot and Shoe Board, which I think has been considerable, has depended solely on piece rates. There are, as I have learned, very considerable variations in what a man can earn on piece rates, depending not primarily on him but on his employer. Nevertheless, the employer does get the benefit also.

9477. *Chairman*: Are those home-workers?—No, these are workers in the shop.

9478. *Lord Weir*: You do not think that would be sufficiently well looked after by the fixing merely of a piece rate time basis?—No. I think the piecework basis time rate is a very difficult thing to judge. When you have got the piece rate it is one of the easiest things to determine.

9479. *Dame Adelaide Anderson*: Have there been many cases where application has been made by a particular employer for special piece rates?—I have not heard of them. I think in the Paper Box Board we have a special rate.

9480. For one or two employers?—I do not know whether there are more than one or two.

9481. They have some very special kind of work?—Yes.

9482. Is it not the case that the chief difficulty has arisen with special rates being fixed above the general minimum rate, as, for instance, in the dressmaking industry?—Of course that particular rate has been very much in controversy undoubtedly.

9483. Does not that arise in a trade that has not arrived at standardising its work? I mean the dressmaking industry is not very much developed?—That is so.

9484. And that kind of difficulty does not arise in an industry that is fairly developed?—No, it would not, because the rate would be so easily fixed; it would be intelligible to everybody. I think that is so.

9485. In those more developed industries, do you think there should be something more than a general minimum rate for the general worker?—Yes, I think so. I feel very strongly that there should be something more than a single rate.

9486. I meant probably something more than the lowest and the general rate?—I think more than that. I do not like that particular way of distinguishing them myself; but that is better than only one.

9487. But all the other question of efficiency and skill required must bear upon the question of what is a suitable minimum?—Yes, it must all bear upon that.

9488. *Mr. Pugh*: Has the Dressmaking Board had any definite complaints with regard to the effect of its decision on the small dressmakers, in the country districts, for instance?—We have not had any definite complaints from them. We have had officials of the Ministry who have put before us a certain number of complaints, sometimes emanating from the employers and sometimes from the unemployment committees the juvenile advisory committees, and so on—official organisations.

9489. I suppose it is open to anyone coming within the trade represented by the Board to lodge complaints with the Board, and that in that event they would receive proper consideration?—Certainly. I do not think they would do it very much, you know; they do not know the machinery well enough, especially the small people.

9490. Still, they have means of making any grievances known?—Yes.

Chairman: We are very glad to hear your views on these matters.

(The Witness withdrew.)

12 January, 1922.]

Mr. L. C. HANSEN.

[Continued.]

Mr. L. C. HANSEN, called and examined.

The Witness handed in the following statement as his evidence-in-chief:—

SUMMARY OF EVIDENCE of Mr. L. C. HANSEN,
General Workers' Group Secretary, Transport and General Workers' Union; Member of the Workers' Side of the General Waste Materials Reclamation Trade Board (Great Britain).

History of the General Waste Board.

In the evidence given before the Trade Board Enquiry Committee with reference to the Waste Trade emphasis was laid largely upon two points; firstly, the undue length to which the proceedings of the Board had been protracted, and, secondly, the action of the appointed members. It might be useful to give evidence on this.

With regard to the first point, it is true the proceedings of the Board have been exceptionally long, but this has been due in great measure to the employers' side, as can be shown from the continued motions for postponement on that Board.

With regard to the second point, it will be seen that the definite action taken by the appointed members was taken after a deadlock had been reached. The appointed members then voted, not for the workers' demands, but for 1d. per hour above those proposed by the employers. It is hardly possible to understand these two points without some detailed resumé of the proceedings of the Board, which I now propose to give.

The first meeting of the Waste Trade Board was held on September 28th, 1920.

The workers put forward detailed proposals as under:—

General minimum time rate for women, 9d. per hour, with 1d. extra for skilled workers.

Piecework basis time rate 33½ per cent. above the general minimum time rate.

Guaranteed time rates for pieceworkers equivalent to the general minimum time rate.

Male workers 1s., 4d. for the first three months, to be then raised to 1s. 5d. Skilled workers to receive 1d. per hour extra.

Piecework basis times rates 33½ above general minimum time rates.

Guaranteed time rates for pieceworkers equivalent to the general minimum time rates.

The normal number of hours to be 48. Any day other than Saturday, 8½ hours. Saturday, 4½ hours.

Overtime rates for the first two hours to be time and a quarter. After first two hours, time and a half. Sundays and Statutory Holidays, double time.

The employers put forward no proposals, but stated that it would be necessary to consult the employers. The Board was, in consequence, adjourned till November 4th.

It will be seen, therefore, that at the first meeting of the Board the workers were willing to put forward proposals, but the employers were not prepared to put forward proposals.

Three sub-committees were then set up—on woollen rags, scrap iron and paper stock.

The woollen rag and paper stock committees came to no agreement, the employers proposing 9d., and the workers 10d., for women's wages on woollen rags, and the employers proposing 8d. for women and 1s. 3d. for men on paper stock. On the scrap iron committee, however, a minimum wage of 70s. (for 40 hours) was agreed for men.

At the second meeting of the Trade Board the rate of 70s. for scrap iron was agreed, but the consideration of the other men's rates was postponed.

On women's rates Mr. Hyman (employer) proposed the following rates on behalf of his side:—

Woollen rags:

(a) West Riding	9½d.
(b) Outside West Riding ...	9d.
Paper stock	8½d.
Main store	8d.

These were agreed (after protest by the workers), and were issued as a proposal.

At the third meeting, February 5th, Mr. Hyman moved that the consideration of the men's rates be adjourned for two months. The Board was adjourned till March 10th.

He also moved that the fixing of women's rates be deferred for six months. (It will be remembered that these rates had been proposed by the employers.)

The Board, however, proceeded to fix these rates. The rates were not, however, confirmed by the Minister.

A further meeting was held on April 28th. The employers then moved that the work of the Board be deferred for three months. They further stated that they objected now to the agreed rates for scrap iron. The Board was adjourned till May 26th.

On that date the women's rates were sent again to the Minister for confirmation.

The Board met again on August 9th. A letter was received at this date from the Minister refusing to confirm the rates. (It will be noted that this was 11 months after the first meeting of the Board, and that the Board had made no progress towards fulfilling its statutory duty.)

At that meeting the employers proposed the following rates:—

Woollen rag	8d.
Paper stock	7½d.
All other sections	6½d.

The workers proposed:—

Woollen waste	8½d.
Paper stock	8d.
Other sections	7½d.

The Appointed Members then moved rates at 1d. per hour above the rates proposed by the employers. The workers' side finally agreed with the motion of the Appointed Members, and these rates were fixed.

It will be noted that the Appointed Members took action after one year's negotiations, and that their action was not to vote for the rates proposed by the workers, but merely to give 1d. more than the employers were demanding.

On the men's rates the employers proposed 52s. for scrap iron and 47s. for other sections.

The workers proposed 53s. for scrap iron and 48s. for other sections. On this, the Appointed Members voted for the workers.

At the fixing meeting of the Board on November 24th the employers again moved an adjournment for three months. This was defeated, and the rates have now been fixed.

It will be noticed:—

- (1) That throughout this long history of the Trade Board there has been what can only be described as a determined attempt on the part of the employers to prevent the Trade Board fulfilling its statutory duty.
- (2) That the rates finally in dispute were not rates differing very greatly in money value.
- (3) That the workers' side reconsidered to a very great extent their original proposals.
- (4) That the Appointed Members did not accede to the final reduced demands of the workers except with regard to male workers; and with regard to the women, who form by far the largest section of the waste trade, the Appointed Members merely made a very slight addition to the wages proposed by the employers.

Scrap Metal Section of the Trade.

I now desire to deal in some detail with the scrap metal section of the trade and with the evidence submitted thereon by Mr. Ashley Ward. That evidence contained a number of statements which are at total variance with facts. He stated, for instance, that the Waste Material Reclamation Board, of which he had a good deal of experience, had met for

[Continued.]

12 January, 1922.]

Mr. L. C. HANSEN.

12 months at enormous expense to the taxpayer, and that he had put something like 24 to 27 full days, sometimes up to 7 or 8 or 9 o'clock at night, in an endeavour to come to a settlement.

As a matter of fact, Mr. Ward was present for the first time at the deliberations of the Board at their fourth meeting, namely, 6th and 7th January, 1921, and then only for the first day. Hereafter he attended at three meetings, namely, the 8th April, 28th and 29th April, and 9th and 10th August, in all six days out of 19 in which the Board has sat.

I should not call the Committee's attention to this, but for more important misstatements made at a later stage in Mr. Ward's evidence, namely, when he was discussing the rate fixed for adult male workers in the scrap metal and iron section.

The rate fixed, and recommended to the Minister to confirm, for the Iron and Metal Section of adult workers of the Waste Trade Board is 53s. for 48 hours.

Mr. Ashley Ward stated that the employers proposed 48s. per week in August, 1921, and that this proposal was forwarded to the Minister for confirmation, and brought forth, in view of falling wages, a storm of protest from the country, and the Ministry sent it back, in consequence of that protest, for consideration by the Board; that they had had a meeting on that day and the result has been that with the vote of the Appointed Members the Minister had been requested to confirm those rates.

The only correct statements in the whole of this passage are, that the rate fixed and recommended for confirmation is 53s. for a 48-hour week, and that this rate was proposed in last August.

The employers proposed 52s., and not 48s. as stated. The rate of 53s. was issued as a proposal on 10th August. Objections were considered on 24th November, following the day on which Mr. Ward was giving evidence. Neither this, nor any other male rate, had been submitted to the Minister for confirmation prior to 24th November, and up to the present no male rate has been sent up to the Board for consideration. The history of the proposed rate for the scrap metal section shows that every consideration was given the employers.

At the first meeting of the Board, held on 28th and 29th September, 1920, it was claimed that the scrap metal section was insufficiently represented, and that, although eight of the employees' associations having representatives on the Board contain the words "scrap metal," or similar words, in their titles, only three had sent representatives actually in that section of the trade, and it was agreed that the Minister of Labour be asked to appoint two representatives, one for T. W. Ward, Ltd., Sheffield, and one for G. J. Cohen, Ltd., London.

On the same date the Board set up a sub-committee to consider and report to the Board on the appropriate rates which should be fixed for workers employed in that section of the trade. The following gentlemen were selected from the employers' side:—

Mr. T. Cashmore, the Midland Iron and Machinery Merchants' Association, Birmingham.

Mr. W. Hall, the Metal Traders' Association, London.

Mr. C. H. Marchant, the Federated Association of Scrap Iron, Steel, Metal and Machinery Merchants' Association, Manchester.

Moreover, in order to ensure adequate representation, it was agreed that representatives of the firms of Messrs. T. W. Ward, Ltd., Sheffield, and G. J. Cohen, Ltd., London, be invited to attend meetings of this Committee. This invitation was accepted by G. J. Cohen & Co., London, Mr. L. Levy attending on their behalf at a meeting of the Committee held on 21st October, 1920.

The Committee agreed to a rate of 70s. for male workers of 21 years and over, and to recommend that rate to the Board.

This recommendation was reported to the Board on 4th and 5th November, 1920, at which meeting Mr.

Levy was present, and at which meeting it was announced that Mr. Ashley Ward had been appointed to the Board, and it was moved by employers, seconded by workers, and agreed, that the general minimum time rate for male workers of 21 years of age and over, of the lowest grade which is employed in that branch of the trade, etc., shall be 70s. per week of 48 hours. (Mr. Hyman moved, Mr. Hansen seconded.)

Nothing further was done as regards this rate, nor was it issued in any proposal, the understanding being that it would be issued with the proposed male rates for other sections when such rates were agreed. This rate was referred to from time to time, but the Board took no further action until 29th April, 1921, when the workers moved that it be issued as a proposal, the employers moving an amendment that the resolution of the Board be rescinded.

On the 27th July the Administrative Committee of the Board reconsidered the rates, but no agreement was reached, the employers recommending a rate of 58s. and the workers one of 62s. 6d.

On the 9th and 10th August the rate again came under consideration. It was then moved by Mr. J. M. Watson, and seconded by Mr. Hall on behalf of the employers, that the G.M.T.R. for male workers of 21 years of age and over should be as follows:—

Scrap iron and scrap metal section of the trade, 52s. per week of 48 hours.

For the same reasons, it was moved by Mr. Batey and seconded by Miss Lawrence, as an amendment to Mr. Watson's motion, that the general minimum time rate for these classes of workers should be:—

Scrap iron and scrap metal, 53s. per week of 48 hours.

The amendment of Mr. Batey was then put to the meeting, when, equality between the sides having been obtained, eleven votes were cast for the amendment and nine against.

It will thus be seen that special efforts were made to ensure proper representation of the employers; that the rates were under consideration a full year; that the final rate is only $\frac{1}{2}$ d. per hour more than that suggested by the employers. The main reason for delay being the persistent obstructionist tactics adopted by the employers. The key to position may be found in Mr. Ward's suggestion that nothing would have been more futile than the refusal of the Chairman and the Minister to consider 12 months ago the postponement of the operations of the Board for 6 to 12 months to allow conditions to stabilise.

He stated also that the deliberations of one month, at an adjourned meeting the next month, had appeared perfectly absurd to both sides.

This is not borne out by fact, and reference to the minutes will show that the workers' side, at least, did their utmost to get the proposals ratified. The employers, however, constantly declined to confirm their own proposals from one meeting to another.

Composition of the Board.

Again, Mr. Ward devoted some time to the composition of the Board, and I should like to deal with his statements on this subject.

He stated that the whole of the employers' representatives spoke sometimes; the employers' side wished they would not. It was probably in the interests of truth and justice that they should do so, but it was a bit trying sometimes, while on the workers' side, in his experience and the experience of two other men who were on Trade Boards, no practical workman, if he were on the Board, ever spoke. The case was always presented in political oratory by union people in connection with labour leaders, and instead of the Trade Board being a reasonable group of practical men to solve a difficulty, the whole procedure of the Board was sacrificed to tactics.

Further, that the speakers who spoke on his Board were not practical. They were people who had always made a speciality of trade union politics and, as such,

12 January, 1922.]

Mr. L. C. HANSEN.

[Continued.]

they spoke every time. At any rate, to his knowledge, they had not been in practical manual work for the last ten years; they never had a practical workman on the Committee.

From all of which 'one rather gathers the impression that the poor employers are unorganised and at the mercy of organised trade union mercenaries. But this again is not borne out if one examines the composition of the Board.

On the workers' side six unions are represented by 22 persons, of whom eight are officials and 14 actual workers, and four unorganised workers, a total of 18 actual workers and 8 officials.

On the employers' side no less than 16 different federations and associations are represented by 22 persons, and there are four unorganised employers.

One rather wishes that Mr. Ward had graced the Board earlier with his presence, as, had he done so, I do not think he would have made the assertion that only officials speak. I am inclined to think that at one time or another nearly all the members have taken part in discussions.

Again, Mr. Ward's statement that no one who has been engaged during the last 10 years on manual work ever speaks is certainly incorrect as far as I am concerned—I cannot speak for my colleagues—since up to 1917 I was earning my living as a casual dock labourer, loading, among other things, freights of scrap iron and waste paper.

The whole argument that only a man engaged in manual labour in the trade can speak with authority is rather absurd, as, if true, one must ask what of the employers and, above all, what of the Appointed Members.

Again, Mr. Ward's assertion that no practical workman ever sits on Committee is untrue. On all three of the sub-committees set up by this Board workers have been elected.

Comparison of Rates in Scrap Metal and Steel Industries.

Again, Mr. Ward's comparison between the rates fixed by the Board for the scrap metal industry and the rates of wages prevailing in the steel industry deserves some attention. There is no analogy between the two trades.

In steel works only about 10 per cent. of the employees are on the base rate, and there is ample opportunity for steel works labourers to rise to well paid positions. In the scrap metal industry quite 60 per cent. of the men are on the base rate, and it is practically a *cul-de-sac*.

The steel agreement is based on the selling price of the steel bars, over which the men have no control, and which moves up and down with that price.

The pre-war wages of labourers was approximately 27s., the highest point touched during the war being £4 6s. The rates in scrap metal yards were very much lower than this pre-war, and as late as the middle of 1920, men were being paid as low as £2 3s. and £2 10s. in some of the larger unorganised firms, whilst the smaller firms were paying even worse rates than these.

In Messrs. Ward's own firm the highest point reached was, I understand, £3 18s.

It is worth noting that Messrs. Cohen's at Swansea are at present paying 56s. per week, namely 3s. more than the rate proposed by the Trade Board and 6s. more than Messrs. Ward's are paying in the same district.

Trade Position and Foreign Competition.

I would also direct the Committee's attention to the following extracts made from a report appearing in the "Waste Trade World" on 8th October, 1921:—

"At the 18th ordinary general meeting of the shareholders of Messrs. Thos. W. Ward, Ltd., the well-known shipbreakers, &c., held at the Royal Victoria Hotel, Sheffield, Mr. Joseph Ward presided.

"The chairman in proposing the adoption of the directors' report, alluded to the difficulties arising out of the coal strike, which had affected the operation of the company, and said that,

notwithstanding those difficulties, their turnover for the first six months of the year was nearly three million pounds, and their total turnover for the year was over four million pounds.

"The chairman stated that as a settlement of matters affecting the excess profits duty had not yet been arrived at with the taxation authorities, the directors were unable to present a balance sheet. They, however, recommended a final dividend on the ordinary shares of 5 per cent., making, with the interim dividend paid in March last, 10 per cent. for the year ending June last. They also recommended a further dividend on the employees' share of 5 per cent. Both dividends are to be paid free of tax."

I also observe that Mr. Ward more than once in his evidence suggests that the difficulties in the steel trade have arisen through high wages being paid, and that the ability of this trade to compete with foreign countries was due to the reduction in wages. I cannot agree with this suggestion. It appears to me that there are other factors, such as the price of coal and the organisation of the industry, which are much more important from a competitive standpoint. I observe, for instance, that in a paragraph published in the "Waste Trade World," 9th July, 1921, Messrs. Samuel Montagu & Co., London, referring to the competition of Belgium in the metal market, state:—"Another factor which assists Belgium to compete successfully in the metal industry is that large supplies of battlefield scrap are collected and mixed together with a small proportion of pig-iron and made into steel at low cost."

Again, the "Waste Trade World" on 10th September, 1921, points out that Mr. Ambrose Calighan, the agent of the National Federation of Blast Furnaces for the north-west coast, declares: "No country in Europe has a better geographical position for the economical manufacture of iron or steel than Great Britain, for while Northern France, Lorraine and Luxemburg have the iron ore close to the works, the coalfields are hundreds of miles away, and with Germany the reverse is the case. If the iron and steel manufacturers on the Continent can assemble the raw materials at the works cheaper than the British manufacturer can, the fault lies at the door of British railways. We have been much impressed with the organisation of the various works. They waste no heat or power that is generated at the furnaces, and if they have any surplus they use it in other branches of industry. They do not apply hand labour where labour-saving machinery can be got. Our general conclusion is that any economic advantage the Continental maker of iron and steel may have over his British competitors is due to his superior works organisation and the rate of exchange"; and the same journal on 26th November, 1921, publishing a report of an address given before the Staffordshire Iron and Steel Institute by Mr. L. G. Harris, indicates that Mr. Harris emphasised the importance of the superior organisation of the Belgian works, and attributes the ability of Belgium to produce steel at a lower rate than England, not to wages, but to the price of the type of coal which Belgium employs and the superior method adopted in the works.

SCHEDULE.

History of General Minimum Time-rate for Male Workers of 21 years of age and over of Lowest Grade employed in Scrap Iron and Metal Section of Trade.

Date.	C. of L. Figure.	Rates.
Nov. 5th, 1920	164	70s. agreed by employers.
July 27th, 1921	119	58s. proposed by employers. 62s. 6d. proposed by Workers' Administrative Committee meeting.
Aug. 9th and 10th, 1921.	119	52s. proposed by employers. 53s. proposed by workers. 53s. carried by Board.
Nov. 24th, 1921	103	53s. fixed.

12 January, 1922.]

Mr. L. C. HANSEN.

[Continued.]

9491. *Chairman:* Mr. Hansen, you are the Secretary of the General Workers' Group of the Transport and General Workers' Union, are you not?

—Yes.

9492. And you are also a member of the General Waste Materials Reclamation Trade Board on the workers' side?—Yes.

9493. It has been called to your notice that evidence has been given with reference to the waste trade, and that emphasis was laid largely upon certain points, one of which was the undue length to which the proceedings of the Board had been protracted?—That is so.

9494. And I think you say that is due in a great measure to the employers' side. And I gather you have taken extracts from the different motions that were made?—They were extracts from the official minutes.

9495. I will take this as written?—The only point there that I should like to add is that the length of time that is taken to come to any decision on this Board has not been only caused by the action of the employers, although the employers' action had a very material bearing on it. We also had our first set of rates returned to us by the Minister. After a very considerable delay the Minister took what was perhaps an unusual course in sending our rates back to us with a letter, not asking us to reconsider the rates, but asking us to give a definite date at which they should become operative. I am not quite sure of this, but I fancy that was the first time it has ever been done on any Board. It is quite a new sort of procedure. The Minister in effect said: "I am quite willing to confirm the rates you have sent me if you, as a Board, are willing to give me a particular date on which they shall become operative."

9496. Do you mean he should have fixed the date himself and referred it to the Board? Is there some complaint as to that?—Obviously when you send proposals forward to the Minister you do indicate in the formal resolution that they shall become operative as soon as possible, or you give a particular period within which they shall become operative. That was done in this case; but in spite of that the Minister sent them back to us and asked us to fix a particular date. He added something more, which is still more peculiar. He said: "upon which the trade as a whole should be capable of bearing them." That opened up, as far as we were concerned on the Board, a rather wide question, because the Board felt that if they were to state definitely a date upon which the rates could be borne by the trade as a whole, they could only do that by having access to the employers' books and seeing exactly what the financial position of the trade was at the particular time. We sent them back to the Minister again and he returned them and asked us to reconsider them. I wanted to call the attention of this Committee to the action of the Minister there.

9497. *Mr. Pugh:* How would that be affected by the date? Was the date suggested a retrospective date?—No. When we sent forward our rates we asked that they should be fixed as soon as possible. The Minister sent the rates back to us. I have the actual letter here if the Committee would care to hear it: "I am directed by the Minister of Labour to refer to your letter of the 14th March, forwarding for confirmation the minimum rates fixed by the General Waste Materials Reclamation Board at a meeting held on Friday, 11th March. I am to state that the Minister has received representations from the representatives of the employers in the trade, that since these rates were proposed the position of the trade has changed seriously for the worse, and that it would be expedient to bring them into obligatory operation at the present juncture. The Minister understands that the stagnation of the trade at the moment is not disputed, and in the circumstances he feels some hesitation in bringing these rates into operation on the 18th April without giving the Trade Board further opportunity of considering the date. The Minister much regrets that he feels bound to take this step in view of the fact

that, although the Trade Board has been in existence since August, 1920, no statutory rates are yet operative in the trade. In view of the statutory obligation placed upon the Boards by the Acts, he feels that they will agree that an early decision is desirable. It has been represented to him by the workers that an improvement in the position is anticipated within a short time, and, if the Board so recommended, he would be prepared when the matter has been reconsidered by the Board, to make an order forthwith by which the rates would become effective as from the date by which the Board consider that the position of the trade will be such as to enable the rates proposed to be paid throughout the trade." That is the Minister's letter, and that, of course, delayed the proceedings of the Board very considerably.

9498. *Chairman:* Are you complaining of that at all?—I am rather complaining of the position that the Minister took up in that instance.

9499. You had already, had you not, considered the rates, having regard to the depression in trade?—We had not at that juncture reconsidered the rates.

9500. But you had postponed fixing the rates for a time on account of the depression in the trade?—No; we had not postponed fixing rates. We had proposed rates and had fixed rates—rates that were agreed by the employers at the time. This letter followed on that fixing or going to the Minister.

9501. At all events, the Minister says there, since he fixed these rates there has been a great depression in the trade, and he would like your opinion as to whether they should still hold. Do you make that a matter of complaint?—I make it a matter of complaint that, having returned them to the Minister, they were sent back for further consideration. Further, the last sentence in the letter is rather important, where he speaks about the date by which the rates proposed should be paid throughout the trade. That would obviously involve the trade in an inquiry as to the ability of the trade to pay; that is to say, it would mean asking for the employers' books.

9502. *Mr. Pugh:* There was an improvement in trade conditions?—Yes, at that juncture.

9503. *Chairman:* Then you want to deal with the scrap metal section of the trade?—Yes.

9504. First you quote a statement by Mr. Ashley Ward to the effect that the Waste Materials Reclamation Board had met for twelve months at enormous expense to the taxpayer, and he goes on to say: "For myself I have put something like 24 to 27 full days, and, as Mr. Poulton says, sometimes up to 7 or 8 or 9 o'clock at night, in an endeavour to come to a settlement." I understand you question that?—Yes. Considering that Mr. Ward was only present six days out of 19 on which the Board actually sat, I question the number of days he mentions. I am not calling attention to that. I quite believe that Mr. Ward, away from the Board, no doubt devoted more than 27 days to considering the problem.

9505. Then the next point you referred to occurs at Question 2950. At Question 2955 he was asked: "These proposals were made some time ago," and he replied: "In August, and they were forwarded to the Minister for confirmation, and they brought forth, in view of falling wages, a storm of protest from the country, and the Ministry have sent them back to-day in consequence of that protest, for consideration by the Board. They have had a meeting to-day, and the result has been that with the vote of the Appointed Members, the Minister has been requested to confirm those rates." You say the only correct statement in the whole passage is that the rate fixed and recommended for confirmation is 53s. for a 48-hour week, and that this rate was proposed in last August, and then you give the history of the matter?—Yes. I imagine Mr. Ashley Ward has become mixed there between the scrap metal rate and the rate for female workers in the trade.

9506. Then, on page 6 of your statement, you quote again: "The deliberations of one month, at an adjourned meeting the next month, have appeared perfectly absurd to both sides." You say that "is not borne out by fact, and reference to the Minutes

12 January, 1922.]

Mr. I. C. HANSEN.

[Continued.]

will show that the workers' side at least do their utmost to get the proposals ratified. The employers, however, constantly decline to confirm their own proposals from one meeting to another"?—That is so.

9507. Then you point out that Mr. Ward devoted some time to the composition of the Board, and then you quote him as saying: "The whole of the employers"—?—That should be "employees"; that is a typing error.

9508. "The whole of the employees' representatives speak; sometimes we wish they would not. It is probably in the interests of truth and justice that they should do so, but it is a bit trying sometimes." You do not accept that?—No.

9509. "On the workers' side during my experience and the experience of the two other men who were on Trade Boards, there is this—that no practical workman, if he is on the Board, ever speaks. The case is always presented in other words, in political oratory by union people in connection with labour leaders, and instead of the Trade Board being a reasonable group of practical men to solve a difficulty, the whole procedure of the Board is sacrificed to tactics." Then he says: "The speakers who speak on my Board are not practical. They are people who have always made a speciality of trade union politics, and as such they speak every time. At any rate, to my knowledge they have not been in practical work—I am speaking now of manual labour."

9510. Mr. Pugh: Who takes the case for the workers' side?—Alderman Turner is the chairman of the Board. It is not all the officials who speak on the Board. We try to reduce the number who shall state the case, otherwise you have constant repetition of the same thing over and over again.

9511. You follow the usual practice of Boards and have definite speakers who state the case, do you?—Yes, within limits. The workers are there, and it is not unusual for a practical man, if we are dealing with some subject with which we are not fully acquainted, to get up and say: "This is what actually happens."

9512. Chairman: You say in your statement that among 22 workers there are eight who are officials, and you say you wish Mr. Ward graced the Board oftener with his presence, and that if he had done so you do not think he would have made the assertion that only officials speak?—I think he may have been misled by someone who drafted his evidence.

9513. Then the workers who are not officials do speak when they think fit, I suppose?—Quite.

9514. You say there are practical workmen on the Committees?—We have practical workmen on the Sub-Committees, but we have not on the Administrative Committee. I think that was an oversight at the time when the Committee was appointed.

9515. Mr. Pugh: What do you mean? One who is actually working in the trade or one who has had practical working experience but is not actually working?—We are speaking here of one who is actually working at the trade. I am not quite positive on this, because I have not been able actually to get the information, but I believe, at any rate, one of the officials has passed through the trade.

9516. Chairman: Then you refer to Mr. Ward's comparison between the rates fixed by the Board for the scrap metal industry and the rates of wages prevailing in the steel industry, and you say that there is no analogy between the two trades?—That is so. You have quite a different position in the two trades. You have quite a different position as far as the fixing of the rates is concerned.

9517. Mr. Pugh: What do you mean by the scrap metal industry? Is that "scrap-breakers"?—In the scrap metal industry you have rather a wide range. You have at the one end of the scale the men who buy battleships and break them, and you come down from that through quite a number of different grades until you get to the small man who pushes a barrow round the streets and collects old scraps and occasional bedsteads or whatever he can get hold of in the

ordinary course. You pass through quite a number of grades between the two ends of the industry.

9518. Chairman: I suppose scrap metal is dealt with in steel works?—Yes; part of the steel works uses scrap metal.

9519. Lord Weir: I take it it is the same material which is being used outside as inside the steel works?—That is not quite so. I think at the present moment you have scrap metal reaching the steel works from two different sources. First you have the scrap metal which they produce themselves in the works.

9520. Mr. Pugh: Would the point here be that there is no fair analogy between the man who deals with the scrap and the man who hauls the scrap when it gets into the steel works? Mr. Ward attempts to make an analogy between the two and you say there is no analogy?—I say they are different industries.

9521. Dame Adelaide Anderson: You say there is a large proportion of the men engaged on this work outside the steel works and on this base rate?—Yes—a large proportion.

9522. As much as 60 per cent., you say?—I think, if anything, I have put the percentage too low.

9523. Is the position of these scrap metal reclaimers at all like the waste reclaimers who bring materials for shoddy into the woollen mills?—Yes; it is something on the same lines.

9524. Rag collectors and rag sorters?—Yes. At one end of the trade you have that. At the other end of the trade you have, of course, something quite different. At the one end of the trade you have quite a large number of men who are simply collecting any sort of waste that they can get hold of that is at all saleable. They make a sort of rough grading of the metal in the first instance; they sell it to the merchant, who is something rather more than they are and who is dealing with metal only; he does not deal with all sorts of other waste products. Possibly, it may pass through three or four hands before it reaches him.

9525. One sees small dumps in some parts of cities of metal in a very rusty condition?—That would be the dumps of one of the metal merchants who ultimately sells to a larger merchant in scrap metal, who again grades it and gets rid of it to a steel works.

9526. And it is the same as rag-sorting and paper-sorting?—It is the same system. I do not think paper goes through so many hands as happens in the case of metal.

9527. And in the metal it is the men who are chiefly employed, whereas in rag-sorting it is practically all women?—In the rag-sorting it is practically all women, and in the metal it is practically all men.

9528. Chairman: Then you quote from a report of the general meeting of the shareholders of Messrs. Thomas W. Ward, Ltd. I suppose you do that to show they are making a good profit?—I do that to show that they are not absolutely bankrupt. If a firm can make 10 per cent. in spite of a coal strike, they cannot be in a very bad way of business.

9529. Lord Weir: Were these profits earned during the year of the coal strike?—The coal strike interfered during that year. The chairman referred to it.

9530. Chairman: I think Mr. Ward said that scrap metal only related to a very small part of his business?—If I recollect the evidence rightly, I understood him to say it was the main part of his business, and that the ship-breaking was the minor part. I may be wrong; I am speaking from recollection.

9531. I think he said the ship-breaking was not the principal part, but I understood some other business took the greater part of his time?—That may be so.

9532. Then you say that it is not the high wages which have been a detriment to this business, but that there are other factors, such as the price of coal and the organisation of the industry, which are more important, and you give us a quotation from the "Waste Trade World"?—Yes.

12 January, 1922.]

Mr. L. C. HANSEN.

[Continued.]

9533. I see, on referring to his evidence, that I said to Mr. Ward: "I understand you are interested in ship-breaking." He said: "No, that is not my chief interest. We are interested very largely in ship-breaking, but that is not our principal business." I am not sure whether he told us what his principal business was?—I rather imagine that it would have been scrap metal, because he has very large scrap

metal works. I rather assumed that from a reply—possibly quite wrongly.

9534. *Mr. Pugh:* I think Messrs. Ward's business is mainly dealing with iron and steel scrap metal.—Mainly.

Lord Weir: Their main business, as a matter of fact, is the sale of second-hand machinery.

Chairman: Thank you, Mr. Hansen.

(*The Witness withdrew.*)

(*Adjourned till Wednesday, the 18th instant, at 11 a.m.*)

TWENTY-FIRST DAY.

Wednesday, January 18th, 1922.

PRESENT:

SIR ARTHUR F. PEASE, BART. (*in the Chair*).

THE RIGHT HON. LORD WEIR OF EASTWOOD.

DAME ADELAIDE M. ANDERSON, D.B.E.

THE HON. MRS. ALFRED LYTTELTON, D.B.E.

MR. J. BELL, M.P.

MR. A. PUGH.

MR. A. MACCALLUM SCOTT, M.P.

MR. H. D. HANCOCK (*Secretary*).

Mr. H. CRABB, called and examined.

The Witness handed in the following statement as his evidence-in-chief:—

SUMMARY OF THE EVIDENCE to be submitted by
Mr. H. CRABB.

I am one of the employers' representatives on the Boot and Shoe Repairing Trade Board (Great Britain), and have been authorised to give evidence on their behalf to this Committee. I also occupy the position of President of the National Federation of Boot Trades Associations.

The Boot and Shoe Repairing Trade Board (Great Britain) was established on the 18th April, 1919, and was one of the first of the Trade Boards set up under the Trade Boards Act, 1918. In addition to repairing, the Trade Board also includes within its scope the making of bespoke hand-sewn boots.

In the evidence I have to submit I deal almost entirely with the repairing side of the trade. The hand-sewn making forms only a very small part of the industry and is confined to the better class parts of large towns.

Trade Conditions prior to the Establishment of the Trade Board.

Before the Trade Board was set up, the boot repairing trade was in a condition that left much to be desired. It was regarded as a dumping ground for the crippled and the mentally deficient. When a boy was physically unfit for any other occupation, the practice was to pitchfork him into the boot repairing trade, irrespective of whether there was a fair prospect of his being able to earn his living at the trade on reaching manhood. The system of apprenticeship had fallen into disuse and youths entering the trade too often grew up to be indifferent workmen. This trade, which at one time was regarded as one of the skilled crafts of the country, had, immediately prior to the establishment of the Trade Board, come to be looked upon as almost an unskilled occupation.

Wages Prior to Establishment of the Trade Board.

Prior to the establishment of the Trade Board the average wages of the workers in the repairing trade were from 25s. to 26s. per week, and the number of hours worked averaged over 60 per week. During the war the rates of wages rose in common with those of other industries, but that was attributable to the great shortage of labour at that time.

Improved Conditions To-day.

I have great pleasure in testifying to the improved conditions in the industry during the short time the Trade Board has been in existence. The boot repairing trade has been raised from the position of a sweated industry to the level of other skilled trades, and credit for the improved status of the industry must undoubtedly be given in great measure to the operation of the Trade Board.

As President of the National Federation of Boot Trades Associations, I can claim to know the opinions of the majority of those concerned on the employers' side, and can say that, out of 200 branches covering the whole of England, only one branch has passed a motion in favour of the abolition of the Trade Board.

At the present time, there is a large amount of unemployment in the boot trade, as in other industries, but there is no evidence whatever to prove that the Trade Board has been the cause of such unemployment. From my experience as a member of the Trade Board, I am convinced that it is the only possible system to prevent the boot trade and other badly organised trades from reverting to pre-war conditions.

Permits of Exemption.

The consideration of applications for permits of exemption from the operation of the minimum rates for infirm or disabled workers has occupied a great deal of the time and attention of the Administrative Committee of the Trade Board, to whom the Trade Board delegated its powers of dealing with

18 January, 1922.]

Mr. H. CHABR.

[Continued.]

these applications. We have been very generous in the use of our powers to grant permits of exemption. Each case is carefully investigated by a member of the Committee. The usual practice is for a member to visit the workshop and see the worker at work and assess his value to his employer accordingly.

Over 630 permits at rates lower than those given by the Trade Board have been issued to sub-ordinary workers. This is a larger number than that issued by any other Trade Board, with the exception of the Laundry Trade Board, but the proportion of permits to the number of workers in the trade is higher in the boot repairing trade than that of the laundry trade.

The Position of Disabled Ex-Service Men in the Trade.

The Administrative Committee of the Trade Board has acted as a National Trade Advisory Committee in connection with the Ministry of Labour's scheme for the training of disabled ex-service men. The total number of disabled ex-service men who have been accepted for training is 4,442. Of this number, 1,250 were trained by the Ministry of Pensions. The total number, therefore, who have been dealt with by the Administrative Committee of the Trade Board is 3,192. Of these 3,192, 2,375 have completed their training and we have been able to trace 2,100 of these. 1,432 of them are to-day in employment or in one-man businesses, and of the remaining 668, 375 are known to be out of employment and 293 have gone to other trades.

No other industry in the country has taken on such a large number of disabled ex-service men for training.

Apprenticeship.

One of the earliest matters to which the Trade Board gave its attention was the revival of the apprenticeship system. We think that, in the interests of the boys themselves and of the trade, it is desirable that the system of indentured apprenticeships should again become a permanent feature of the trade. Under the provisions of the Trade Boards Acts which permit a Trade Board to attach conditions to the payment of learners' rates, we have drawn up systems of apprenticeship applicable to the various branches of the repairing and hand-sewn making sections of the trade. We have prepared a model form of indenture of apprenticeship for the use of employers in the trade. We have made the rates for apprentices lower than those for junior workers who are not apprenticed, so as to induce employers to adopt the apprenticeship system.

Institutions.

One of the great difficulties the Trade Board has had to contend with has been the case of lads who are partly trained in charity schools and other institutions, and who are put out into the trade after a preliminary training in these institutions under a bootmaker instructor. These youths are thrown into the trade regardless of the question whether or not there is likely to be an opening for them, or, in the case of crippled boys, whether they have any fair prospect of being able to earn their own living in the trade on reaching manhood. We have discussed this question with deputations from some of these institutions. We have also reason to believe that many institutions such as boards of guardians and asylums utilise the labour in the institutions for the purpose of doing repairs, not only for the inmates of the institutions, but for the outside public, thus competing with legitimate traders.

Under the present Trade Boards Acts, it has been held by the legal advisers of the Ministry of Labour that workers in such institutions, whose work is not utilised by way of trade or for the purposes of gain, do not come within the scope of the Trade Board. It is the unanimous opinion of the Trade Board that all such institutions, where trades are taught and where the work is done either for the use of the institution or the outside public, should be brought under the control of the Trade Board.

One-Man Businesses.

Another great difficulty in the boot-repairing trade is the larger number of repairers who employ no labour, and are known in the trade as "one-man" businesses. These men can sell their labour at any price and work as many hours as they feel disposed without coming under the Trade Board Regulations. A considerable number of these men take in work from retail shops. The retailer giving out such work is subject to the Orders of the Trade Board, but under the existing machinery it is extremely difficult to trace such men. The Trade Board, therefore, have suggested to the Government that all boot repairers trading with the public should be registered either with the Trade Board or with the Home Office.

General Minimum Piece Rates.

I wish specially to direct the attention of the committee to the fact that the boot-repairing trade is essentially a piecework trade. The great majority of the workers, about 85 per cent., are employed on piecework, and the Trade Board has drawn up a very exhaustive list of general minimum piece rates for the trade. These rates are the actual piece rates at which the workers are paid. In some parts of the country higher piece rates are paid than those fixed by the Trade Board, but generally speaking it may be said that the Trade Board general minimum piece rates are the basis or standard rates throughout the trade.

We regard it as very important that the Trade Board should have the power to fix the actual piece rates payable to the workers. Any proposal to take away from the Trade Board the power to fix piece rates would seriously diminish the effectiveness of the Boot and Shoe Repairing Trade Board.

District Trade Committees.

The Trade Board has established 14 district trade committees, covering the whole of England, Scotland and Wales. These district trade committees have, since their establishment, been consulted, as required by the Trade Boards Acts, on every occasion on which any variation of the rates has been proposed. On some occasions, before issuing a formal notice of proposal to vary the existing rates or to fix new rates for special classes of workers, the Trade Board have asked the district trade committees in the first place to give their opinions upon the Trade Board's suggestions.

I am in favour of continuing the policy of consulting these committees to the fullest extent in regard to proposals for fixing or varying rates of wages, but I am strongly of opinion that it would be impracticable to give these district trade committees power to fix rates independently of the Trade Board. The Trade Board have power to fix differential district rates, and, if at any time it should decide to do so, it would, of course, consult the committee; but it is essential that there should be a co-ordinating authority in the trade with regard to wages throughout the country. I think this co-ordination of wages can best be exercised through a National Board.

With regard to the method by which wages are fixed by a Trade Board, I would strongly advocate that the two sides of the Board get together as much as possible, and so arrive at settlements by mutual agreement.

RECOMMENDATIONS.

(a) Any proposals for the variation of wages or the normal number of hours of work in the trade have, under the present procedure, to go before the country for two months to give an opportunity for objections being lodged, and it takes from four to six months to bring about either an increase or a reduction in wages. I suggest that this procedure should be speeded up, so as to make it possible for Trade Boards to accomplish their object in six weeks. I would suggest that 14 days be allowed for lodging objections, and I think 7 days sufficient time to give the Minister of Labour to consider the question of confirming the rates after being fixed by the Trade Board.

18 January, 1922.]

Mr. H. CRABB.

[Continued.]

(b) Under the present Acts, if the Trade Board desires to give effect to any objections received within the two months or to any recommendations from the District Trade Committee, the Trade Board find themselves in the position that, if the proposed amendments are substantial alterations of the rates stated in the Notice of Proposal, they have to issue a further formal Notice of Proposal and to go through the same elaborate procedure again. The same difficulty arises when the Minister of Labour refers back to a Trade Board rates approved of by the Board. I suggest that a Trade Board should be given wide discretion to deal with amendments to proposals issued by them. They should be empowered to make such amendments as they consider desirable in view of objections made either by employers or workers, District Trade Committees or the Minister of Labour without being obliged to submit fresh proposals to the country.

(c) The Trade Board should have power to grant Permits of Exemption to workers who are not only suffering from some form of actual physical infirmity, but to those who are constitutionally slow and proved to be incapable of earning the minimum time rates. Permits in these cases would only be granted, of course, after careful investigation by a member of the Board or an inspector.

(d) Every boot maker and repairer working for profit should be brought under the Trade Board Regulations by some form of compulsory registration, thus enabling inspectors to trace those who collect repairs from shops and do the work in their private rooms.

(e) All workers employed by boards of guardians, asylums and similar institutions, whose work is utilised in the ordinary course for the purposes of the institution or for sale to the public, should be brought within the scope of the Trade Board.

(f) Stronger measures should be taken to enforce Trade Board regulations after the rates have become operative. The employer who (without a permit) pays less than the Trade Board rates and the worker who works for less than the rate should both be prosecuted.

(g) The chief inspector under the Trade Boards Act should be at the Trade Board Offices instead of at the Ministry of Labour, and should control the whole staff of inspectors at the offices of the Trade Board. The chief inspector could thus be brought into direct contact with the Trade Board and the Administrative Committee.

(h) Some of the legal advisers of the Ministry of Labour should be actually attached to the Trade Board Offices. This procedure would have the advantage of enabling the legal advisers to be in contact with men possessing technical knowledge, and members of the Board would have the legal difficulties explained to them when proceedings against a particular person for infringement of the Trade Board Regulations have not been instituted.

9535. *Sir Arthur Pease*: You are a member of the Boot and Shoe Repairing Trade Board?—Yes.

9536. What is your position; are you a member or an official of a union?—I am the President of the National Federation of Boot Trades Associations, an organisation representing the employers' side which covers the whole of England. Mr. Buckle represents the workers' side. I have been a member of the Trade Board from its inception.

9537. When was it first set up?—July, 1919.

9538. You say that before the Trade Board was established the conditions were unsatisfactory in the industry?—Yes; the boot making and repairing industry—of course, you will understand I am speaking for what is known as the bespoke trade, not the manufacturing side, because the manufacturing side of the trade does not come under the Trade Board; we cover what is known as the bespoke boot making and repairing. Before the setting up of the Trade Board there is no doubt that our trade came under the heading of what we speak of as "sweated industries." It was generally recognised, I believe, before the Central Profiteering Committee, that our

trade was about 25 per cent. below what is known as the "subsistence level" prior to 1914.

9539. *Lord Weir*: It had improved considerably in 1919?—Oh, yes; of course, during 1919-20 especially; before that really it had begun; directly there became a shortage of labour in the trade, naturally wages began to rise in other industries, and wages began to rise rather rapidly in our trade.

9540. That is to say, the conditions immediately prior to the formation of the Trade Board were fairly satisfactory?—They began to improve considerably before the Trade Board was set up; in certain districts it was not general.

9541. *Sir Arthur Pease*: You say that the system of apprenticeship had fallen into disuse?—Yes. The system of apprenticeship had become almost extinct, with the exception that, in some of the rural districts, I believe now and again lads were apprenticed, but then it was very seldom they were really indentured apprentices; they were simply taken on to be taught the trade for a certain number of years under verbal agreement, without any indenture and without any obligation on the part of the employer as to what he should really teach the lad; consequently, a number of lads, who were supposed to be apprentices in a way, never received a proper training.

9542. You also say that a number of boys who were physically unfit were dumped into this trade?—Yes; It has been a well-known fact for many years that the boot repairing and boot making trade has been what we have always termed a "dumping ground" for the physically unfit and mentally deficient—especially cripples. Of course, we are prepared to admit that, so far as the hand-sewn boot making is concerned, it is a very suitable trade for cripples and men who may be, perhaps, delicate in certain respects; but it is certainly not a trade which every lad who may be physically unfit for other industries should be dumped into; but that has been the case, unfortunately, without any regard to whether the lad would be likely to make a competent workman or not when he had completed his training.

9543. *Mr. Pugh*: That would be largely because you had no proper means to regulate the remuneration to be paid to the lad?—That is it.

9543a. Therefore they could be paid anything that could be arranged, I suppose?—Yes, that is right.

9544. *Sir Arthur Pease*: You rather mean, do you not, too, that there are certain physical infirmities which did not prevent a lad carrying out the trade as well as a fit man?—Yes, the loss of a leg, or being crippled in a leg, or the hip, is something in that way; so long as he had the full use of his hands and the full use of his brain, the trade would be suitable for him.

9545. *Dame Adelaide Anderson*: That would apply particularly to the hand work, not to the great heavy machine work at which standing at a complicated machine is necessary?—Quite so.

9546. A very heavy machine would not be suitable work?—Not to a defective lad, where he would have to stand a great deal.

9547. Is not the great bulk of the industry a factory industry?—Oh, no; not of boot repairing. There are certain, what we term, modern boot repairing factories, but it is only a minority of the trade that that covers.

9548. *Mr. Bell*: In the boot repairing trade, did the employers prefer to engage what we might call these cripples?—I do not know whether they preferred to engage them; they engaged them, I am afraid, in many cases under the idea that they were getting cheap labour. Personally, I am not of that opinion. I am not of the opinion that low-paid labour is cheap labour, but there is no doubt that is what influenced a large number of employers who used to take these boys in that way.

9549. While not agreeing with them, you are of opinion that the real reason why they were engaged was because it was cheap labour?—Yes, I think so.

18 January, 1922.]

Mr. H. CRABE.

[Continued.]

9550. *Sir Arthur Pease*: Wages prior to the establishment of the Trade Board, you say, were 25s. or 26s. a week?—Yes, that was about the average, I think.

9551. At what date is that: in 1919?—That would be right up to 1914; it was in 1915 that wages began to rise a little first; they gradually rose, and then they rose more rapidly as labour became more scarce.

9552. You say, "Prior to the establishment of the Trade Board": the Trade Board was established in 1919?—Yes.

9553. These figures refer to 1914, do they?—Yes, these figures refer strictly to 1914; but, as I say, they had gradually improved a bit before.

9554. What were the wages immediately prior to the setting up of the Trade Board?—I should say, though I have no exact figures to go on, immediately before they might have risen to an average of about 30s.

9555. Not more?—Not more I think, but possibly more; they had not risen to the extent they rose when the Trade Board came into existence and settled the minimum rate.

9556. *Lord Weir*: How much did the first Trade Board raise the wages?—The first minimum rate fixed by the Trade Board was fixed at 65s., which is still in existence, for time work, a 48-hour week.

9557. What percentage of rise did that represent?—I think that is obvious from the remarks which I previously made.

9558. You have told us that in 1914 the wages were 25s. or 26s., and you have told us that the Trade Board fixed the minimum of 65s. What did that represent as an increase over the pre-Trade Board wages?—Of course, you have to take into consideration the fact that whilst there was a big increase, we will say as compared with 1914, as you are well aware there was a big increase in the cost of living.

9559. I simply want to get the approximate figures. You have given a figure for 1914 and said that was prior to the Trade Board; that is rather too far back; I want it immediately prior to the Trade Board. Did you say 30s.?—I am just giving my opinion of 30s. I want it to be perfectly clear that there had been an improvement from 1914 up to the setting up of the Trade Board, although that improvement was not general; in the rural districts especially things were very little improved from what they were in 1914 right up to the setting up of the Trade Board.

9560. It really comes to this, that in certain cases perhaps a very small number of cases, the increase in rate would be 100 per cent.?—Yes, when the Trade Board was set up probably. I should say it would be about 100 per cent. when the Trade Board was set up and fixed its first rates.

9561. *Mr. Bell*: You tell us up to the time of the Trade Board being set up wages had increased. Now supposing you had had no Trade Board, would those increases, in your opinion, have been permanent, or would they have slipped back again to the old position?—I have no doubt, in my mind, that they would have slipped back again to the old position, or even worse.

9562. *Mr. Pugh*: Where do you get your 65s. in the Statutory Rules and Orders?—The first Order that was made, in November, 1919, was for time workers, 65s. for a 48-hours' week. I think it was confirmed in November.

9563. *Lord Weir*: You recognise that the 65s. is the highest minimum rate set by any Trade Board for any trade?—I am not prepared to say yes or no, because I do not know; there may be others higher, so far as I know, but, of course, as a member of the Boot Repairing Trade Board, I have confined most of my labours to that Board. If you want my opinion, I do not consider that 65s. was an excessive rate, if that is what you want me to say.

9564. That was not my point; I simply wanted to ask if you understood that your minimum rate is the highest rate of all the Trade Board rates.

9565. *Sir Arthur Pease*: Is 65s. still the rate?—

65s. is still the minimum time rate; but, of course, as you will see in another part of my evidence, the bulk of the work in the trade is done on piece-work lines.

9566. *Lord Weir*: That rate fixed in 1919 has not been changed?—No. I may say that there has been notice given for the next meeting of the Board for a reduction of the piece-work rates, but there has been no notice given yet for a reduction of the time rates—not yet.

9567. *Sir Arthur Pease*: Then you say that of all the members of the National Federation of Boot Trades Associations, only one Association has suggested that the Trade Board should be abolished?—That is true. As I said a few minutes ago, our Federation covers the whole of the Kingdom, about 200 Associations, scattered all over the various towns, and only one out of the 200 has passed a resolution against the continuation of the Trade Board. Our organization has been practically unanimous throughout the country that the Trade Board has been the means of raising the trade very largely to something like the same status as other skilled industries. We are also practically unanimous (I am speaking now of employers) that if the Trade Board should be abolished, the trade would slip back to the conditions we were in before the War—or probably worse.

9568. Is the Association which so passed this resolution an important one?—The Association that passed the adverse resolution is not a very big one, it is one of our smallest Associations, as a matter of fact, in a rural district.

9569. *Lord Weir*: Of the total number of workers who come under the operation of this Trade Board, what proportion does the Association which you represent employ?—The National Federation of Boot Trades Associations includes in its membership not only employers, because there are in our trade a very large number of tradesmen who employ no one; they do not come under the operation of the Trade Board, but a number of them are members of our organization. If they are in business for themselves they are eligible for membership of our organization.

9570. I want to get at who you are speaking for; what percentage of the workers come under the Board?—You will excuse me, I am not speaking for the workers; my friend, Mr. Buckle, is speaking for the workers. I am here as representing the Boot Repairing Trade Board; I am not here to speak for the organization of which I am president, although naturally I know their views.

9571. You are representing the employers; I want to know what percentage of the working boot repairers those employers employ?

9572. *Mr. Pugh*: The point is that the members of your Associations employ the workpeople who come under this Board?—Yes.

9573. Of the total number of workpeople coming under the Board, how many are employed by members of your association and the bodies you represent here to-day?—That is a question which I am not prepared to answer, but I should say the majority. Mr. Buckle may be able to answer that question better than I can, but I should say that the majority of the workers in the boot repairing industry are working for the firms which belong to our organization.

9574. Which you represent?—Yes. I do not think it will be denied that the bulk of what we term the best men in the trade are members of the National Federation, the organisation we represent.

9575. What percentage of workers will be outside the control of the associations you represent. Can you give any idea as to how many will be outside your associations?—You are asking me questions which I think should be better addressed to Mr. Buckle, as representing the workers.

9576. I think the point is that your associations employ a very large number of workers. We want to know how many of the workers are outside the purview of your associations; how many employers are outside your association, and how many workers do those that are outside employ?

9577. *Mr. Bell*: Do they employ a quarter of them?—Those outside the federation?

18 January, 1922.]

Mr. H. CRAIG.

[Continued.]

9578. Outside your associations?—Yes, probably they do, but I think, as I said just now, the overwhelming majority of the workers are employed by employers who are members of the National Federation.

9579. *Sir Arthur Pease*: You go on to describe the system you have of exemptions under permits; you have found that work satisfactory?—Yes, but, as I have said in my *précis*, I believe it is acknowledged that, with the exception of the Laundry Trade Board, there have been more permits of exemption applied for, and granted, under the Boot Repairing Trade Board, than any other trade. Taking into consideration the number of employers and employees controlled by the Boot Repairing Trade Board and the Laundry Trade Board, the Boot Repairing Trade Board has granted more permits of exemption than any other Trade Board in existence. That has been brought about very largely in the circumstances which I stated in my previous reply, that there had been so many mentally deficient and cripples, and so on, brought into the trade. We have taken a very liberal view of what I may term the mental defects or physical defects as to which we have powers to grant permits, and we have taken a great deal of care to investigate the cases. Nearly all the cases have been investigated personally by a member of the administrative committee of our Board, either from one side or the other. In some cases where they have been extremely difficult cases they have been investigated and reported on by members from both sides, both from the workers' and the employers' side; but we have worked together very amicably in all these cases. I want to say that for the workers' side, as well as for the employers' side; that we have worked together amicably, I believe, each side trying to do the best they can, both for the employees as well as the employers in these cases.

9580. Do you mean to say a member of the Board has interviewed each man?—Yes, in most of the cases; I do not say in every case. There are some cases which require no investigation; they speak for themselves. For instance, if a man applies for a permit and he is nearly 70 years of age, and has some physical defect, and the employer (which it has been in many cases) is offering a reasonable wage for a man of that age, we do not make any investigation then.

9581. How many are on your Administrative Committee?—Ten, I think; five from each side of the Board.

9582. Do you have the men come to see you, or do you go and see the men?—We go and see the men.

9583. Anywhere in England?—It is generally done in the district. My friend, Mr. Buckle, lives in Leeds; if there were an application for a permit somewhere in the radius of that district, Mr. Buckle would take it; another member might be living in Manchester, he would investigate the cases in that particular area. There might be some somewhere in London, or near London, in the Home Counties round London, and I might be asked to take them. They ask the man nearest to them to take them.

9584. *Lord Weir*: Is the distribution satisfactory, that is to say, that the representatives on the Board come from all the different districts in the country, so that the country cases can be handled?—Yes, quite; in any case, since the setting up of the District Board Committees. In our trade there have been District Trade Board Committees set up: nine in England, three in Scotland, two in Wales, I think; 14 altogether. Since the setting up of the District Trade Committees, in some of the rural districts, a long way away from London, we get the investigation made by a member of the local Trade Board Committee, and they send in a written report.

9585. *Dame Adelaide Anderson*: Does the word "sub-ordinary" cover those with some marked physical defect or deformity, or does it in any way cover a sub-normal worker in the sense of speed?

—Under the existing Trade Board Acts, I believe we are not allowed to issue a permit to a man unless there is some physical defect, although, as I say, we take a very liberal view of that when a man is advanced in age. That is the opinion of our side of the Board. I do not know whether my friend, Mr. Buckle, is of the same opinion, but it is the opinion of our side of the Board that the Trade Board should be given power to issue permits of exemption to men who are naturally slow, and proved to be unable to earn the minimum rates.

9586. *Mr. Pugh*: What would that arise from: age?—Not necessarily age. Sometimes you might have three men working in the same shop of the same age, or about the same age, but one man is naturally slow, and he knows he is naturally slow.

9587. If you run a piece-work system, surely that adjusts itself?—It is quite true; but in some districts, specially in the rural districts where the work is so rough and heavy, and so on, an employer may not have sufficient work to keep a man fully employed at boot repairing; you will find, in many rural districts, a man who is the village boot repairer has got some other business as well, and he will keep a man who will do his boot repairing and do odd jobs; it is much more convenient to a man like that to pay a fixed weekly wage, which will cover his boot repairing, and anything else he does, than to pay piece-work for doing the work, while he is doing boot repairing, and something more for something else, which he may not be doing; that is where the difficulty comes in.

9588. That, of course, would be an arrangement to meet purely local conditions, and not one to deal with the case of a slow worker, would it?—No; well, we get slow workers in our own shops, even in London. I might give you a case in point, in my own shop, where I have three men; I should say the oldest of them would be about 40; they range from 25 to 40. They were all on piece-work, one man would earn, on the average, £5 a week in a 48-hour week; he was an exceptionally good man. The next man would earn, on the average, about £4; the third man, the youngest of the three, could never earn above the minimum of 65s. As a matter of fact, to take an average, in a 48-hour week, his earnings would average about 60s.

9589. *Sir Arthur Pease*: Doing the same work?—Doing the same work and being paid at the same rates; but the man was naturally slow, and he knew he was naturally slow, and he would be quite willing to take a permanent job at a time rate of 60s. a week; but, of course, that could not be done.

9590. Could that man get exemption, in your opinion?—No, he could not, because he was suffering from no physical disability; he was simply naturally slow.

9591. I rather gathered that, with a liberal interpretation, you really brought them in?—No, but we think we should be able to bring them in; we think that is one of the points that this Committee should recommend to the Ministry: that the Boards should be given discretionary power to grant permits in all cases.

9592. *Mr. Pugh*: It is because you are asking for power that I am rather pressing the point. Surely those three persons, being on a piece rate, the thing adjusts itself: you pay no more per piece to get the work done, the only thing is that one man earned much less than the others. Is your point that he did not earn, as a result of his slowness, what the Board rates say he must earn. Is that the point?—No, my point is this, that we come across a large number of cases where men of that type would rather work for a fixed weekly wage, and in many cases the employer himself would rather pay them a fixed weekly wage, than for him to be on piecework; because you can see, as well as I do, that when a man is on piecework, and work gets a bit slow, he may be told to stand off for a day or two, whereas if he is on a fixed weekly wage it is very improbable he would be.

9593. Your point is that you cannot put him on a fixed weekly wage?—You cannot put him on a fixed

18 January, 1922.]

Mr. H. CHABR.

[Continued.]

weekly wage because the employer naturally would not put him on for 65s. if the man could not earn that at piece-work rates.

9594. *Lord Weir*: To take Mr. Pugh's point a little further with regard to this man who could only earn 60s. on piecework, under the Trade Board piece-work rates, assuming that the inspector came, has the employer got to make up the rate?—Oh, no.

9595. What is the man paid: 60s.—what he earns?—The 65s. is the minimum rate for men who are on time rate for a 48-hour week, but if a man is working at the piece-work rates, if he was unfortunate enough to be so slow that he could not earn more than 40s., that is all he is entitled to; and, of course, neither the inspector, nor the Board, has any control over the employer or the employee in that case.

9596. In this case you have no special piece-work time rates?—Oh, no, we have no guaranteed time rate for pieceworkers.

9597. In boot repairing, you do not have that?—No.

9598. *Mr. Bell*: Then what is the point in asking for exemption for men who may be slow workers if all they get is what they earn at piece rates?—Simply, as I said just now, that I know (I am speaking from my experience now which I have gained during the last 12 months in practically covering nearly the whole of England at different times) that there is a general demand now by the workers and employers, in the case especially of the rural districts, as I was saying just now, where men like that feel themselves that they would be much better off to be paid at a time rate, a reasonable time rate, which they know they can earn, rather than have to depend on the piece rates and be put off now and again, when they might get work otherwise.

9599. Suppose a man is working at piece rates and the minimum has been fixed at 65s., but being on piece work he only earns 40s., he is already exempt from the operation of the minimum because the minimum is 65s. and he is only getting 40s.?—Quite so.

9600. Is it likely that the employers will pay more than the 40s. even if they put him on a standard wage if when he is working on piece work he only gets 40s.?—I do not think it is likely.

9601. Is it likely they will pay him less?—Yes, quite likely they would pay him less if they could, perhaps—some of them.

9602. *Mr. Pugh*: It is a matter of greater elasticity in your arrangements that you want?—That is what we want.

9603. *Sir Arthur Pease*: If you broaden the scope of it as you suggest, do you think it is possible for the Administrative Committee to deal with the increased number of cases that would come before it?—Yes, as a matter of fact, we frequently get applications for permits of exemption in such cases as this. Of course, we do not get so many of them now because they are getting to know there must be a physical disability. We used to get a number of applications which we had to refuse on the ground that there was no physical disability. I have no doubt, in my own mind, the cases could be dealt with for the simple reason that they could be dealt with by the administrative members of the Committee from either side of the Board. I believe I am correct in saying that the employers have never disputed the report made by the workers' side of the Committee, neither have the workers' side disputed any report made by the employers' side in these investigations. We have always taken it that we are practical men, and if a man goes into a shop and sees a man work for a time, besides making a number of inquiries, he is able to assess that man's value.

9604. You seem to be a very happy family on this Board?—I am very proud to say we are; we work very amicably together, because I believe the majority of us, at any rate, realise that there are rights on both the workers' and the employers' side.

9605. *Lord Weir*: What happens just now to a man who is not worth 65s. a week?—Of course, he is

almost invariably put on piece work now, or in some cases where, as I have said, there is a mixed employment, they put the man on the hourly time rate, that is, 1s. 4½d. an hour for the time he is actually working at boot repairing.

9606. Surely we are not to take it that your Board believes that that minimum rate applies to people partially employed in boot repairing?—Most decidedly. If they are working at boot repairing they are under the control of the Trade Board.

9607. For a period of a week, surely?—For the time that they are working at boot repairing, they are certainly under the control of the Trade Board.

9608. For the hourly time?—Yes. I want to be perfectly clear: if I understand you rightly, if a man is working for three days in the week boot repairing, and the other three days farming, during the days he is boot repairing he is undoubtedly under the control of the Trade Board.

9609. On an hour's rate based on the 65s.?—Yes, or on piecework, whichever his employer and he agree on in that respect.

9610. *Mr. Bell*: May I take you to another point as an illustration: in addition to the operatives that you employ at boot repairing, you employ a large number of clerical workers?—They do not come under the control of the Trade Board.

9611. This is the point I want to bring out; some clerical workers write much more quickly than others?—Oh yes, of course.

9612. But the invariable custom, I think, is that at a certain age they all get the same wage, although one may be able to do far more work than the other. Is there any reason why the same system should not apply to operatives as applies to clerical workers?—Yes, I think there is reason. A person working at clerical work, as time goes on, naturally gains considerable experience in connection, we will say, with clerical work and bookkeeping, and so on, which they did not have in their younger days, and whilst they may be slower they are certainly worth more than, we will say, one who might be more rapid but had not had the same experience. But I do not think that applies to much extent to the worker in boot repairing.

9613. In the case of the slow worker on the clerical side, do I take it that sometimes the slowness is due to more care?—Yes, I should say so.

9614. Does not that also apply to operatives?—In some cases I think it does.

9615. *Sir Arthur Pease*: Is it a fact that your clerical grades are all paid exactly according to age?—I really do not know what operates generally with regard to clerical work. In our trade, the boot-repairing trade, there is not a large number of employees employed on clerical work—in fact, a very small number.

9616. They have a scale according to age?—I do not think so. So far as I know, I should say that their wages would be regulated very much by the agreement between the employer and the employee: in cases where the employee is a member of the union there may be some negotiations in that way perhaps, but I am not in the happy position of being able to employ clerical labour myself.

9617. *Mr. Pugh*: The average boot repairer is his own clerk, is he not?—That is right, and some of them very bad ones.

9618. *Mrs. Lyttelton*: In effect what you want is two minima; you want a minimum for the ordinary worker and a minimum for the slow worker?—No, I am not asking for that; I am speaking of what I term the general minimum for the trade. I think the minimum rate fixed for the workers in the trade generally should be such a rate as to enable a man to live and keep his family in decency.

9619. Yes, I understand that.—But on the other hand, the trade has already a power of granting permits to a man who may be suffering from some physical disability: if he is lame that is a physical

18 January, 1922.]

Mr. H. CRABB.

[Continued.]

disability; but if a man has not got a physical disability, although he is naturally slow, we have no legal power to grant him a permit.

9619A. I know, but would not it tend, if you had more power, to the establishment of two minima?—Possibly, I admit that danger.

9620. Do you think that would be a good policy?—I am speaking from my experience on my own Board; I do not think we should suffer under our own Board, for the simple reason, as I say, that we work together so amicably.

9621. *Sir Arthur Pease*: Would you suggest, as has been suggested to us, that men over a certain age should be excluded automatically from the operation of the minimum?—No, I would not suggest that, because some men, even up to 70 years of age, are as good workers as they were at 50.

9622. You would leave it all to this Administrative Committee to decide whether they were fit or not?—Yes.

9623. *Lord Weir*: The fact that you have as a matter of fact a very high minimum rate makes the necessity for a little elasticity in permits rather more important to your Board than other Boards?—Well, of course, the cost of living has gone down considerably since that minimum rate was fixed, and it is quite possible there may be a demand put in for a reduction of that minimum. As I said just now, there has been no demand put in, but it is quite possible there will be.

9624. Of course, you have no foreign competition, for example, to cause you to ask for a reduction; so long as the Trade Board preserves the same level throughout the trade there is no particular reason why you should ask for a reduction, is there?—Well, if we got to feel that the minimum rate which we are paying is higher than what is being generally paid in other skilled trades, I think you may take it there would be a demand put in for a reduction. We recognise this on the employers' side of the Board as well as the workers' side: that there is no reason why a boot repairer working 48 hours, if he is a competent workman, should get any less wages than a man who may be a builder or an engineer, it is a skilled trade, and if he knows his trade, and does his 48 hours a week, there is no reason why he should be paid less.

9625. That is, you recognise although in your case there is no external competition, yet you must help others to get the cost down.

9626. *Mr. Bell*: Can you tell us what were the reasons which led your Board to fix 65s. as the minimum?—The reason 65s. was fixed as a minimum was certainly, if you want my personal opinion, that having regard to the cost of living at the time it was fixed, it was really a low minimum. I may say that the demand which had been put in by the workers' side was for a considerably bigger amount than that, and that minimum was fixed after a considerable amount of negotiation, which I believe lasted over three days, if I remember rightly, and which was really a compromise between the two sides.

9627. So that the 65s. then was fixed as being the least amount which, in the opinion of your Board, a man could maintain himself on?—Yes, at that time.

9628. That being so, if any exemption from that rate was given to slow workers, how were they going to live?—Oh, yes, of course, I expected to have that question put to me, but my reply to that would be, if that man was on piece work, as he would be if we had not the right to grant him a permit, and he only earned 20s. a week, I might retort by asking you the same question: how does he live? Unfortunately they have to live, or exist.

9629. The probability, if he could only earn 20s. in the boot trade, is that he would find some other occupation he was adapted for, where he could earn more. That is the probability, is not it?—I do not know I am sure. We have a lot of men in the boot repairing trade as to whom both sides of our Board

would be very glad if they did find some other occupation.

9630. *Dame Adelaide Anderson*: This remark applies to a comparatively small number of cases where power is used in the works?—Yes; but there are no piece work rates fixed for the finishing of repairs which is done by what we call the up-to-date factories, where they have power machinery running. The Trade Board have not fixed any piece work rates for that.

9631. Not yet?—No; we have had applications in, but we have not been able to fix that.

9632. How long ago did they begin to apply power to this work?—Twenty years ago in a small way.

9633. Has the use of power in boot repairing grown at all?—Yes, very considerably.

9634. What proportion is it now?—In the large provincial towns and London, I should say that the bulk of the work was done in shops where there is power machinery of a certain type. What I mean is, you will find many what we call small repairing shops, where there is perhaps only the employer and one man, or even a lad, where they have got a finishing machine run by power; but the bulk of the work throughout the country is done in shops of that type, or shops where there is no machinery at all. In London and some of the big provincial towns there are what we term up to date modern repairing factories. Perhaps you might find in the whole of London half a dozen, not more, I think.

9635. Employing, on the average, a larger number of persons?—Yes, some of them. For instance, I have in my mind now three, what I call the three principal ones in London, which certainly employ on the average from 20 to 30 men each of them, which, of course, is a large number of workers in a boot repairing shop—taken throughout the country.

9636. Would you still say then, that the great majority of the workers are hand workers?—Oh, yes, undoubtedly.

9637. It is not a growing movement to apply power to this work, as it is in some other industries?—Yes, I think it is a growing movement, but so far as the small country towns and the rural districts are concerned, they cannot apply machinery to it to a very great extent for the simple reason that it can only be applied to what we term mass production; where you can get an abundance of work.

9638. Owing to the cost to introduce it?—Yes: the most they would do would be a finishing machine.

9639. Is there any provision for sending out part of the work to a factory from a small hand place?—There is a very large portion of that work being done now, and that is one of the weaknesses which we feel we are labouring under. Very few foot retail shops, by which I mean a shop where they sell boots and shoes, actually do their own repairs, but they take in repairs from the public.

9640. And send them on?—And send them on. In many cases they will send them to the factories which I just referred to, but in a larger number of cases they have men who come into their shop every day and collect whether it is one or a dozen repairs and take them home to their own private houses, or in some cases a little shop, and do the repairs for the retailer.

9641. On lines similar to bespoke work?—Yes, but this is the weak point; of course, we know under the Trade Board Act that the retailer is responsible to see that that man who is doing his work is paid Trade Board rates of wages and works Trade Board hours; but the difficulty, you see, is that the man is working at home in his own house, he is not an employer, he does not come under our control, and it is absolutely impossible for us to know whether that retailer is paying him the minimum rates or not. You may say to me, why do you, an employer, worry your head about that? I say, for this reason: that in many cases he is competing with and undercutting an employer who has men in his shop and has to pay the Trade Board rate of wages.

9642. I want to clear up the point as to the use of power in the industry, when it began, to what extent it has grown, and whether it was exercising

18 January, 1922.]

Mr. H. CRABB.

[Continued.]

an influence on wages by lowering the wages of hand work before the Trade Board came into existence?—I believe it did have the effect of lowering the wages in some cases where they put in a finishing machine.

9643. If the Trade Board regulations ceased, that would be a factor, as well as the taking of so many of the cripples, and so on, in lowering the rates?—Yes, I think it would.

Sir Arthur Pease: You say, lowering the rates. Do you mean that the machines did part of the work, or do you mean that the man was actually paid less. Supposing a job cost 5s., and the machine took half-a-crown's worth of it, and the man took half-a-crown's worth of it, do you mean the man was actually paid less per hour, or the total amount of money received for wages was less?

Dame Adelaide Anderson: My question was simply directed to the competition.

9644. *Sir Arthur Pease:* I follow your question, but I am not clear as to the reply.—My reply to the lady on my left was to this effect: (If I understood her rightly, of course, she was asking me what tendency had been brought about: whether the introduction of machinery before the setting up of the Trade Board had had any effect on keeping wages down). I think it would very largely have that effect.

9645. The rate of wages?—Yes, in keeping the rate of wages down; but I am not going so far as to say that introducing more machinery under the modern factory system would be the means of bringing wages down, although I admit there is the danger of that under what we term the speeding-up system; but I want to reiterate that the bulk of the work is not done in those big repairing factories, nor can it possibly be done, because in the small towns there is not sufficient work to warrant a man going to the expense of putting all this plant and machinery in.

9646. *Dame Adelaide Anderson:* Except by sending out the work in part to a factory?—Even then, if you take a small town of anything under 20,000 inhabitants, there would not be sufficient work, if you put up a modern boot repairing factory, to keep a factory like that fully employed.

9647. *Mr. Bell:* Do I understand that what you mean is, that the factory system, whilst it may increase the earnings of those who are working in the factory, has a tendency to reduce the wages of those outside, because the cost of doing the work is so much higher?—That is right. To put it plainly, what I mean is this: if a man has got a modern up-to-date boot-repairing factory in a big town, and he is employing his men, we will say, at the minimum time-rates, by the speeding-up system on the finishing machines and stitching-up machines and sewing-on machines, and so on, he is able to turn out work cheaply, and naturally to cut prices of the man who has got to get the whole of his work done right through by hand, which they are bound to do, as I have said before, in some of the smaller districts.

9648. I think I understand that; it may be possible in the future, in the same time that it takes a man to do one pair, to do three pairs with the machine?—Quite so.

9649. *Lord Weir:* This piece-work schedule that you have here covers the method of doing one pair of boots, and also the different sub-divisions of work to enable the three pairs to be done which Mr. Bell has spoken to?—The piece-work rates cover the whole of the sub-divisions with regard to what we term the benching and the finishing and stitching, but it does not cover, because there is no piece-work rate for it, finishing done by machinery; and, of course, the bulk of the work which is done by machinery in any repairing factory is finishing. Of course, there could be no difficulty in fixing a piece-work rate for finishing by machinery in a small shop, where the whole of the finishing would be done by one man, but the difficulty which we are up against (and this is a matter which we have discussed several times) in a modern boot repairing factory is, that they try to run them very

much on the same lines as a manufactory, where a repairing job passes through the hands, we will say, of half-a-dozen different workers. The difficulty is, we get so many small jobs: we will say a pair of lady's boots heeled, or a gentleman's boot with just one toe-piece; if they passed that through a machine, it has to go through each process on the machine the same as a complete job of soleing and heeling, and in a small job like that, passing through the hands of a number of persons, it is difficult to divide it up so that each gets his proportion. We could handle it on a large scale, in grosses instead of small individual pairs or one boot.

9650. But this list really constitutes the stereotyping of the wage cost of all boot repairs all over Great Britain?—Yes, the schedule provides for the boot repairing done by hand throughout the whole of Great Britain. Of course, in certain districts they pay above the Trade Board rates considerably. Everyone, in Lancashire and Yorkshire especially, is paying at the present time, I believe I am correct in saying, 30 per cent. above Trade Board rates, and, of course, in the West End of London what is known as the West End bespoke trade, and again in Glasgow and some of the Scottish towns; for the best class work not only now since the setting up of the Trade Board, but even in pre-war days they paid considerably above the rates paid by the general repairer for bespoke work. It is a better class of work and the men are more highly skilled.

9651. Did this schedule exist before the Trade Board?—No.

9652. I do not mean the prices in it?—There were certain piecework rates; but every different part of the country had their own piecework rates; there was no uniform rate covering the country as there has been since the Trade Board was set up.

9653. *Mr. Pugh:* Has there ever been a demand for definite district rates to be made?—No.

9654. Different rates?—No; we have not had an application for a differential rate. That was one of the questions we had in view when we set up the District Trade Board Committees. I believe I am correct in saying that only one of the District Trade Board Committees since they have been set up has passed a resolution asking for a different rate—one district only.

9655. One district committee established for the purpose of dealing with those questions?—Yes, making recommendations.

9656. So if there had been any demand you would have expected to have had it expressed through the District Committee?—Yes.

9657. *Sir Arthur Pease:* Which district was that?—I am not quite sure, but if my memory serves me right, I think it was the West of England.

9658. *Mr. Bell:* Was that an application for preferential treatment, to be allowed to have a less minimum than the one you had fixed?—It was not a formal application, it was a resolution which I believe was passed at one of the meetings of the district committee suggesting that a lower minimum should be fixed for the area covered by that particular district than the general minimum rate for the country.

9659. The inference naturally being that they desired to pay a less minimum than the one you had fixed?—Quite so; that was what they had in their minds.

9660. But there are a number of districts which are paying considerably more than the minimum you think?—Quite true.

9661. *Sir Arthur Pease:* Except for the exceptions you have mentioned, these rates, which are called minimum rates, are really standard rates in the Trade?—They are.

9662. The people who are paid differently from that are quite a minority?—I should say so, covering the country generally. I believe it is principally in Yorkshire and Lancashire where the higher rates are paid, although Mr. Buckle would know better than I on that point, covering the whole of the country.

18 January, 1922.]

Mr. H. CHABB.

[Continued.]

9663. *Lord Weir*: Do you have applications from employers who have got a new method of doing the work, and new facilities, for a variation or a special minimum piece rate?—No, we have received no such applications.

9664. None whatever?—No.

9665. *Sir Arthur Pease*: The next question you refer to is the disabled ex-service men; you give an account of the provision which has been made?—Yes.

9666. *Mr. Pugh*: These arrangements with regard to the ex-service men have been made through the machinery of your Board largely, have they not?—Yes.

9667. Do you think you would have been able to have made the arrangements so successfully if you had not had your Board machinery in existence?—No, I do not think we could possibly.

9668. You think the Board machinery was necessary to give proper effect to the desire of the trade in regard to ex-service men?—Yes, I do. I may say before my Board was set up, the training of disabled men, which was then under the control of the Ministry of Pensions, was anything but satisfactory; in fact, we came across many cases where, to put it plainly, the conditions were scandalous. Ex-service men were being, what I may call, dumped into certain shops, where they were supposed to be trained in boot making and boot repairing, where the conditions were such that it would be absolutely impossible for the men ever to become competent workmen. When the Administrative Committee of the Trade Board was made the authority for dealing with the training of these men, we took particular care to see that these men were put into shops where they would receive a proper training, and especially during the last 12 months of the training we also take particular care to see that there is a promise of employment for that man when he has completed his training, or a suitable district in which he can start business for himself.

9669. *Sir Arthur Pease*: The number that has been dealt with by the Trade Board is 3,192, and of that number, 2,375 have completed their training?—Yes.

9670. Of those you know, 1,432 are now employed in the trade?—Yes.

9671. And of the balance, 375 you know are out of employment?—Yes, that is right.

9672. As to the others, you do not know?—There are about 668 remaining, and out of them we know there are 375 unemployed. As to the other 293 we do not know what has become of them; our assumption is that they have given up the boot-repairing trade and gone into some other industry.

9673. *Mr. Bell*: Does the 1,432 include those who may have started in business for themselves?—One thousand four hundred and thirty-two are in employment or in one-man businesses, and of the remaining 668, 375 are known to be out of employment; there are 293 we have not been able to account for.

9674. *Sir Arthur Pease*: You told us that the apprenticeship system was practically dead before the Trade Board?—Yes.

9675. Now you have made arrangements for the apprenticeship system to be revived?—Yes.

9676. By that system, are properly apprenticed boys paid at a lower rate than an ordinary learner?—Yes, he is paid at a lower rate than the ordinary learner.

9677. Do you find that work satisfactorily?—We have found that work very satisfactorily. We had two things in view in fixing the apprenticeship rates. First of all, we were very anxious to prevent, as I was saying just now, the dumping of boys into the trade irrespective of whether there was any prospect of their becoming competent workmen, and we were also anxious to stop what we have always termed the blind-alley occupation. Especially in workshops where there is a finishing machine it had become very general for boys to be taken in to do odd jobs about the shops and little jobs connected with the finishing machine, and then when they had been, say, a couple of years like that they were thrown on

the labour market, and in many cases these lads have considered themselves boot repairers; consequently boot repairing had become—well, anything but a skilled trade in a large number of cases. So we had two objects in view; we wanted, first of all, to see that boys coming into the trade did not waste their time and then be thrown on to the labour market with no trade at their finger tips, and we also wanted, at the same time, to try to bring the trade back to what it used to be in the old days, a skilled industry, and see that the boys coming in received a proper training. We prepared a form of indenture, and there again, before we register any apprentice, we take care to find out that the employer is in a position to be able to carry out the terms of that indenture and teach the lad what he undertakes to teach him.

9678. *Mr. Pugh*: Is your apprenticeship scheme in operation now?—Yes.

9679. You really will have no "learners" difficulty, such as they have in some other trades?—Of course, we have just recently adopted another scheme for learners, apart from the apprenticeship scheme, so that a lad can be registered as a learner without being an indentured apprentice; but there again he has to be registered with the Trade Board.

9680. Is the sole difference between the two, that of the indenture?—The wages are a bit higher for the learner than for the indentured apprentice. We prefer to get them indentured, because we feel there is more likelihood of the lad getting a trade if he is bound apprentice for four or five years than there would be if he came in as a learner liable to be discharged at the end of a short time at a week's or a month's notice.

9681. *Sir Arthur Pease*: The next point you take up is with regard to institutions; you say you have great difficulties to contend with on the Trade Board because of institutions which partially train people. Would you develop that?—We get a great number of applications for permits for lads, and this is how it comes in in most cases: they are lads suffering from physical disabilities, and in a very great number of cases mental defects, and they have had some, what we term rough and ready type, practical training in the institutions in which they have been brought up, industrial schools, schools under Boards of Guardians, and so on, and it has been the custom then to dump those boys out into the trade. We have had a great deal of difficulty in dealing with these cases, and partially to meet the difficulty there we have just recently fixed up a rate, because, to develop the point further, you know that in most of these cases, where lads are put out as apprentices from these institutions, there is a premium paid, and the employer undertakes to provide a boy with food, clothing, medicine and so on. Our difficulty has been to deal with these cases in regard to the employment wages which the employer would have to pay these boys. An Order has just recently been confirmed by the Ministry of Labour; apart from our ordinary efforts we have prepared a scheme fixing rates of wages for boys who are also provided with clothing and food, and other necessities during their term; but one of the difficulties we are up against, which applies not only to the apprentices but to the institutions generally, is that the instructors in those institutions, we are advised by the Legal Department of the Ministry of Labour, are not subject to Trade Board regulations. We think they ought to be subject to Trade Board regulations, for more than one reason.

9682. You mean the instructors should be?—Yes, for more than one reason. First of all, if they were subject to Trade Board regulations we think it would be more likely that those institutions would have more fully competent men as instructors, and therefore the lads would be likely to receive more competent training; and another reason is that we have reason to believe that, in some cases at any rate, those institutions not only do the work for the inmates of the institutions, but they do work for the

18 January, 1922.]

Mr. H. CHABB.

[Continued.]

public outside, thereby competing with the legitimate trader, and for that reason we think that at those institutions the instructors, and not only the instructors, but any others that are employed there, should come under the Trade Board; what I mean to say is, that there are cases where the Boards of Guardians, for instance, do their own boot repairing inside, and they have got an instructor, and perhaps they employ one or two other men as well doing the repairs and making for the inmates. We claim that in that case the instructors and the workers should be subject to Trade Board regulations, and should be entitled to the same rates of wages as the men working for an employer outside.

9683. *Dame Adelaide Anderson*: Even if they are only working for inmates?—Yes, even if they are only working for inmates, because, indirectly, they are competing with the general public.

9684. Where would you draw the line if you go beyond a contract of employment, because it might then become impossible for anybody to exercise a craft?—I do not see your point.

Mrs. Lyttelton: There are quantities of women in villages now who are learning boot repairing and repairing their own boots.

9685. *Dame Adelaide Anderson*: And possibly their neighbours' as well?—We know that is so, and if you want my personal opinion, I think it is a scandal that the Education Authority should spend money in teaching women to do boot repairing when there are so many boot repairers walking the streets looking for employment.

9686. *Mrs. Lyttelton*: I do not think that the educational authorities are responsible?—We have reason to believe it is so, in London, at any rate.

9687. *Dame Adelaide Anderson*: It is, really, the ordinary contract of employment which brings a worker under the Trade Board?—Yes, quite so; but a contract of employment, to use my illustration of, we will say, the Board of Guardians doing their repairing inside, instead of having it done by an outside contractor; I have known of certain cases where certain contractors have been doing the work for a particular Board of Guardians, and then suddenly that particular Board of Guardians has decided that they will have in a boot-repairing instructor and do their own work inside.

9688. *Sir Arthur Pease*: Because they can do it cheaper?—Quite so; but, not being under Trade Board control, it gives them the opportunity of employing men at less than Trade Board rates of wages, and, consequently, they are competing with the outside workers for the simple reason, as I said just now, that they can get their work done inside cheaper than they can get it done outside.

9689. *Dame Adelaide Anderson*: You would say that working for the outside public is on a totally different basis to working for an inmate?—I agree there is a difference. What I say is that those institutions ought not to be allowed to work for the outside public at all.

9690. *Mrs. Lyttelton*: You want them controlled, even for their inside work, I understand?—Yes, if they are wage earners.

9691. *Dame Adelaide Anderson*: If they are wage earners?—Yes. If they are wage earners; they are outside our control, so we are advised by the Legal Department; that is my point.

9692. *Mr. MacCallum Scott*: Supposing a tramway company were setting up a boot-repairing shop to supply its workers with boots, setting up a regular boot shop, employing labour, would they not come under the Board?—A tramway company would.

9693. Supposing a Board of Guardians set up a boot shop to supply the inmates with boots, and employ labour in the usual way, would they not come under it?—The Legal Department tell us, no. We think they should, but we are told by the Legal Department they do not.

9694. *Mrs. Lyttelton*: You did not make that point clear at first. We understood you that when the inmates were used to repair boots for other inmates,

you would like them to come under the Trade Board?

—No, I mean, when workers are brought in from outside to do the work.

Mrs. Lyttelton: That is a different point.

9695. *Sir Arthur Pease*: Are there not two conditions? Take a reformatory school, where the instructor is employed to teach the boys boot-making, and his chief business is teaching, and not repairing boots. The other is the instance you have given, say, of a board of guardians setting up a boot-repairing establishment, inside the workhouse, simply as a matter of economy?—Yes. Of course, there is a difference, but my reason for suggesting that the instructor at an industrial school should be brought under the Trade Board is that, as I said just now, I think it is highly desirable that men, filling the position of instructors in an industrial school, should be men who are fully competent to teach the lads what they are supposed to teach them; and, I think, you would be more likely to get men of that type, if they are under the control of the Trade Board, and subject to Trade Board Regulations. We have reason to believe that in many cases the men filling the position of instructors, in such institutions, are not competent to do the work that they are expected to do, and they are engaged largely because they accept a lower rate of wages than a fully competent man would accept.

9696. *Dame Adelaide Anderson*: Have you represented their defective powers of teaching to the Education Authority? Is it not a matter for the Education Authority?—I do not think it is a case for the Education Authority. Our point is, we say, they should be under the control of the Boot-Repairing Trade Board. If you want my opinion, candidly: we have not very much confidence in making representations to the Education Authority, so far as my experience goes; I have been before the London Education Authorities, on several occasions, in connection with teaching women boot repairing, and they very seldom carry out the promises which they give, as to what they intend doing. That is my experience.

9697. *Sir Arthur Pease*: I want this quite clear: you say that these instructors, not in isolated cases, but as a rule, are paid less than the Trade Board rates?—Yes, in many cases.

9698. Taking into account pensions and the fact that they are living in, and all those kind of things?—Yes.

9699. You state that?—Yes, I do state that; that is my opinion.

9700. *Mrs. Lyttelton*: As a rule do they live in or do they come in from outside?—They come in from outside in most cases. I believe, in the majority of Boards of Guardians cases, they live in. Of course, in rural districts I know the Boards of Guardians very often have a man who is what is termed the shoemaking instructor, and he also acts as porter or something of that sort in conjunction with it.

9701. *Lord Weir*: I take it the control you ask for would require that every individual should come under the Board?—Yes, every individual wage-earner.

9702. Because there would be such a variety of conditions?—Quite right.

9703. *Sir Arthur Pease*: If a worker is brought in from outside and repairs for people outside, then they come under the control of the Board at present, do they not?—Yes, if we know it, but our difficulty is to prove it. It is on all fours with my previous point as to proving that a retailer is sending out work to a man to do in his home. That is under the Board, but frequently neither our Committees nor the Inspectors can trace that man. We have reason to believe that certain institutions are doing it, but the difficulty is to produce satisfactory evidence that would convince you that it is so.

9704. Not us.—Well, the authorities,

18 January, 1922.]

Mt. H. CRABB.

[Continued.]

9705. *Mr. Bell*: After all, is there much work done by Boards of Guardians that enters into competition with you?—Well, yes; let me put it this way. Take a firm which I know in London, which for many years has made a speciality of tendering and doing work for Boards of Guardians. That firm employs a large number of workers on that particular class of work, and then certain Boards of Guardians, for reasons which I stated just now, start their own repairing departments inside. That particular firm, and other similar firms, lose that work; consequently men who were in their employ find themselves out of work. I know cases like that have happened in London recently, so that it does tell against the trade in that way.

9706. The same conditions under those Boards of Guardians will affect the well organised industries which have not a Trade Board in the same way, will they not?—Yes, I suppose they will.

9707. It is not an argument really against the Trade Board, because the same thing applies?—I am not arguing against the Trade Board. If you want my opinion on that, I am a very strong supporter of the Trade Board system, but I say I can see no reason why the whole of these men who are wage-earners, because they are employed by Boards of Guardians, should not be subject to Trade Board Regulations.

9708. *Mrs. Lyttelton*: You do see the point and it is excessively difficult to draw the line?—I do not see the difficulty.

9709. *Sir Arthur Pease*: I think we have that point in our minds now. You next come to one-man businesses. You say the difficulty in the boot repairing trade is the large number of repairers who employ no labour, and are known as one-man businesses, and those men under-cut the people who are working under the Trade Board Regulations?—That is so. A man who is not an employer can start work at what time he likes and leave off at what time he likes. He can keep his shop open to midnight if he feels so disposed, because, according to the ruling of the Home Office, a boot repairing shop is not a retail shop within the meaning of the Shop Hours Act. Consequently the man not only avoids the half-day closing, but he also avoids the closing regulations, and keeps open as many hours as he likes, takes in work for the public, and by working 60 or 70 hours a week (which we know they do) they are able to under-cut the man who is an employer and has to pay Trade Board rates of wages. Of course, we can realise that no Trade Board will ever be granted the power of saying to that man, "You shall not work in your own house more than 48 hours a week."

9710. *Mr. Pugh*: Do these individual men represent 60 per cent. of the boot repairing trade?—I should say they probably do. I should say at least 50 per cent., at any rate.

9711. And they are outside the jurisdiction of the Trade Board?—Yes.

9712. *Mr. MacCallum Scott*: Do you mean 50 per cent. of the number of businesses, or 50 per cent. of the amount of boots that are done?—I should say that 50 per cent. of the boot repairs in this country are being done by one-man businesses that are not under the control of the Trade Board. As I said some few minutes ago, it is a very general thing, in London and big towns, for a man to open a little shop, and he will go and make an arrangement with one or more retailers to do their work; so that he is doing the work for one or two retail shops and taking in at the same time what he can get from the public, and is thereby competing with an employer and under-cutting his prices.

9713. *Mrs. Lyttelton*: He is practically the employee then?—He is an employee for the shop he is working for; but we cannot trace the cases.

9714. *Sir Arthur Pease*: How do you suggest that should be dealt with?—We made representations to the Ministry nearly two years ago, first that there

should be a compulsory system of registration: every boot repairer, whether an employer or employee, should register with the Trade Board or with the Minister of Labour or the Home Office, whichever was considered necessary.

9715. Do you mean where they are working for another shop or where they are working for the public?—Whether they are working for another shop or whether they are working for the public, or even if they are employees they should register.

9716. *Dame Adelaide Anderson*: Are they not registered already, if they are working for other firms, as out-workers?—No, they are not registered as out-workers.

9717. *Mrs. Lyttelton*: Do you think it would be possible for an employer to place all his repair work out with these people and never come under the Trade Board rates?—Yes, undoubtedly, and it is done in hundreds of cases. I had a man in my own employ who, after he had done his 8 or 9 hours in my workshop, used to go home and work in his own private rooms (he only had two rooms, and a wife and three children) doing work for a retail shop which happened to be near where he was living. It was only by accident I found out he was doing it, but it is very largely done, and he was doing the work for that man at less than Trade Board rates of wages.

9718. I should think technically he would come under the Trade Board, would he not?—Yes, technically, but through the lack of registration we are not able to trace it; the inspectors cannot trace these cases. The inspectors, as a rule, go into a retail shop and ask if they are employing anyone there on boot repairs and they say, "No"; neither are they; and the inspectors go away.

9719. *Mr. Bell*: The bulk of this work would be piecework?—It would be paid at piecework, but paid at a lower rate than the Trade Board rate in these cases.

9720. The ordinary boot-repairing work will not be on a piecework system?—The ordinary boot-repairing work is ordinarily on a piecework system. I should say 85 per cent. of the boot-repairing trade of the country is on a piecework system.

9721. *Sir Arthur Pease*: You would only suggest registration where they were taking work from outside; you would not want registration where a man was repairing boots for his own family, would you?—No, not if he is confining it to repairing for his own family, but if he is doing it for the public; for instance, if a policeman or a postman or a railway man—and we have scores of cases like that—was doing repairs, not for his own family, but for the public, we say he should register as a boot repairer.

9722. *Lord Weir*: After he has registered what are you going to do with him?—If he registered the inspectors of the Department would know where to find him.

9723. You do not suggest the policeman who repairs his boots or his neighbour's boots for an odd half-crown. What are you going to do with him; are you going to penalise him for that?—I would suggest that a policeman or a postman, who are supposed to be paid a living rate of wage, whilst I do not blame them for repairing their own boots—I do blame them for repairing the boots of their neighbours or any of the general public when there are other workers walking the streets looking for work.

9724. Supposing you had these powers what would you do?—Do you mean you would make it penal for them to do it?—I do not say I should make it penal.

9725. You would fine them?—That is not for me to say, it is a matter for the authorities to say what shall be done. I say there should be some system by which we should be able to trace the men who are doing this work. As I say, 50 per cent. of the trade, in my opinion, is being done by one-man shops, and there should be some means of registration which would enable us to be able to trace them and get them under the Trade Board.

9726. *Mr. MacCallum Scott*: Is not the point that they should not be prosecuted or fined but that they

18 January, 1922.]

Mr. H. CRABB.

[Continued.]

should receive Trade Board rates?—We want to be able to trace them so that we can enforce the Trade Board rates on people whom we know are infringing them. We have been to the Department and we have been to the Home Office, and the Home Office have referred us back to the Department again.

9727. *Lord Weir*: There are two kinds of case; the one is where they are doing, in their own homes, work which has been given them by shops, and the other case is when a man sets up his own shop and deals with the public and does all the work himself; the true one-man business. You wish to register both of them?—We do.

9728. What are you going to do with him after you have registered the one-man business?—I do not know that we can do anything except this: that if he is registered with the Home Office and that man does begin to take work in from any retail shop, we know where to find him, and the Inspectors know where to find him, whereas at the present time they do not know where to find him half the time, for the simple reason that so many of them work in private houses, and not in shops even. That is my point.

9729. In their own homes very often?—Yes.

9370. *Mrs. Lytton*: Ought not it to be obligatory on the retail shops to provide a list of the people they are employing?—We do not mind which way it is put, so long as we could get the registration. We have been told by the Department it would be very difficult. As I said some little time ago, at the Home Office, when we were there on a deputation, it is only a matter of extending the present system which is in operation. For instance, a man may open a boot repairing shop, he has got no machinery and he is not subject to any regulations, either from the Home Office Inspector or the Ministry of Labour Inspector, unless he is employing young persons; but if he puts in a finishing machine, or any kind of machine driven by power; if it is only a half-horse power motor engine or gas engine, he has immediately got to register at the Home Office, and if he does not he is liable to a penalty. It is only a question of extending that to a man who is doing boot repairs for the public; that he should register with the Home Office or the Ministry of Labour. Personally I think it could be done at the Home Office by simply extending the Home Office system, because they have got to register directly they put in power or machinery.

9731. *Dame Adelaide Anderson*: With regard to a man who is working without power, and doing work which he takes in himself, he is in the same position as a laundress who takes in work and does it by herself?—I suppose so; they are not subject to any regulations.

9732. It could not be applied to one case without being considered for other cases?—Very likely; I am interested in my own trade, and it is for the laundries and other industries to speak for their own particular trade and industry.

9733. Practically hitherto it has been found that where a person is employed under the Factory Acts the need of regulations begins with the fact of the employment of one person by another?—Yes, that is so.

9734. *Mr. Bell*: If you do bring all these matters under the Trade Board, would there not be a great danger of overloading the ship?—No, I do not think so; our trade, probably, has more men of that type. I should imagine, than any other. I have heard they have the same difficulty at the Tailoring Trade Board, where work is given out in that way and done in their own homes, but I do not think to such an extent as we have got it in our trade. We know, as a matter of fact, that the Trade Board regulations are being ignored in hundreds of cases throughout the country by men who are taking work for retail shops, and we do not know the shops they are working for.

9735. *Sir Arthur Pease*: I think we understand your views on that now. Then you deal with the

question of a general minimum piece rate. You say 85 per cent. of the trade are employed on piece rates?—I should say so.

9736. You recommend that not only should they fix a minimum time rate, but fix the actual piece rates?—I do.

9737. Do you not really mean minimum piece rates?—Oh, yes, quite so.

9738. Not actual?—Not the actual, the standard. I look upon the fixing of the piece rate to be the same as fixing the time rate; that the Trade Board should have the power to fix the minimum piece rates, the same as they have power to fix the minimum time rate. I recognise the fact that a minimum piece rate should ensure the possibility of a man being able to earn, as a piece-worker, a higher rate than the minimum time rate, whatever it might be.

9739. I think the words "actual piece rates" rather misrepresent what you mean; would not you really have that, "the minimum piece rates"?—I am quite willing to alter that word if it is thought necessary. That is what I had in my mind, that the Trade Board should still retain the power which they already have of fixing piece rates, as well as time rates.

9740. If you have to vary your piece rates, either up or down, do you know at all how that would be done? Would it be done by percentages, or a flat rate?—Probably by percentages. I am not, of course, prepared to say how the Board would deal with it, but I may say that when an increase on the piece rates took place, it was done on a percentage, and I should say the probability would be that the reduction, when it comes about, would also be at so much per cent. As I said earlier, there is a motion now standing to come before the next meeting of the Board for a reduction of 10 per cent. on the piece rates, and it is quite likely, I should say, that any reduction which might take place, whether it be that amount of more, would be on the percentage basis.

9741. Do the piece workers, as a rule, earn substantially above the time rate?—Yes, I think they do at present rates.

9742. *Mr. Bell*: Is it not a fact that the piece rates, after all, are not minimum?—That is the fact.

9743. But the actual rate, that is, the piece rate, is a standard rate?—As to the piece-work rates at the present time, practically the whole of Lancashire, large parts of Yorkshire, and, I believe, certain districts in Wales and Scotland, and the whole of the West End of London, and the better-class trade generally, pay considerably above the present piece-work rates, so I think it goes to prove that even our piece-work rates now are the minimum, and they are not the standard rates; they are, generally speaking, in the rural districts taken as the standard rates, but even in London there are men to-day, a considerable number, getting considerably above the Trade Board rates.

9744. *Lord Weir*: Would you say there are more workers receiving higher piece-work rates than there are receiving the Trade Board rates, or do you adhere to your statement; generally speaking, the Trade Board rates are the standard rates?—Generally speaking, as I said a moment ago, in the rural districts the Trade Board rate is the standard rate; but it is not the standard rate throughout the country, as I explained just now.

9745. Over 50 per cent. are paid the actual Trade Board rate?—Yes, I should say so.

9746. *Sir Arthur Pease*: I think we come next to the question of District Trade Committees. You are in favour of the continuance of those?—I am in favour of them.

9747. Without power to fix a rate, but only to make recommendations?—That is right; having power, as at the present time, to make recommendations. They have not the power to fix a rate, and not only I, personally, but our Board are unanimously of opinion that it would be a retrograde step to give

18 January, 1922.]

Mr. H. CRABE.

[Continued.]

the local District Trade Board Committees the right of fixing rates of wages for their own particular districts.

9748. What advantage do you think the Committees are to the Board?—They enable us to focus the opinion of the particular districts which they cover, the Committee being composed of representatives which cover the whole of the particular district. Take the West of England, for instance, Devon, Cornwall, Somerset, Gloucester, and so on: the representatives covering those counties are able to bring before the Trade Board the opinion of the trade in that particular area, and if any of those particular Committees made certain recommendations to the Board for a differential rate, for instance, if it did come up and it was thought desirable, of course, the matter would receive the careful consideration of the Board.

9749. It simply means that it enables the representative or representatives of that district to ascertain the views of the trade generally?—That is right.

9750. In a different way to what it would be by correspondence, by meeting them, and so on?—Yes, it would be absolutely impossible for us to get the same amount of information from local districts without the existing system of the District Trade Board Committees.

9751. Are the District Committees well attended, having regard to their very limited powers?—They have got very limited powers, but they are well attended. I represent the Trade Board on two of the Committees, and there is generally a full attendance of the members of the Committee from both sides; there may be one or two absentees occasionally, but there is a very good attendance, and they take a great deal of pains to be able to collect the feelings of the district which they represent; and they have been of great assistance to the National Board; but I think the power of fixing the rates of wages and hours of labour should be in the National Board, and not in the District Committees. I think there must be some co-ordinating authority, and I think the National Board is the best authority for that.

9752. It really comes to this, that these District Boards keep employers and employed more in touch with each other. Is that not the real thing?—Yes, that is it.

9753. So that they can thrash out their grievances before they come to the National Board?—Yes.

9754. Mr. Pugh: Does that affect the size of the Trade Board?—No, it does not affect the size of the Board.

9755. You seem to be doing most of your work through your Standing Committee or Administrative Committee?—All the matter of exemptions and so on is done by the administrative Committee, but, of course, subject to the approval of the whole Board. We have no executive powers.

9756. How many are on your Board?—19 each side. When the Board was first set up, the Board consisted of 15 employers and 15 employees, and, of course, the three Government-Appointed Members.

9757. And the Committee would be about half-a-dozen a side?—The Committee are five or six a side.

9758. Does not the existence of the Committee do away with many meetings of the Board that would otherwise be necessary?—Yes, quite so. I mean, it is quite likely that the Administrative Committee may meet two or three, or even more, times before the full Board meeting, and get the various proposals ready for submitting to the Board for confirmation.

9759. Does the existence of your District Committees help you when you want to make a change, say in any of your rates. For instance, we find that, generally, if you want to make a change, time is allowed for objections and you get an enormous number of objections and you get a good deal of delay. Would you say that the existence of the District Committees does away with a great deal of that and removes the necessity for objections being raised after rates have been practically agreed to by the Board?—Yes, I should say that. If I may

touch on that point now, which I have already touched on in my evidence: the question of time taken up.

9760. I am going to take you through your recommendations and, I think, you had better take it then. Your statement will be put in the Minutes of the proceedings. You put it forward that the time ought to be reduced for dealing with this matter?—Yes.

9761. We have had a great deal of evidence on that and I think you need not develop it any further with regard to your recommendations (a) and (b). With regard to (c), which is that the Trade Board should have power to grant permits of exemption to workers, you have already dealt with that, you say they should be on broader lines than at present?—Yes.

9762. (d) is as to the compulsory registration which you have already explained very fully?—Yes.

9763. (e) is the question as to workers employed by boards of guardians, and so on, and (f) is "Stronger measures should be taken to enforce Trade Board Regulations, after the rates have become operative." Would you like to say anything about that?—We have been far from satisfied with the administrations of the Trade Board Act, since our Board has been in operation. Of course, we quite realise that, with the limited number of inspectors at the disposal of the Ministry, it is difficult for them to cover the whole of the country, and, what I may term, make a shop to shop inspection; but we do feel that when there have been cases reported (and there have been scores of cases reported) to the department, where there is reason to believe that Trade Board Regulations are not being complied with, we think that these cases ought to be dealt with, and reported on, much more speedily than has been done in the past. We think there is a great deal of room for improvement in that direction.

9764. What have you to say with regard to (g)?—That is with regard to the chief inspector. We are all of opinion that the chief inspector ought to be at the Trade Board office and not at Montagu House. We are continually, as a Board and as an Administrative Committee, coming up against cases where we feel it would be a very great service to us—and if I may say so, we feel we could be of great service to the chief inspector—if we could get into personal touch with him; and if he was on the premises of the Trade Board office, instead of here, from time to time. We think it would be very greatly to the advantage, both of the Board and of the Ministry itself, if that were done.

9765. The chief inspector could not be under the Trade Board's directions, could he; he would still have to be under the Ministry's directions?—Yes, under the Ministry's direction, but, instead of being at Montagu House, he should be at the Trade Board office, where he could be brought into direct touch with the Trade Boards and members of Administrative Sub-Committees, which come into contact with cases, and they would be able to place before him details which he would never get in other ways.

9766. And now will you deal with (h)?—That is the point with regard to the legal advisers. We also think that, some way or other, more of the legal advisers of the Ministry should be at the Trade Board office for the same reason as with regard to the previous paragraph. We are continually getting up against this difficulty: that we make some new regulations to meet some particular difficulty which we have been face to face with, and an Order, or, at least, the proposal, has been made, and then perhaps in the course of two or three months, or more, we are advised by the Legal Department that we have exceeded our powers: that the Trade Boards Act, or a particular Order under which we are working, does not empower us to do what we have attempted to do; consequently there is a great loss of time. What we feel is this, that if there were a representative of the

18 January, 1922.]

Mr. H. CRABB.

[Continued.]

Legal Department at the Trade Board, before we commit ourselves to any proposal like that, we could get his legal advice and guidance on these points.

9767. You really want legal assistance in drawing up your Orders?—That is right. We know we shall be told we can get legal assistance now, but owing to the fact that the Legal Department is here, and we are at the Old Bailey, that causes a great deal of delay in getting to the Legal Department. I am not attacking the legal department at all, whenever we have approached the Legal Department, they have always met us or come up and met our Committee; but the present system tends to cause a great deal of delay. If we could get into immediate touch with representatives of the Legal Department, when we are meeting there, it would not cause so much delay. Of course, that has been one of our great complaints: the delay in the operations of the Board.

9768. You do not want to have a legal adviser always present, do you?—Yes, we think there should be a legal adviser present.

9769. The whole time the Board meet?—At the Trade Board office. With the number of Boards in existence continually meeting, I should say that there would be quite enough work to keep, at least, one representative of the Legal Department at the Trade Board office.

9770. Do you mean, you wish to have a legal adviser present during the whole of the discussions of the Trade Board?—No.

9771. But you call him in at a certain stage?—Yes, so that we know there is a legal adviser on the premises with whom we can get into touch at any particular moment, when we are meeting; that is what we mean.

9772. Do you wish to add anything further?—There is just one other point which I have not mentioned in my recommendations, which I would like to touch on, and that is the question of the Appointed Members. There has been, in some quarters, a considerable amount of criticism, not only in our trade but in others, and the claim made that the Appointed Members should be men with technical knowledge. So far as we are concerned, we do not make that claim; we are perfectly satisfied with the present system. We feel that we are being well served by the men who are sitting on our Boards, and, I believe, on other Boards as well, as the Government-Appointed Members; and we are of this opinion, that we are more likely to get an unbiased judgment from men of the type which we get as our Appointed Members, than we should get if they were representatives of employers or employees, which they would have to be if they were men with technical knowledge. I say it is impossible to get a man, be he employer or employee, if he is the Appointed Member, but what he is bound to be influenced by the particular side to which he belongs in commercial life.

9773. We have had various suggestions put forward with regard to that, and the one that has been put forward most generally has been that the Chairman should be an outside man altogether, with legal or judicial training of some kind, but that there should be assessors appointed, as they do in the Industrial Court, I believe, at present, one from the workers' side and one from the employers' side, who would be able to give him technical advice on the trade in an informal way, as well as in the actual speech-making at the Trade Board. What would you say to that proposal?—I am afraid that would not meet the objection which I just stated: that a man, no matter how eminent he may be in the trade, if he has technical knowledge of the particular trade (I will take the boot trade, for instance) is bound to be prejudiced, to a certain extent, by the particular side to which he belongs; and my opinion is, so far as our own Board is concerned, that with the technical knowledge of the men who are on the two sides of the Board, we get all the technical knowledge and all the technical advice which we require, and, if I may say so, what we want for the appointed

members are men with a judicial mind, men who have some knowledge of trade and commerce generally, and are able to weigh up the evidence which they have heard from the various speakers on each side. I do not think it is necessary that they should be men who are great speech-makers. We are very fortunate in that respect; we do not suffer very much from that on our Board.

9774. Speech-making was not perhaps the right expression; I mean, putting the case very formally. If you had two men, more or less partisans, to advise, the Chairman, who recognised they had to look after the interest of the one side and the other, they could put matters in an informal way which could not be done at a large Board. That was the idea of the witnesses?—I quite agree that it could be done in that way.

9775. The decision would then rest with the Chairman?—Quite so.

9776. Do you think the appointed members' powers should be increased so as to be able to suggest a settlement besides having a casting vote?—I do not know about increasing the powers of the appointed members so as to include suggesting a settlement. I do feel that there should be some powers of being able to settle matters, when there are any matters in dispute and a proposal has been referred back, or there has been a deadlock. I think that there should be some means of bringing about an agreement without having to issue a new proposal, which we have to do under existing conditions. What I mean is this: Suppose a proposal goes out from the Boot Repairing Trade Board for an increase, or a reduction, or whatever it may be, and we receive a large number of objections, not only from our District Trade Committees, but from the trade generally, it is probable that the proposal which we have made is not acceptable to the majority of the trade. What I think is, that the Board should be able to take the matter up and amend their Order without having to issue a fresh proposal to the country, and cause a long delay again of another four or six months.

9777. That was not quite my point. Supposing the suggestions the employers and the workmen made were both unreasonable, and the appointed members felt they ought not to vote for either, they would not come any closer to-day; but do you think the appointed members, or the Chairman, should have power to suggest what they think fair?—I do.

9778. They have not that at present?—I think they ought to have it, and I thought they had, for the simple reason that (and I know my friend Mr. Buckle will bear me out in this) when we have been in difficulties once or twice on our Board, there has been a considerable amount of negotiation, with the appointed members and certain of us from each side of the Board, which has brought us in the end to an agreement. I am rather surprised to hear now that the appointed members have not power to do that; they have done it on our Board, and it has been very successful.

9779. They have the power to make suggestions, but they have not power, after hearing both sides, to lay down what have to be the conditions, unless it is proposed by one side or the other; they cannot propose it; they can only give a casting vote.

9780. Mr. Pugh: That would, of course, be to make your appointed members an arbitration court. What would you think of the suggestion, that has been made here, of a central body, a kind of appeal court, that would not only dispose of differences between parties on individual Boards, but would also act as a co-ordinating body over the whole area in which Boards operate; or over the whole of the Boards? Have you thought of a central body of that kind?—Yes, I have. Probably what you have in your mind, or what I have in my mind, is, for instance: a proposal comes up to the Ministry of Labour for confirmation, and, for some reason or other, the Minister of Labour does not feel disposed to sanction that, and it is referred back to the Board. I take it what you have in your

18 January, 1922.]

Mr. H. CRABE.

[Continued.]

mind is that there should be some central authority here which should relieve the Ministry of Labour of the responsibility of saying "Yes" or "No" to that, and the final approval should be given by the central authority representing the whole of the Boards.

9781. I am not thinking of that in particular. What I am thinking of is some central authority, or some court, to which any Board could go, or any authority connected with a Board could go, to settle a disputed point; it could not only settle disputes in that way, but could also keep a general survey over the operations of the Boards, and act as a co-ordinating authority, and so on?—I should say, on first thoughts, it would be very desirable to have such an authority.

9782. You think it would be useful?—It would be useful I think.

9783. What is your experience as to the effect of the Trade Board on your trade and the employment in your trade? Would you agree that the tendency of your Trade Board has been to damage the trade and to create unemployment?—No. I am not of that opinion at all. There is a lot of unemployment in our trade, as in every other industry at present, but I do not admit that that has been brought about by Trade Board regulations.

9784. Would you be quite emphatic in saying you do not think the Trade Board has caused unemployment?—Yes, I would be emphatic.

9785. Lord Weir: I should like to ask you just one question about unemployment. Let us assume a boot-repairer in your own establishment, you pay him off because trade is bad, and that man starts a one-man business; do you consider he is unemployed?—No, decidedly not; if he starts a one-man business he is not unemployed.

9786. And there has been, as you say, a very large transference in that way?—I do not know that there has been a large transference; it has been the case in the boot-repairing trade ever since I have known it, and I have been in the trade ever since I was a boy, and there have been these one-man businesses.

9786a. If I thought you desired us to understand there had been an increased development of the one-man business?—There has been an increased development again since the War.

9787. And since the Trade Boards Acts?—Yes, especially since the trade depression; but I would say this: it has not been brought about because of the Trade Board regulations; it has been brought about through the general slump in trade from which our trade, like others, suffers. Say there is an employer who employs half a dozen men and his trade has fallen off to such an extent that he has to discharge two of them, those men can go and start for themselves; they are unemployed to the extent that they are no longer wage-earners, but they are earning

something for themselves, although I am afraid in most cases it is very, very small living; they are getting an existence, at any rate.

9788. Dame Adelaide Anderson: How do they get work if the retailer or the employer cannot get it; on what ground are they employed or how do they get work to do; do they pick up stray jobs like a glazier?—Yes, they pick up stray jobs.

9789. Sir Arthur Pease: Is it not though sometimes that they do it cheaper?—Yes, no doubt that accounts largely for it. If a man goes and knocks at a door and asks if they want any boots repaired, and he is prepared to repair a pair of boots for 5s. when the Trade Board regulations, if they were enforced, would make it necessary to charge 6s. 6d., naturally in most cases he would get the job; but you would not advise the abolition of the Trade Board to enable that sort of thing to be done. If it were, I rather shudder to consider the condition to which the trade would revert; in fact, if I thought the trade would ever revert to the conditions in which the boot-repairing trade was in pre-war days, I would get out of the trade, and I have had a life experience of it.

9790. Dame Adelaide Anderson: That power of picking up an odd job for a low rate is not likely ever to be a large thing. In normal times that is not likely to happen very much?—Not in normal times.

9791. An industry makes its way and holds the field by its efficiency and its meeting the public needs?—Quite so.

9792. After all, that is not a very important factor in the whole situation?—I think this is brought about very largely at the present time by the large amount of unemployment in other industries. Naturally, if a man is unemployed himself or only partly employed—because when we read our figures about there being so many millions unemployed, we must not forget the hundreds of thousands that are only partially employed—if a man is only working three days a week instead of six, and someone comes along and offers to repair his boots for 5s. instead of 6s. 6d., much as he may dislike it, he does not trouble himself very much about whether that man can do it and get a legitimate wage for himself after he has done the job. Consequently he will allow that man to repair his boots, although he knows he is sweating himself to do it at the price. In other words, it is a question of the man's stomach which is making him do the work for the price which he agrees to do it at, but that would not be so under normal conditions.

9793. Under normal conditions he will not get much work?—No, because a man under normal conditions, where decent rates of wages are being paid, would not stoop to do that sort of thing; he would very much rather be working in a workshop where he could get a decent wage.

Sir Arthur Pease: We have to thank you very much for all the information you have given us.

(The Witness withdrew.)

Mr. J. BUCKLE, called and examined.

The Witness handed in the following statement as his evidence-in-chief:—

I am one of the workmen's representatives on the Boot and Shoe Repairing Trade Board (Great Britain) and have been authorised to give evidence on their behalf to this Committee. I also occupy the position of National Organiser of the National Union of Boot and Shoe Operatives, whose Head Office is at 34, Guildford Street, London, W.C.1.

The Boot and Shoe Repairing Trade Board (Great Britain) was established on the 18th April, 1918, and was one of the first of the Trade Boards set up under the Trade Boards Act, 1918. In addition to repairing the Trade Board also covers the making of hand-sewn work, riveting, pegged and surgical work. In the evidence I have to submit, I deal entirely with the making of hand-sewn work, repair work, surgical work, riveted and pegged work.

18 January, 1922.]

Mr. J. BUCKLE.

[Continued.]

the number of hours worked averaged over 56 per week. During the war, the rates of wages rose in common with other industries, and that was attributable to the great shortage of labour at that time.

I have great pleasure in testifying to the improved conditions in the industry during the short time the Trade Board has been in existence. The industry has been raised from the position of a sweated trade to the level of other skilled trades, and credit for the state of the industry must undoubtedly be given, in a great measure, to the operation of the Trade Board.

As organiser of the National Union of Boot and Shoe Operatives, representing 100 branches and covering a membership of 100,000 members. I fully appreciate the improvement in the repairing trade, generally speaking.

Permits of Exemption.

The consideration of applications for permits of exemption from the operation of minimum rates for infirm or disabled workers has occupied a great deal of the time and attention of the Administrative Committee of the Trade Board, to whom the Trade Board delegated its power to deal with these applications. Each case is carefully investigated by a member of the Committee. The practice being, for a member of the Committee to visit the workshop, see the worker at work and assess his value to his employer accordingly. Over 600 permits at rates lower than those fixed by the Trade Board have been issued.

The Administrative Committee of the Trade Board has acted as a National Trade Advisory Committee in connection with the Ministry of Labour's schemes for the training of ex-service men. The total number of ex-service men that have been trained is 4,500, and of this number 1,400 were trained by the Ministry of Pensions. The total number, therefore, who have been dealt with by the Administrative Committee of the Trade Board is 3,100; of these 2,300 have completed their training, and we have been able to trace 2,100 of these. 1,400 of them are at present in employment or in one-man businesses, and of the remaining 700, 350 are known to be out of employment. You will at once see that we have taken a full share of the responsibility in training ex-service men.

Apprenticeships.

One of the earliest matters to which the Trade Board gave its attention was the renewal of the apprenticeship system. We think that, in the interest of the boys themselves, it is desirable that the system of indentured apprenticeships should again become a permanent feature of the trade, under the provision of the Trade Boards Acts. We have drawn up apprenticeship schemes applicable to the various branches of the trade. We have also prepared a form of indenture of apprenticeship for the use of employers in the trade, and have fixed satisfactory rates for those apprentices who are "boarded in."

One of the greatest difficulties the Trade Boards have had to contend with has been the case of lads who are partly trained in charity schools, local institutions, industrial schools and crippled schools under the Education Authorities, and who are put out into the trade after preliminary training under a qualified instructor. These youths are thrown into the trade regardless of the question whether there is likely to be an opening for them, or, in the case of crippled boys, whether they have any prospect of an opening in the trade to enable them to earn their own living.

One-man Businesses.

Another great difficulty in the repairing trade is the large number of repairers who employ no labour and are known in the trade as "one-man businesses." These men can sell their labour at any price and

work as many hours as they feel disposed without coming under the Trade Board regulations, therefore, we have suggested to the Government that all boot repairers trading with the public should be registered either with the Trade Board or the Home Office, to be dealt with under the Factory Acts.

I wish to draw the attention of the Committee to the fact that the boot and shoe repairing trade is essentially a piecework trade. The great majority of the workers, about 85 per cent., are employed on piecework, and the Trade Board has drawn up a very exhaustive list of minimum piece rates for the trade. In some parts of the country considerably higher piece rates than those are paid to the workers. Any proposal to take away the power of the Trade Board of fixing piece rates would seriously diminish the effectiveness of the Board.

District Trade Committees.

The Trade Board has established 14 Trade Board Committees covering the whole of England and Wales. These District Committees, since their establishment, have been consulted as required by the decision of the Trade Board. On every occasion when any variation of rates has been proposed, before issuing a formal notice of proposal to vary the existing rates or to fix new rates for special classes of worker, the Trade Board have asked the District Committees in the first place for their endorsement or otherwise. I am in favour of continuing the policy of consulting these Committees to this extent. In regard to proposals for commencing any new rate of wages, I am strongly of opinion that it would be impracticable to give these District Committees power to fix rates independently of the Trade Board. I am, of course, opposed to differential rates being fixed by District Committees, I think that they can be best established on a national basis through the medium of the Trade Board. Any proposal for the variation of wages or the normal number of hours of work have to go before the country for two months to give an opportunity for objection to be lodged, and it takes from four to six months to bring about either an increase or reduction in wages; therefore, I would suggest that this procedure should be varied so as to make it possible to accomplish their objects in a period, say, of four weeks.

I may further mention that, in the year ending November, 1920, 1,411 visits were made in connection with the working of the Trade Board Act in respect of the boot and shoe trade—of these visits, 1,311 were to employers, and 40 to workers. The principal objects which the firms were visited for, was to secure payment of minimum rates.

I am in favour of members of the Trade Board having full powers in their various localities to investigate violations of the rates as laid down by the Board, and such investigations to be reported to the Board, as now operates with regard to the question of permits. As regards the system of Appointed Members, and having experience of the Board since its inception, I have found that the system has been advantageous and I appreciate the guidance and assistance given towards the solution of the many difficult problems appertaining to the trade during the Board's existence.

9794. *Sir Arthur Pease:* What do they call the body which you represent?—The National Union of Boot and Shoe Operatives, whose head office is 34, Guilford Street, London.

9795. What number of members have you?—100,000.

9796. Your recommendations are almost exactly the same as those Mr. Crabb has just put forward?—Yes, for the simple reason that we are giving evidence speaking for one Board. I have no other experience, and I have been wondering what I could say to you.

9797. Would you say that you generally approve of the evidence which has been given by Mr. Crabb?—Yes, I could say generally I do.

18 January, 1922.]

Mr. J. BUCKLE.

[Continued.]

9798. Could you mention any further points which you would particularly like to draw our attention to?—There is one point I want to draw your attention to, and that is where I deal with the question of the educational authorities in the country. The question I want to develop a little is with regard to the reformatories and the industrial schools and the semi-imbecile and cripple schools under the educational authorities of the country, and the invalid aid societies, of which there are many in the country. We find that every educational authority has boys taught up to a given age under an instructor. When you come to the industrial schools for boys, they are almost self-contained schools, and the boys are taught to make their boots and shoes there, and at the age of 15 the committee, or the governors, have got to consider placing out the boys in question. We find that that means a very large influx into our industry. Then we come to the special educational side of the cripple schools and the semi-imbecile schools, and a large percentage of the educational authorities throughout the country have been producing boys and placing them out. That was so before the Trade Board came into existence, but we are now attempting to deal with that side of it which has worked very detrimentally to the industry, generally speaking. Now when we come to the other side of it, with the very large number of disabled men who have been taught as trainees and have come into the industry, I think the competitive force of that influx is very largely responsible for the dullness in the repairing trade to-day. Therefore, under our apprenticeship system, which has only just practically come into operation, we are attempting to deal with that influx from the various schools in the country, and we feel that there must be some continuation of protection by law for this industry. If the Trade Board Act is to be dispensed with, we must wonder very seriously what is to become of the trainees and disabled sailors and soldiers who are placed in our industry to-day. We are speaking very largely here as a Board. I was one of the persons who opposed coming within the Trade Board Act, but I have learned since then that I made a mistake, and I now believe the Trade Board has not only raised the status of the employer, but has materially raised the status of the workpeople that are employed in the industry. Generally, I believe that the circumstances are vastly improved. Our Board, from what I can see of it, is unanimously for a continuation of the existing state of affairs. The debates have not always been conducted without some feeling at times, but still we have gradually overcome the difficulties that presented themselves, which otherwise could not have been done.

9799. What protection, by law, are you asking for with regard to this particular point of the educational authorities?—The protection that we are endeavouring to obtain is that none of those institutions that I have named should be permitted to indenture or license a boy out to our industry, or any other, unless it is registered through the medium of our Board, or through any other Board, as the case may be; that the suitability and the capability of the employer to fulfil the indenture should be thoroughly understood; that is one of the protective measures which we desire very much. We have endeavoured to get that through our indentures, and we are getting registrations of apprentices at the present moment.

9800. You would not allow a boy, coming from one of these schools, to be licensed out with a one-man business in a village?—I should not object to that, provided we were perfectly satisfied that the employer in question was fully qualified to teach the boy his trade, and make him an efficient workman when he reached the end of his apprenticeship.

9801. *Dame Adelaide Anderson*: I want to clear up the position as regards any apprentices other than an institutional boy. Has the Board power to decide whether an employer is fit to give instruction?—We have sought those powers through the apprenticeship. I mention those institutions to show you the large

influx from the educational sources, but the regulation of apprenticeship, which I am speaking of, we desire to be general, and to have power to enforce.

9802. It is enlarged powers with regard to the conditions of apprenticeship that you desire?—Yes.

9803. And really there is no particular reason why you should differentiate between an institutional boy and a non-institutional boy; the institutional boy will have learned, probably, a very little, quite insufficient, before he begins, and the ordinary boy would not have learned any boot repairing?—I quite admit that. I mean that the education authorities are responsible for the large number of boys coming into the hand-sewn measure work and the repair trade.

9804. It is an artificial rate of coming in; it is larger than is normally obtained, if it were not for these institutions?—Yes, and the Committees have had power in the past to license or indenture those boys, as the case may be, at very low and inadequate rates.

9805. The Boards have, under Section 10 of the Act of 1918, power to make a recommendation to any Government Department, with reference to the industrial conditions in the trade, and the Department to whom the recommendation is made shall forthwith take it into consideration, so you could make a recommendation to the Department concerned with institutional training. Already, under the Act, you could make recommendations. A Board could, if they thought fit?—Yes.

9806. And the Department would be obliged to take it forthwith into consideration. Is there something additional to that power which you desire?—We desire to have power to so control, both from ordinary life and institutional life, the number of boys coming to the trade. And we find they can only do one portion eventually, the common repair work, and there is a tendency to depreciate the efficiency of the standard of work.

9807. The boys are coming in as learners, and not apprentices, is that the point?—We can deal with that. In the institutions that I am speaking of the Committees are the parents, up to a given point; that is to say, they are the guardians of the boys, and they actually assume parenthood until they reach a certain age; therefore, during that period, when the time arrives when the boys should leave school, the Committee usually are anxious to get them placed, and they place them, both in London and in places all throughout the country, and we want to be quite sure that we have the power, and have some responsibility in seeing that they are placed correctly.

9808. *Lord Weir*: There are two things you want to get: one, to raise the training of the boys so as to make them better craftsmen?—Yes.

9809. And the other thing is to control their number?—Yes.

9810. Then what is going to happen to them?—Well, what happens to them now?

9811. *Sir Arthur Pease*: Do you really mean that the Trade Boards should have power to say, "No more apprentices must go into that trade, there are plenty there already?" Yes, if it is advisable to do so under the circumstances. The Trade Board have power to say now that it is advisable to place any more disabled trainees in the industry.

9812. Leaving out of question the disabled or institutional, but coming from anywhere at all is what I mean; do you say that the Trade Boards should have power to say, "No more than so many may enter this year?"—I should say that the Trade Boards ought to have power to say that, unless the situation is suitable, the boy cannot go there.

9813. That is quite different?—And if the market is too crowded, I think the Board ought to have power to say that there is no likelihood of the boy maintaining himself eventually.

9814. *Lord Weir*: Your union, I think, is the National Union of Boot and Shoe Operatives, and has 100,000 members?—Yes.

18 January, 1922.]

Mr. J. BUCKLE.

[Continued.]

9815. What kind of proportion of those are boot repairers?—The proportion of repairers will be about 8,000. We are dealing now, exclusively, with the hand-sewn, rivetted measurement, peg work, and repairing in all its branches. The modern shoemaking side of it is excluded from the province of the Trade Board.

9816. *Sir Arthur Pease*: Have you any other points you wish to draw our attention to specially?—I would just like to say with regard to the District Committees that my experience of the meetings of the District Committees since they have been brought into existence (and we have only had a small number of meetings) is that, in the first instance, I thought it was practically a waste of money. Now what I have found out, by experience, of the meetings I have attended, is that with regard to the discussions that have taken place, the Committee being of a representative character, the representatives go down

into their various areas and explain exactly what the reference meant, and that has been responsible, in my opinion, for reducing the number of objections that have been made to the central authority on that very thing, and, it appears to me, that a better relationship has also sprung up as an outcome of these meetings. I did not always hold that view on the matter, as I say, but I am quite satisfied that instead of the District Committee being a menace, it is of some great assistance in reducing the objections, and the questions, and one thing and another, in the areas where they feel injustices have been committed, the explanations which have been given privately and otherwise have a great tendency, in my mind, to establish that there is some really useful work that can be done, in the shape of recommendations and considerations, by the District Committees.

Sir Arthur Pease: We are very much obliged to you for your evidence.

(The Witness withdrew.)

Mr. J. F. SIME, called and examined.

The Witness handed in the following statement as his evidence-in-chief:—

DUNDEE AND DISTRICT UNION OF JUTE AND FLAX WORKERS.
Affiliated to the General Federation of Trade Unions, the British Trade Union Congress, the Scottish Trade Union Congress, the Scottish Council of Textile Trade Unions.

Secretary.—J. F. SIME.

37, High Street, Dundee,
6th January, 1922.

When the Trade Boards Act of 1909 was before Parliament the question of inclusion of the jute and flax trades arose, the question being first raised, I think, by the late Miss Mary R. Macarthur. She certainly suggested the jute trade should be included as a "sweated industry." Mr. Robert Harcourt, M.P. for the Montrose Burghs, had some lengthy correspondence in the "Dundee Advertiser" of that period on the question. Mr. Winston Churchill decided not to include them. We were of opinion they should have been included.

The jute trade is centralised in Dundee, 35,000 to 38,000 being normally employed in the city 4,000 to 5,000 being employed in the other districts outside of Dundee.

The relations between employers and employees in the jute trade carried on in Dundee has not been by any means happy. For many years the employers refused to meet jute trade union officials. Even yet it is a very rare occasion on which they meet them outside of Trade Board meetings. I quote Sir William Henderson, Chairman of the Employers' Association, who said on 2nd December, 1918:—

"With regard to this question of conferences between employers and representatives of the workers, it is quite true that for many years these conferences were very rare."

I digress at this stage to deal with the period prior to the issue of the Order applying the Trade Board Acts to the jute trade. Meetings were held at Dundee on 7th May, 19th August, and 14th October, 1918, to consider the formation of a reconstruction committee or a Whitley Council for the trade. The whole of the opposition to the proposals was put forward by the employers' representatives, a convenient "obstacle" being found in the proposal to include "merchants." The workers' representatives had no interest in that "domestic" squabble until an employer impudently told the workers' representatives from whom the workers' representatives should be drawn if a Council was constituted. The final result was the employers refused to agree to the formation of a Council. The

Trade Board for jute was constituted in December, 1919. The employers were equally opposed to it, as to a Whitley Council, at that date.

Coming back to the relations between employers and operatives, employers always said they were not to have "outside interference" in working conditions or wages. This culminated in a series of strikes (1) at Messrs. Cox Bros., Ltd., Camperdown Jute Works, Lochee, Dundee, in March, 1911, affecting 5,000 workpeople, which lasted one month; (2) Messrs. J. & A. D. Grimoud, Ltd., Bowbridge Works, Dundee, in January, 1912, affecting 2,000 workpeople, which also lasted one month. Both strikes were settled through the good offices of the then Lord Provost, Sir James Urquhart. Both employers refused to meet the workers' representatives; (3) a strike affecting the whole trade in the city in March, 1912, which was settled through the efforts of Alex. Wilkie, M.P. for the city, and Mr. W. A. Appleton, Secretary, General Federation of Trade Unions (the employers refused to meet the operatives' representatives). The terms of settlement (after a six weeks' strike) were 2½ per cent. increase to a very small section of the workers, and a promise to "level up" the wages of two sections of workers. It took from May, 1912, to May, 1915, to carry out that promise, and the "mountain produced a mouse," the "levelling-up" consisting of a few coppers per week to a very small percentage of the workers concerned. I produce the scales and agreement dealing with the "levelling-up." I am convinced, had it not been for the war situation of 1915, even these rates would not have been conceded, as they were meant to stave off demands for increased wages to meet the increase in the cost of living.

Arising out of the general strike of 1912, an attempt was made to set up a Standing Joint Committee (I enclose draft of proposed constitution). It fell through owing to the opposition of the employers' association of that date.

During the war, when requests for increased wages were made, they, from 1915, were met with point blank refusals, while every obstacle was used by the employers to prevent arbitration on the requests. They also refused to meet the workers' representatives to consider them. This again led to a strike in the whole trade of the city in March, 1916, which dragged fitfully on for twelve weeks.

The first radical agreed change made in wages and hours was after the Trade Board was formed, a "Skilled Workers' Committee" being set up by the Board. The following proposals were recommended and ultimately the first two were fixed, the third still being under consideration by the Board:—

(1) Special rates for spinners, who were grossly underpaid.

18 January, 1922.]

Mr. J. F. SIME.

[Continued.]

- (2) The institution of a 48-hours working week (from a 50-hours week, the employees refusing to work 55 hours). The wage for 48 hours being that for 55 hours.
- (3) Arising out of the institution of the 48-hour week, to implement the promise of 55 hours' pay for 48 hours, a "factor" was fixed, by which the rates of piece-workers were multiplied. Certain flat sum increases were compounded into the piece-work rates. An agreement was signed on 19th March, 1920, regarding the adjustment of complaints against the "factor" (reference will be made again to this agreement).

It was found, however, that in weaving particularly, the "factor" was unsatisfactory, and it was decided to "standardise" the weaving rates. A scheme was drawn up, and under a signed agreement put on trial for three months from 25th June to 23rd September, 1920. The employers refuse to this date to adjust anomalies and injustices in the scales, which appear to be too technical for the appointed members to arrive at a clear opinion on them so far. These rates were proposed as Trade Board rates by the employers' representatives eight months ago, but they now oppose them, while an agreed scale, in the proposals before the Board, dealing with percentage increases for variations in weight of weft, are persistently kept inoperative.

On the above proposals a ballot vote of our members was taken, the E.C. of the three trade unions concerned advising their acceptance, which meant resumption of work on Saturdays. The following was the ballot paper:—

DUNDEE JUTE AND FLAX WORKERS' UNION.

Hours and Wages Ballot Vote.

The following proposals were submitted by the employers' representatives to a Sub-Committee of the Jute Trade Board, and issued as an Interim Report by the Sub-Committee, which consisted of equal numbers of employers' and trade union representatives.

Jute Trade Board.

Interim Proposals of Sub-Committee on Hours.

1. That the normal working week consist of 48 hours.
2. That the normal working day for the first five days consist of 8½ hours, and for Saturday, 4½ hours.
3. The employers are prepared on their side to give an undertaking that the wage now paid for a 55-hours week will be paid for a week of 48 hours.
4. The Dundee employers desire an assurance that the Dundee workpeople will agree to a single break in each day, and to the resumption of Saturday work. The representatives of the Union undertake to present this request to their Executive.*
5. It is suggested that the single break system should be worked experimentally for a period of four months. If at the end of that period it be found that the system has proved unworkable, or seriously inconvenient, objections to the system shall be lodged with the Trade Board, and the Trade Board be asked to re-consider the arrangement.

The arrangement of hours proposed by the employers are:—

Monday to Friday, 7.45 a.m. to 12 noon. 1 p.m. to 5.30 p.m.

Saturdays, 7.45 a.m. to 12 noon.

* This has been done and also placed before the Joint Committees, and they recommend the acceptance of the offer as being the best obtainable at the present time.

These proposals were submitted to, and approved of by the Employers' Association. To give effect to clause 3 of the proposals, it was necessary that the wages books of every firm should be examined and the percentage ascertained by which piece-work rates should be increased over those of 1914, to enable the workers concerned to earn in 48 hours the same wages as would now be earned in 55 hours. This was carried out by two chartered accountants, one appointed by each side. They will have completed the work by the time the ballot vote is taken, and the percentage to be added will be shown by each firm in the various departments in which piece workers are employed. Time workers will receive 55 hours' wages for 48 hours' work.

Spinners' wages have been standardised in so far as the varying number of spindles attended to are to be paid. There are other details yet to be adjusted. The wages to be paid in accordance with the standard scale are exhibited in each work, and will come into immediate operation if the hours proposed are accepted. If they are not accepted, the spinners' new rates will not be put into operation by the employers until the Trade Board Act Regulations have been complied with, which will mean at least three months' further delay.

We are raising at the next meeting of the Trade Board, which will be convened immediately, the question of standardisation of work and wages or rates of all other sections of workers in the trade. To do so, a Committee of the Trade Board must be set up to consider the question and draft proposals. This will entail a vast amount of work owing to the varying rates in existence, and will probably take some considerable time to complete.

The request contained in clause 4 of the employers' proposals has been considered by the Union Committee and the Joint Committees. They are of opinion the proposals should be accepted, and accordingly recommend their acceptance.

It will be observed the arrangement of hours is experimental for a period of four months, when they can be reconsidered.

I desire most strongly to emphasise the fact that these three changes were made as a result of the Trade Board Acts being applied to the jute trade. We have for years attempted to get them adjusted, but always met with refusal on the part of the employers. There has never been any recognised method of "collective bargaining."

The rates "standardised" are hessian weaving. Other classes of weaving rates were to be dealt with also, in addition to those of winders, reelers, warpers, twistors, etc. Promises and agreements made by the Dundee jute employers are, however, not to be depended upon. Nothing has been done with the other rates to date.

The reason I have gone so fully into "past history" is: (1) I am presuming the Employers' Association will submit, or have submitted, evidence to the Committee in favour of the abolition of the Jute Board, and statements not in accordance with fact may be or have been made; and (2) in February, 1921, the Dundee Jute Employers' Association sent a lengthy letter to the Minister of Labour, requesting the abolition of the Jute Trade Board, to which the following reply was sent to the Minister on 21st February, 1921:—

Sir,

In reference to the letter of the Association of Jute Spinners and Manufacturers of 3rd February, 1921, addressed to the Minister of Labour, asking for the abolition of the Jute Trade Board (Great Britain), which was referred to the Board by the Minister, we have to draw attention to the following points:—

The statement of what took place at the meeting of the Board on 27th January, when the employers'

18 January, 1922.]

Mr. J. F. SIME.

[Continued.]

representatives gave notice of motion to vary the general minimum rates by 25 per cent., is inaccurate in its details.

High Cost of Production.

We should like to know what percentage wages bear to the total cost of production normally. The wages percentage in pre-war time and to-day for comparison.

Permission to Reduce Wages.

It is true wages increased "when the conditions of the trade were exceedingly prosperous," but they were not increased in a degree at all commensurate with the "exceedingly prosperous" state of the trade. For example:—

In spite of the wages increases the profits of the six following firms in the years 1916-1920 were as follows:—

Messrs. Cox Bros., Ltd.				
			£	s. d.
"	J. & A. D. Grimoud, Ltd.		623,390	3 6
"	Harry Walker & Sons, Ltd.		621,483	5 5
"	Thos. Bell & Sons, Ltd.		734,530	14 7
"	Gilroy, Sons & Co., Ltd.		1,224,139	17 11
"	J. N. Kyd Co., Ltd.		1,497,557	15 4
1916	...	...	...	...
1917	...	...	...	...
1918	...	...	...	...
1919	...	...	...	...
1920	...	...	...	...
Total	...	...	£4,706,101	16 9

Annual Average, £942,220 7s. 4d.

The pre-war standard of profit was £344,464.

Further comment would be superfluous. We presume, however, the jute employers who "shouted from the housetops" that the workers should provide for the "rainy day," acted upon their own precept. The profits of the above-mentioned firms point to ability to do so at least, and to an extent beyond the reach of their employees, whose wages to-day are at least 35 per cent. worse than they were in 1914, in view of the increased cost of living.

The employers state:—

"Were they able to reduce wages (which were increased at a time when the conditions of the trade were exceedingly prosperous) to such a degree as would in the present state of affairs allow of manufacturing under sound, or fairly sound, economic conditions, it might be possible to keep the works running till such time as the trade will have taken a turn for the better, and orders may be hoped for."

The following questions were put by Mr. J. F. Sime to Sir Wm. Henderson at a meeting of the Jute Trade Board, held on Thursday, 17th February.

Question: If a reduction was granted can you promise full time in a week or a month?

Answer: No!

Question: Can you promise full time in six months?

Answer: No!

Question: Can you promise full time in a year?

Answer: No!

Question: Can you promise, if a reduction was granted, that the works will not be closed down?

Answer: No!

These answers mean the workers are therefore asked to make an extraordinary sacrifice but receive no guarantee in return.

Abolition of Trade Board.

We have to point out the changed attitude of this Association. On 14th June, 1919, we had a letter which stated *inter alia*:—

I am directed to say that a Trade Board having been proposed for the Jute Industry, my Committee consider that the proposed Joint Com-

mittee should be left over meantime, or the matters which it is suggested should be considered by that body are matters which, it is understood, Trade Boards are appointed to deal with.

(Signed) FRANK S. CATHRO,
Secretary.

Again on 28th August, 1919, we had the following:—

I am directed to inform you that the meeting (Employers' Association) decided that in view of the larger question involved by the workers' rejection of the Employers' proposals recently submitted to them, no change should be made meantime, but that representation should be made to the Ministry of Labour with a view to the hastening of the establishment of the Trade Board, one of whose duties would be to deal with such matters.

(Signed) FRANK S. CATHRO,
Secretary.

This letter was on the question of the working week, the workpeople refusing to work on Saturdays. The question was settled since the Jute Trade Board became operative. The employers seem to "blow hot and cold" on the question of a Trade Board for the jute trade.

It was their objections in the latter part of 1918 that prevented a Joint Industrial Council being set up. Three meetings were held on 7th May, 19th August and 14th October, 1918.

Working Agreements.

The Association letter states:

"The employers and workers in the jute trade are highly organised, and before the operation of the Trade Boards Acts they were accustomed to come to agreements as to working conditions and wages, such agreements having immediate effect."

The above letters and the employers' attitude toward a Joint Industrial Council are in direct contradiction to the statement quoted above. Further proof of the inaccuracy of that statement is that every wage increase request put forward since 1915 was refused and had to be referred to arbitration, the Association refusing to meet the Union representatives to discuss the requests.

Arbitrations were held on December 21st, 1915; April 20th, 1917; November 19th, 1917; June 8th, 1918; October 21st, 1918; December 5th, 1918; January 6th, 1919; and December 15th, 1919. Increases were granted in each case except that of December, 1915, when Sir George Askwith (now Lord Askwith) at the conclusion of the hearing intimated that he had been advised by the then Government not to grant increases in wages. This led to a strike in March, 1916, arising out of another refusal to a request for an increase in wages. The strike dragged on for twelve weeks.

Even with the Trade Board in operation it has taken 14 to 15 months to fix the present rates and every obstacle was put forward by the employers' representatives, acting, no doubt, on the instructions of their Association, to prevent them being fixed.

The Dundee jute employers, who are 100 per cent. organised, dominate the employers' side of the Board, having 75 per cent. of the seats.

The Standard of Living.

The Association letter states:—

"The Labour leaders speak of a reduction of wages as a lowering of the standard of living. This the employers cannot admit, and most certainly they do not desire that their workers should suffer any lowering of the standard of

18 January, 1922.]

Mr. J. F. SIME.

[Continued.]

living. The rises have been given because the Trade was considered to be able to pay at the time a higher rate of wages to its workers."

It would appear an attempt is here made to lead the Minister to believe the increases in wages were given voluntarily or arranged by agreement. The above-mentioned arbitrations prove the contrary.

It is true "the Labour leaders speak of a reduction of wages as a lowering of the standard of living," but we are not surprised to be told "this the employers cannot admit." The jute workers until within recent years were paid "sweated wages," and had to accustom themselves to a low "standard of living." The following figures are taken from the Report on Earnings and Hours, Textile Trades, 1906. (Cd. 4545.)

"Average Earnings of Operatives working full time in the last pay week of September, 1906:—

Men.	Lads and Boys.			Women.	Girls.			All Work-people.
	Full Time.	Half Time.	Half Time.		Full Time.	Half Time.	Half Time.	
s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.
21 7	11 4	4 4	4 4	13 5	10 0	4 1	4 1	14 3

49.1 per cent. of the men were paid under 20s. per week. 36 per cent. had 20s. and under 30s. per week. 13.4 had 30s. and under 40s. per week and 1.5 had 40s. and over. 75 per cent. at least of the operatives in the trade are females.

Spinners, one of the most highly skilled section of workers had an average wage of 12s. 3d. per week. Two-thirds of the weavers, highly skilled workers, averaged 13s. 11d. for one loom, the other third on two looms averaged 15s. per week.

That being the "standard of living" in 1906, possibly the employers have in their minds that the wages should come to that level before the "standard" can be said to be reduced. If that is so, it would explain their denial of a desire to lower the standard of living.

In 1909, Mr. Winston Churchill, who was then President of the Board of Trade and M.P. for Dundee was requested to bring the jute trade under the Trade Boards Act, but declined to do so.

Continuation of Trade Board.

The time may come when a Trade Board can be dispensed with. That time does not appear to be at all near. We, therefore, have to ask that the request of the Association of Jute Spinners and Manufacturers shall not be granted.

(Signed) J. F. SIME.

The employers' request it is obvious was not granted.

With reference to the Agreement referred to previously, Messrs. Jute Industries, Ltd., have deliberately broken the Agreement which is as follows:—
(Copy.)

Agreement as to the Application of the Factor for Consolidating the Piece Rates, and putting into operation the Time Rates hereinafter called "THE NEW RATE."

All wages shall be calculated at the new rate from Friday, 26th March, 1920, onwards.

DISPUTES: Any Disputes as to the new rate, or the application thereof, shall be dealt with as follows:—

1. By the Members of the Piece Workers' Consolidation Joint Committee interested in the matter under review with the Accountants as advisors.

Should no Agreement be come to, or an Appeal lodged against the decision, then

2. By the Piece Workers' Consolidation Joint Committee as above arranged, with Professor Baillie as umpire, the umpire's decision to be final and binding on all parties.

All appeals against the new rate, or the application thereof, must be made in writing and addressed to the Joint Accountants, care Messrs. R. C. Thomson & Murdoch, C.A., 11, Reform Street, Dundee, and be received not later than April 23rd, 1920.

After that date, all rates which have come into operation, and against which no appeal has been lodged, shall be considered as accepted by all parties.

In the case of any dispute, the new rate shall be paid and accepted during the hearing of any dispute, or any appeal. Should it ultimately be decided that the worker has received too little, a retrospective payment, in agreement with the Award, shall be made, but should the worker have received too much, a deduction shall be made for any overpayment, provided that no deduction in any one week shall exceed the greatest sum still outstanding overpaid in any one week.

Signed on behalf of—

Dundee and District Union of Jute and Flax Workers.

J. F. SIME,
Secretary.

Dundee and District Calender, Linoleum and Dye Workers' Union.

Association of Jute Spinners and Manufacturers.

FRANK S. CATHRO,
Secretary.

Dundee, 19th March, 1920.

Briefly the facts are, certain piece workers had a "Factor" fixed for their rate. The firm never lodged a complaint against the said "factor" until a few months ago, when a request was made that a reduction should be made in the "Factor." No agreement on the question was arrived at and on 22nd November, 1921, I received intimation that from 2nd December, 1921, the "Factor" would be reduced. I reported the matter to the Employers' Association on 23rd November, 1921, and after five weeks' delay—on 29th December, 1921—had a reply denying "breach of agreement." I draw attention particularly to Clauses 3 and 4. The Agreement while not actually drawn up as a Trade Board item, was the result of the work of the Trade Board in fixing the 48-hour week. I regret very much in view of past experience, not insisting that the Trade Board should be responsible for the Agreement also. It appears to us no reliance can be placed upon any indi-

18 January, 1922.]

Mr. J. F. SIMS.

[Continued.]

vidual or collective Agreement made by the Dundee jute employers, and therefore the continuance of the Jute Trade Board is a necessity until at least we see or find evidence that agreements are not to be turned into a "scrap of paper."

We also oppose the suggestion which has been made by an employer at the Flax and Hemp Trade Board that the Board should be withdrawn from the operation of the Acts for two years.

We suggest, in the interests of the workers, that the 1909-1918 Acts should remain on the Statute Book, with any amendments that experience has shown to be necessary.

J. F. SIMS.

SCHEDULE.

Copy.

AGREEMENT between the Dundee and District Spinners' and Manufacturers' Association, Ltd., and the Dundee Jute Workers' Joint Committee.

It is hereby agreed that the scales for preparing and spinning (with conditions) shown on the two sheets attached marked "A" and "B" respectively, and signed by both parties of this date, be put into operation in the mills of the members of the Association on week commencing Friday, 28th May, 1915.

It is further agreed that the Dundee Jute Workers' Committee will do all in its power to prevent any labour trouble arising in connection with the putting into operation of these scales of rates, and in the event of trouble arising will do all in its power to end that trouble at an early date. The Association on its part will instruct its members that from the date shown above, *vis.*, Friday, 28th May, 1915, no member shall pay a lower rate of wages than that shown on the scales for the particular class.

Dated this 14th day of May, 1915.

Signed on behalf of the Dundee and District Spinners' and Manufacturers' Association, Ltd.

L. G. MACINTYRE, *Chairman.*

FRANK S. CATHRO, *Secretary.*

Signed on behalf of the Dundee Jute Workers' Joint Committee (representing the Various Textile Unions).

ROBERT B. MYERS, *Chairman.*

JAMES REID, *Secretary.*

N.B.—It is further agreed that on the introduction of these scales any member who is paying above the rate shall continue to do so until further notice.

When the worker attends Front of one Roving only, pay as per lower of the two Scales.			
For these rates Rover has to shift one Carriage. When Rover does not shift, the rate is 1s less per week.			

Remarks.

For these rates shown above the operative is to start and stop machines when required, and to perform other usual duties.

"Holding-on."—Firms are to continue paying their present "holding-on" rates.

"Rovings."—When the number of spindles attended is not shown above, the rate to be paid is that for the next highest number shown, e.g., 42 spindles is to be paid at the rate for 48 spindles, 70 the rate for 72, 84 the rate for 88, and so on.

The scale of rates for preparing (with conditions) as shown above is hereby accepted by the Dundee and District Spinners' and Manufacturers' Association,

Limited, and the Dundee Jute Workers' Joint Committee, and will be put into operation in the mills of the members of the Association on week commencing Friday, 28th May, 1915.

Agreed to on behalf of the Dundee and District Spinners' and Manufacturers' Association, Ltd.

L. G. MACINTYRE, *Chairman*.

FRANK S. CATIRO, *Secretary*.

					23 6

Remarks.

For the rates shown herewith, single spinners are to shift a carriage, and all spinners are to clean and blow down frames, to start and stop frames when required, and to perform other usual spinners' duties.

Spinners working on two sizes of bobbins which are rated under different scales are to be paid the proportion which each number of spindles bears to the total under each scale—(i.e. and over to equal 1d.)—e.g.:

1 spinner attending 64 spindles—3½" bobbins.

48 " 4½" "

112

(3½")—112 : 64 ... 17s. 10d. } proportion = 10s. 2½d.
(4½")—112 : 48 ... 18s. 9d. } " = 8s. 0½d.

Authorised rate, 18s. 3d.

"Holding-on."—Firms are to continue paying their present "holding-on" rate, or the rate shown against the aggregate number of spindles attended, whichever is the greater—e.g.:

Taking the case of a single spinner attending 72 spindles of 4", holding on extra 72 spindles of 4"—

The rate for 72 spindles=15s. 4d.

" " 144 " =20s. 2d.

With a "holding-on" rate of 1d. per hour (4s. 7d. per week) the wage would be 19s. 11d. In this case the rate for 144 spindles—20s. 2d.—would be paid, being the greater.

With the "holding-on" rate of 1s. per day (5s. 6d. per week) the rate of 20s. 10d. would be paid, being greater than the rate of 20s. 2d. shown against the 144 spindles.

The scale of rates for spinners (with conditions) as shown above is hereby accepted by the Dundee and District Spinners' and Manufacturers' Association, Limited, and the Dundee Jute Workers' Joint Committee, and will be put into operation in the mills of the members of the Association on week commencing Friday, 28th May, 1915.

Agreed to on behalf of the Dundee and District Spinners' and Manufacturers' Association, Ltd.

L. G. MACINTYRE, *Chairman*.

Mr. J. F. SIMP.

[Continued.]

9817. *Sir Arthur Pease*: I regret to say that our Chairman, Lord Cave, is indisposed and unable to be with us to-day, but all the evidence you give will be placed before him although he is not here. You represent the Dundee and District Union of Jute and Flax Workers?—Yes; I am the secretary.

9818. Your statement will be printed, and perhaps you will develop the points which you particularly wish to draw attention to. In the first place, I think, you give a history of the negotiations that have taken place in the trade prior to the Trade Board?—What I particularly wish to draw attention to is the fact that, as far as negotiations are concerned, they have been very few and far between, that the employers for years have absolutely refused to discuss any questions at all for the adjustment of wages and working conditions. That led, as I point out, to serious strikes in the trade, and what I want to draw particular attention to is that, so far as adjustment of wages is concerned, any serious or proper adjustment of wages from our point of view has only been made through the instrumentality of the Trade Board. If you take, for instance, the question of female spinners, all highly skilled workpeople, their wages in the past were, in my opinion at least, sweated and should have come within the scope of the first Trade Board; but it is only since this trade was brought under the Trade Boards Acts that these rates have been put at all upon what can be called anything like a proper basis. I gather, from what I have been able to see in the Press, that a statement was made that these rates were arrived at by voluntary agreement. That is incorrect.

9819. With the Trade Board, or before?—Without the Trade Board. What took place was that the Trade Board appointed a Skilled Workers' Committee. This Committee took up the question of the spinners' rates. They met under the chairmanship of the Chairman of the Board, and we threshed out between ourselves a scale which is now in operation. It is quite true to say that the employers put this into operation voluntarily, before it became a Trade Board Order, but that was due to two facts: first, that the trade was booming at the time, in 1920, and, secondly, that there was a dearth of spinners. There was such a small difference between the spinners' wages and the wages of the girls who shifted or doffed the bobbins—that is, when the bobbins are filled they have to be taken off and replaced by empty ones to be refilled—that these girls had almost as large wages as the spinners. The spinners, naturally, then preferred to take the easier job, as against the more arduous one of spinning. These two factors led to these rates being put into operation in March of 1920, and they did not become effective rates under the Trade Board until October of 1920. That was six months' difference. So that it would be true to say that these rates were put in operation as a voluntary arrangement six months prior to their becoming effective under the Board; but it is not true to say that these rates were drawn up between the employers and ourselves outside of the Trade Board: it was through the instrumentality of the Trade Board that they were drawn up.

9820. It was really the knowledge that the Trade Board was coming that made the rates effective?—The Trade Board was there by that time. From 1912 we had been hammering at this question of getting these rates adjusted, and you will find, in the statement that I have put in, that there was a strike, in 1912, at the conclusion of which the employers promised to level up the wages of certain classes of workpeople, among whom were the spinners. These people received increases of a few coppers per week. The number of people affected would be a large percentage of the trade, but there was not a large percentage of that number who received these increases, because, after all, what took place was that the employers took the average wage of all the spinners in the trade, and they levelled up to the average. What figures they got we do not know; they simply said: this is the scale we have drawn up, and we propose to put this into operation, and they asked us to agree to it. As

it meant something to somebody, we said: "All right, put it into operation." But it did not come into operation until 1915, and I have supplied the Committee with a copy of the agreement.

9821. The printed statement, you mean?—Yes, the printed statement. You will see it came into operation in 1915. I want to draw attention to a typographical error, in the second paragraph and the second sentence; it should read: "The association on its part will instruct its members." "Is" is the word that is there; that, of course, is a typographical error.

9822. Yes.—They asked us to meet them with a view to putting these small adjustments into operation, because there was trouble among the spinners about the rates, and they asked us to sign this and agree to it with them, in order to prevent trouble. There was trouble, but we fulfilled our part of the bargain. It took from 1912 to 1915 to produce this and to put it into operation, and my opinion is that it would not have been put into operation had it not been for the war situation, even at that period. Then we attempted again to get them induced to tackle this question. The result was that nothing was done until the Trade Board was established, in December, 1919. These rates were produced through the Board—fixed in October, but put into operation voluntarily in March of that year.

9823. Did the wages remain the same from 1915 to 1919?—No; we had got increases through arbitration during that period. In February, 1915, we got one increase by agreement with the employers; and we also got a 2s. war bonus, which was conditional on the employees working a complete week of 55 hours. If they had one minute of loss, the employer was entitled to keep the 2s. off, that is to say, if they had any broken time. Outside of that, we have not been able to arrive at any agreements at all. But they went further than that when we got that last increase, and they suggested that we should bind ourselves not to ask for any further increases during the period of the war. The answer I gave was: If you can guarantee that the cost of living will not increase, and if you can also guarantee that you will have no increased profits or charge no higher prices for your goods than you have now, we will consider that question. That finished it.

9824. Was that the last increase—the 2s. war bonus?—No; we have received a number of increases during the war, but in every case we were compelled to go to arbitration, and the employers put every obstacle they could in the way of arbitration being held. Until February, 1915, I think it was, the jute trade did not come within the scope of the Munitions of War Act. An Order was issued during that period making it applicable, and after that, of course, arbitration was compulsory, in complying with the terms of the Act. When we made requests for increases we always got a point blank refusal. We reported the matter to the Ministry, arbitration was held, and we received increases. I do not know that I have the dates with me, but we received increases. In the first one the arbiter was Sir Thomas Munro. The men received a flat sum of 5s. and the women 10 per cent., and the young persons 5 per cent. The next one was the committee on production: we received in that case 5s. for men, 4s. for women, and 2s. 6d. for young persons. Then there were two increases of 7s. each for men, 5s. for women, and 2s. 6d. for young persons.

9825. Could you tell us what the average increase was for a man and for a woman between the date of this agreement which you have printed and during the War?—This agreement in 1915, do you mean?

9826. Yes.—In the case of a woman I think it would be 17s., and in the case of a man 26s.; that is adults.

9827. That was before the Trade Boards came in?—Before the Trade Boards; there has been no increase of wages since the Trade Board came into operation. The only thing that took place was that when they fixed the minimum rates there would obviously be

18 January, 1922.]

Mr. J. F. SIMS.

[Continued.]

men who would get that minimum rate; the men who were getting 48s. would have to get 50s.

9928. But there was no increase through the Trade Board?—No, no general increase.

9929. Are the Trade Board minimum rates the standard rates practically now?—No, they are not the standard rates. With the exception of the spinning rates, which are undoubtedly the standard rates for spinning, although the Board has fixed them as general minimum rates for a special class of work-people, they are nevertheless the standard rates, because all the employers are paying no more than that. You must keep in mind, of course, that this trade is centralised in Dundee. There will be roughly 40,000 employed in the trade, and out of that number I should reckon that there would be somewhere between 4,000 and 5,000 employed outside Dundee—round about those figures. Among that number you have to keep in mind that a number of them work a mixture of jute and flax, which will bring them under the Flax Trade Board rates; so that for purely jute the figure would be less than 5,000. In any case, the jute business is centralised in Dundee, and with an association that is 98 per cent. organised, you can quite well understand—

9930. *Mr. MacCallum Scott:* Is that the workers or the masters?—The masters. There are only two firms who are not organised. One of the largest, Cox Brothers, work jute and flax. The other one is a purely jute mill; it belongs to the Scottish Co-operative Wholesale Society, and they have applied for admission and been refused. These are the only two firms that are not within the scope of the Employers' Association. It is obvious, therefore, that these rates being fixed by arrangement between us through the Trade Board, with the Dundee employers, the spinning rates are the standard rates, but outside of that, so far as the general minimum rates are concerned, there are a number of people that are paid higher than the minimum, that is to say, they were paid a sum higher than the minimum before.

9931. *Sir Arthur Pease:* In the case of piece rates?—In the case of piece and time as well.

9932. *Lord Weir:* That is to say, practically, that the trade have adopted the scale with the employers outside the Trade Board?—No, we did not agree outside the Trade Board. A Skilled Workers' Committee was set up. I have the particulars here with me. It was set up to deal with the rates of skilled workers, and among the rates that were referred to this committee and dealt with by them was the first and most important question of the spinning. They dealt with that, and they made a recommendation in regard to these rates. I have here the scale of rates which was issued as a Trade Board Order, but this is not a Trade Board Order; this is an exact copy of J.7., I think it is; Spinning Rates. We got it printed in this form for our own convenience instead of the big Order that was issued by the Trade Board.

9933. Really what you mean is that these rates were agreed on at a Departmental Committee Meeting of the Board?—Yes; and, rather peculiarly, when we did meet for the first time I had no idea as to what the employers' view on the matter were, neither had they any idea of mine. We found we got over one obstacle at once; we had both fixed on the same sort of basis for working out this scale, the only difference between us being the difference in price, and we gave away more on that question than the employers did. They made a break at one point in regard to the price. We asked that after the basic rate the increase should be 2d. per spindle attended. The employers said 1½d. It was compromised by this, that at 64 spindles there would be a break, and they would pay 2d. after that and 1½d. below, that was the compromise that was arrived at. As you say, it would be true to say that it was an agreement arrived at between us as a result of this Departmental Committee, as you call it.

9934. *Sir Arthur Pease:* It would be a Whitley Council of the Trade Board, in a way?—Yes. The Chairman, like all the appointed members, was not conversant with all the technical details; in fact, he

had never seen a jute mill until the first meeting of the Board when he was able to go through one, and as far as he was concerned he was only there to keep us in order. Fortunately, at that stage, owing to our views being so near to one another, there was not much disagreement on that occasion.

9935. *Lord Weir:* Would it not be true to say that, in fixing those rates, both sides understood and felt that they would be the standard rates that would be paid?—There is no question about that.

9936. Rather than the minimum rates?—Yes, that is so; the trade being confined almost wholly to Dundee, it meant that these would become standardised rates. There is this also, that on one occasion when we met a Committee of the employers, outside the Trade Board but dealing with a matter which was discussed by the Trade Board, two of the employers repeatedly pointed out to us that these were only minimum rates, but I always argued that the tendency would be, if the employers got their way, to make these the standard rates. Two of these employers said that was not the case, but their Chairman on that afternoon contradicted them and said it was no use their trying to bluff themselves into that, because that would be the tendency.

9937. The tendency would be to make the minimum rates the standard?—As far as the employers were concerned—not from our point of view, of course.

9938. The employers have told us, and you have confirmed it, that their organisation is very complete?—On the employers' side.

9939. I rather think your organisation is fairly complete also, is it not?—Well, we reckon that in Dundee there are round about 36,000 to 38,000 people employed in the trade normally. There are different branches, of course, but we include within our scope all processes from batching up to weaving. Then there is a Tenter Society or a Loom Tuner Society. They take in only tenters or loom tuners. Then, outside that, there is the Calender Workers' Association. That is the Finishing Department; we do not touch that at all. Out of these numbers you would have to deduct from the number of people employed, I should say, round about 3,000; that leaves, out of, say, 36,000, 33,000, and out of that number we have round about the balance of 20,000.

9940. One would have expected, in a severely localised industry like that, where the employers are well organised and you are fairly well organised, that there would have been a distinct possibility of arriving at satisfactory rates by negotiation. Why has it made so little progress in Dundee?—Well, previous to 1906, when our Society was formed, there was only in existence the Calender Workers' Society—its full name is the Dundee and District Calender, Linoleum and Dye Workers' Union—which was certainly a militant organisation. Their representative is here, and he will speak for himself. There was also another society, which appeared to be run more on a friendly society basis than that of a trade union; that is to say, it was never responsible for any strike or caused any lock-out in the trade. Any strike that took place on the part of the workpeople was spontaneous on their part. An attempt was made when we were formed, or prior to our being formed, to alter their methods, and they distinctly refused. The result was that we were formed. We adopted a militant policy and have continued it. We wanted to get things adjusted that required to be adjusted. The employers have refused to meet us, and their attitude is the same to-day towards the association as it was at that period. We have had trouble about an agreement; and I have had some correspondence with the employers' association in the matter, because they were signatories to this agreement in regard to the institution of a 48 hours' working week in place of a 50—because we were not working 55 at that time—and this is the letter I received on the 16th of this month: "With further reference to your letter of the 5th instant, I have brought this before a meeting of my sub-committee to-day. I am instructed to refer you to my letter to you of the 29th December, and to state that my sub-committee

18 January, 1922.]

Mr. J. F. SIMR.

[Continued.]

has nothing further to add to that letter." I had written to them on the 5th January, suggesting that a meeting with their sub-committee should be arranged, at which witnesses from both sides should be present for examination and cross-examination, to prove or disprove "that your sub-committee have (1) either been misled, or (2) have not all the facts placed before them." That is in relation to a charge that they have broken an agreement (of which you have a copy) that was signed on their behalf by Mr. Frank S. Cathro, their secretary.

9841. *Sir Arthur Pease*: When was the agreement made?—On the 19th March, 1920; you will find it contained in my *précis*.

9842. Was there any provision as to the period of the agreement, or as to when it was to terminate, or anything of that sort?—No.

9843. Which page of your *précis* do you refer to?—Page 4. I regret that by a mistake on the part of the printers these paragraphs are not numbered. You will find on that page a sub-heading: "Continuation of Trade Board," and immediately underneath that, a copy of the agreement.

9844. Yes: "Agreement as to the application of the factor for consolidating the piece rate"?—Yes.

9845. *Lord Weir*: Might I just ask this: Would you agree to this answer to my question, that you found difficulty in getting co-operation with the employers?—Extreme difficulty.

9846. That would cover it?—That covers it.

9847. *Mr. Bell*: Do they give no reason for refusing to meet you?—They have not given me any reason, but I have heard of reasons, and I think the reason given is that they decidedly object to meet me; but I want to point out that I am the servant of our members, responsible to my committee, and that whatever has got to be done must be done with their sanction, and that it would not matter if there were somebody else in my position, they would be instructed to do the same thing as I am instructed to do; therefore, I am carrying out the instructions of my constituents. In the process of doing so, they fix upon me as being the instrument that is causing all the trouble.

9848. *Sir Arthur Pease*: They refuse to recognise the trade union, do they?—They do not do that now. For instance, although I have this letter here dated the 16th January, in which they refuse to meet us, as representing their Association and representing our Union, nevertheless a member of the Employers' Association telephoned to me yesterday and asked me to come up, that he is getting in two new twisting machines, and he wants to fix a rate for those, and he says that he is not going to be humbugged with his Association and ourselves about the rate, that he wants me to come up and arrange with him and his workpeople about the rate to be fixed for this particular class of work, and to be finished with it. But if he were to apply to his Association, they would tell him what rate he is going to pay, or approximately what rate he is going to pay, and once that rate is fixed it could not be altered without the consent of the Association. But he has taken what he considers to be the wiser course, and he has asked me to come up, when I get home again, and arrange with him what he is to pay for this class of work.

9849. Are you in a position, in accordance with your agreement between the employers and yourselves—to go and fix a rate behind the back of the Employers' Association?—This agreement that I referred to is an entirely different matter. We are at perfect liberty to make that arrangement with him outside of that agreement. May I just develop that point. Owing to the exigencies of the war and the submarine menace, jute being imported from India into this country, it was necessary to curtail the amount of jute that was coming here, which meant a reduction in hours. The employers intended to put machinery off wholesale. I discovered what was likely to take place, and I protested not only to the employers, but to the Ministry of National Service—Mr. McLeod. We saw Mr. McLeod and it was arranged that a conference should be held in London

between the employers' representatives in the flax trade and the jute trade and the workers' representatives. We pressed that short time should be adopted, and the decision was given, or rather the view was expressed, that wherever possible short time should be adopted instead of putting off workpeople and machinery. It ultimately led to a general system of short time being adopted, of 40 hours per week. The employers would not agree to this, but ultimately through pressure that was brought to bear on them by a Government Department, or a Government representative anyhow, they agreed also to pay 50 hours' wages for the 40 hours' week. I was a member of the Flax Control Board, and the Controller of Raw Material (Mr. George Malcolm) was also a member of that Board, and I was kept *au courant* as to what was taking place in regard to supplies of jute. He informed me about six weeks previous to the employers going on full time what the state of affairs was, and told me it was very probable he could grant permits to run full time, as he was getting a better supply of jute in now, because they were getting a mastery of the German submarines. I pointed out that it would be advisable that the employers should be informed from them that any arrangement that was made about the increase of working hours should be made by agreement with us, and if that was not done there was nothing surer than that the employers would post up notices on some particular day stating that they intended to resume full time immediately, or whatever increased time they were allowed. I happened to be in London again when a letter crossed in which Mr. Malcolm stated, on the 26th March, I think it was, that he would be able to increase his supplies so as to enable full time to be worked, if the employers cared to do so. I received a telegram from my assistant informing me on the same day that a notice had been posted up at one of the largest works in the town to the effect that they intended to resume full time on the following day. Fortunately I was here, and I went to see Mr. Malcolm and another gentleman, and did what I could to induce them to send a telegram asking that the employers should be prevented from carrying out that policy until a consultation had been held with us to come to some agreement in regard to the increase in the hours. That was not done. They say they sent a telegram, but if they did it was ignored. When I got back our people were up in arms. Meetings were held in various parts of the town; you can understand it is a difficult job for us to get a hall sufficiently large to hold our people, so that we had to hold a series of meetings, and at every one our people absolutely refused to work a single hour beyond the 40.

9850. Did they refuse to work beyond the 40 for the same wages, or did they refuse to work beyond it even if they were paid for the additional time?—The question of wages did not count with them at all at that particular moment; they simply refused to work more than 40 hours. On the other hand, my Executive—we had but very short time in which to discuss the matter—decided to recommend work on the Monday, which was exactly the lines on which I suggested to Mr. Malcolm it should be done. I suggested that any change should be made by instalments—by 5 and 5, or even by 10 and 5; and we decided to recommend our people to work on the Monday. That was not that even. The result was, of course, that they got 40 hours' pay. They had been receiving, previously to that, 50 hours' pay for 40 hours' work. From a month after that they consistently refused to work on Saturdays. The Trade Board by this time was established, and this brings us up to this agreement. I am quoting now from the official document of the Trade Board; this is Circular 373E, and is a record of the proceedings of the Hours of Employment Committee of the Jute Trade Board which was held on Friday, 20th January, 1920. The recommendation of this Committee was: "That the normal working week consist of 48 hours"—we

18 January, 1922.]

Mr. J. F. SIME.

[Continued.]

had agreed to this by this time—"that the normal working day should be 8½ hours, and for Saturdays, 4½ hours; that the employers are prepared, on their side, to give an undertaking that the wage now paid for a 55-hours' week will be paid for a week of 48 hours. The Dundee employers desire an assurance that the Dundee workpeople will agree to a single break in each day and to the resumption of Saturday work. The representatives of the union undertake to present this request to their Executive." Then it deals with the single break system. You will find in my *précis* that I give a copy of the ballot that was submitted to our members, as to whether this recommendation should be accepted. I think that was one of the things also that led to a great deal of bitterness between both sides on that particular question. The employers readily agreed to pay 55 hours' pay if they could get this 48-hours' week instituted with working on Saturday. They also agreed that these spinners' rates that I have referred to already should be put into immediate operation if our employees agreed to accept a 48-hours' working week. Those two facts, of course, weighed very much in the minds of our people, and, by a very large majority, they decided to accept these terms, and we have been working 48 hours since.

9851. Now, you have given us a history down to when the Trade Board started. That is very interesting as showing the difficulties you had prior to the Trade Board. Now I think we rather want you to go on to the proposals of the Trade Board?—What I was trying to show was that it has not been possible in the past to come to any agreement with the employers. They have adopted what we consider a high-handed action in regard to matters that concern us equally with themselves.

9852. *Mr. MacCallum Scott*: You found that there was no way of settling wages through bargaining?—That is so.

9853. That collective bargaining did not operate in that trade?—It did not operate at all.

9854. That is your point?—That is my point.

9855. *Sir Arthur Pease*: You were not strong enough?—On the question of strength, we had a strike that lasted six weeks in 1912. In 1911 we had two of the largest works stopped for a month at a time, and in 1916 we had a strike that dragged on fitfully for 12 weeks. So that we had to be in a strong position financially if we were to face that sort of thing every two or three years.

9856. Your view is, is it not, that you think the Trade Boards ought to continue?—I do not think there is any doubt about that. We are convinced of this, that so far as the jute employers are concerned, if there had not been any Trade Board, while on the 9th February our adult people will suffer a reduction of 18½ per cent., the employers, if they had had their will, would have put it into operation in February of last year—a year ago, and would have carried out the proposal that they put before the Trade Board, of a reduction of 25 per cent. Further, I am convinced that if they had carried that through at that time, and supposing there had been a strike declared to fight it, and we had spent all our money, we would not be able, in a short period, again to fight another reduction; and I am convinced that the employers would have attempted another one and an equally serious one at that. But what I want to draw attention to particularly is that first of all we never overtook the increased cost of living. The employers say, or have said at Trade Boards meetings where wages have been discussed, that the increases were about 125 per cent. We do not agree with that. We say that they are within the region of 100 per cent. But even on the employers' figures, with the reduction that has taken place just now, a man of 21 years of age and over, from the 9th February will have 40s. 7½d. as a minimum rate. In 1906—I am quoting now from the Report on Earnings and Hours of the Flax Trade (Cd. 4545)—the wage for a man was 21s. 7d. The Board of Trade gave us a return at the present time that

the cost of living (I have not seen the latest return) is 99 per cent. over that of 1914. Supposing you take it at 100 per cent., it means that a man with £2 now is no better off than he was in 1906.

9857. In 1914?—In 1914, and not only that but in 1906. May I remind you that we were not in existence until 1906. This Report was published in 1906, and therefore the investigation must have been prior to 1906. We gave them no information, and therefore it must have come from the employers. You will find that referred to on the last page of my *précis* at the top of the first column, and I have the report of that here by which it can be confirmed. You find the wages for women were 13s. 5d. Their wages to-day, for adult women 18 years and over, are 25s. So that the same thing applies to them, that they would be brought back to the level of 1906. When the first Trade Board Act was passed, Mr. Churchill was our Member of Parliament, and it was suggested to him that the jute trade should be included within the scope of the first Trade Board; but he did not see his way to do so.

9858. *Mr. Bell*: As to these wages that were in operation in 1906, or previous to 1914, how were the standards arranged?—They were not arranged at all; the employers simply fixed them and paid them.

9859. So that the rates of wages were exactly what the employers themselves decided to pay?—That is right.

9860. Did they all pay something similar, or had you a different rate in operation at each mill?—You might find a difference in each mill of a few coppers, or it might be as much as 1s.; but they had to make a variation in the rate that was paid, in accordance with the number of spindles that had to be attended to. For instance, if they had a spinner working on a 4-inch bobbin, with, say, 60 spindles, they would pay a certain wage for that. It is obvious they would have to pay more for a woman who was attending to 120; and that was the only method they had of variation in the rates; and each one made his own sum and paid what he cared, or what the people would accept.

9861. *Sir Arthur Pease*: The rates you have quoted are not the rates that are in actual operation at the present time; they are the rates proposed by the Trade Board, but the Order has not yet been confirmed. The rates at present are above the rates in question?—I say that, on the 9th February of this year, a man of 21 years and over will be receiving 40s. 7½d. At the present moment he is receiving 43s. 9d.

9862. *Mr. Bell*: I want to get to the point that representatives of the employers' association have given evidence before this Committee and they are of opinion that there is no need for a Trade Board. Now I want you to bear that in mind in answering the questions that I want to put to you. These rates that were in operation previous to 1914, being the rates decided upon by the employers themselves, shall we be right in assuming that those were the rates of wages that the employers thought were reasonable?—I am quite sure, and you may be assured; that they thought it was reasonable; we certainly did not.

9863. So that if the Government or the Ministry of Labour came to the conclusion that wages were too low in the jute trade, and set up a Trade Board, and you find an improvement in the rate of wages since the Trade Board came into existence, are you then of the opinion that their opposition to the Trade Board is simply from a desire to get back to the previous level of wages?—Exactly; that is my view.

9864. Are you then of opinion that the Trade Board has operated for the benefit, at least, of the workpeople?—It has. First of all, when trade was good, the operations of the Trade Board got these spinning rates adjusted. We have been discussing weaving rates as well for the last eight months.

18 January, 1922.]

Mr. J. F. SIMP.

[Continued.]

There are points upon which we cannot agree, and even on these, taking it all over, the employers claim that their total wage bill for the whole of the weaving in Dundee is higher than it was before they came into operation. I am prepared to accept that statement, although this has got to be kept in mind: that when you attempt to bring order out of chaos—and that was the state of the weaving rates in Dundee, because you could never get any two firms to pay the same sort of rates for the same class of work—you are bound to get some people receiving slightly less than what they had before, whilst other people will receive increases; and that did take place. A rate has been fixed, which is in operation at the present time, but it was only on trial for three months, with the view, at the end of that period, of getting an adjustment made where it was found to be faulty. That agreement was in operation for three months in the early part of 1920, and since that period the employers have persistently refused to make any adjustments whatever in regard to these scales.

9865. You are aware that we have had submitted to us evidence that some of the workpeople have petitioned the Ministry and the Prime Minister?—Not from the jute trade; you are referring to the flax trade.

9866. Well, yours is jute and flax, is not it?—But I do not intend to deal with the flax trade; I am leaving that for Mr. Hendry to deal with.

9867. Very well—I am sure that Sir William Henderson gave evidence, and also Mr. George R. Donald. Mr. Donald is the Secretary of the Chamber of Commerce; he is also the legal adviser to the Association of Jute Spinners and Manufacturers Employers' Association and he is also the legal adviser to the Flax Employers' Association. I am not sure that he is not also the Secretary of the Scottish Flax Spinners' Association.

9868. You have a large amount of unemployment, I believe, in the jute trade, have you not?—We have.

9869. Have you ever had unemployment before, say previous to 1914?—Yes. I was employed with Messrs. J. and A. D. Grimond, and on two occasions we were on short time for six months on end; we were working 40 hours a week.

9870. At that time there was, of course, no Trade Board in operation?—No.

9871. Is the unemployment in the trade now worse than it ever has been?—Yes, I think so, within my experience; but I must draw attention to this fact, that unemployment is also in the same position in every trade in the country, I think. We are suffering from the aftermath of the war.

9872. I was going to ask you if you knew of other industries in Scotland, that do not come under a Trade Board, and have as much unemployment as you have in your industry?—Yes; you find in all the trades in Dundee it is the same—in the engineering and shipbuilding, and so on.

9873. So that if the employers allege, as they did allege, in evidence before this Committee, that the unemployment was partly due to the operations of the Trade Board, would you be able to agree with that?—I do not agree with it at all, for this reason: when the employers proposed the first reduction in wages they said it was necessary to get wages reduced to enable them to get trade. I put a series of questions to Sir William Henderson, the Chairman, asking if he could give a guarantee that, if he got a reduction at any time, the works would run increased hours in a week or in a month, or could he promise full time in six months. He has answered each of the two questions by "No." Last week, at a meeting of the Jute Trade Board, when they fixed that this reduction should come into operation on the 9th February, Sir William Henderson referred to the same question again, and he gave the answers without being asked this time, and he said that he could give no guarantee that, even with this reduction in wages, they would be able to give a single hour's more work than they are giving at the present time.

9874. What wage does an adult woman get now?—The general minimum rate at the present moment is 28s. After the 9th February it will be 26s.

9875. So that for an adult woman, when you get the rate to 26s., with the cost of living somewhere round about 100 per cent. as compared with pre-war, you will be back at a wage comparatively of 13s. per week?—That is right.

9876. Sir Arthur Pease: 13s. 5d. was the rate.—In 1906 the rate for a woman was 13s. 5d.

9877. Was that the same rate immediately prior to the war, in 1914?—No. You will find in a sheet that I sent in, that the rate for spinners—

9878. I want the minimum rate for an adult woman?—Before the war?

9879. Yes, immediately before the War?—There was no minimum rate for women before the War.

9880. The actual rate then?—It depends on the job.

9881. Take an unskilled woman?—An unskilled woman—take the lowest wage you have, for instance, a woman at one of the easiest jobs that there are in a mill, pressing down the silver into a can—would be paid about 12s. a week.

9882. Immediately before the War?—Yes.

9883. Mr. Bell's point shows that if it was 12s. it makes it even nearer still, but with 100 per cent. added to the cost of living, both the man and the woman will be barely in the same position on the 9th February that they were in before the War, in 1906?—Yes.

9884. That is the point?—Yes.

9885. Then had wages been reduced between 1906 and 1914?—No, there has not been a reduction since our society was formed, until these two under the Trade Board.

9886. Mr. Bell: Take a weaver. How long does it take a girl to become an efficient weaver?—That depends, as you will know, upon the adaptability of the person; but they have fixed, under the Jute Trade Board, a system of apprenticeship whereby the employer has to provide efficient training for the apprentice, who will be paid a less sum. At the end of three months she will be entitled to receive the adult rate, but it does not necessarily follow, neither will it be the case, that at the end of that period, unless she is an exceptionally smart girl, that she will be able to earn the general minimum rate.

9887. Supposing you have a girl coming into the trade at 14 years of age, how soon will she be able to receive the full adult rate?—How soon will she be able to earn it, do you mean, on piece rate?

9888. I used the word "receive"?—Under the Order as it is at the present time she will not be able to receive the adult rate, if she cannot earn it under the rate that is fixed, until she is 18.

9889. So that actually a girl of 14 serves four years of apprenticeship?—That may be the case.

9890. So that weaving is a very highly skilled occupation, is it not?—It is very high skilled.

9891. And the wage in February for that work will be 26s.?—That is right—the minimum wage.

9892. How many of these adult women can earn more than the minimum rate?—A fairly large percentage.

9893. On piecework, of course?—Yes. If the employer is giving them good yarn, there is certain to be a large percentage who will be able to earn above the minimum rate. The unfortunate thing is that at the present moment they are not getting very good yarn. That, of course, affects their earnings, being piece workers. At the last meeting of the Board, for instance—and I will deal later, if I may, with the question of price—we were discussing a question that you will be conversant with; we were discussing what difference it would make to a weaver working one in a split as against two in a split; that is to say, with a 9-porter reed you work two threads in the split, with an 18-porter reed you work one thread in the split. It is the fact that, when working one thread in the split, if the yarn is at all bad there is going to be trouble for the weaver, which naturally affects her earnings. I produced at the Board on that occasion some of the yarn that was being given

18 January, 1922.]

Mr. J. F. SMIE.

[Continued.]

to the weavers to work under these conditions, in order to prove our contention that it did affect their earnings; and the employers were not pleased at our showing their bad yarn.

Sir Arthur Pease: I think this is very interesting, but we must not get too far into the details of the trade. We must get back to general principles.

8894. *Mr. Bell:* My questions were aimed at showing the necessity of a Trade Board for this particular industry, on account of the very low wages the work-people have been receiving.—The point I wish to make is this, that while it is true to say that we are back near to where we were before 1914, had it not been for the Trade Board we would have been worse off than we are now.

8895. *Lord Weir:* To follow up Mr. Bell's point a little further, could you give us an indication as to what percentage of all the females in a mill over 14 years of age will receive the minimum Trade Board rate?—That is a question I could not answer.

8896. Broadly speaking?—I could not answer that question at all; it is no use my trying to say I can give you figures on that question, because I cannot. All I do know is that we receive complaints from all quarters of the town that the minimum rate is not being paid.

8897. *Sir Arthur Pease:* The minimum piece rate, do you mean?—The general minimum rate; although a weaver is on piecework, she still is safeguarded by the general minimum time rate.

8898. A normal pieceworker?—An ordinary worker.

8899. A normal worker is not able to earn the time rate on piece?—Yes. We put a complaint before a member of the Board, that weavers in his establishment at the present moment, doing a certain class of work, were not able, under the conditions they had to work under, with the bad yarn and other things, to earn the minimum rate. On that class of work—it is an 80-inch cloth, and that would be an 86-inch reed space loom weaving 80-inch cloth—weavers working on that in one week are only able to earn 26s. A weaver having to work on these looms should be able to earn from £2 to £2 5s., at least.

9000. Women?—Yes, with the rate that is fixed.

9001. *Lord Weir:* It is rather important that we should have some information on that point, because it is the low paid worker who wants protection rather than the high paid one.—Well, in the weaving, if all things were equal, there would be very few of the weavers who would come under the protection of that Trade Board rate, because the rate for the weaving would enable them to earn above it. In some cases exceptionally good weavers—for instance, there are two weavers who are members of the Trade Board, they are exceptionally good weavers and they can earn from £2 to £3 a week; but what does take place in their case is that if there is any exceptional work to be done, the employers like them to do it.

9002. *Mr. Bell:* I notice you made a statement about a one-loom weaver. Do you have better weavers running more than one loom?—Weavers attend to two looms, but there is a certain point at which it is impossible to do so. It is quite possible for them to mind two 50-inch or two 60-inch reed space looms, but not two 72-inch reed space looms. We say that no weaver should have to take charge of more than two 50-inch reed space looms, but the employers say they are quite capable of doing it. A weaver is not capable of minding two 72-inch reed space looms.

9003. The number is fixed according to the reed space of the loom?—Yes.

9004. *Sir Arthur Pease:* Of course, all these rates you have been discussing are for a 48-hour week compared with a 55?—That is right. Might I just refer again to the question of this agreement? As I have read the letter to you, the employers have refused to meet us to discuss this question. There are two sides to it. I believe that I can produce evidence to prove that the employers have broken this agreement.

9005. The Trade Board agreement?—No. That is the unfortunate thing; it arose out of the Trade Board. The Trade Board decided, as I have read

to you from their record, that they were going to recommend the Board to adopt a certain procedure in regard to hours, and fixing overtime rates, which meant a 48 hours week. On the other hand, the employers on their side were to recommend their members of the Board to agree to certain things, one of which was to give 55 hours' pay for a 48 hours week. That led us to deal with the question of the weavers. The weavers normally are piece-workers, but during the war, when we got arbitration increases, we got flat sums, and therefore they were no longer really piece-workers; they were partly time-workers and partly piece-workers. The employers naturally wanted to get them on to a piecework basis again, and two chartered accountants were appointed, one paid by each side, and a Committee of equal numbers from each side was appointed to deal with this question, to draw up a scheme that was going to consolidate these flat sum increases into the piece-work rates.

9006. All outside the Trade Board?—No. It was not done and recorded in the Minutes, but it all arose out of the Trade Board. The unfortunate thing is that we trusted too much to the employers. If we had to do it again not a single word of that would have been put on paper outside of the Trade Board. The chartered accountants had to fix a factor, a figure, by which the pre-war rate had to be multiplied to give the equivalent of 55 hours' pay for a 48 hours week. We state that two workers in particular in one works, and a number of workers in another works, have received a reduction in wages by an alteration in this factor, without agreement. If we had to do it over again, that agreement would go through the Trade Board; we can place no reliance on any agreement made by the employers. I want to refer you to a document that I enclosed, dated 1912. (*Handed in—not printed.*) That was after a strike that lasted for six weeks. An attempt was made at that time to draw up an agreement between us to get a better state of affairs existing in the trade and to settle the differences between us. You will find on the second page, at the bottom, "Proposed amendment by unions" to insert in the seventh clause, line 3, after "workpeople," "reduce rates of wages or depreciate working conditions." What we were at there was that, in the event of any dispute arising, the *status quo* would be maintained until the question was settled. The employers would not agree to that, and rather than accept anything like that they simply said there will be no agreement. You will find that is dated 1912 on the back. That was the last attempt that was made to come to any agreement.

9007. This agreement was never completed?—It was never completed.

9008. It was a draft?—Yes; and we haggled over that question for three to six months.

9009. Your evidence has been to show that you think the Trade Board is necessary. Have you any suggestions with regard to the Trade Boards, assuming they continue?—So far as the Appointed Members are concerned, I am of the opinion, and I think that that opinion is generally held among us, that the Appointed Members should be differently constituted from what they are at present. The Chairman would necessarily have to be an outside person, but the other two Appointed Members should be rather in the form of assessors. We have been dealing, as I mentioned a minute or two ago, with the technical question about reeds, and the Appointed Members, in spite of the explanations that were given on this question by both sides—and both sides know what they are talking about—had to be asked to go into a factory and to see it in operation. We managed to get that. I was with them; but in spite of that, when we were discussing this question we found they knew as much about it, apparently, as they did at the beginning. We think that an assessor should be appointed from both sides, but it is obvious at once that in a textile trade the selection of assessors would

18 January, 1922.]

Mr. J. F. SIME.

[Continued.]

be from textile people who would know what was being talked about. It is obvious at once that, if Mr. Bell, for instance, were selected as an assessor to deal with the jute trade, when we are dealing with reeds he would know what we are talking about, and the employers would also know.

9910. Whereas your present Chairman does not?—Whereas our present Chairman does not, neither do the other two Appointed Members.

9911. *Mr. Bell*: May I put this point to you, that, even with the present members, if it was shown to them that in the Lancashire cotton trade a one in a dent is paid a higher percentage than a two in a dent, would not that be sufficient to warrant them in coming to the conclusion that there was something in the argument?—All that has been pointed out to them. I have here the Cotton Weaving Rates Book; the Chairman has seen this Book over and over again. I have drawn attention to it, in what has been done in the reeds and the difference between single and double loom prices. All these things have been pointed out, but it makes no difference; they do not seem able to grasp it.

9912. *Sir Arthur Pease*: Your point is that you would not have these assessors have votes, would you? Do you mean that the chairman would then become an umpire in your view?—Whether the other two had votes or not, it might come to the same thing. Take, for instance, the constitution of the Arbitration Board. They were drawn from panels of employers' and employees' representatives—the employers' representative vote for the employers' proposals and the workmen's representative vote for the employees' proposals. It is obvious the Chairman would there have a casting vote. If the assessors had a vote, the Chairman would still have the casting vote.

9913. *Mr. Bell*: I am aware that much has been made in evidence that has been given before this Committee about the necessity for people being on the Board—that is the outside members—who have a knowledge of the details in the trade. But is not it possible to overcome that, whilst retaining the neutrality which we all desire to retain in the Appointed Members, by their calling in advisers at times on these technical details?—That could be done; that would get over the difficulty, if they called them in. For instance, on this same reed question last week I had short pieces of reeds about 6 inches long, so that they could see by demonstration what we were faced with in this question, and we had a new Appointed Member on the Board. When I loosened the parcel I said what I was going to do, and I said it was possible he did not know anything about the reeds. He said he was not ignorant. I said, "In that case I will put them away again," but he asked me to go on with the demonstration, and I went on, and it was clear to me he did not know anything about it at all.

9914. *Sir Arthur Pease*: We have had the evidence in from one side or the other both ways, some very strongly in favour of keeping the whole of the appointed members independent, and the others following the suggestion that you have made, that we should have a Chairman independent, and the one from each side?—I can quite well fall in with the suggestion put forward by Mr. Bell, because that would meet it. On this reed question, for instance, if such a provision was made, that each side could call in somebody who understood the question to advise the appointed members, that would get over it in some fashion.

9915. It would be difficult to call in anybody who was unbiased, would it not, on one side or the other?—I dare say that would be a difficult thing to find.

9916. I mean, you would come back to the same position again: if you call in an adviser, he might advise in favour of the workmen or in favour of the employers?—The advantage would be this, of course: the appointed members have listened to us explain this reed question until they are sick of us, at any rate we are sick of explaining it to them. Both sides have gone over it. It is possible the appointed mem-

bers think that each one is making more of it than is in it, but if you are able to bring in outsiders who would give their expression of opinion upon the statements that are made by both sides, it would convince the appointed members that they were right or wrong in what they are saying.

9917. But you would not have those advisers sit there all the time, would you?—No.

9918. *Mr. Bell*: May I put it in this way, Mr. Chairman. Here are certain technical details that the appointed members cannot be satisfied about. They might put the question, say, to an employers' or to a workers' representative whom they have called in as advisers: in your opinion does this particular reed use the yarn worse than the other? On that answer both the employers' and the employees' representatives would give exactly the same answer, and they could not do anything else because it is an admitted fact, that certain reeds do use the yarn better than other reeds?—That is right.

9919. *Mr. MacCallum Scott*: There is no obstacle at present to the Board calling in any technical adviser?—Not that I am aware of, though it has never been done.

9920. But it could be done?—I presume so.

9921. *Sir Arthur Pease*: I do not quite see, to follow up your point a little further, how you are going to get an adviser to work, unless you have him sitting on the Board to hear the whole discussion. You can call him in on one point, as Mr. Bell has illustrated, and of course that would be all right; but I understand it is the whole technical preparation of the rates that you want him to advise upon—whether they were workable?—Not necessarily on the arrangement of the rates. The main point is, you get on to a question as to which there is a complete divergence on both sides. On this reed question, for instance, the employers admit that a 9-porter work in an 18-porter reed does make a difference to the weaver. They will not admit that any other reed below that makes any difference. Now Mr. Bell's point could be carried out in this fashion: if the Board is discussing this, what we have found in practice is that it is remitted to a committee to deal with, and to come with some recommendation on this question, so as not to waste the time of the whole Board. The committee may meet a few times to discuss this, and if they cannot come to an agreement on this question, naturally the Board would say: We had better call in some advisers on this question, so that they can hear what has taken place at the committee meeting and they will be able to advise the appointed members on this question, so as to enable them to determine which of these two parties is right.

9922. *Mr. Bell*: The whole point not being a change of rate so much as a slight percentage increase on the rate for the extra work involved?—That is the point.

9923. So that the advice required, and the only advice required, is as to whether there is the extra work or whether there is not?—That is the point.

9924. *Sir Arthur Pease*: Of course, I have not any experience of this particular trade, but Mr. Bell has; but in other trades the argument is absolutely sound in one works and is absolutely wrong in another on account of the different conditions?—That is so; but I have only taken one instance, which is a very burning one with us. Mr. Bell has hit the trouble with us. We say that the ordinary rate for a weaver is defined in a book containing rates, in which there are 15,000 calculations for all the various classes of cloth; and we say that this scale should entitle our people to some percentage increase where a weaver is compelled to work a cloth in an 18-porter reed instead of a 9-porter reed or in a 16-porter reed instead of an 8-porter reed, or a 14 instead of a 7, and the halves in between. The employers say, No. The only thing that the experts or the advisers would be called upon to decide there is,—are the workers right in their contention that this does affect the earnings of the weaver? If so, are they entitled to receive something extra?

18 January, 1922.]

Mr. J. F. SIME.

[Continued.]

9925. Which would you say now, after this: that we should have assessors appointed?—I would fall in with Mr. Bell's point of view; I think it is a reasonable one.

9926. What is the next point you have?—In regard to scope. When we lodge complaints we find that we can never get any information as to what has taken place in regard to the complaints. I have lodged a few complaints since the Trade Board was formed, and I have not heard anything at all about what has happened in regard to the inquiries. What I do know is that an inspector has been there, because they have asked me for some particulars and have also asked me where a place was, because in Dundee it is awkward to get to some places and I have given directions where to go, and they have got information; but beyond that we have no idea as to what is being done in regard to our complaints. If the Chief Inspector was domiciled at the Trade Board's Office, he could be called in. There would be this difficulty, of course, that he would have to travel to a meeting of the Board when it is not held in London, but that could be got over in this fashion: that he need only be called upon to attend there when they are dealt with, and give reports on complaints that have been lodged. With a Board that does meet in London we are in the same position, that we cannot get any information in London as to what is being done, and we think the Chief Inspector should be domiciled there, and we also think there should be a legal adviser on the premises to advise us on any legal questions that arise. We have found, for instance, that a Board, in its wisdom, have drafted a notice in a certain fashion. The next thing we are told is that a representative has come from the Ministry of Labour to explain the opinion of the legal adviser, and that we have done the thing all wrong, and it has to be done all over again.

Sir Arthur Pease: We have had evidence as to this before.

9927. *Dame Adelaide Anderson:* As regards the complaint, is that lodged with the Board or with the Chief Inspector?—I send complaints to the Secretary of the Trade Board. I receive an acknowledgment from him that he has received them and that he has sent them on to the Ministry of Labour. That is all I hear about it.

9928. Is there any difference when you send a complaint to a factory inspector?—We are not told what takes place under the Factory Act, no.

9929. Would it be practicable to send to complainants, who might be very numerous, a sort of report of results?—What has taken place in regard to the complaints that I have lodged under the Factory Act is that I have seen the Inspector afterwards. The Inspector covering our area is domiciled in Dundee; I have seen him afterwards and he has told us what has been done about the complaint, and I have found it has been rectified.

9930. In fact you would only hear if there was something in the complaint that could not be dealt with?—Could not be dealt with?

9931. Could not you would assume, if the complaint were enquired into and justified, that action would follow?—It does not follow. We have lodged complaints that have been rectified and we have had no prosecution under the Factory Act. We have lodged complaints under the Trade Board Act, and there has never been a single prosecution yet in the jute trade.

9932. *Sir Arthur Pease:* Have you any other suggestions?—I think these are the main suggestions.

9933. *Dame Adelaide Anderson:* I just wanted to ask this: By far the greater number of the workers in the industry are women?—I should say we reckon about 75 per cent. or thereabouts.

9934. The work of men and women in certain directions is interchangeable?—In certain occupations it is.

9935. Do you think that has any influence upon the rates?—No. Where a male has been employed, and the rate has been fixed on ages, they have always got a younger person in. I objected to the rates

being fixed on ages from the very beginning; I said it was a wrong procedure.

9936. *Sir Arthur Pease:* I think that is an important point, and I wish you would develop that?—What has taken place is, that you may have a man who is over 21 years of age; you may have a man near 40, who is quite able to do a certain job, and quite prepared to do the job at the rate the employer is prepared to pay; but the Trade Board say it must be paid for at a certain rate, unless he gets an exemption, and he can only get an exemption because of some physical infirmity.

9937. *Dame Adelaide Anderson:* Would that be in a branch where a woman could do the work?—Yes; for instance, in preparing departments, you could have a man attending to a roving frame, or a woman, and they have had them in the past. You could have a boy or a woman, and what they have done is, they have taken the cheapest rate and attempted to get the female to do it instead of the male, because the female rate is cheaper. So, in the case of an older man, they have got a younger boy to do the job, and paid him the lower rate. I opposed that from the very beginning; I said that the rate should be fixed on occupations, not on ages at all. When I pointed this out quite recently, our Chairman said I was rather late in doing so, and I had to refer him to the Minutes, which proved that it was true, that I had objected to it from the beginning.

9938. *Sir Arthur Pease:* You have not quite dealt with the question in the way I put it. I had in my mind the younger people being raised so much a year according to experience, according to the time they have been engaged. That was a little different point that you raised, although it was interesting?—The only arrangement made in our trade in regard to apprenticeship is in weaving. Although spinning is a highly skilled occupation, and I reckon it is as highly skilled as weaving, there is no process of learning adopted. A girl of 14 or 15 comes into the mill as a bobbin shifter or a bobbin doffer. From that she gets on to what we call "piecing"; that is, when the bobbins have been doffed and the frame is started, a number of the yarns will break. These persons remain with the spinner and get all the ends set going, and then she goes off and leaves the spinner. By that means they learn to spin, and at the end of four years or so they are generally able to mind a frame and have become spinners. That is the only process of learning that is in existence so far as spinning is concerned.

9939. *Dame Adelaide Anderson:* By gradual absorption and gradual assimilation of the processes?—Yes, gradually, as they learn it themselves.

9940. In weaving is there more concentrated teaching?—The Trade Board has established at the present time that the employers, where they do undertake to train weavers, can do so, paying the weaver for a specified period a less sum—18s. a week, and the weaver who gets training is to receive, in addition to what she earns, a flat sum of 5s. But the employers themselves say that, although that was the case, it did not follow that they were going each firm to adopt the system of training. There are only a few firms that train weavers, and we have pointed out the absurdity of that. If "A" undertakes to train weavers, and "B" does not, "B" gets his weavers because of the training given by "A."

9941. How do those two differences affect the proposal to vary minimum rates?—Which ones?

9942. The ones you have been speaking of—spinning and weaving?—How do they affect this variation?

9943. Yes?—They both suffer the same reduction—6½ per cent. just now.

9944. *Sir Arthur Pease:* There is a considerable difference in the figures between learners' rates and the ordinary female workers' rates?—Yes, there is a difference. For the young person the figure was originally 22s., it is down to 18s. now, if I think, and it will come to 15s.—

9945. Under 18, 15s. 7½d.; learners, 13s. 1d., under these new proposals?—That is right, which come into operation on the 9th February.

18 January, 1922.]

Mr. J. F. SIMS.

[Continued.]

9946. *Lord Weir*: With regard to the equipment of the mills in Dundee, would you say it is up-to-date, on an average?—In some cases fairly so; in others, very far behind. I know that in some cases the machinery is over 50 years old. It should be scrapped.

9947. Machinery like that should be scrapped?—Yes. Would you believe that an up-to-date firm some years ago, as a matter of fact 10 years ago, bought not one machine but six machines that at that time were 50 years of age?

9948. I thought it was people farther North who did that sort of thing! Then is it the case that Dundee is losing a considerable proportion of trade to the East?—There is no question that we have suffered through Calcutta competition, but we, like Lancashire, have had to meet the situation. There are certain classes of goods that are manufactured in Dundee that the people in the East cannot touch.

9949. So that you concentrate on those, and leave the others?—The employers have been compelled to concentrate on those now.

9950. And you are leaving the others?—When you say "you," you will have to exclude me. So far as I know, the employers have given it up as a hopeless job.

9951. I suppose the unit of work per person would be greater in Dundee than in Calcutta?—So far as the work is concerned, I think the employers and ourselves are agreed that the unit of work as produced in Dundee by one person, would require three persons to produce in Calcutta; but, even so, the wages that are paid in Calcutta would be less for three persons than what is paid to one here.

9952. *Sir Arthur Pease*: And they work day and night, do they not?—They are supposed to work a 12-hours' day under the Indian Factory Act; but I am afraid that what is wanted there is more efficient inspection. We want more efficient inspection here, but ours is a kingdom of Heaven to the inspection there, apparently.

9953. Do you work at night?—No, we do not work at night.

9954. What is your working day?—Our working day is from a quarter to 8 till half past 5, with an hour's break from 12 till 1; and 4½ hours on Saturday.

9955. Do you never have a night shift at all?—Only in some occupations in the finishing departments. Mr. Cunningham may deal with that. It is only in the finishing departments in the jute trade, they are all females; all weavers, with one or two exceptions, are females. The same applies to them.

9956. *Dame Adelaide Anderson*: But those that are not, is it for particularly heavy or particularly skilled branches of weaving?—Weaving is a very heavy job.

9957. In certain branches?—In all branches.

9958. But, none the less, women do the work?—Yes. I have not a daughter, but if I had one she would never be a weaver, nor would she be a spinner.

9959. I understood you to say there are some men weavers?—I may be open to correction on this point, but, so far as I know, there is only one firm in Dundee at the present moment that have any male weavers, and I think they have only about half a dozen, and they are on exceptionally broad looms—8 yards wide—work that is not fit for a woman at all, it is out of the question.

9959a. Are there not other firms doing work like that on these broad looms?—I am talking now of the work that is done by women, but there is a class of work in one firm, very, very heavy bagging that is used for covering cotton. A great deal of it goes to Liverpool. That work is done by men, but it is a small firm, and I should say they only employ about 20 men altogether.

9960. It is a difference of heaviness, not of skill?—That is so.

9961. Would you say that weaving in jute is as skilled as weaving in cotton or woollen or worsted?—Yes, it is as skilled; the only difference being, of course, that in cotton their thread is much finer than ours.

9962. That would mean that a greater skill was needed to handle the material?—I do not know about that.

9963. *Mr. Bell*: May I help you about that? The heaviness of the work does not always depend on the cloth woven so much as on the kind of loom used?—That is right.

9964. *Dame Adelaide Anderson*: I just wanted to find out whether weaving, as a whole, in jute is as skilled as weaving in cotton or woollen or worsted?—I do not think there is any question about that; I think it is equally as skilled.

9965. *Mr. MacCallum Scott*: Do you think the Trade Board rates have had any effect upon competition?—That is a difficult question to answer. The Trade Board has only been in existence since 1919. The first rates that were fixed by it were fixed and came into operation somewhere about July or June, I think, of 1920; then the slump came, so that what effect the Trade Board has had on the jute trade I could not say, but I do not think it has made the trade any worse than it would have been, that is to say, this slump would have come irrespective of Trade Boards.

9966. You do not think there has been enough experience to judge of it?—No; I do not think it would have had any effect, anyhow.

9967. Is the rate fixed the minimum or standard, or do some firms pay more?—Some pay more.

9968. Then it is a minimum rate?—It is a minimum rate. When the minimum rate came into operation a number of men (and I know of a few cases) over 21 years of age, who were earning 48s., immediately got 50s.; but there are a number of men who have much more than that. We have tenters, for instance, who earn £3, £4, and £5, and we have dressers earning £6 a week.

9969. Then would you say that the Trade Board rate was the standard rate in the trade?—No, I would not say that, except where there are certain fixed special rates for special classes of workers. There is a scale fixed in the case of spinners, and that has become the standard rate; but that is much above the general minimum.

9970. I want to ask you a question with regard to the Appointed Members. You referred to the very complicated nature of the technical details that have to be discussed. It also appeared that the agreement under which you are working just now was made outside the Trade Board, by a Special Committee?—That is for weavers only.

9971. Yes.—A factor was fixed to consolidate these flat sums into piece rates. That was made as a result of the work of the Trade Board, by agreeing to fix the normal working hours at 48. We thought it advisable, and we suggested to the Chairman, for instance, that there was no need to waste his time on this job, because it would take some time, and I made the suggestion, in a jocular way: Go and play golf until we send for you. When we had completed our work, we told him what we had done; but now I see it was an unfortunate thing that we did not put this forward as a Trade Board proposal. The result now is that, although there is an agreement, it has been broken in two particular cases.

Sir Arthur Pease: I think you made that point quite clear, did you not, earlier in your evidence.

9972. *Mr. MacCallum Scott*: Was the fact of this being made outside the Board largely due to the difficulty of the Appointed Members understanding the technical detail?—There is no question about that. We had to go over the books of all the firms in the town, and take out all the different reed spaces, and we had to do the same thing with the reelers, warpers, tenters and dressers. All that had to be done—

9973. It is not the details that I wanted?—I just wanted you to see what was involved in it. I have the book here that contains all the rates.

9974. The difficulty was in getting the Appointed Members to understand these details?—Yes and we placed reliance in the employers to keep their promise;

18 January, 1922.]

Mr. J. F. SIMS.

[Continued.]

we did not put it through the Trade Board, and I regret it now.

9975. Would this coming together of the two sides have been possible before the existence of the Trade Boards?—No, absolutely impossible.

9976. So that it is really a result of the Trade Board, which has driven the two sides to come together and settle this matter themselves?—Yes. In regard to this agreement, I have read the letter suggesting to the employers that their Sub-Committee should meet us and discuss it. I had raised the matter at the Trade Board already. One of the employers' representatives, acting as chairman, said they had had it under consideration, and that it should be deferred until they had to say what should be done. I raised the matter again later, that I had not received a satisfactory reply, and it was referred to the next meeting of the Board. They will have to deal with it. The Board tell us, and it has been recorded in their proceedings, that the employers are to pay, by agreement, 55 hours' pay for 48 hours' work. We say it has not been done in two cases; so that it is a question for the Board now. Therefore the Board itself, by reason of the employers' refusal to meet us and discuss it, will have to take it up and decide what they are going to do about the question.

9977. *Sir Arthur Pease*: The point about this agreement is that it is not a Board agreement?—That is so.

9978. And it is because you did not get it formally sanctioned by the Board; therefore it is not clear to me how the Board can deal with it at all, except by making those rates, which you have shown us in that book, a Board decision?—That may be.

(The Witness withdrew.)

Mr. JOHN C. HENDRY, called and examined.

The Witness handed in the following Statement as his evidence-in-chief:—

STATEMENT OF EVIDENCE SUBMITTED BY JOHN C. HENDRY ON BEHALF OF THE SCOTTISH COUNCIL OF TEXTILE TRADE UNIONS.

I am the Secretary of the Scottish Council of Textile Trade Unions, Chairman of the workers' side of the Flax and Hemp Trade Board (Great Britain) and a member of the Jute Trade Board. The members of my organisation are very closely interested in these two industries.

While I am speaking primarily for the Scottish Council, the views I am expressing are those generally held by the workers' representatives on the Flax Board, for whom on two occasions I have prepared memoranda for submission to the Minister of Labour when objections to the continuance of the Trade Board were lodged with him by employers and others.

No Board has been more bitterly attacked, in Scotland at any rate, or more determined efforts made to secure the abolition of any other Board. The outstanding features of these attacks have been that they have been most intensely developed in those districts where the workers' organisations are weakest, and that the employers who have made themselves most prominent in promoting them have been men who have made themselves, at one time or other, equally prominent by their hostility to trade union organisation amongst their workers.

My evidence will refer mainly to the position in the flax trade, others being charged with the responsibility of dealing with the position with respect to jute.

At the outset my Council was doubtful as to the desirability of bringing the flax and jute trades under the Trade Boards Act, and it was not until a most careful survey of the whole position that they agreed unanimously to approve of the policy. Personally, I never had any doubt either as to its desirability or necessity, and I was not alone in that opinion. With their experience of the Trade Boards they are now satisfied that they decided rightly.

While there were numerous considerations which led them to their ultimate conclusion those which

9979. Until that is done, I do not see how the Board can have anything to do with it?—The Board has everything to do with this matter, because the Board recommended—and it is recorded in the records of their proceedings—that the employers on their part (I have read it to you already, and if you like I will read it again) undertook to pay 55 hours' pay for 48 hours' work. We, on our part, would advise our members to work a 48-hours' week, instead of 50, part of that 48 hours being worked on Saturday. This they refused to do for 18 months. That is what the Board is concerned with.

9980. We are not concerned with settling disputes; we only want to see how this thing works out, and you are putting before us the difficulties you are in?—The point I have raised it for is this, that, without the Trade Board, we cannot depend upon any promise made by the employers or by any representative on their behalf. This is an example of it.

9981. That is your allegation. We have not heard the employers' side on that particular point.—The only point about it, or the principal point about it, is this, that if the evidence of the jute employers' representatives here had any serious effect upon the minds of this Committee, and you were to report that the 1918 Act should be repealed, it would bring us back to where we were previous to that Act; the employers would be at liberty to do as they liked, and we would not have the opportunity of bringing any breaches of that sort before the Board at all. That is why I mention this. You cannot depend upon any of their promises.

had most weight with them were (a) the low rate of wages which ruled in the trade, (b) the hostility shown by certain employers to any form of organisation amongst their workers which would prove an effective instrument for collective bargaining and (c) the lack of any effective organisation amongst the employers to secure respect for any voluntary agreement as to wages and conditions which might be mutually arranged. These conditions still prevail and make the continuance of the Trade Board more essential than ever.

Another consideration which had considerable influence with the workers was their feeling that they were too much divorced from their craft; that matters of great importance to the trade, closely affecting their well-being, were determined without reference to their desires or needs, and they believed that the establishment of the Trade Board would secure for them the realisation of their legitimate demands in that direction.

(a) The decision of the workers was a cause of considerable disappointment to the employers and, at their request, we met them in conference. Both sides were equally frank, but neither convinced the other. What the employers seem to resent most keenly was the stigma which, they contended, the application of the Trade Boards Act would bring upon the industry. This suggestion did not worry the workers, many of whom considered that it was only what the trade deserved. On several occasions representations had been made by the workers' organisation to the responsible Minister asking that the Trade should be treated as a "sweated" trade and brought within the ambit of the 1909 Act. Those representations were never successful—why, was never very clear to the workers.

According to the Board of Trade Census of 1906, the average earnings in the trade were then, for women, 10s. 9d. per week, and for men 22s. 4d. per week. I am not to dispute these figures, which I believe fairly represent the position, but with regard to the men in the finishing department and the less skilled workers a very large proportion were paid round about 18s. per week, the number so paid forming the big bulk of the men in the industry.

18 January, 1922.]

Mr. JOHN C. HENDRY.

[Continued.]

In 1903 I made a detailed enquiry into the social condition of these men and their families. I took a typical case, a man with a wife and four young children, a total abstainer and a non-smoker. I do not suggest that the final characteristics were typical. His wage was 18s. per week. Here is a week's budget compiled from details supplied by his wife:—

	s. d.
Rent and rates	2 0
Bread	3 0
Milk	1 2
Beef	1 0
Oatmeal	0 5
Tea	0 6
Sugar	0 9
Coals and light	1 9
General groceries	3 6
Friendly societies, insurance	0 9
	14 10
Clothing, boots, &c., at 14s. 6d. per head per annum	2 0
	16 10
Balance for holidays, doctors' bills, recreation, &c.	1 2
Total	18 0

It will be noted that the weekly expenditure on food alone is 10s. 4d. To have supplied the same family with food in the almshouse would have cost 2d. more per week—10s. 6d. and the almshouse authorities were able by means of contracts to buy at least 20 per cent. below the ordinary retail prices.

By 1914 wages had improved somewhat, weavers, weft winders and warp winders averaging 15s., 14s. 5d. and 14s. per week, respectively, according to the figures of the manufacturers in Brechin. These figures, however, do not include mill workers, who are more poorly paid. The improvement is not so substantial as appears, as this increase in money wages had been partially discounted by an increase in the price of commodities. The wages of the weavers also compared favourably in 1906 with the figures of the Board of Trade, amounting to 12s. 2d., approximately, as against the general average of 10s. 9d.

In this connection I have prepared two tables which show the variation in individual earnings, and give a more accurate presentment of the position than averages do. They are prepared from bounty statements and show the position in 1914. The figures are exclusive of bonus payments.

TABLE I.

7 weavers earned a weekly average of 8s., but less than 9s.
7 weavers earned a weekly average of 9s., but less than 10s.
15 weavers earned a weekly average of 10s., but less than 11s.
26 weavers earned a weekly average of 11s., but less than 12s.
45 weavers earned a weekly average of 12s., but less than 13s. 6d.
43 weavers earned a weekly average of 13s. 6d., but less than 15s.
23 weavers earned a weekly average of 15s., but less than 16s. 6d.
34 weavers earned a weekly average of over 16s. 6d.

TABLE II.

11 weavers earned a weekly average of 8s., but less than 9s.
8 weavers earned a weekly average of 9s., but less than 10s.
24 weavers earned a weekly average of 10s., but less than 11s.
17 weavers earned a weekly average of 11s., but less than 12s.

42 weavers earned a weekly average of 12s., but less than 13s. 6d.

34 weavers earned a weekly average of 13s. 6d., but less than 15s.

18 weavers earned a weekly average of 15s., but less than 16s. 6d.

37 weavers earned a weekly average of over 16s. 6d.

The tables are for consecutive months and, taken together, give a very fair summary of these weavers' earnings. It will be observed that in the first month, out of 200 weavers, 100 earned on an average less than 13s. 6d., while in the second month, 102 out of 191 were in the same position. The bounty additions to these figures would increase the lowest paid by 6d. per week, 9d. a week for the next, and so on by 3d. rises till those earning 16s. 6d. and over receive 2s. 3d. per week additional. While the payment of the bounty was conditional, in practice it was dependent on production.

In the Howe of Fife wages ran from 10s. to 18s. per week for weavers. Payments to those engaged in the various processes in the spinning mills were lower. Men's wages, apart from tenters and dressers, would run from 20s. to 24s. per week. A few might have more, but then some had less.

Wages during the war and post-war years showed a considerable monetary increase, but this improvement was really nullified by the big fall in the purchasing power of the sovereign. I feel I have already overburdened you with figures, but I would like to give you a note of weavers' earnings in the fall of 1919, when the cost of living had increased over July, 1914, by 120 per cent., with a consequent reduction in the relative purchasing power of the sovereign to 9s. I have ranged them in three classes according to the size of the looms on which they were employed (a), (b), and (c). I give the average for the class, the highest and lowest in the class.

	Average.	Highest.	Lowest.
	s. d.	s. d.	s. d.
Class (a)	29 11½	33 9	24 8
Class (b)	27 9½	30 8	23 9
Class (c)	31 2	38 9	23 3

or a general average over all of 29s. 8d. These wages include all bounties, war increases, etc.

(b) It would be unfair to the employers to state that any very general hostility to the trade union has manifested itself recently. Some who were rather antagonistic prior to 1914 modified their opinions considerably as the result of their war experiences and, as a rule, we can now get a hearing even where it was once given grudgingly or altogether refused. But there are still a number, particularly in the North-East of Scotland, who show a pronounced hostility to the workers organising themselves. It is sometimes difficult to point to an overt act in proof of this statement, but that the feeling does exist, and that very strongly, is undoubted.

(c) One objection taken by employers to the establishment of the Trade Board was that it had been precipitated into a well organised industry which was, and had been able, to manage its own affairs without any outside interference. So far, I have been unable to find that organisation on the part of the employers. Their principal association is the Scottish Flax Spinners' and Manufacturers' Association, with headquarters in Dundee, but there are a fair number of employers who are not connected with it. In addition, there are a number of local associations who owe no adherence to the principal association, although their members may, as individuals, be connected with it.

That the Flax Spinners' and Manufacturers' Association does not function or fails to function effectively in matters concerned with wages, working conditions, etc., is evidenced in several ways. Questions of wages were generally determined locally,

18 January, 1922.]

MR. JOHN C. HENDRY.

[Continued.]

except when increases were granted by the Committee on Production or the Arbitration Court under the Wages (Temporary Regulation) Act. Even in such cases it was difficult to get recognition for these national decisions. In Dunfermline, for instance, this difficulty was most marked, and in one case, even after Lord Hunter, sitting as a Judge in the Appeal Court had decided that an award was applicable to them, it was some time until they paid and that only to save another action which was threatened. And this was not an isolated case. Even the workers' organisations were not entirely guiltless in the matter of lack of cohesion. Just after the armistice, a movement for an increase of wages was initiated in several districts, each moving on its own, and varying settlements were accepted, the increases for piece-workers varying from 7½d. to 10 per cent., and for men from 3s. to 4s. per week.

Matters were no better when the question of a shorter working week came up for settlement. The workers' demand was for a 44-hour week, which was in operation in some parts of Fife. The Flax Spinners' and Manufacturers' Association, with the object of getting a settlement for the whole trade, agreed to the setting up of a Joint Committee to make suitable recommendations. I was a member of that Committee. We held a number of meetings, and ultimately came to a unanimous agreement to recommend a 46½-hour week, engine time. When it came before the employers' association it was turned down. The result was that the hours were settled locally, but not before serious trouble was threatened in some districts. The general agreement was for a 47 or a 48 hour week, but the methods of working it are about as varied as the colours of Jacob's coat. The 44-hour week is still being worked in addition. That the organisation is improving is true, but until it gets better stabilised and more cohesive it would be unwise to leave to it the direction of the industry. As an instrument for this purpose the Trade Board is proving very valuable.

Coming to matters which relate more to the practice than to the principle of Trade Boards, I agree that there is room for a considerable simplification in their procedure. I am of opinion that it would be a great improvement if the period which is required for the variation of rates could be considerably reduced. The proposals put forward on behalf of the Trade Boards Advisory Committee of the Trade Union Congress would, I believe, meet this legitimate complaint, which both sides have uttered—at different times—and at the same time adequately safeguard an industry from ill-considered and hasty determinations.

The complaint as to the inelasticity of the Trade Board system is, however, in my opinion, overdone. Many of the complaints seem to be due either to ignorance on the part of the complainers or the failure of the employers to give the Boards the opportunity of exercising their powers.

In some instances which have come under my own notice, workers suffering from some physical or other defect which made them sub-normal, have been dismissed, or been on the eve of being dismissed, because their employer was unaware of the powers of the Board with respect to the granting of permits of exemption. In other instances workers similarly circumstanced have been allowed to go under circumstances which suggested that the desire of the employer concerned was to create a prejudice against the Trade Board.

Another objection of a similar character often urged is that the Trade Boards do not and cannot give sufficient regard to the varying capacity of workers. This is urged with special reference to the fixing of rates applicable to pieceworkers. So far as this industry is concerned, it is an objection that has not much substance, and the workers' representative are not responsible for such substance as it has. It has been suggested often that once, that a system of minimum piece rates would be very suitable for the trade and would obviate this difficulty, but the employers have not responded kindly to the

suggestion. I must, however, except the employers of male canvas hosepipe weavers, for whom such rates have been adopted and are in operation.

In the course of his evidence, Mr. Donald, of Dundee, who is, I understand, one of the secretaries of the Flax Spinners' and Manufacturers' Association, although I speak subject to correction on this point, advanced the suggestion that the tendency was for Trade Boards to develop into Courts of Arbitration, and that did not help to produce harmonious relations between employers and employees. Neither suggestion applies to the Flax Board, where the function of the Appointed Members has been that of conciliators, an extremely valuable and useful function, practically every rate now in operation having been reached as the result of agreement between both sides. Nor has the Board introduced a discordant note into the industry. The contrary is the case. Those who do realise what is due to their workers have now a sense of security, that they will not be unduly penalised if they allow their ideas to prevail, while those who refused to give equitable consideration to the needs of their workers find their power for evil curtailed. We may differ as to the desirability of the Board, but I do think I can claim that both sides have shown a desire to work together for the good of the industry. Schemes of apprenticeship have been developed to get rid of the shipshod and unsatisfactory methods by which workers were trained for the more highly skilled employments in the trade; periods of learnership have been established, with special rates for female workers, while in several districts, largely under the influence of the Trade Board, the Education Authorities have been approached, and as a result technical classes have been established where the workers will be more fully equipped for their employment. Abolish the Trade Board, and the driving force which is bringing about this new outlook will be removed.

The most serious charge against the Trade Board, however, is that it has produced widespread unemployment and under-employment by fixing high and uneconomic rates of wages for the workers. What is a "high" wage is a matter of definition. Mine would be, "a wage which gave the recipient a substantially greater share of the requirements of daily life than were necessary for subsistence." Not an extravagant demand, in my judgment. The original rates fixed by the Board when the cost of living stood at 130 per cent. over that of July, 1914, were:—For women of 18 years and over, 32s. per week, and for men of 21 years and over, 54s. per week, equal to a pre-war wage of 12s. 10d. and 21s. 7d. respectively. The present minima are, female time-workers over 18 years, 28s. per week, male workers over 21 years, 48s. 6d. per week, with a piecework basis time rate of 32s. per week for female piece-workers, or, expressed in pre-war values as at 1st December last, wages of 14s., 24s. 3d. and 14s., but it should not be forgotten that when fixed the cost of living was 20 per cent. higher than it was at 1st December.

It may be agreed that while the wage is meagre enough when measured by the workers' needs it is still so high that it is killing the industry. My answer is that the lack of employment which is so prevalent in the trade is due to causes in which wages play no part, and that even were the present rates reduced 50 per cent. there would still be unemployment. Let me give two examples of the relation of the wages cost of production to the total costs of production. The figures apply to September last. The first instance is 4lb. tow yarn. The actual cost of production of one spindle of this yarn including selling costs was 7s. 2d. The raw material cost 3s. 8d., to which has to be added 1s. for spinning waste, discounts and selling charges amounted to 6d., while oncost charges and wages amounted to 2s.

The disparity is even more marked in weaving. Take a plain kitchen towel. In 1914 it was sold, wholesale, for 3½d. The wages cost of production, taking the generally accepted rule that the weaver's wage is equal to the wages cost incurred for all the other workers, was 4½d. or 11½/7 of the whole. In

18 January, 1922.]

Mr. JOHN C. HENDRY.

[Continued.]

September last the same towel was selling at 1s., but the wages cost had only increased to 1-0-2d.

The fact is that Trade Board or no Trade Board, even with a booming demand, there will be shortness of employment in the flax trade for some years to come. It is not merely lack of demand for the finished product, but the lack of raw material to meet any demand that might arise which is responsible for the slump. Some 80 per cent. of the trade's normal supplies came from Russia. That source of supply has been cut off, and despite the efforts to stimulate home production and tap new sources of supply the trade is struggling against this hopeless handicap. In 1913 the total imports of flax into this country (less re-exports) were 98,912 tons, of which 81,577 tons came from Russia. This year (December, 1920, to November, 1921) the total imports (less re-exports) have been 15,738, or about one-eighth of the normal, and the position shows little signs of improvement.

With respect to the reform of the Trade Board system, it would be of great advantage if in an amending Act powers were conferred on the Minister to group overlapping trades for the purposes of administration. It is sometimes a matter of difficulty to employers to have different rates operating for practically the same work in the same mill. It is a difficulty which has been experienced by employers in this industry, and trade union officials are also brought up against it. On the workers' side there is a considerable body of opinion favourable to bringing the flax and hemp, the jute, and the rope, twine and net trade under one Board, as several works are covered by all three. Another advantage from the workers' point of view is that it would enable the finishing section of the flax and jute trades to secure the protection of the Trade Board, which is badly needed. These three Boards are endeavouring by means of a co-ordinating committee to minimise the difficulties with which they are faced, but I am not very hopeful as to the results.

That a close community of interests exists between the three industries is proved from the fact that a committee representative of the three had under consideration the formation of a Joint Special Scheme for their workers under the Unemployment Insurance Act. A fair measure of progress had been made when, in view of the conditions which had arisen, it was dropped meantime. It might also be worth consideration how far the same powers could be conferred on Trade Boards in this connection as are enjoyed by Industrial Councils.

Suggestions have been put forward that if the feeling should be in favour of the continuance of the Trade Boards that their powers should be considerably curtailed, and particularly that their power of fixing special rates for special classes of workers should be taken from them. Speaking generally, I consider that what is wanted is not a curtailment, but an extension of powers, and that more particularly in the matter of inspection, which leaves much to be desired. On this particular power of fixing special rates for special classes it would, in my opinion, prove a particularly disastrous step to take it away. Three-fourths of the most beneficial work for the trade performed by the Flax Board has been made possible by this power. Take it away, and no effective policy with respect to apprenticeship or learnership would be possible. Apprenticeship and learnership carries with it responsibilities and duties to the learner on the part of the employer, and it is only by fixing a rate for such workers less than that which would be applicable to an ordinary worker of the same age that the employer can be compensated for the obligation he undertakes.

Otherwise, in respect to improvements in the system, I am in agreement with the proposals put forward by the Trades Board Advisory Committee of the Trade Union Congress, which I believe would obviate the legitimate complaints of employers and workers.

JOHN C. HENDRY.

9982. *Sir Arthur Pease*: You are the Secretary of the Scottish Council of Textile Trade Unions?—That is so.

9983. And you are Chairman of the workers' side of the Flax and Hemp Trade Board?—That is so.

9984. And a member of the Jute Trade Board?—Yes.

9985. What number of members do you represent?—Altogether connected with the Council there would be from 50,000 to 60,000 workers, and of that number three-fourths at least would be included in the jute and flax trade.

9986. What proportion of those would be men and what proportion women?—The proportion, I should say, would be about 75 per cent. women and the balance men, taking the trade generally. In some branches, of course, there is a larger proportion of men than women, but as a rule it is a woman's trade.

9987. You say that the Board has been most bitterly attacked in Scotland?—That is so.

9988. Then you are mainly going to deal with the flax trade?—Yes, with flax, because there are others who are speaking for jute.

9989. *Lord Weir*: When you speak of "attack," and of objections being lodged by employers and others, whom do you mean by "others"?—The others include that very infinitesimal section of workers, who were induced to join in the attack.

9990. The other small portion of the workers?—Yes; I should have put it "and a certain section of the workers."

9991. *Sir Arthur Pease*: At the beginning your Council was doubtful whether it was advisable to have a Trade Board?—Yes.

9992. But now you consider it is necessary?—Yes. There was a certain number of those connected with the industry who were doubtful as to the desirability of bringing the flax and jute trades under the Trade Board Acts, but the great bulk undoubtedly were in favour of it, and, as I say here, there is not the slightest doubt in any of their minds now as to the wisdom of the course they took when they decided to support the proposal.

9993. What decided you first of all was that you thought wages low and, secondly, the employers would not recognise your union?—Yes; in fact in some places they actually took steps to break the union.

9994. That is what decided you?—Yes.

9995. Then you say they are also too much divorced from their craft?—What I mean by that is that, so far as the workers were concerned, the trade was being degraded into a sort of casual occupation. The workers were not really taught the trade; they were simply set to do certain things to a certain extent mechanically. There was no proper arrangement that workers who went into the trade would be taught or given any proper training in the branches they happen to fall into.

9996. *Lord Weir*: That is the juvenile element?—Or even elders. In some sections of the trade you cannot put juveniles to learn; they must be from 16 to 18. Take the tenting; a young man would go in as an under-tenter. The under-tenter is a sort of labourer to the tenter, and he is allowed to pick up the business the best way he can. I have known men who have been years as under-tenters, and are no more like being tenters after 5, 6, 7 or 8 years than when they went in, simply because they have had no opportunity.

9997. The Trade Board, by raising the rate, gives them the opportunity, does it not?—No; but the Trade Board has been able to make arrangements which, if it had the powers which I think it ought to have, would ensure the adoption of a satisfactory system. For instance, we have adopted an apprenticeship system for tenters and dressers so that they may be taught the trade properly.

9998. You have powers for young apprentices and you are acting on those powers?—Yes.

9999. What further powers do you want?—To enforce the employers to say: "If you are coming into

18 January, 1922.]

MR. JOHN C. HENDRY.

[Continued.]

this trade, you have to come into it as an apprentice instead of coming into it and picking it up anyhow."

10,000. *Mr. Bell*: Dealing with this question of tenters, I notice a big variation in the earnings of weavers?—Yes.

10,001. How do you recruit your loom tuners when you have no males weaving?—What happens generally is this, at least it is a very common practice and has been in certain districts: supposing they wanted an under-tenter, they would often take a tradesman, say a joiner who had not been very successful in his own business and who would possibly apply for a position as an under-tenter; owing to his knowledge of joinery he would be a handy man about a loom, and he often got the preference simply on account of that knowledge. Very often under-tenters were really taken from those who had come in from other work, and, as a vacancy became available, they asked for it and got it.

10,002. *Lord Weir*: What powers have you? You can do anything you like in the way of fixing rates, can you not?—Yes, but this is more than a matter of fixing rates. What I want to say in regard to this is that, when I speak about divorcement from their craft, I mean rather more than simply not getting a proper opportunity to learn the trade. What the workers did feel was that there were questions in which they, as workers, were very keenly interested; for instance, there is the question of hours, and matters such as that. These matters were simply settled by the employers. The employers said: "The hours are to be 44, or 48, or 50," and you might protest, but it was simply a case of "take it or leave it." The employers said what was to be, and the worker had no real power to make his desires or his needs effectively felt. They thought that through the Trade Board they would have an opportunity of bringing their opinions to bear as to what ought to rule in the trade.

10,003. *Dame Adelaide Anderson*: They could have altered that if the organisation had been stronger?—Yes, if the organisation had been stronger; but unfortunately the organisation in the textile trade, up to about 10 years ago, was very weak.

10,004. Can you say why that was, as compared with Lancashire?—I could not very well say why. I know this, that these workers have been very difficult to organise. One of the reasons, I believe, why they were so difficult to organise was the fact that their earnings were so low. My experience has been that where workers have low earnings, and are living under generally unhealthy conditions, they are extremely difficult to organise. You cannot get the sense of collective bargaining or collective working developed in them; and even to-day many of those workers are without any proper conception of the idea of organisation; the organisation has not really got properly solidified; it is loose, as it is naturally bound to be, owing to the comparatively short number of years in which the workers have been brought thoroughly together.

10,005. *Sir Arthur Pease*: Then you go on to say that the average earnings in 1906 were 10s. 9d. for women and 22s. 4d. for men?—Yes.

10,006. But there were men working at 18s.; adults?—Yes. At that time there was quite a large number—I am speaking more particularly of Scotland at the moment—who were earning round about 18s. a week.

10,007. Then you give a budget of how a man would live on 18s. per week?—Yes. That is the actual statement of a worker who is living in Brechin.

10,008. Then you go on to say that the wages in 1914 had somewhat improved?—That is so.

10,009. Then you set out two Tables—Table I and Table II?—Yes.

10,010. What is the difference in the two Tables?—The two Tables are these. The bounty is a monetary payment which was paid on production, and those are Tables for two successive months. My idea was that to give the two successive months would give a better idea of what the actual earnings were than if I had taken one month only, because sometimes a weaver will have a big month and sometimes a small

month, and I have put the two together so that you might get a fairer comparison.

10,011. *Lord Weir*: Both of them are exclusive of the bonus payment, are they not?—Yes. The bonus payment in the lowest case would add 6d. a week, and it goes up by 3d.—6d., 9d., 1s., and so on, until you get to 2s. 3d. for those earning 16s. 6d. and over. It is noted in a paragraph following the tables.

10,012. *Mr. Bell*: Taking these two tables, I notice that you have given, in one case, 34 weavers earning ing over 16s. 6d.?—Yes.

10,013. And in the other case, 37?—Yes.

10,014. Would those be the same weavers each month, or do they vary?—They will be practically the same weavers; it is for the same work in two successive months, you might have a slight variation, but they would be practically the same.

10,015. How do you account for the big difference, say, between weavers who were earning 10s., as compared with those who were earning 16s. 6d.?—It is the question of a large month and a small month. In one month the weaver might earn a wage which would entitle her to a larger bonus; for instance, in the first month a weaver might have earned an average of 10s. a week, and in the succeeding month she might have earned an average of 11s. a week.

10,016. But you will remember my previous question, when I asked you if the 34 and the 37 of the two different months would be the same weavers?—Take it that the 34 given in the first are calculated in the 37; that might happen or might not. You find, when you come to the higher rates of wages, that these are fairly constant; it is when you get lower down that the difference occurs. I have known a case of a weaver perhaps having a bounty of 5s. in one month, and possibly the next month she would only have 2s. She is paid, of course, on piece, and if she was near the end of a piece, or if at the beginning she was just in the middle of two pieces of cloth, the big bulk of the work would be done, say, this week, but she would not be paid until next week, and that would effect her bounty earnings if it was at the end of the month.

10,017. This all has an effect on the rate. So that if you have a weaver who is a little bit less efficient than another, and perhaps needs something to be shown to her, who shows her, seeing that you have overlookers, as we call them, who have never been weavers?—Well, very often, in my experience, she is dependent on some of the other girls round about her to give her advice on a matter of that sort, or assistance. Sometimes the tenter would give a certain amount of assistance, and sometimes he would not.

10,018. I can see that; and probably you will agree that your overlookers in many cases cannot even take an end up?—No, I would not say that. The point I was trying to make when I was dealing with the tenters was that those who went in got no proper opportunity of learning. It is largely a question of a man's adaptability and his general intelligence. Some of them become most excellent tenters, but you have a big number who never get a real opportunity.

10,019. Does the width of the loom affect the average earnings of these weavers?—Well, in some cases I have known—in one work that I know—the narrow loom workers make the best wages. It sometimes happens that the work on looms of 60 inches and over reed space is given to the more elderly workers, who are not so fit as they once were. Those looms go slower. Of course, jute is different from flax. You might get a woman who is not able to manage two 50-inch looms on rather heavy work, who is quite able to manage a loom of 60 inches or 70 inches, because it goes slower.

10,020. What effect has the fixing of the minimum had on these weavers, say, whom you give as earning 10s. Do they still, working on piecework, keep above the minimum?—This table, of course, deals with 1914, and the wages which were 10s. then would be much greater now.

18 January, 1922.]

Mr. JOHN C. HENDRY.

[Continued.]

10,021. *Lord Weir*: And is for 55 hours, also?—Yes. You see, the rates were advanced from 150 to 160 per cent. over the pre-war rates, at least, that was the employers' statement. So that, of course, you have not to take 10s. as the average wage of that weaver when the Trade Board was established, but you have got to take it as multiplied by a rate which has been increased from 150 to 160 per cent.

10,022. *Sir Arthur Pease*: You have given the average on the next page of your précis?—Yes.

10,023. *Mr. Bell*: Taking your 10s., and putting 150 per cent. on, that only brings it up to 25s.?—Yes.

10,024. That is why I asked the question: how does the fixing of the minimum rate affect these weavers whom you here give as only earning 10s. at that time?—It really means an increase to them.

10,025. Are they earning actually less than the minimum, and have to be made up?—I do not know exactly how they do in regard to that. There are complaints that there are workers who are not receiving the minimum, but I know in certain cases again the employers stated quite distinctly that their rates were quite sufficient to meet the minimum without any alteration being made in them after the minimum came into operation.

10,026. *Sir Arthur Pease*: These figures that you give on the next page are the average rates now?—Yes. These were just immediately before the Trade Board was formed. Just after that time, in three works in Brechin, at any rate, the average wage would have been 35s. or 34s. for weavers. The reason why I know that is that we were making some adjustments in regard to bounties. These firms wanted to abolish all bounties, and there was a statement prepared showing the average earnings, and I think they came to about 35s.—well, allowing for an increase which was given immediately after that.

10,027. These weavers would all be women?—Yes.

10,028. Then I see in paragraphs (b) and (c) you go on to state the views of the employers. I do not know whether you wish to explain those further; I think they are very clear in the statement?—I do not suppose there is anything required to be added here, but in one of the paragraphs there is a word or two left out. In the last paragraph, on page 4, after the words "Lord Hunter, sitting as a Judge in the Appeal Court," the words "had decided that an Award be applicable to them" should go in. It is really a verbal omission, but I think it is understandable.

10,029. Then I think it is all quite clear down to the paragraph which begins, "Coming to matters which relate more to the practice than to the principle"; that is half way down page 5. You make certain suggestions there as to the improvement of the Trade Boards?—Yes.

10,030. You suggest that the time wants reducing?—Yes, a reduction in the period of notice.

10,031. Then you say: "The complaint as to the inelasticity of the Trade Board system is, however, in my opinion, overdone. Many of the complaints seem to be due either to ignorance" and so forth. What do you mean by that?—What I mean is that the employers apparently do not recognise the powers which the Board really does have. Take, for instance, the question of granting exemptions. As I have stated here, in some instances, I am satisfied that workers have been dismissed through ignorance. I can give one instance that I know of, where an employer dismissed a worker because of a physical defect. The employer said: I cannot afford to pay him the Trade Board rate. I took steps to get that employer informed as to what the position actually was. An application form was filled up, it was sent in, the Board granted exemption, and the lad concerned is working still. I happen to have seen some of the evidence which has been given by the employers, and in their own statement which they made there is perfectly clear evidence that they do not understand the position in regard to certain matters. For instance, this was said by, I think, Mr. Boase: "Attention may be directed to an important point in connection with the minimum rate, assuming 80

per cent. of the workers to be ordinary workers in the Trade Board sense, that is, workers of ordinary skill and experience in the class of goods in question, then a piece rate is acceptable when that percentage of the workers can earn by piecework a sum equivalent to the piece-work basis time rate." Now this is what I want you to note: "It therefore follows that the other 20 per cent., being sub-ordinary, are not employable." Now that seems to show an absolute ignorance of the provision which is made for meeting the case of the sub-ordinary worker.

10,032. You can meet it in the case of piece rates, but in the case of time rates the man has to be physically infirm before you can make him sub-normal?—But it does not make them unemployable because, where you have a piece rate, that affects the granting of an exemption. Take the percentage which he gives—80 per cent. who are normal, and 20 per cent. who are sub-normal: there would be no difficulty in employing those 20 per cent. sub-normal.

10,033. You mean you could employ some people who did not even earn the time rate?—The piece-work basis time rate.

10,034. *Mr. Bell*: Do you reckon that is an argument against the Trade Board?—No.

10,035. Supposing you had not the Trade Board, and your organisation had been strong enough to obtain what is ordinarily termed, though perhaps wrongly termed, a trade union rate, how would the employer then have dealt with workpeople whom he alleged were not up to his standard of efficiency?—Sack them.

10,036. He has the same opportunity under the Trade Board?—Yes.

10,037. So that exactly the same thing is in operation with a trade union rate as with a Trade Board rate?—It is in operation in this trade. I know, for instance, of workers touching 70 years of age who have been dismissed because they could not make the Trade Board rate—workers that, from my own personal knowledge would have no difficulty in getting an exemption certificate.

10,038. *Sir Arthur Pease*: Would you be in favour of the power of the Trade Board being enlarged to give the exemption certificates in regard to specially slow workers, although they were not actually physically infirm?—It would have to be very closely guarded if such permission were to be given, and the Trade Board would have to be able to compel the employer who made such an application to submit evidence which was satisfactory to them that that worker's slowness was due to himself, and not due to the circumstances of his employment.

10,039. Yes, of course, I quite see it must not be simply a by-way of getting round the minimum rate. That is what you mean?—Yes. Very often you will find workers whose wages are considerably under what you would ordinarily expect them to make, and it is very often due to the quality of the material. That is one difficulty we are up against at the present moment. Flax is so absolutely scarce—I shall have something to say about that presently. If you will give me the opportunity—and the quality of the material has so deteriorated, that the worker has not the same chance. As a matter of fact, if the material was anything like normal, the workers at the present time would be making far higher wages than are fixed by the Trade Board rate.

10,040. Another objection, you say, that has been urged is that the Trade Boards cannot give sufficient regard to the varying capacity of the workers. But your workers are nearly all on piecework, are they not?—Yes; but apparently the employers urge this objection: But they are not on piece rates, they are only on a piecework basis time rate. That is the ground of the objection. It is 8d. an hour, and the rates must be such as will enable the ordinary worker to make that. A piece rate is a different thing.

10,041. A normal rate?—Yes, a normal rate. A piece rate is a different thing; a piece rate is a price fixed for a certain piece of work. For instance, here

18 January, 1922.]

Mr. JOHN C. HENDRY.

[Continued.]

is a certain web: the price to be paid for that web is 5s. or whatever figure you please. If the weaver gets that price, if the 5s. is earned, then the requirements of the Trade Board are met. We suggested to the employers that, instead of a piecework basis time rate, we should endeavour to prepare a statement which would determine the price to be paid for each particular fabric, the same as they have in Lancashire. If that were done, that would meet the case of any worker who happened to be particularly slow, because even if she was unable to do more than a certain piece of work, she would be getting the recognised Trade Board rate for it. But the employers objected to the proposal on account of the work involved.

10,042. Then I think you want to draw attention to some evidence that has been given by Mr. Donald of Dundee?—Yes. Mr. Donald suggested that the tendency was for the Trade Boards to develop into Courts of Arbitration, and that that did not make for good relations between the employers and the employees. So far as the Flax Board is concerned, the function of the appointed members, as I state here, has largely been that of conciliators, and practically all the important rates fixed by the Flax Trade Board have been a matter of agreement between the workers and the employers.

10,043. Without pressure from the appointed members?—Without pressure. As a matter of fact I am going to deal, if you will allow me, with a point which was dealt with by the employers when they were here, that is, that historic occasion on which they walked out of the room. It was stated, I think, by Mr. Boase, that as the result of the vote of one of the appointed members, a rate was carried through the Trade Board which put on an increase; that they walked out, and that, as a result of their action, a compromise was reached. That is their history of the event. I am going to give you mine, and I refer you to the minutes of the Trade Board itself for confirmation. A Special Rates Committee was set up to discuss the question of special rates for special classes of workers. That committee met, with Professor Baillie, and we parted miles apart. We met in July to discuss the question as a Trade Board. In the morning of that day Mr. Buckpitt, who comes from Bridport, came to me and he said: Cannot we come to some agreement over that rate? He, with Mr. Smart (another employer), Mr. Sime and myself talked over the matter, and we came to an agreement as to what those rates were to be. They were to be 70s. for tenters, so much for dressers, and so much for other classes of workers. Mr. Buckpitt moved the adoption of this compromise, and I seconded it, and it was carried unanimously. The notice was sent out, and the Board met in November to deal with the objections.

10,044. November of what year?—A year past in November—November, 1920. The employers then objected to those rates going through. We naturally said: Well, we made a bargain, and we want you to stick to your bargain the same as you would have asked us to stick to ours. There was considerable discussion over the matter, and the appointed members certainly supported the proposal that the rates should go through. But it was evident, and they made it perfectly clear, that while they thought the rates ought to go through, seeing they had been a matter of agreement, at the same time they considered they should postpone the date of their coming into operation until a fairly late period, owing to the conditions which had arisen in the trade at the moment. Naturally, we were rather loth to agree to that. However, ultimately, after an adjournment, we met again in about a month, and we agreed that, subject to certain conditions, we would allow those rates to be held in suspense; so that, so far from it being a case of a compromise, it really was the case that the workers made a large concession to the employers. They agreed to allow those rates to hang in suspense. The employers said they would see that the present rates which were in operation should be allowed

to remain as they were, and they also gave a promise that, when the rates were brought into operation, they would apply the rates at once. Ultimately, these rates were dropped entirely. New rates were fixed, but the employers did not bring them into operation until the time for the objections had run, and, in fact, it had become an Order. We never asked them to bring them in sooner because we considered that under the circumstances the trade was in it was better not to do it. But so far from the workers thrusting the thing down the employers' throats, it was they who were trying to get out of the agreement they made with us. As far as the compromise in July was concerned, the appointed members knew nothing about it until we went into the room and told them what we had agreed to do. Of course, they have helped us by making suggestions—they have been a big help in that connection—but nothing has been crammed down the throats of either of us.

Sir Arthur Pease: I will not ask you any question on that, because you have made it perfectly clear.

10,045. Mr. Bell: About the middle of page 6 of your statement, I think you have a wrong word, where you say: "Those who do realise what is due to their workers have not a sense of security": should that "not" be "now"?—Yes, "now." There is another mistake in the same sentence. The word "for" in the next line should be "while."

10,046. Yes, and a comma after "prevail" would improve it?—Yes.

10,047. Sir Arthur Pease: With regard to unemployment, I think it has been pointed out by others besides yourself that, owing to the lack of the supply of flax, we cannot gauge whether unemployment is due to the Trade Board or not, because there is not the material to manufacture?—That is so. I may say this: that, as a matter of fact, in my opinion a reduced rate of wage and increased employment in the flax trade under present circumstances would be one of the worst things that could happen for the workers, because the boom would mean this, that the material would be used up and then you would have shut doors. But there is no doubt that the employers, or certain employers, at any rate, apart from what they say here, are doing their best to create the impression that it is the Trade Board that is responsible for this lack of employment.

10,048. How do your figures compare with the flax trade in the North of Ireland; are they the same? Have they a Trade Board there?—There are two Trade Boards. One of them, I understand, is on strike.

10,049. The Trade Board are on strike?—The employers' side are, at any rate, so I understand. In Scotland, of course, we have a different fashion: when our employers wanted to strike we proposed to the Chairman that we should go on with the business and do it without them. That is what we do in Scotland; and I do not know why in Ireland the appointed members do not meet with the workers and proceed to do the business without the employers.

10,050. What are the rates in Ireland?—I cannot say what they are now, but originally in Ireland certain rates were higher than they are here, that is, in the first proposal. Some of them were 8jd. or 9d., I think, as against our 8d.

10,051. Only the spinning section is covered?—Yes; but I understand there is a Board for the weaving.

10,052. But they are really not functioning?—Yes, I understand that is the position.

10,053. It is not worth while following that up then?—No.

10,054. With regard to the Trade Boards, do you think it would be well to group them?—Yes, I think it would be a big advantage. I have mentioned three trades, but there are others who might quite well be brought within the scope of one Board.

10,055. And then have sections of the Board for the details?—That is so.

10,056. But have nothing done without the sanction of the whole Board?—That is so.

18 January, 1922.]

Mr. JOHN C. HENDRY.

[Continued.]

10,057. Have you considered the question of District Committees?—We did discuss the question of District Committees; in fact, at the first meeting of the Board, it played rather an important part in the proceedings. We had agreed to a rate of 8d. as a minimum time rate for female workers, and there was a proposal to form District Committees and then make district rates. As we were against District Committees, we agreed that we would rather drop ½d., to allow the District Committee to go, and that was accepted by the employers, who thought it was quite a reasonable compromise. I may say, so far as this trade is concerned, that while there is a certain amount of the trade carried on in Dundee and Kirkcaldy and some of the larger towns, it is a trade which, on the whole, is carried on in districts which have a considerable degree of similarity; and it is rather curious, but it is the fact, that in some of the country districts the wages paid before the Trade Board was established—before 1914—were higher than they were in some of the larger districts. I happen to have some figures here as to rates of wages, and they bear on that point. In 1914, in Bervie, which is one of those places that are 20 miles from everywhere—it is taken as a typical place—

10,058. *Mr. Bell*: Is it in Scotland?—Yes.

10,059. And 20 miles from everywhere?—Yes; it is one of the typical places, where all the difficulties and all the disadvantages are combined. In 1914, in Bervie, reelers and spinners were receiving 14s. to 16s. a week. I have checked those figures with the workers recently. That 14s. to 16s. can, I think, be accepted implicitly, for this reason, that a Court of Arbitration determined that that was the rate which was in operation at that time; they fixed it at that figure. In Brechin, which is a city of about 9,000 inhabitants, spinners working double frames were getting 12s. to 13s.; those working single frames (who, of course, were less efficient workers) were getting 8s. 6d., but they are all women; and reelers were getting 14s.

10,060. *Sir Arthur Pease*: The wages you have given with regard to Bervie were all in respect of women too?—Yes, they are all women's wages. Then in Arbroath, which would be about 25,000 population, spinners on 72-inch frames were getting 14s. to 15s., as against Bervie's 16s.; on 60-inch to 64-inch frames, 12s. 6d. to 13s.; the reelers, about 13s. 6d. Then, coming down to a later period—

10,061. I think you have given us enough figures to illustrate your point, and we have all your written documents?—Yes, but these figures are not there.

10,062. Are there any other points you wish to draw attention to?—Yes, there are, I think.

10,063. We know you are generally in favour of the Trade Boards?—Yes.

10,064. And that their powers should not be curtailed?—Yes.

10,065. Have you considered the question of the appointed members?—My feeling is that it would certainly be an advantage if we had people who knew the trade acting along with the chairman, or people who at least had some technical knowledge of the trade. I was here when Mr. Sime was being examined. I think that, if that change were to be made, it would be better that they should be permanent members rather than that they should be called in when questions of difficulty arose.

10,066. I can quite see how this would act if the Chairman was the umpire. He could then hear all the case, as arbitrators do now, and he would have his two arbitrators, as is often done in arbitrations, and he could put down his own ideas and then show them to assessors to see if they were workable from a practical standpoint. But I do not quite see how it is going to work where he has only a casting vote to give on these various subjects; I mean the appointed members have simply a casting vote?—Yes.

10,067. They can make suggestions or proposals?—That is so.

10,068. But they cannot make an award?—No, they cannot do that; but still sometimes I think it would

be a big advantage if the Chairman had a more or less independent person to guide him in dealing with some of these technical matters.

10,069. Two advisers, one on either side?—Yes, one on either side, the one to keep the other right.

10,070. You think it would enable him to make more practicable suggestions to the Board?—Yes, I think it might. I think a Chairman sometimes, in perfect good faith, makes a suggestion which is rather unworkable, and I think that if he had someone like that who could advise him before he made suggestions to the Board at all, it would be better. After all, if the Chairman makes a suggestion which is, to those who know the trade, absolutely impracticable, it does not strengthen his position with the Board.

10,071. And a suggestion put forward in the proper form to start with is very much more likely to be satisfactory?—Yes; if you go on arguing and quarrelling about a thing for half a day, and then somebody makes a suggestion, it certainly will not receive the same consideration as if it were made earlier in the day and before you lost your tempers.

10,072. *Mr. Bell*: Have you thought of this phase of it: that if on the Board already you have so many representatives of the employers and so many representatives of the workpeople, who can all be said to be experts in that particular trade—they all know these technical details—if they cannot come to an agreement and you bring another two in, say one from the employers' side and one from the workpeople's side, you have simply increased the number without adding anything to the knowledge that is already on the Board? From that point of view, do you not think that the Appointed Members, acting as conciliators between the two sides, are of far more importance than simply bringing them in as assessors, when one would sit on one side and the other on the other side along with the rest of the Board?—No, I think there would be an advantage if they were there, because they would hear the whole discussion and would know everything that led up to it. If you bring them in simply when the difficulty arises, it is difficult to get every point put before them.

10,073. Now, from your experience both as an official of a trade union and as an official on the Trade Board, supposing that the workpeople nominated somebody as an assessor, and he knew what his colleagues on that Board wanted, would he depart from a decision that they had arrived at or would not he be simply a fighter all the time for what the workers wanted—and the same, of course on the employers' side?—Well, my feeling is that I would not say that the workpeople should nominate the individual who is to go there, but they might nominate a panel from which the assessors should be selected.

10,074. When you have done that and the Chairman is in the position that he is the only one that is in a neutral position and he has to give a decision, if those technical experts who are already on the Board cannot convince three men, or even one of the three, would it not be worse to be entirely at the mercy of the one man who might be in the Chair?—It certainly would be a much worse position for the Chairman to be in; that is the only difficulty I see. It would be a burden upon him. Solomon said: "In the multitude of counsellors there is wisdom." We say in Scotland: "Too many cooks spoil the broth"; and my feeling is that if you had two who are specifically charged with the duty of advising the Chairman, they would be able to concentrate the arguments on both sides, or the opinion on both sides, and put it before him in a far more concise and informative form than can possibly be done if you have half-a-dozen speakers from each side who are all trying to amplify and explain what somebody before them has said.

10,075. Which is the most important work of the Board, dealing with these technical matters, or fixing rates of wages?—I should say the fixing of the rates of wages and the general conditions is certainly the

18 January, 1922.]

MR. JOHN C. HENDRY.

[Continued.]

most important work of the Board, but it seems to me the fixing of these rates and conditions is very often determined by some technical point.

10,076. But not the fixing of the minimum rate always?—No, not so much in the fixing of the minimum rate, which is what you would consider sufficient to provide the actual necessities of life.

10,077. In trying to arrive at the rates of wages, with the difference existing on the Board between the representatives of the employers and the representatives of the workpeople, which is the most valuable work of that Board, the work of conciliation between the two sides or, say, the work of becoming assessors?—I think the work of conciliation is really the most important because if you can get an agreement it is certainly far better for both sides than if you have a force forced on one side rather than on the other side.

10,078. So that whilst there may be some advantage in having experts or men who know all the technical details in an industry, the disadvantages of removing the neutrality of the Appointed Members might be very serious?—I may say I have no very strong opinion on the point, but if a change is desired it seems to me that would be the wisest and the safest line on which to go. A point I would like to refer to is with regard to the petitions for the abolition of the Trade Board. These petitions were made against this Trade Board. With your permission I would like to explain the circumstances, as far as I know them, under which these petitions were got up in one of the places. Bervie was one of the places where a petition was got up. I think it is only right you should know that when the Trade Board fixed its rates, the employers in Bervie locked the workers out. I happened to know about it, as a number of them are members of my union, and we paid them dispute benefit for, I think, three months. Then the works were reopened on the Trade Board rate, but only for a short time, when they closed again, and the workers came on to the donation benefit. Immediately after the donation benefit finished one of the employers there, who is one of the employers to whom I refer as being very antagonistic to trade union organisation, went to the workers and said he was prepared to open his mill if he could get back to the rate of wages which was in existence before the Trade Board had brought in the first minimum time rates. I may say that Bervie in 1914 was higher paid than other places, but by this time rates had fallen, owing to want of organisation. There was no organisation for a considerable time there. This employer got the workers to sign a petition to the Trade Board asking that the rates should be decreased. But in the interval the letter from the Flax Spinners and Manufacturers' Association was sent to the Minister asking for the removal of the Board. He then thought he could go one better, and instead of this petition being sent on to the Trade Board he organised another petition which was for the abolition of the Trade Board. I would just like to mention in passing at this point that I have handed to the Secretary to-day the reply which was sent to the Minister in connection with the letter sent by the Flax Spinners and Manufacturers' Association, which I would like to be taken in as part of my evidence. Well, the workers were in this position: they were beginning to feel the pinch of hunger and they were induced to sign the petition. A considerable number of them did it very unwillingly; in fact, it was hawked about the place to get them to do it; but in a little place like that they were afraid that, if they refused, the mill would be opened and possibly other workers would be employed in their places.

10,079. Dame Adelaide Anderson: Was this locked out directly consequent upon the raising of the rate?—The notice which was posted up was something to this effect:—"That owing to the condition of trade, and in view of the rates fixed by the Trade Board, this mill will be closed until a new arrangement is made." The employers, of course, tried to deny that

it was the Trade Board rates that were the cause; but we maintain, and we are perfectly satisfied, that it was that which was the cause, and that it was really an effort to try and break the rates which had been fixed by the Trade Board.

10,080. Your suggestion is that it was aimed at getting the workers sympathetic towards the proposal?—I have no hesitation in saying that. I do not know so much about the circumstances up in Aberdeen, but I may say this, that anyone who has read the speeches made by Mr. Douglas, the Managing Director of Richards, Limited, in Aberdeen, and the various petitions which have been sent, can see perfectly well, whether they were inspired by him or not, certainly the workers had what he said before them in their mind when the petition was being drawn up, and I have been told by workers in that place that they signed the petition simply because they were afraid that if they did not they would lose their work.

10,081. Mr. Bell: A few weeks ago we had a representative of the Employers' Association sitting where you are now, and he gave evidence before the Committee that these workpeople had signed this petition voluntarily, and that one of the workpeople themselves had drafted the petition, and that no pressure of any kind had been used in order to get them to sign it. You used the word "induced" just now. If you had heard an employer make that statement, how would you describe it—in Scotch?—Well, I know how to describe it in English, but I forget exactly the equivalent Scotch term that I would use. Of course, there are various ways in which pressure may be brought upon people, but the workers were under the impression that if this petition were not signed the works would be closed down; and they were trying to save their bacon.

10,082. Sir Arthur Pease: I think you want to define very clearly what you mean by "pressure." There are two ways of influencing people, the one is persuasion and the other is pressure?—I should rather say "persuaded."

10,083. I mean, pressure is threatening to discharge the men?—I do not say they were threatened to be discharged.

10,084. There is a form of pressure you may legitimately use, such as to tell them that unless they will agree to meet the market by a reduction in wages you could not keep the mill going. That, I assume, is what you mean, or something in that form?—Yes; I do not mean to say that he went and simply said: If you do not do that I will sack you.

10,085. Or something else?—Or something else; I mean rather the pressure which is caused by the fear of loss of employment.

10,086. Dame Adelaide Anderson: But they were actually faced with the fact that the mill was closed?—No, not in Aberdeen, but in Bervie. In Aberdeen, out of something like 2,000 workers there were only something like 700 employed.

10,087. But they were faced with the fact that they were out of work?—Yes, in Bervie.

10,088. And they were coinciding with the rate?—Yes, and the fact that they had stated in their own notices that one of the reasons for closing the mill was owing to the fixing of the Trade Board rates.

10,089. Mr. Bell: Whether it is pressure or not, or whether it is inducement, I think when you look up the Minutes you will find that the statement is definitely made in the evidence that the workpeople were not approached in any way to induce them to sign that petition, but they did it entirely on their own and voluntarily. Is that true?—I do not believe it; I know this, that I could get people to do things—I would not go and ask them—but there are some people who are ready to do things if they think it is going to please their superiors. I think you may find that had something to do with it.

10,090. Sir Arthur Pease: Have you any other point you wish to make?—The only other point is the statement that there was another firm where the

18 January, 1922.]

Mr. JOHN C. HENDRY.

[Continued.]

workers signed a petition for the removal of the Trade Board. That was at Messrs. Paton's in Montrose. They signed no such petition. The petition which they signed really was a petition to the Trade Board asking to be allowed to work at a lower rate. That was the petition they signed; they did not ask for the abolition of the Trade Board.

10,091. *Dame Adelaide Anderson*: I should like to ask you one question about the 1909 Act. This industry did not come under a Trade Board until the Act of 1918?—No.

10,092. It was entirely, or primarily, because of lack of organization and the difficulty of organising combined with low wages?—That is so, but as a matter of fact, so far as the workers' rates were concerned, and so far as the unions which were then in existence were concerned, it was no fault of theirs that it was not brought under the 1909 Act. We maintained all along that it was in industry which ought to have been brought under that Act, and on more than one occasion, either through the Women's Trade Union League, or through the action of the local organizations, representations were made to the responsible Ministers to have the industry brought under the 1909 Act.

10,093. My great difficulty is to understand how it is, in a skilled occupation—because it is maintained that the weaving and spinning of flax is as skilled as in cotton and worsted—the rates are so low and that the organization is so difficult. Is it because the great majority are women and because of the competition from India?—No, we are not affected by India at all, not in the linen trade. Our competition is with France and Belgium and Austria; and, of course, Russia is now entering into the trade, too, she is not content simply with growing flax, but she has been for some time spinning and weaving the flax.

10,094. So that you have a combination of competition from abroad, and a majority of the workers being women?—Yes. I believe the fact that there are so many women is one of the factors which make them rather more difficult to organize than if they were purely men, because there are a considerable number of women in the industry who look upon it as simply following an employment until they get married.

10,095. And unless the industry gets more into the hands of men, and competition from abroad is

lessened, you cannot get reasonable wages except under the Trade Board?—I do not know that the competition from abroad is so serious a factor after all. I am satisfied that we can go on and hold our own with them any day; we have done it for a long time, and I think we can continue to do it.

10,096. And it is only the shortage of flax that really makes for unemployment primarily?—There is not the slightest doubt about that. There is a very small demand, but that smallness of demand is caused by price, and the high price is caused by the want of supply. Before the War £40 would have been an average price for a ton of flax. At the present moment I suppose it is selling for anything up to £130 a ton.

10,097. *Sir Arthur Pease*: I presume your chief competition is from the North of Ireland, is it not?—No, except in Dunfermline and Perth; Dunfermline and Perth are really the centre of the trade in Scotland that competes with Belfast. In the middle and heavy ends of the trade we are not so much troubled with Irish competition.

10,098. *Mr. Bell*: You have jute, flax and cotton all worked in Scotland?—Yes.

10,099. How do the wages of jute and flax workers compare with the wages of the women engaged on cotton weaving, say, in Scotland?—Well, I really could not answer that question.

10,100. Can you tell me this: are the wages of the cotton workers in Scotland generally as low as the wages of the jute and flax workers?—No, I think they would be rather higher; but I do not come into contact with the cotton workers.

10,101. Then I will not pursue that.—If I could have answered the question of course I would have done it at once, but that is the position I am in; I do not come so much into contact with the cotton workers. The secretaryship I am occupying I have only been in for nine months, so that I have not yet got into proper touch with the whole of the details, and my experience has been largely linen.

10,102. *Dame Adelaide Anderson*: Is not cotton in Scotland rather special?—Yes.

10,103. *Mr. Bell*: And you will agree that some of it—I am asking a question that I could answer very well myself—is exactly like the cotton cloth that we work in Lancashire?—Yes, I believe so.

(The Witness withdrew.)

Mr. J. CUNNINGHAM, called and examined

The Witness handed in the following statement as his evidence-in-chief:—

I started work in the jute trade on my tenth birthday in the year 1884, as a half-timer, and continued to work in the trade, man and boy, till the year 1910, when I was appointed full-time Secretary to my trade union.

My first job as a man in the finishing department consisted in carrying cloth from the damping machine, generally regarded as being the most laborious job in that department. The wage paid was 15s. 6d. That was in 1896 and there were men doing full-men's work in receipt of even lower wages. Very few men, no matter how highly skilled their work, were paid over £1 per week. There was practically no organization on the part of either employers or workers, and as no other effective machinery existed for the regulation of wages or working conditions the workers had just to strike, or grin and bear it. The sectional strike, therefore, was always with us and the loss to the trade due to this cause must have been enormous.

The prevalence of these disputes of course forced the employers into closer association with each other, so that by the year 1912 they were in a position to counter the sectional strike by the threat of a general lock-out. In 1912 the unions made demands on behalf

of their members for an all round advance in wages. This the employers refused to grant. A strike took place which lasted for seven weeks and was only settled by outside intervention. Again in 1916 a request was made for an advance on the wages of the workers. It was promptly refused. A strike took place which lasted eleven weeks. Again outside influence had to be introduced before a settlement could be arrived at.

I am convinced that had a Trade Board existed for the trade in those years, or other effective machinery whereby both sides could have been brought together and kept together, neither of those disputes would have taken place, and thus much suffering to the workers and loss to the trade might have been averted. Since 1916 and up to the formation of the Jute Trade Board no strike of any considerable note has taken place, wages questions arising during that period being submitted to and decided by Court of Arbitration. I have been a member of the Board since its inception and have attended almost every meeting, and it is my honest conviction that the whiff of outside influence introduced into our discussions by the presence of the appointed members has made progress possible, where otherwise no headway whatever would have taken place.

18 January, 1922.]

Mr. J. CUNNINGHAM.

[Continued.]

I consider, therefore, that the Board provides ideal machinery for the consideration of trade questions coming within its purview, and that its abolition would be nothing short of a tragedy for the workers and the trade generally.

As to the Finishers, whom I represent, I am strongly of opinion that a Board should be set up with the least possible delay for this branch of the trade. Their wages before the war were miserably low, so low indeed that many of these men's wives were forced to work in the mills and factories, leaving their children to the care of strangers. The homes of these people could not have been kept going otherwise. Wages, of course, went up during the war, but food prices went up higher. There is still no minimum wage. The absence of a minimum affects the workers adversely. To give an instance of what I mean, we will take two men, one receiving 40s. and the other 50s. Should the man receiving 50s. leave his job and the man with 40s. get promoted from the lesser to the higher paid job he would in all probability only receive 45s. instead of 50s. This practice is still fairly general. We have been trying for the last two years to have this question of a board settled, and although it has been admitted by Ministers that there is a clamant need for same there is no immediate prospects of our efforts meeting with success.

10,104. *Sir Arthur Pease*: You represent the Scottish Council of Textile Trade Unions?—Yes.

10,105. And you are Secretary of the Dundee and District Calender Linoleum and Dye Workers' Union?—Yes.

10,106. You are a member of the workers' side of the Flax and Hemp Trade Board and the Jute Trade Board?—Yes.

10,107. And you are giving evidence on behalf of the finishers, are you not?—Yes. It was just at the last moment that I made up my mind to come here, and I just made out this statement; there is not really much of it.

10,108. You have heard all the evidence of the last witness on the general questions. Do you agree with them generally?—Yes. I wanted just to say that so far as arguments in favour of retaining or abolishing the Board are concerned, my experience since the Board came into being is that it has been of great advantage to the trade and the workers. My experience has been that before the Board came into existence it was quite possible that the sides could meet; we would meet occasionally, but the two sides feeling strongly on a question, we did not stay long together, and it might be years before we would meet again. The great advantage of the Trade Board is that we are asked to meet at stated times, and, whether we want to meet each other or whether we do not, we do meet, and the advantage is that we are kept together. One employer may leave the meeting, but that does not matter, because the constitution of the Board makes for equalisation of votes, and there has only been one instance where the whole of the employers have left the Board, and only one instance where the whole of the workers' side have left the Board. The advantage, as I say, is that we must meet, and when we do meet we must stay there until the day is finished, or until the Chairman says that the meeting is finished. That is a great advantage, and we do sometimes come to agreement.

10,109. Is Mr. Lowden giving evidence with you?—Yes, Mr. Lowden is here.

Sir Arthur Pease: Perhaps Mr. Lowden will listen to your evidence. You have heard no doubt a great deal of the evidence that has gone before, and if you can say if you generally concur, and then put any particular points you wish, I think the Committee will be just as much impressed as if you go through it all again.

The Witness: May I mention the finishers, then, Mr. Chairman?

10,110. Yes. I think your particular point is that the finishers, which have not a Trade Board, you

think should have one?—Yes, for this reason, that there is no minimum rate; and I have stated here, in these few words, the way that the absence of the minimum rate affects the workers through what we call retailed reductions. For example, a man may get an advance if he is shifted from a lower to a higher paid job when a vacancy takes place. He may get an advance in his wages, but he is working possibly for 5s. or 6s. less than his predecessor on the same job, and no matter how many general advantages you get, they can all be taken back from you by this process, whenever a man is shifted to a job, of making a reduction of 3s. or 4s. on the job. Then the finisher suffers all the disadvantages of the Trade Board, with none of its advantages. When the Board sanctions a reduction in wages or a reduction on the minimum rates then all the rates are reduced. A 12½ per cent. reduction took place the other month on all wages above the minimum—the minimum and above the minimum. Of course, the finishers came into that too, although they had no minimum. A further 6½ per cent. reduction takes place in February. They will have that reduction too. I cannot see why they should be specially excluded from both the flax and the jute Trade Boards. There are only a few thousand of them in Dundee; they are, I suppose, in the whole of Scotland not so very numerous either; and I cannot see just exactly why they should have been excluded.

10,112. *Mr. MacCallum Scott*: Why are they excluded in fact?—I do not know. The Order says they are excluded.

10,113. Is it a different industry?—Yes; they are excluded from the operations of the Trade Board. Although I am on the Trade Board representing our own industry, I am not of the Trade Board; that is to say, I can argue and help the others to argue and convince the appointed members to grant increases or delay reductions, but I cannot put a halfpenny on the wages of any worker that I represent on that Board.

10,114. In your opinion, should they be brought under the same Trade Board, or is there a special Trade Board for them?—I cannot see the reason for some of the Trade Boards being separate and meeting separately. The same Appointed Members sit on the Jute Trade Board that sit on the Flax Trade Board, and practically do use the same machinery, it is the same processes, only there is a difference in fibre. So long as these Boards are separate, I think a special Board should be set up for the finishers, but I can easily see where lots of these Boards could be brought together and, when that took place, of course the finishers could be brought together as a section of it.

10,115. *Sir Arthur Pease*: You have no idea at all why the finishers were left out?—No, I do not know why they were left out.

10,116. *Dame Adelaide Anderson*: Would you urge their being brought in on the ground of low wages or lack of organization, or both?—Well, lack of effective organization, for this reason: for example, there are a few thousand finishers in Dundee. Many employers are ashamed of the wages that are paid to the men; they have admitted that themselves; but supposing the employers agreed, outside the Trade Board, to substantially advance the wages of finishers, then you have other 35,000 workers in Dundee who want an advance in wages too, because the finishers would be getting an advance in wages. It is the same in every section.

10,117. *Sir Arthur Pease*: Are there not members of your union who are finishers in other trades than finishers in the flax and jute trade?—No.

10,118. There are finishers?—Yes, there are finishers in Lancashire and other places. Ours is a local society confined to Dundee.

10,119. But I understood the proposal was to have finishers for all trades?—No, that has never been discussed by us. We have seen several Ministers of Labour and we have discussed questions with them, repeatedly, and they have been sympathetic; but we have never discussed that question. I understood

18 January, 1922.]

Mr. J. CUNNINGHAM.

[Continued.]

that what was to happen was that for the finishers in the flax trade and the finishers in the jute trade in Scotland there would be a Board set up. There are other well organized trades who will not have anything to do with Trade Boards. They get along all right with their own Trade Union Organization. They prefer Industrial Councils and that sort of thing.

10,120. You agree generally with the evidence that has been given?—Yes.

10,121. You want to urge the importance of putting up a Trade Board for the finishing trade in flax and jute?—Yes.

(The Witness withdrew.)

COUNCILLOR T. LOWDEN, called and examined.

The Witness handed in the following statement as his evidence-in-chief:—

SUMMARY OF EVIDENCE BY COUNCILLOR T. LOWDEN.

The workers' representatives on the Jute Trade Board are of opinion that the continuance of the Trade Board is a necessity. This is a trade out of which large profits have been made by the employers and very low wages earned by the workers.

Every operation through which the fibre has to pass from the time it enters the mill till it leaves the packing press as bales of cloth, requires a degree of skill which it takes a considerable time to acquire, and strange as it may seem, the operation of spinning to which the manufacturers attached the most importance, was, until recently, the most poorly paid. In fact, the jute trade is one of the industries to which a Trade Board is indispensable from the workers' point of view.

Minimum Wage.

The minimum wage of £2 10s. for men fixed by the Board is inadequate for a man to maintain a wife and rear a family, but it was the highest figure the workers' representatives could extort from the employers, who proposed a much lower figure, thus emphasising the necessity for a Trade Board for the jute trade.

The minimum wage fixed for women workers at 32s. per week is among the lowest fixed for adult female skilled workers. From these rates there has already been a reduction of 12 per cent. and a further reduction of 6½ per cent. takes effect next month, but had there been no Trade Board I am convinced that the employers would have carried out their original intention of reducing the wage by 25 per cent. In any case these low rates and these reductions indicate that this is a trade where the organisation is insufficient to enable the workers to regulate wages for themselves.

In a letter sent to the Minister of Labour on the 4th of February last year by Mr. Cathro, Secretary of the Jute Spinners' and Manufacturers' Association, Mr. Cathro writes as follows: "In a large proportion of cases the operative rate of wages is the effective minimum fixed by the Board." Now if Mr. Cathro is right, and I raise no objection to his statement, we maintain that Mr. Cathro strengthens our case for the continuance of the Trade Board if the workers are not to be depressed beneath the poverty line.

Organisation.

In the same letter Mr. Cathro writes as follows: "The employers and workers in the jute trade are highly organised and before the operation of Trade Board Acts they were accustomed to come to agreements as to working conditions and wages."

We are well aware that the employers are highly organised, and we have found them to show a decided reluctance to discuss matters under dispute with the workers' representatives.

It was found impossible to deal with the trade as a whole, and the result was that different rates of

10,122. That is the main point?—Yes. I want to add my quota to the evidence that has already been given and the opinions already expressed, that Trade Boards ought to be retained, that it would be nothing short of a tragedy if the Trade Boards were abolished, so far as jute and flax are concerned anyhow. I can only speak for them.

10,123. *Dame Adelaide Anderson:* And you think the presence of outside opinion through the appointed members is a reason for the Trade Boards organization?—Yes; I do not see how it could be done otherwise.

wages were fixed for the same class of work by the different employers. Since the trade has been brought under the Trade Boards Acts this anomaly has to some extent been remedied by the adoption of spinners' and weavers' rates.

So far as the workers are concerned, it is not to be expected, after 18 months of short time and in many cases total unemployment for that period, that their organisation can be effective from an economic point of view, hence the necessity for the Trade Board.

Agreements.

Our experience of agreements come to between the employers and the workers has not been a happy one, as we have found that the employers have, when it suited their purpose, had no scruples in violating both the spirit and the letter of some of these agreements. It is the experience we have gained that makes us anxious to retain in force the machinery which has been established for the legal regulation of wages in the jute trade. There is no doubt whatever that the Jute Trade Board has been beneficial both from an employers' and workers' point of view. Many points of difference which might otherwise have led to disputes involving loss of time have been arranged. The Board being composed of the authorised representatives of workers and employers, and its findings having to apply to the whole trade, has had a steady effect, and there appears to be a tendency towards a better understanding between the employers and the workers than has previously existed. To discontinue or curtail the powers of the Board at a time when the workers are suffering acutely from the effects of a long spell of bad trade would, in my opinion, be a great error.

FURTHER POWERS—INFORMATION.

The purpose of the Trade Board Acts is to afford some measure of protection by fixing, varying and cancelling rates of wages to workers in badly-organised trades, but the Acts do not provide the power to compel employers to disclose information as to wages, costs or profits, and the Board is often at a disadvantage when questions regarding the ability of the trade to carry the wages bill is under discussion. Under such circumstances the Chairman and Appointed Members are called upon to give a very important decision with very questionable data before them.

I am of opinion that the Board should have the power to demand such information.

APPOINTED MEMBERS.

It is essential to the smooth working of a Trade Board that the representatives on both sides should have confidence in the Chairman and Appointed Members. I readily admit that theirs is a delicate task, and that it is sometimes not an easy matter to hold the scales of justice level; but no Appointed Member, whatever be his or her qualifications or otherwise, can hope to retain the confidence of the Board unless they show a due appreciation of the

18 January, 1922.]

COUNCILLOR T. LOWDEN.

[Continued.]

responsibility which rests upon them. As it is very often the votes of the Appointed Members which are the deciding factor, I hold that the representative members ought to have a voice in the selection of Appointed Members.

COMBINING KINDRED TRADES UNDER ONE BOARD.

Much of the agitation against Trade Boards is because of the expense incurred. I consider that under the exceptional conditions such expense is justified, but I think a considerable saving could be effected by including several trades within one Board. There is, for instance the jute and flax trade. Now there are a number of firms who work both fabrics and who have some difficulty in knowing which Board they ought to be working under at a given time. Such firms are generally engaged in the heavy end of the flax trade, and I do not see why they could not be brought within a combined Board. Such a Board could be formed into committees which would consider the points which applied to their particular branch of the industry before these were submitted to the full Board. If these two Boards—the Jute and the Flax Boards—were combined, a large and important section of textile workers—finishers—for whom the setting up of a Board has been under consideration for some time, might also be brought within the same Board. I am sure that most of the workers' representatives would be in favour of the Trade Board Acts being so amended as to give the Minister the power to include different branches of a trade within one Board.

10,124. *Sir Arthur Pease:* You represent the workers' side of the Jute Trade Board?—Yes.

10,125. Do you agree generally with the evidence that you have heard?—Yes, I agree in general to what has already passed from the other representatives here. I think, first of all, that we ought to take into consideration, when we are considering whether a Trade Board is or is not necessary, that the Government must have explored every avenue of information before they set up the Trade Boards at all, and they did consider it necessary to set up a Trade Board in order to meet the circumstances which they expected would arise. These circumstances, it is admitted, did arise, and our contention is that they exist to-day; hence the necessity for them to-day. We maintain also that there have been very large profits made out of the jute trade. Until recently, however, we had not the opportunity of knowing anything at all about the profits, because most of these firms were private companies. It was only when Jute Industries, Limited, was set up, and we saw its prospectus, that we got an idea of the real profits that were being made. Previously to that we only knew when a manufacturer died what he was actually making while he was living. Of course, we are prepared to admit that there are good employers as well as bad ones, and all the good ones are not the dead ones—there are some still alive—but it was the good ones whom we had never any difficulty of dealing with. It was the bad ones that we had difficulty in dealing with, and, as I have indicated in my summary here (and Mr. Sime brought it out very clearly in his evidence), there was a very considerable difference in the wages that were paid in the different firms for the same class and the same quantity of work. When the arrangement as to these wages was made, not by the Trade Board, but by reason of the Trade Board machinery being there—that is the spinners' and weavers' rates—it was found that there was a considerable difference in the price that was paid and in the fabric the employers took for a basic price. The consequence was that there was a levelling up in certain respects, and a levelling down in others, in weavers' wages. The main argument upon that is this, that the employers made something and the weavers lost something; it was a one-sided agreement so far as they were concerned.

10,126. Which was agreement was that?—With regard to the spinners' and weavers' rates, to which

Mr. Sime referred, and which I refer to here in my summary.

10,127. If you would give the date of the agreement it would be easier to trace it, because there are so many?—Yes, but these are the rates now in force. "It was found impossible to deal with the trade as a whole, and the result was that different rates of wages were fixed for the same class of work by the different employers. Since the trade has been brought under the Trade Boards Act this anomaly has to some extent been remedied by the adoption of spinners' and weavers' rates." It was done because of the Trade Board machinery, as Mr. Sime pointed out, and there was no getting the manufacturers to meet the employees' representatives previous to the setting up of the Trade Board, with any degree of expectancy on the part of the workers to be any better off; in fact in 1916, even, it went to arbitration. It was turned down at arbitration, and the consequence was an eleven weeks' strike.

10,128. What do you mean by "turned down at arbitration"?—They got nothing through arbitration, and the consequence was that the workers struck work.

10,129. The workers struck against the Award?—Yes, the workers struck against the Award, and they were 11 weeks unemployed, and it was ultimately settled by a representative of the Board of Trade arbitrating between the two, and they got a rise of wages then. Now the question has been asked in regard to the minimum wage. The reason that the minimum wage is so low arises from the fact that from 1914 to 1919 the workers never reached the rise in the cost of living. So far as the jute trade is concerned, their advances in wages were much lower than in any other trade, and consequently when it came to fixing a minimum wage, the employers did their very utmost to keep it as low as they possibly could, and they had the advantage that the wages had not advanced in the jute trade as they had done in other trades. You will see that I quote in my précis from a letter from Mr. Cathro, which he wrote to the Minister of Labour on the 4th February last year. He was writing, of course, on behalf of the Jute Spinners' and Manufacturers' Association, appealing to the Minister to withdraw the Jute Trade Board from the operation of the Act. M. Cathro writes "The employers and workers in the jute trade are highly organised, and before the operation of the Trade Board Acts they were accustomed to come to agreements as to working conditions and wages." What I say with regard to 1916 will indicate to you that we could hardly come together to agree; and between 1917 and 1919 the workers had to appeal for arbitration and an advance of wages six times. The employers never voluntarily gave an advance of wages during the period of the war.

10,130. But did you not go to arbitration by agreement between the employers and the employees?—Whenever the necessity arose. Mr. Cathro says they were accustomed to come to agreements; here the workers endeavoured to meet the employers, but the employers would not grant them an advance of wages, and consequently the workers had to appeal to arbitration for advance in wages.

10,131. Of course, I do not quite know what the position was there, but in some trades it was always necessary to get a formal sanction to an increase in wages, or the Government would not give an increase in the price of material. I do not know whether there is anything of that in your case, but you had to get the formal sanction of the Ministry you were dealing with for the rise in wages before they would increase your prices to that amount. I do not know whether that applies to the jute trade.—What the employers say is that they are not in a position to increase the wages.

10,132. That might have been so, without the sanction of the Government?—But it has always been the same—long before the war. If you go further back than 1906 you find the same thing.

18 January, 1922.]

COUNCILLOR T. LOWDEN.

[Continued.]

10,133. But I want to make it quite clear to you: the employers based their prices for certain materials that I know of on wages, and unless the wage had been sanctioned by the Ministry concerned, they would not give an equivalent rise in prices. What I want to know is, was that the case in the jute trade?—That would not apply in 1917, I think.

10,134. I do not know the particular dates, but it did apply to a considerable part of the war; and I wanted to know whether there was anything of that preventing the employers coming to agreement?—No, I do not think there was. Now, Mr. Cathro, in that same letter, writes: "In a large proportion of cases the operative rate of wages is the effective minimum fixed by the Board." I think I ought to put before you the reason why that minimum was fixed. It was simply because the workers' wages had never come up to the increased cost of living. So far as the manufacturers are concerned, the manufacturers, of course, are highly organised; they have their associations and they have always held the fort, because they have the capital behind them and they have the key of the door in front, and the workers have had a very poor chance, so far as the jute trade is concerned, in going up against them, because the workers' organisations are practically in their infancy. Consequently while the numbers may be strong, the finances are weak; and if you take into consideration that they have been for eighteen months on short time, and a good many of them during that period have been out of employment altogether, you can quite well understand that, from an economic point of view, their organisation cannot be very fit. You asked Mr. Hendry, I think, Mr. Chairman, in referring to the Trade Board and unemployment, how did it affect Ireland—how did unemployment stand in Ireland? There was unemployment in Ireland long before there was a Trade Board at all. Ireland was the first to feel the effects of the war, because the cross-Channel steamers were taken off for service as transports, and a good many factories had to be closed down in 1916 and 1917. I happened to hold an important position in Ireland at that particular time, and in the factory I was in 400 looms were closed down in 1916. Therefore, so far as the unemployment in Ireland is concerned, the Trade Board had nothing at all to do with it.

10,135. My question was not addressed to that at all. It was as to whether there was any considerable variation between the rates in Ireland and Scotland—the actual rates being paid?—No, but I understood you to ask, with regard to unemployment, too, as to how the unemployment stood there; I may have misunderstood you. Now I do not think there is anything further that I want to say except really with regard to these further powers in connection with the Trade Board, but if there are any questions which you would like to put in connection with any point, I shall be pleased to answer.

10,136. You suggest that the Trade Board should have power to ask the employers to disclose wages, costs and profits?—Yes. That is one of the difficulties.

10,137. Do you mean individual firms should disclose them, or the trade as a body should disclose them?—The trade as a body, when the Board finds it is necessary. We have found that the employers make statements which they will not substantiate by figures, and we have often found that both the workers' side and the appointed members have been at a disadvantage in regard to that. The only thing that we can fall back upon in regard to figures is the Trade Report in the local paper, the "Dundee Advertiser." You will observe that the employers say at the present moment that they are losing a great deal of money. It may be so, when the machinery is standing idle, but so far as I am able to make out from the price of cloth and the price of raw material, and the amounts they have to pay in wages, they have still a good margin. Let us take a 10½-oz., 40 in. hessian fabric, which they have based the weavers' wages on. I find it costs them 28s. 7d. for 100 yds or 3½ per

yard, and, according to this Report, which is from the "Advertiser" of 14th January, they are getting 38s. Yet they tell us they are losing money. I have no doubt they told you, when they were here the other day, that they were losing a great deal of money. Now it is just as easy for me to calculate this from the published information as it is for the manufacturers; there is no secret at all about it so far as this is concerned. I have no doubt that with the amount of machinery and work standing idle, they are not making the profits that they are accustomed to make, but at the same time I cannot see where they are losing money.

10,138. That is upon your point that the Trade Boards ought to have powers to get information as to the profits?—Bearing on that point also, Mr. Sime proposed a motion at the Trade Board that the employers should furnish certain information in regard to the wages that were being paid in the trade. They did not give us the wages that were paid for the whole trade in Dundee; they gave us the wages of nine firms, and I have no doubt they selected the firms from which to give us the information. Of course, with the exception of the Weavers' and Spinners' rates, there is no equal pay for a job; you have only the minimum wage to fall back upon. Consequently this document which they issued is no good to us.

10,139. You want the Trade Board to have authority to demand further information?—Yes.

10,140. And those are the reasons you give for it?—Yes.

10,141. Of course we have nothing to do with settling wages. Have you any other points you would like to make?

10,142. Mr. Bell: I do not think you deal with the particular point, but Mr. Sime, I think, deals with the question of co-ordination. Have you any settled opinion with regard to that matter?—I do not know that I have a settled opinion on that matter.

10,143. Supposing you have a woman of 21 or 22 years of age, an adult, working either in a flax mill, or a jute or cotton mill, or a worsted mill, do you know of any reason why, in fixing a minimum wage for a woman of that age, there should be any variation in the rate?—I am not so well acquainted with the Woollen Trade, but so far as jute and flax are concerned, I see no reason why there should be any difference at all. If it is only a minimum wage, I do not see why there should be any difference in any of them, because it is a matter of what will be a subsistence wage. The minimum wage is a subsistence wage; it is not an economic wage, it is fixed really upon what would be the least that anyone can live upon.

10,144. Dealing with the minimum wage that is fixed according to the same subsistence level, do you know of any reason why a woman working in any industry should not receive the same minimum wage?—Certainly not, no reason at all.

10,145. Who do you think should fix that minimum wage?—Well, of course you have got the Boards, but I do not see why all these Boards should not be combined throughout the whole textile trade.

10,146. If you are going to deal with the question of a national minimum—and of course in these replies that is what you are suggesting—covering the minimum in any industry, should not Parliament fix that national minimum?—I do not know that I would go to the length of going to Parliament to fix the minimum. I would leave the different industries to fix the minimum.

10,147. Then you would get variations, would you not?—I do not think you would find very much variation. I think people would come closely to it. Where there is a big difference in the minimum wage, it comes in the industries that were already badly paid and badly organised; and the Jute Industry and the Flax Industry were badly organised. It is only at a recent date that we have begun to make headway. If you have an industry in which a male or female is earning a big wage, the minimum wage does not matter. Here to-day we have heard of the Boot

18 January, 1922.]

COUNCILLOR T. LOWDEN.

[Continued.]

Repairers; their minimum wage is far higher than ours.

10,148. In one of your answers—and it is as well to remember what we have said previously—you said the minimum would be fixed on a subsistence level?—No, I did not say it should be; I say it is, in this trade, fixed on a subsistence level. That is one of the reasons put forward for putting it before the employees' representatives. Both the Chairman of the Trade Board and I were agreed about that.

10,149. Let me put it in another way: supposing you are fixing a minimum wage on a subsistence level, that no adult woman should be allowed to enter into industry unless the employer paid her that wage—that would be a national minimum?—Yes.

10,150. And then leave the Trade Boards to settle anything for increased skill. Would you be in favour of a system of that kind?—I certainly would not have any objection; but, so far as this minimum was fixed, that was fixed at a subsistence level. That was one of the points that Professor Baillie argued very strongly with Mr. Sime, that this was only a wage that would be paid in a very few instances. We took it that this minimum wage, whilst it would be the lowest wage, would be paid automatically to the sub-normal worker; since the exemptions came on the employers have had a lower wage for people that are sub-normal. That is really why this wage was accepted by any of the representatives as a minimum.

(The Witness withdrew.)

(Adjourned till Wednesday, 25th January, 1922.)

TWENTY-SECOND DAY.

Wednesday, January 25th, 1922.

PRESENT:

THE RIGHT HON. THE VISCOUNT CAVE,
G.C.M.G. (Chairman).
THE RIGHT HON. LORD WEIR OF EASTWOOD.
DAME ADELAIDE M. ANDERSON, D.B.E.
MR. JAMES BELL, M.P.

THE HON. MRS. ALFRED LYTTLETON, D.B.E.
MR. W. T. LAYTON, C.H., C.B.E.
MR. E. L. POULTON, O.B.E., J.P.
MR. A. PUGH.
MR. H. D. HANCOCK (Secretary).

Mr. G. F. MAYES, called and examined.

The Witness handed in the following statement as his evidence-in-chief:—

The Brush and Broom Trade Boards (Great Britain and Ireland) and the Hair, Bass and Fibre Trade Board (Great Britain) have been invaluable to brush workers and preparers of brush materials in improving their industrial conditions, wages having been exceptionally low, particularly in the unorganised portion of the industry, prior to the war.

The industry is not well organised, and outside the Trade Union sphere employers had a free hand in fixing rates of wages for all classes of workers.

The establishment of the Trade Boards has resulted in the creation of uniform minimum rates for Great Britain and Ireland.

The result has been, not only to benefit the lowest paid workers, but to materially assist those employers who, by agreement with the Trade Unions, were paying a higher rate of wages.

Manufacturers object to the delay in bringing into operation a variation of existing rates, and in this the workers concur, although under present circumstances the delay does not adversely affect them.

It is generally agreed that the "objection period" is too long and should be considerably reduced. If a

10,151. Dame Adelaide Anderson: You must, in fact, be aiming at something rather more than bare subsistence for your minimum, or you would not ask for information about costs and profits?—That is so, but that is now, after the minimum wage has been fixed?

10,152. Yes?—We want to get at that. We have really got no piece-work basis minimum at all yet; we have only a time-rate minimum.

10,153. Based really on what is the lowest living wage?—Yes.

10,154. Sir Arthur Pease: But you think the minimum rate ought to be fixed, to a certain extent, having regard to what the trade will bear?—Yes, for a normal worker.

10,155. If a trade was doing very well the minimum rate ought to be higher than if the trade was having very severe competition?—Of course, you take me away from the point there, too. You have taken a variation of the minimum wage. That is really what the Trade Board is for—for fixing, varying and cancelling.

10,156. Dame Adelaide Anderson: Partly having reference to the state of trade and what the particular trade will bear?—Yes.

10,157. That is the real reason, in argument, for an individual Trade Board for a particular trade or group of trades?—That is so.

Board confirms rates after considering all the objections, they should operate as soon as notice to this effect can be issued.

The suggestion that has been made that Boards should only have power to fix one rate for the whole of an industry would render the Boards on which we are represented almost useless.

The rate that could be fixed under such limitation would be too high for unskilled workers if sufficiently high for skilled workers. On the other hand, if the rate fixed was low enough for unskilled workers it would be too low to be acceptable to skilled workers.

The brush industry is a piece-work industry, and the Boards, by unanimous agreement, have fixed piece rates for nearly all the branches of the trade, and this has been beneficial to the trade as a whole: the workers know exactly the rates they are to receive, the manufacturers know the rates they have to pay, with the additional advantage of being assured that they are not being subjected to unfair competition.

The work of the Inspectors is simplified, as they have only to compare the wages book with the lists of piece rates and are not required to test workers to ascertain if the rates they receive yield the piece work basis time rate to "ordinary workers."

25 January, 1922.]

Mr. G. F. MAYES.

[Continued.]

The Boards to which I refer have encouraged the introduction of apprentices and learners into the industry by providing for proper instruction at rates below the ordinary minimum rates.

With reference to the evidence of manufacturers who have objected to Trade Union officials representing the workers' interests on the Boards.

Many of the officials referred to have at some time been employed in trades they represent, many of them having served an apprenticeship of five or seven years.

Their membership to the Boards is necessary in the workers' interests and for the general efficiency of the workers, as they have a knowledge of the industry as a whole and by their general touch with the workers are able to speak with authority as to their wishes.

If Trade Union officials are debarred from attending the Board meetings, the workers' representatives will be continually asking for adjournments to enable them to consult their officials as to the general effect of any proposal.

If there is anything in the manufacturers' objection, the workers, on the other hand, could object to the secretaries of Manufacturers' Associations attending Trade Board meetings, but they do not object as they appreciate the fact that their general knowledge also is invaluable to the Boards.

We do not agree that the present voting powers of the Appointed Members should in any way be restricted. Our experience has proved the value of the Appointed Members in their endeavours to bring about agreement, but such efforts would be likely to be futile were it known that the Appointed Members could not vote on the subject before the Board. The full power of voting should be retained, but only exercised as a last resource to bring about a decision.

Our advocacy for the retention of the existing powers of voting is because they strengthen the Boards and tend to agreements being reached on matters under discussion, and is not due to any advantage gained by the workers in the past, as the majority of decisions have been reached by unanimous agreement, very few votes having been taken.

The Brush and Broom Trade Board (Great Britain) has passed the following resolution:—

"It was moved, and unanimously agreed, that the attention of the Trade Board having been drawn to attacks and criticisms which have been made against the methods of regulation of wages by means of Trade Boards, the Trade Board desire to place on record their view, which has been reached after an experience of 18 months of the working of the system, that the Trade Board has proved of great advantage in securing industrial peace in the trade and in the settlement of all questions relating to wages and conditions. The Trade Board further desire to record that, while there are certain administrative difficulties, towards the removal of which steps are now being taken, the establishment of the Trade Board in the brush and broom trade is regarded as an important step towards the attainment of self-government in the industry."

The Hair, Bass and Fibre Trade Board (Great Britain) passed the following resolution:—

"It was moved and agreed that the Board record their opinion that the Trade Board has been of great assistance and utility to the trade both to employers and workers, and that in the opinion of the Board the principle of the Trade Board Acts is sound, but that the machinery of the Boards was in urgent need of radical amendment with the object of giving the Boards greater freedom of action and enabling them to fix and vary rates much more rapidly."

(Signed) G. F. MAYES,
Secretary.

January 3rd, 1922.

10,158. *Chairman*: Mr. G. F. Mayes, you are the Secretary of the National Society of Brushmakers, are you not?—Yes.

10,159. Is that a society of employers or employed?—Of the workers.

10,160. Have you a large membership?—Yes; it is large, considering the size of the industry. Of course, it is a small industry compared with many.

10,161. Does it include an important proportion of the workers in the industry?—Yes, quite.

10,162. Is the industry well organised, so far as the workers are concerned?—No, I should say not.

10,163. So that you have not got a large percentage of the workers?—No. It is difficult for us to get the exact number employed in the trade; but I should think there were fully 40 per cent. outside the various unions in the industry.

10,164. *Lord Weir*: Outside of your union?—Yes.

10,165. I mean, there may conceivably be a number of other unions?—I am speaking of outside of all unions. We have the largest membership. The other unions have not a very large membership—only a matter of 200 or 300.

10,166. *Chairman*: What is the view of your society as to the effect of the Brush and Broom Trade Board?—We think it has been invaluable to the workers in the brush industry. Unfortunately, ours was always recognised as one of the lower-paid industries in the country. It had the name for many years of being one of the sweated industries of this country, and first the war and the conditions that prevailed then, and latterly the Trade Board, I am glad to say, have removed it from that position.

10,167. *Mr. Poulton*: Would you say the Trade Board has been valuable also to the industry as an industry?—Undoubtedly.

10,168. So that it is a two-fold benefit?—Yes. It has been invaluable to the employers in the sense that they have known exactly where they stand when they have had to tender for the various classes of work.

10,169. *Lord Weir*: That is, where they stand as regards other brush-making employers in this country?—Exactly.

10,170. *Chairman*: Are you a member of the Board?—Yes.

10,171. I see you have fixed a general minimum time rate. It seems to rise from date to date?—No. We fixed one time rate, and that time rate has remained up to the 2nd of this month, when we reduced it by $7\frac{1}{2}$ per cent.

10,172. I have the schedule here, and it seems to fix one rate as from the 1st January, 1920, another from the 28th May, 1920, and another from the 2nd January, 1922?—Are you speaking of the time rate?

Mrs. Lyttelton: That is the overtime rate, is it not?

10,173. *Chairman*: I am told that some of these rates became effective at different dates?—That may be so.

10,174. And they have all been embodied in one consolidating order, and that is why I find the three different dates?—Yes.

10,175. Then you have also fixed a general minimum time rate for female workers, and a guaranteed time rate for certain classes of female learners?—Yes.

10,176. Also a piecework basis time rate for female workers, and another piecework basis time rate for female pan hands, which is an exception?—Yes.

10,177. Then there are overtime rates for male and female workers, a form of agreement for learners, and there is also a scale for apprentices?—Yes.

10,178. Then there is a form of apprenticeship deed, and in another schedule there are minimum piece rates for a number of classes of workers?—Yes, that is so.

10,179. Those seem to be very detailed; they extend over about 18 pages of the schedule. Then there is another schedule of piece rates for other classes of workers, which runs over a number of pages, and altogether it is a very elaborate schedule?—Yes. I think we can claim that it is elaborate, but, at the same time, it is very clear to the workers and employers.

10,180. Does that embody a previous agreement between employers and employed?—No. All our rates

25 January, 1922.]

Mr. G. F. MAYES.

[Continued.]

have been arrived at since the Board came into operation.

10,181. *Mr. Bell*: Had you no rates in operation previously?—Yes, we had rates in operation.

10,182. How did you arrive at those rates?—By negotiation with the British Brush Manufacturers' Association.

10,183. And those have not been embodied in the rates under the Trade Boards Act?—They have been embodied, but they have been altered since. I mean the actual rates we have now were not the rates prevailing prior to the Trade Board, but they are based on such rates.

10,184. That is to say the rates have been superseeded?—Yes; they have been altered, and either increased or decreased, as the case may be.

10,185. *Mrs. Lyttelton*: On the whole they have been increased, I suppose?—Yes, they have been increased by a percentage when the cost of living rose after our Board was brought into operation.

10,186. *Chairman*: Have these rates been arrived at by agreement as far as the Board is concerned?—Quite so. I may say that practically everything our Board has done has been done by agreement.

10,187. The Appointed Members have not had to vote?—I do not think they have voted more than five times in a matter of two years.

10,188. *Mr. Bell*: Had you any districts prior to the Trade Board coming into existence, where no agreed rates between yourselves and the employers were in operation?—Yes, I would not like to specify any particular districts, but all over the country, even where we had agreements with employers, rates were paid which were simply rates which the employer chose to pay, and which the workers had to accept, not being organised.

10,189. How did those rates compare with the rates you agreed with the employers?—They were ever so much lower.

10,190. *Chairman*: You have some criticisms, I think, to make upon the machinery of the Act?—I have not much criticism to make except in regard to the delay in bringing the new rates into operation or any revision of rates. As I have said in my statement, it does not particularly affect us to our disadvantage at the present moment, but during the rise in the cost of living, of course, it did affect us. We had to wait for a very long time for advances, and at that time particularly we should have liked to have seen the machinery speeded up.

10,191. I suppose your union was able to get advances even before the Trade Board made an advance?—Yes. So far as the organised workers were concerned, we did get advances by agreement with the association, to which I have referred. Of course, that only applies to a limited few, while the Trade Board rates now apply to the whole of the industry.

10,192. On the other hand, the employer cannot make a reduction until the Trade Board rate is reduced?—Not at the present time.

10,193. And you think the period of two months for objections is too long?—Yes; I think it is quite unnecessary, particularly when a revision of rates has been agreed upon.

10,194. Would a month be a suitable period?—That is the longest, I think. I should think three weeks would be enough.

10,195. Of course, a little time is required to enable the unions and the other associations to consider the proposal for an alteration of rates. It must take a little time to get their members together to thresh the matter out, so that they must have three or four weeks, at all events?—I think it is advisable that they should have some time, but certainly two months is not required.

10,196. Then you say that the suggestion that the Board should only have power to fix one rate for the whole of an industry would be prejudicial?—Yes.

10,197. That means one minimum rate, I take it?—Yes.

10,198. Will you develop that point?—I have done so a little further on in my statement by pointing

out that if the Board are only allowed to fix one rate, it would be such a rate that if it was satisfactory for the unskilled workers it would be useless for the skilled workers; on the other hand, if it were satisfactory for the skilled workers, the employers would think it was too high for the unskilled workers. In an industry like ours we want power to govern the industry. We look upon the Board as being valuable as the governing body of the industry.

10,199. You want a Board which will regulate wages, and, as you say, govern the industry?—Quite so.

10,200. But is that the view which your Board has taken of the purpose of the Acts?—Yes. So far as our Board is concerned, we have been prepared—both workers and employers—to leave the Trade Board to settle any matter in dispute.

10,201. *Lord Weir*: But is that the spirit in which you have applied the Act on the Trade Board?—Yes.

10,202. *Mr. Poulton*: That is, as far as you can do under the existing law?—Yes, as far as we could do. I agree that there are many matters which the Trade Board cannot settle; but employers have sent questions arising out of the list to the Board for settlement, and they are quite prepared to accept the Board's decision, whatever it may be—either for or against them.

10,203. *Chairman*: The Board, as a rule, has been able to settle those matters by agreement?—Yes.

10,204. *Mrs. Lyttelton*: What proportion of your workers are skilled? Is the larger proportion skilled or unskilled?—The whole, I should say, are skilled.

10,205. *Lord Weir*: To begin with, I notice your Board fixes only one rate for female workers?—No; they fixed a whole range of rates according to age for time workers and one rate only for pieceworkers.

10,206. Over a certain age you have only one rate for female workers?—For adult female workers we have only one time rate.

10,207. That is a rate, I think, of about 8½d.—It is 8½d.

10,208. Now you have evidently changed your conception of your duty, because you have fixed a rate which covers skilled workers to the extent of 100 per cent. There is a minimum rate for female workers over 21 up to 1s. 4½d.—That only applies to a special section of workers.

10,209. Yes, but it is so?—Yes.

10,210. What caused you to do that? Was there something insufficient about the single rate?—We were dealing with a special class of skilled female worker doing work similar to that done by men, and the desire was, in certain classes of work, to bring women somewhat to an equality with men in that special section of work.

10,211. I think you say in your statement that the result of the Board has been to benefit the lowest paid workers. You fixed a rate which protected obviously the lowest paid worker?—Yes.

10,212. What actually caused you then to make a change and to begin to protect the highest degree of skill?—The explanation I can give for that is that the work for which we had fixed the higher rate to which you refer is work which has always been mainly recognised in the industry as the work of men. The women do the work in an identical manner, except for one operation, which they physically do not do, to the men, and the Board saw no reason why for that class of work the women should not be paid the same rate as men.

10,213. Has the fixing of that rate had any effect on the employment of women?—It has only been in operation from the 2nd January of this year.

10,214. Do you anticipate it will have any effect on the employment of women?—No, I do not think so at all. I do not see why it should.

10,215. *Dame Adelaide Anderson*: Was it really in part to protect the men?—I think it would be fair to say yes.

10,216. *Mr. Bell*: Was the object in fixing that rate to prevent the men being displaced by women because their labour would be cheaper?—No. I should develop this position: We have realised, of

25 January, 1922.]

Mr. G. F. MAYES.

[Continued.]

course, that women have been displacing men in this operation, and the Board has arranged, as far as it could possibly arrange it by the fixing of rates, that certain classes of the work should be made by women and certain classes by men. The higher rate that you have referred to may drive that class of work into the hands of the men; on the other hand, where a specially low rate has been fixed for certain classes of that work, it is going to have a tendency to drive that work from the men into the hands of women.

10,217. *Dame Adelaide Anderson*: Do the functions which you desire the Trade Board to be extended to cover include such questions as regulating which processes shall be performed by men and which by women?—If it is to the interest of employers and workers, I should desire it.

10,218. Have you not really in the Act already got the material power when you have power to control wages by fixing minima for different classes, and coupled with that the power to standardise hours?—Yes, I think we have the powers to an extent. I am not particularly asking that the Board shall have any further powers; I am asking that they shall retain their present powers.

10,219. I thought I understood you, in answer to one of the questions, to say that you wanted an extension of the scope of the Board?—If I did say that I really do not want to press it. I simply ask that the present powers shall not be interfered with, because we find the Act as it stands now beneficial to our industry.

10,220. You would say that if you have power to regulate wages up to a point by these minima, coupled with the standardisation powers, you have got the control of the things that most matter?—Yes, I think so.

10,221. *Chairman*: Then I think you have rates for learners?—Yes, we have rates for learners.

10,222. And rates for apprentices?—Yes.

10,223. Do you make different rates for learners and apprentices?—The expression "learner" applies to girls, and the apprentices, of course, are boys. Actually they are the same thing, but we call them by different names.

10,224. You use the terms in that way?—Yes. Of course, they are considerably lower rates to apprentices in order to encourage girls to be brought into the trade and to be taught properly. I am afraid that the system in the past before the formation of Trade Boards has been that, so far as girls are concerned, they have not been given an opportunity to learn the trade.

10,225. Which do you say is the lower rate?—The learners' rate. They are lower time rates than the ordinary rates fixed for a skilled timeworker.

10,226. *Mr. Bell*: Do I take it then that all the apprentices are boys and all the learners are girls?—Yes; so far as the Trade Board Order is concerned, that is how you could separate the two.

10,227. *Mr. Poulton*: In part 3 of this Schedule there is a rate for homeworkers at per hour. Have you any experience of how that works out? How do you get at the number of hours of anyone working in their own home, because I see under the proposed schedule it says that a homeworker is one who works in her own home?—Yes. Our trade in the main is a piecework trade, and all homeworkers are pieceworkers. The class of homeworker that we have in our trade is governed by a list of piece prices. They are paid by list, and there is no difficulty.

10,228. It is rather misleading then to speak of 9½d. per hour, because it is a piece rate?—The 9½d. is a piece rate based on time rate. The list of prices under the homeworkers' work is based on that piece time basis rate of 9½d.

10,229. *Chairman*: You fix your piecework basis time rate and then you fix your piece rates to produce that amount?—Yes.

10,230. *Mr. Poulton*: You think you have enough experience to say that the ordinary normal worker could earn that rate?—Yes.

10,231. *Chairman*: So that really, once you have fixed your piece rates you do not have to refer to the piecework basis time rate at all?—That is so. The advantage of the Brush and Broom Board is that the employer is in the position that for most of the operations we have fixed piece rates. We have no fear whether the rates to be paid do not conform to the Trade Board standard. As long as the employer pays the piecework rates, whether they yield the minimum or not is no concern of his.

10,232. *Lord Weir*: Suppose an employer gets out a new process for some particular operation which is laid down in the Schedule; does he pay the same price?—He pays those rates when the work is done by the methods that those rates are to govern. But if he introduces a new method and he employs his workers on piecework, he would have to pay such rates as would yield the piecework basis time rate.

10,233. That is all?—Yes.

10,234. He departs from the list and uses the guaranteed piecework basis time rate?—Yes.

10,235. *Mr. Poulton*: And so long as it produces that amount of money that you give, naturally the Board would sanction the new operation?—Yes. He could continue to pay at that rate until such time as the list might be arranged for the particular new method of working.

10,236. *Dame Adelaide Anderson*: He could apply under the Act for a special rate?—Quite.

10,237. *Lord Weir*: Have you many cases of that kind?—No.

10,238. Then do you suppose there is much improvement going on?—In the brush industry do you mean?

10,239. Yes.—No, I do not think there has been a great deal of improvement in methods. The piece list we work under now is a list very similar to one that brush makers worked under 120 years ago.

10,240. *Mrs. Lyttelton*: The Egyptians made brushes, did they not?—I believe so. As a matter of fact, some of the rates in 1914 were not higher than those which were paid 120 years ago in this trade. Before the war we had not had an advance in the biggest branch of the industry for 50 years.

10,241. *Lord Weir*: Is there a large export business?—There is a good deal of export work done.

10,242. Is it a substantial portion of the trade?—I am afraid I am not in a position to say what proportion it is.

10,243. *Dame Adelaide Anderson*: Does not the trade vary very greatly in regard to the size of the undertaking? Do you not have brushes made in very large places and in very small places?—Yes, that is the difficulty of our trade, which makes it difficult to organise it. You can have a brush factory in a back room, and of course you have brush factories which employ hundreds of hands.

10,244. In the large factories I suppose they have labour-saving appliances?—They have more machinery in certain classes of work; but there is not a great deal of machinery used in brush making compared with other industries.

10,245. Then I take it in the large factories they would be doing special types of work which lend themselves to sub-division?—Which lend themselves to the use of machinery, but not necessarily to sub-division.

10,246. Is a good brush better made by hand right through?—Yes, it is more reliable. The best brushes are made by hand, such as hair brushes, clothes brushes, toilet brushes, and brushes of that character. I feel confident that the public will always want the hand-made work for that class of brushes.

10,247. Does the brush industry cover all types of brushes from a fine artist's brush for painting water colours, say, to a scrubbing brush?—Yes.

10,248. *Lord Weir*: These rates which are given are, I suppose, standard rates?—Yes, our rates are really standard rates in the main. We have higher rates in certain cases, but in the main you can say that our Trade Board rates are standard rates.

10,249. *Mr. Poulton*: They are piecework rates generally, are they not?—Yes.

25 January, 1922.]

Mr. G. F. MAYES.

[Continued.]

10,250. So that it depends upon the skill of the operative as to the amount of money earned per week?—Yes. As to our piece rates I am positive that a good many of our workers do not reach the 9½d. basis rate. On the other hand, some earn more. It, however, gives every worker a chance. Whether they are infirm, slow or old, as long as they work at those rates there is no reason why an employer should not keep them in employment rather than discharge them.

10,251. *Chairman*: We have dealt with the important part of your statement. The rest relates, I think, first to the question about trade union officials being on the Board. I gather from your statement that most of the members of your Board who are trade union officials have had experience in the trade?—So far as I know, every member of our Board has had experience in the trade, and the trade union officials referred to have served their apprenticeship of seven years. I was one of them. I would like to add on the question of the trade union officials that there seems to be an erroneous impression that trade union officials desire to be on the Trade Board because they benefit financially from it. I gather that from some of the evidence which has been already given. I should like to say, as regards the trade union officials on the Board with which I am concerned, they have not received a penny from the Government Department since they have been members of that Board, namely, for over two years. Therefore, I should like to correct the impression which has been formed. In the brush trade the trade union officials have not benefited in the way suggested.

10,252. I do not remember that suggestion having been made?—I do not say it has been made by our own employers; but it has been suggested that it might be a good thing if the trade union officials were to make the Trade Board work part of their career.

10,253. All they get, I think, is an allowance for subsistence while they are at work on the Board, and in some cases an allowance for lost time?—If they are full-time officials they do not get an allowance for lost time, but they do get subsistence. So far as the London officials are concerned, I do not think they get any expenses at all—not even a 'bus fare. Certainly I have never received anything as being a member of a Board in England.

10,254. I think you may dismiss that point from your mind as far as we are concerned?—Thank you.

10,255. Then about the Appointed Members, you say they are a useful element on the Board?—We have found them so.

10,256. As a matter of fact, you have not had to trouble them to vote much, but I suppose they take part in the discussions and endeavour to bring about an agreement?—Yes.

10,257. *Mr. Pugh*: What do you think of the suggestion, which I think has come from the employers' side of your Board, that the Appointed Members should be compelled as part of their duty in the case of equal voting, to give a casting vote; and, further, that, while conciliation should play a great part in their duties, the Appointed Members should be compelled to give a decision? Do you think that that is a policy which should be adopted by the Appointed Members? As a matter of fact, it would tend to make your Appointed Members a Court of Arbitration. Do you think that would be preferable to setting up an outside advisory body of some kind in connection with Trade Boards?—I think the Appointed Members should exercise their vote. In one case only on our Board the Appointed Members did not vote. I think, generally speaking, that they should do so. When the matter comes to a vote they should exercise their vote.

10,258. What would be your view as an alternative on the suggestion that you should have a Chairman with two assessors, one from the employers' side and one from the workmen's side, both of whom have definite practical experience in the industry, as against having Appointed Members?—If I give my personal opinion, and not the opinion that I have

gained by general discussion with other members of the Board, my own opinion is that the Appointed Members should remain as they are. But I believe it is the general opinion of other workers' representatives on various Boards that assessors would be an advantage. I rather look upon it as appointing one additional member to each side.

10,259. Your arrangements prove quite satisfactory to your Board, do they not?—Quite.

10,260. Do you think, in addition to maintaining your present arrangement with regard to Appointed Members, it would be an advantage to your Board to have an outside advisory body of some kind to co-ordinate the work of the Boards and to deal with points in dispute which the Boards could not settle, and so on?—I prefer a Board of that character having matters in dispute referred to them rather than that they should be referred to the Ministry of Labour.

10,261. *Mrs. Lyttelton*: You say that your infirm and old workers can be kept on under your rates?—Yes, under our piece list.

10,262. Have you any instances where those rates do not really give them a subsistence or a living wage?—Of course, there are many instances, unfortunately, of that. When workers get old, however good the list, they are unable to earn a subsistence wage.

10,263. And under your rates you feel that they are not quite safeguarded?—They are safeguarded in the sense that they do not lose their employment. The unfortunate thing is that if the employers have to pay them a higher wage it would mean their discharge.

10,264. What I wanted to get at was whether you felt your rates were in the main high enough to cover those cases?—They are not high enough to cover very slow or infirm workers; but they actually do in fact cover them.

10,265. *Dame Adelaide Anderson*: Do you think an industry ought to provide subsistence for gradual infirmity?—Yes. I think it should be the duty of every industry to provide for the old servants.

10,266. By the work they do or by a pension given to them, or superannuation?—If they have been in the service of a firm and have given fair service for a number of years, and then they are unable to earn what is the recognised weekly wage, I think the firm should make them a grant and make their wages up.

10,267. That would make the industry go into the hands of the larger undertakings, would it not?—I suppose it would necessarily.

10,268. Small employers could hardly pension old workers?—They would find a difficulty.

10,269. *Mr. Pugh*: They could make a collective effort in the direction of insurance, could they not?—Yes; it is not an impossible thing to do if all the employers were in their Association and the workers were in theirs.

10,270. *Dame Adelaide Anderson*: That is a different matter; that is recognising it as a different problem?—True; but it is a thing that could be arranged if all workers and employers were in their respective Associations.

10,271. All I meant was that paying a piece rate is not necessarily sufficient to yield a living for the slow and infirm worker?—It could be done by fixing a higher rate, but then they would not be employed.

10,272. *Mr. Bell*: In your particular industry is it your experience where the work is so largely dependent upon the hand that the quickest workers turn out the best work?—I have found by experience that you can do your work as well quickly as you can do it slowly; that is to say, I have always found by experience that the quick workers' work was as good as the slow workers' work.

10,273. But in hand work there is not such a thing as being careful or careless?—Quite; but I think that would apply to slow and fast workers.

10,274. So that in fixing your minimum you have fixed a minimum rate but not a minimum wage?—Not a minimum wage; it is a minimum rate so far as piecework is concerned.

25 January, 1922.]

Mr. G. F. MAYES.

[Continued.]

10,275. So that the question of a man or a woman having sufficient to live upon does not apply in your industry if they are not able to earn it on your minimum rates?—That is so. Some workers, of course, are naturally quick, while others, unfortunately, cannot reach the same position. In that case they work at a list which, unfortunately, is generally based on the faster workers rather than on the ordinary workers as understood by the Trade Board.

10,276. So that the principle of a minimum wage has been departed from entirely by your Board?—No, I should not like to say that. The employers have met us fairly in this matter, and in drawing up this list I do not say we have based it on the fastest worker; but we have endeavoured to base it as equally as we can get it on the ordinary worker.

10,277. *Mrs. Lyttelton*: Still, it is not a minimum wage; it is a minimum rate?—That is true.

10,278. *Lord Weir*: Would it not be desirable if you could fix a guaranteed week?—If you fixed a guaranteed week, it would mean that the worker would be discharged if he or she were unable to reach it. I had to explain to several employers that as long as they paid the piece-list they had no need to get rid of their elderly workers. In fact, I have had to give several of our members a note to take to their employers stating this in order that the workers might be kept in their positions.

10,279. *Mr. Pugh*: Does that mean that your Board has been very successful in dealing with these exceptional cases?—Yes, I think so—by our piece-list.

10,280. It is a difficulty which you have succeeded in surmounting very well?—Yes, and quite successfully. We have not had any serious complaints.

(The Witness withdrew.)

Mr. GURNEY ROWLERSON and Miss F. E. EDWARDS, called and examined.

The Witnesses handed in the following statement as their Evidence-in-Chief:—

STATEMENT OF GURNEY ROWLERSON and Miss F. E. EDWARDS, Members of the Executive Council of the Amalgamated Society of Tailors, Tailoresses and Kindred Works, who desire to give evidence before the Trade Board Inquiry Committee with respect to wages and working conditions in the wholesale and retail bespoke tailoring trade prior to the Trade Boards Acts covering these industries and the effect of minimum rates of wages being fixed.

Qualifications.

(*Gurney Rowserson*): I have been in the trade for 40 years, 35 of which have been spent as a journeyman tailor working on the board. Have also for nearly 20 years been a member of the executive of the above society, which became an amalgamation of local societies in 1866. The last return shows a membership of 35,000 workers exclusively employed in the sewing trade. Members of the council still work at the trade.

Miss F. E. Edwards has been working as a tailoress in the Manchester area in both the wholesale and retail bespoke sections of the tailoring trade for the past 14 years. Has also for the past three years been a member of the executive council of the above society.

Male Workers, Retail Bespoke Section.

Wages and conditions of working prior to the application of the Act.

For many years we found that while in other industries hours had been shortened and wages improved, in the retail bespoke tailoring trade the hours were if anything longer, and wages very little higher than they were 40 years ago; a position being reached that owing to the above-mentioned conditions apprentices would not come to the trade. The result is to-day that on the statement of a member of the executive of the National Federation of Merchant

10,281. *Mrs. Lyttelton*: You are confident that that result has been obtained without too much hardship on the infirm and the old?—Yes, I think our lists have acted fairly. Under present conditions of industry we are not able to deal with a man who has reached that stage when he cannot be as quick as he was in his younger days, and naturally his wages are less. We would like to fix a guaranteed week, but we know what the result would be, and the workers would oppose that.

10,282. *Dame Adelaide Anderson*: Would you say there was a specially large proportion of old and infirm workers in the brush industry—larger than in any other industry? Is it a bigger problem in the brush industry than in other industries?—I should not say so.

10,283. Would you say it was a healthy industry?—No, I should not say that.

10,284. *Mr. Bell*: What would happen suppose you had 100 employees working and you discovered that not 50 per cent. of them were receiving from their piecework rate an amount equivalent to what you regard as your minimum rate per hour?—We should go as a society to the Board and ask for the lists to be increased, owing to the fact that the rates did not afford to a fair proportion of our members a minimum rate.

10,285. *Mr. Poulton*: I think you have made provision for that, because in your agreement you speak of the list yielding a satisfactory rate to an ordinary worker?—That only applies to the ordinary time rate basis. When you fix a piece list it does not matter what it yields so long as the list is paid. We based our list on our previous piecework time rate basis.

10,286. *Lord Weir*: Assuming it to be the output of an ordinary worker?—Yes.

Tailors, 95 per cent. of the work of the city of Manchester is in the hands of aliens, while in the whole city of London, east of the Law Courts, I question if there are 100 British tailors employed.

The above society has over 300 branches in various towns and hamlets, in which the log rates up to 1918 averaged from 4½d. to 5d. per log hour. No increase in wages was received by our members, in spite of the increase in the cost of life, until the August of the above-mentioned year, when about a third of our membership received advances amounting to 20 per cent.

Owing to these low rates men were compelled during the busy season to work very long hours, from 7 in the morning until 9 and 10 at night being the common practice.

The seasonal nature of the trade has been responsible for a position being created by which men got into debt with the employer during slack periods by being paid in advance for work, their hands being tied when the busy time came, thus hampering them in any attempt they might wish to make to improve wages.

Women Workers, Wholesale and Retail.

For years we tried to organise women workers, but found that owing to the low wages they were paid it was impossible for them to pay contributions to a trade union. Prior to the operation of the Wages (Temporary Regulation) Act, wages of fully qualified tailoresses in many parts of the country, particularly in the eastern and western counties, averaged from 5s. to 7s. per week.

In two of the worst sweating towns in the country, Brighton and Portsmouth, it was common practice to pay tailoresses 1s. 6d. per day. The system under which they were employed was for the men to prepare work the first two days of the week, then call in the women and work them at high pressure the remaining four for 6s.

25 January, 1922.]

Mr. G. F. MAYES.

[Continued.]

Learners and Apprentices (Males).

Up to learners and apprentice rates being fixed by the Board, it was impossible to get boys to come into the trade. There is now a desire on the part of parents to put boys into the trade. The employers complain the rates fixed are too high, and this union has agreed to meet the employers and reconsider the present rates, being as anxious as the employers that an agreed satisfactory rate shall be fixed that will again attract British boys to the handicraft section of the trade, otherwise the reputation of first class British tailoring which in the past has been the envy of the world is doomed.

Learners and Apprentices (Girls).

This class of worker in the past has been exploited, many shops in the west country being run by juvenile labour. The fixing of learners' rates has lessened this evil but it still exists. Within the last few months I brought to the notice of the Trade Board a case in Plymouth where an employer in twelve months took eleven apprentices from whose parents he had received in premiums between two and three hundred pounds, and who had no adult labour in his employ to train them.

With respect to this question we are of opinion that the Trade Board should fix the proportion of learners and apprentices to the adult labour employed, in order to ensure effective training. Any weakening of the control at present exercised by the Trade Board will again leave this class of worker to the exploitation of unscrupulous employers.

Conditions of Working, and Wages Paid in various parts of the country before the War.

When war broke out in August, 1914, even the Government took advantage of the unorganised and helpless condition of workers in the clothing trade.

Mr. Lloyd George, when Munition Minister, after promising the Bristol Trade Union Congress that piece rates should not be cut where women labour was introduced, decided the following week, in answer to a question put by myself, that military uniform was not munitions of war. As a result, when other workers' wages were going up by leaps and bounds, we were having reductions forced upon us. In view of this decision we resisted a reduction in Marylebone by a strike, with the result that Inspector Drury pounced on our pickets, taking them to Brixton, and never even brought them before a magistrate for eight days, when they were charged before Mr. Denman with holding up munitions of war. After four hearings before Mr. Denman, McBodding withdrew the charges, admitting that uniform was munitions of war. This decision gave us great help and we were successful in recovering thousands of pounds for sweated women workers under the Temporary Wages Regulations Act.

At this time the Government had no blankets, they bought all the heavy goods they could get from the manufacturers, these were cut in blanket lengths and were given out to sub-contractors to hem. Although workshops were being opened by charitable people for women workers who were thrown out of employment and who could have done this work, the Government gave the work to alien sub-contractors, one of whom, an Austrian, kept an eating house. This Austrian took thousands of these at 2s. 6d. a dozen, again sub-contracting the same to workers at 8d. a dozen, the workers finding their own machines and sewings.

Further, I took a deputation of women workers into the War Office who proved they were making khaki jackets for 1s. 4½d., finding their own sewings, with the result that the contractor was struck off, only to come on again under another name.

One other case in proof of the steps we were compelled to take for the protection of women workers prior to the application of the Trade Board Act.

In the city of Exeter we found a firm employing over 100 women. This firm has created a monopoly in the making of clothes for clergy and church vestments

They were paying two fully qualified male workers 18s. and 21s a week, and two fully qualified tailoresses 5s. a week. As they refused to pay more and the workers were not organised, I waited on Dr. Vincent Cole and the Rev. Carter, of the Christian Social Union, who, after going fully into the case, struck the firm off the white list of the C.S.U. with the result that the firm immediately offered us minimum rates of 18s. a week for girls of 18 years of age and a minimum of 35s. for men in order to get back on their lists, proof that the industry could carry higher wages.

Since the minimum rates have been in force this firm has always paid the top rates, and their trade has enormously increased.

The conditions operating in this firm were general throughout the South-West area, employers always arguing in the towns they could not pay more owing to the competition of firms in the country districts.

Causes of the above-mentioned Conditions in the Retail Bespoke Section.

1. Want of organisation among the workers.
2. The seasonal nature of the trade.
3. The large amount of female sweated labour employed prior to minimum rates of wages being fixed.
4. The introduction of sub-divisional methods of production by middlemen, or sub-contractors, and the competition between them to obtain large quantities of work, which is essential if this system is to pay.
5. The poaching of the multiple shops with false description of work produced.
6. The large number of small employers in the trade without capital.

Administration.

As an organisation we complain that owing to the want of sufficient inspectors the rates fixed have not been enforced and penalties for evasion have not been pressed home.

We are also of opinion that the prosecutions for evasion should be taken out of the hands of local magistrates, who, as employers, are unsympathetic and opposed to the Act, and transferred to the same kind of tribunal as those who were responsible for the enforcement of wages under the Temporary Wages Regulation Acts.

We believe that Trade Boards have done splendid work in the prevention of strikes and the promotion of better understanding between employers and workers, and pay tribute to the work of the Secretary of Trade Boards and his staff.

General Remarks.

Good employers agree that the operation of minimum rates has been in the best interests of the trade as a whole. A large number are opposed to differential rates for rural areas on the grounds that they will re-introduce the unholy competition of the past. The large number of small employers in the trade have always been a menace to the industry, these men having in the past by the payment of sweated wages lived lives of comparative affluence on the output of three or four workers. If the Trade Board Acts are ever repealed it will mean a return to the old rotten conditions, when by strikes or the threat of strikes the workers wrung a halfpenny per leg hour out of the employers when trade was busy only to have it filched from them again when trade got slack. Even now the great bulk of the trade is made by women workers who come under the wholesale rates owing to the fact that they work for sub-contractors who work for three or more shops, the employers, by adopting this method of production, escaping the retail rates of which they complain.

10,287. *Chairman:* Mr. Rowlerson, you are a member of the Corset, Dressmaking, Hat, Cap and Millinery, Retail Bespoke Tailoring, Ready-Made

25 January, 1922.]

Mr. GURNEY ROWLERSON and Miss F. E. EDWARDS.

[Continued.]

Tailoring and Wholesale Mantle and Costume Trade Boards, are you not?—(Mr. Rowlerson): Yes.

10,288. And you are a member of the Executive of the Amalgamated Society of Tailors, Tailoresses and Kindred Workers?—Yes.

10,289. And Miss Edwards, I think, is a member of that Executive?—(Miss Edwards): Quite so.

10,290. Mr. Rowlerson, you have been in the trade for 40 years, I understand?—(Mr. Rowlerson): Yes.

10,291. Thirty-five of which you spent as a journeyman tailor?—Yes.

10,292. The membership of your Society is 35,000, I see?—That is the figure for last year. Our last figure gives 21,208 males and 14,000 females.

10,293. Before the Trade Board Acts, how did you find wages in the retail bespoke tailoring trade? Were they very low before the Acts were passed?—Very low indeed.

10,294. You remember that yourself?—Yes. I brought up a family on them, so I know.

10,295. Were the wages so low that it was difficult to get apprentices to come into the trade?—Yes; they practically ceased to exist.

10,296. Mr. Bell: What was the real reason why the workers in this industry got no advances?—It was due to various causes. Changes in the method of production affected the handicraft section of the trade, and employers to a very large extent utilised sweated women's labour to the detriment of the males.

10,297. You say you have 14,000 women in your Society. When you refer to sweated women's labour were they women who were sweated members of your Society?—No; that was prior to their organisation. They have only been recently organised.

10,298. What proportion of the women now do you estimate you have in your Society?—There has been a large drop in membership, I believe, in the last 12 months owing to the enormous slump in industry; but we have not got the figures.

10,299. But there would be more than 14,000 in the whole industry, would there not?—Yes, considerably more. The estimate of the employers was that there were quite 200,000 women employed in the clothing industries of this country.

10,300. And your view is that these women were brought into the industry because their labour was cheaper than that of men?—Yes. In many instances it costs nothing for two years of their time.

10,301. Chairman: You have also got a number of aliens in the trade, have you not?—A tremendous number. The method of production adopted by the alien sub-contractors was the top, bottom and middle of the sweating system, for this reason: The dual system of working has always been adopted; that is, so far as the machiners and pressers of the teams are concerned they are always pieceworkers. The tailor of the team is always a weekly wage worker, and the women employed in the teams are also weekly wage workers. The result is that employers, by forcing reductions on the machiners and pressers—the two most important members of the team outside the tailor—always compel the speeding up of the weekly wage workers in order that those pieceworkers can get a week's wages.

10,302. Mr. Poulton: And that also has an effect upon the tailor?—Yes. I have had a good deal of experience of the Jewish movement, and it is still in evidence. Where it has been adopted in indoor working by employers, the system is maintained. The consequence is, if a penny is taken off the machining or pressing of a garment, there is always continual friction in the shop. The presser says: "Unless you give me work to press, I shall have no wages." The consequence is there is a tendency to speed up the tailor.

10,303. Chairman: I suppose that sweating is not possible under the Trade Board?—No.

10,304. From what you have said, the trade might well have come under the Act of 1909, might it not?—Yes; it was partly under it, as you know.

10,305. in regard to the wholesale trade?—And the retail under certain circumstances—the sub-divisional processes.

10,306. There were certain processes under it?—Yes.

10,307. Mr. Layton: Do those figures which you gave represent the whole number of organised work-people in the trade, or are there other unions?—There is another union, but so far as the retail bespoke section of the trade in England and Wales is concerned they have only a very small membership.

10,308. Dame Adelaide Anderson: At the foot of the first page of your statement you say: "The result is to-day that on the statement of a member of the Executive of the National Federation of Merchant Tailors, 95 per cent. of the work of the City of Manchester is in the hands of aliens." That is rather the other way round. The coming in and competing of the alien brought the result of lower wages, did it not? It was not the low wages that caused the influx of aliens; it was the aliens being there and competing when there was no standard to prevent wages slipping down that caused the wages to slip down?—Exactly. So far as the Manchester area is concerned, that statement was made by a member of the Executive of the National Federation of Merchant Tailors, and we have no reason to doubt that the huge bulk of the Manchester trade was and is under those conditions. It was due to the fact that the women were badly paid that led them to introduce them to the detriment of the male worker.

10,309. And that must always be the case if you have an influx into any centre of an industry of a body of fairly competent workers with a lower standard of life?—Exactly.

10,310. It must always come if you have not a level fixed below which they shall not fall?—I quite agree.

10,311. Lord Weir: You referred to the conditions which prevented British apprentices coming into the trade?—Yes. I say that British apprentices practically ceased to exist owing to the fact that when out of their time the conditions under which they would be employed as adults would be so bad that no woman with any respect for her boy would put him to the trade. I have six boys myself, and I never put them to the trade as the result of my experience.

10,312. Dame Adelaide Anderson: Was that going on at the time that aliens were already coming in to the industry?—That has been going on for years.

10,313. The two things were happening at the same time?—Yes.

10,314. Mr. Poulton: Was not the tailoring trade one of the few trades to which aliens gravitated immediately, and they were taken advantage of by their friends who knew something of the language, while they themselves were entirely ignorant of the language and were entirely at their mercy?—Yes. They were known as "greeners."

10,315. Mr. Bell: According to your statement, there could not be much sweated labour in the employment of Britishers?—They were very lowly paid, but that was largely due to other causes—principally the seasonal nature of the trade and the development of home working and outdoor working.

10,316. You see the statement is made here that only 5 per cent. of the trade in Manchester is not in the hands of aliens?—Yes.

10,317. So that the aliens must have been the largest employers of sweated labour?—Agreed.

10,318. Chairman: The hours were long, I suppose?—The hours were abnormally long. There was no leaving-off time in many of the sub-contractors' shops. Taking the East End of London, for example, it is the same as in Manchester. I point out in my statement that there are not a hundred British tailors employed east of the Law Courts in the whole of the City of London. The whole trade is in the hands of the Jewish sub-contractors. There was no leaving-off time, except that brought about by ex-

25 January, 1922.]

MR. GURNEY ROWLERSON and Miss F. E. EDWARDS.

[Continued.]

haustion. I have known them to work 90 and 100 hours a week.

10,319. On a weekly wage?—No, on the system that I have pointed out. The fights that used to take place at the Jewish end of the sub-contracting were generally over the machiner and the presser, because whatever reduction could be forced upon the two keen men of the team operated on the whole team.

10,320. As far as speeding up the work goes?—Yes.

10,321. But you say some workers worked as much as 90 hours in the week. Would they be working by piece or by time?—By piece; but the piece rates were so low that they compelled them to work these hours.

10,322. And the time workers would be also working?—Yes.

10,323. Would they be paid overtime?—No. Overtime was unknown.

10,324. Therefore, the time workers were working on a weekly or daily wage?—Yes—or quarter-day in slack time. The system was, and it still exists even now, that on Monday the team turns up at the sub-contractor's premises. He may tell them that there is not sufficient work for them to start, because it is essential that there should be a large amount of work before the team pays the sub-contractor. If there is any shortage of work the machinery of the sub-divisional system gets out of running order. The consequence is the sub-contractor says there is no work. They may come again on Tuesday and on Wednesday. On Wednesday he may have sufficient work, and he will say: "You can come in for a quarter of a day," and they would be paid a quarter of a day's wage and then go out again. That is common in slack seasons. It is common to-day owing to the slump existing.

10,325. *Dame Adelaide Anderson*: In fact, in those days the only limit to hours at all was owing to the operation of the Factory Act?—The Factory Act did not operate amongst the Jewish workers.

10,326. It did not affect the men, but it affected the women, did it not?—No, not the women. I have had practical experience of that. I have been at these places all hours of the day and night.

10,327. *Mr. Bell*: Even under the Factory Acts there was constant evasion?—The exceptions were where the Act was observed. As a matter of fact, it was never observed.

10,328. *Lord Weir*: Does not that apply largely in the same districts to the Trade Board regulations to-day as regards the evasions?—The evasions are still taking place in places like the East End, owing to want of inspectors.

10,329. *Chairman*: And then, I think, an attempt was made to organise the workers in the tailoring trade?—Yes. We put in a tremendous amount of work for this purpose of trying to organise Jewish workers, and we were successful at one time in organising about 12,000 of them. We found by experience that they were not amenable to the discipline of the British trade union movement, and we ceased to attempt to organise them as the result. We found they would not obey the ordinary trade union laws and that they were not amenable in any shape or form to the British trade union movement, and we were in constant trouble with them, with the consequence that we ceased to make the effort.

10,330. *Mrs. Lyttelton*: Were the greater part of the employees Jewish?—The women were generally British.

10,331. *Chairman*: Were you able to organise the British women workers?—Since the Trade Board Act we have been successful in organising them to a great extent, until this slump came about. There has been a genuine effort on the part of women to take up the Trade Union movement generally since the Trade Boards Act. Before that there was no chance of organising them. They could not afford to pay contributions to a trade union owing to their poverty.

10,332. Now that the work has fallen off so much there is, I suppose, a difficulty in paying them?—Yes. The argument has been adduced generally to

the women that it is the result of the wages position created by the Trade Boards Act, which, in our opinion, is absolutely untrue.

10,333. *Mr. Pugh*: Would you attribute the increased extent of unemployment to the general slump rather than to the effect which the Trade Boards have had on trade?—I do not think the Trade Boards have had anything to do with it. I can give you an instance. A contractor in Plymouth had about two or three thousand pairs of knickers to make. He approached the women and said that if they were prepared to accept reductions on the present rates, he could get repeats of the same order, and they would find continuous employment to a very large extent. The women accepted the reduction, and the knickers were made. Afterwards the women were locked out, and there has been no more work. The wages had nothing to do with it. It is the general conditions as the result of the aftermath of the war.

10,334. *Mr. Bell*: What have you found to be the general attitude of these employers who employ sweated labour when you have attempted to get their employees into the trade union?—They have always been antagonistic to any organisation on the part of their employees, and so far as women workers are concerned they have been terrorised, particularly in areas where there is no possibility of transference of their work. That is one of the difficulties with which we have been faced. In the Midlands and northern areas, at places like Kettering or Northampton, where machinists can transfer from the tailoring to the bootmaking trade and *vice versa*, as they in fact do, there is the possibility of the women maintaining some sort of a standard. But in places like Brighton, Portsmouth, Exeter, or right through the west country, where there is no opportunity for the women workers except in the clothing trade, they are helpless. Take Portsmouth in particular. In the corset trade there were 8,000 women employed prior to the war, and their wages were a disgrace. So far as other employers in Kettering, Bristol and Manchester are concerned, they always complain that the unfair competition of the Portsmouth employers was due to the sweated wages which were paid to the workers.

10,335. *Dame Adelaide Anderson*: It is a great gain if you can develop a variety of industries in any centre, is it not?—I agree.

10,336. *Mr. Poulton*: The standard set up in the Midlands was in danger of being knocked down by the other people, I take it?—Yes.

10,337. *Mr. Layton*: You referred to the effect of wages on trade. You would not go so far as to say that wages have no effect on trade, would you?—No; but I say the present wages have no effect.

10,338. When you are talking of that, are you referring to wholesale as well as retail?—Yes.

10,339. Is there not a very great difference in the prices charged to-day, for instance, in London, for men's suits and that kind of thing?—In the City of London, do you mean?

10,340. Yes, in London?—Do you mean as between shop and shop?

10,341. Yes?—There is a difference.

10,342. What is the explanation of that? Is that in any sense due to evasion of the wage rates, or are they universally observed?—There are many causes for that. Take the West End first-class trade as an example. The garment produced demands the skill of the handicraft worker, and coupled with that is the fact that he produces garments for people who patronise firms of high repute. They have to pay not only for the skill of the worker, but also for the skill of the firm.

10,343. *Mrs. Lyttelton*: And the rent of the premises?—Yes.

10,344. *Mr. Layton*: But you can see in the Strand, for example, suits advertised at pre-war prices?—Yes.

10,345. Are they all produced under proper conditions?—Largely, they are now. But the false description is a thing which the retail bespoke tailor

25 January, 1922.]

Mr. GURNEY ROWLERSON and Miss F. E. EDWARDS.

[Continued.]

fully understands. He has complained to the employers about it. Take a multiple shop. Their garments are produced by factory methods, but they advertise as being bespoke tailors and lead the customer to believe that he is an individual customer and dealt with in that way; but he is not.

10,546. *Lord Weir*: That is a very big development, is it not?—Yes, it is.

10,547. Do you associate that development in any way with the increase of rates?—It has nothing to do with it.

10,548. Not even as applied to the rural tailor?—Not at all.

10,549. *Chairman*: Is it the fact that the rates for learners have been considered to be too high?—Yes; but last week we agreed to meet the employers, and an agreed position was arrived at by which a reduction was agreed to. We are as anxious as the employers to again get the British boy and girl back into the trade.

10,550. Then there may have been ground for thinking that the previous rates were too high, and prevented learners from being taken on?—That, I think, was due to the fact that in the past they were paid nothing. In the west country the general condition was that a girl got nothing the first year; she might get 1s. a week the second year, and at the end of her time she might get 3s. 6d. When fully qualified she might get 7s. or 8s.

10,551. I think you have on the Board a system of rates for learners, according to experience?—We are anxious to discourage learners altogether. Both the employers' and the workers' sides are anxious to re-introduce the apprenticeship system, in order that the workers may be thoroughly trained.

10,552. And for that purpose you allow a somewhat lower rate of wage to be paid to an apprentice than to a learner, in order to encourage the taking of apprentices?—Yes. We are anxious to develop that still further, in order to attract apprentices, both boys and girls, who will be efficient workers at the end of their time.

10,553. In the case of apprentices, the wage grows as time goes on?—Yes.

10,554. But I think in the case of a learner who is not an apprentice, then the wage increases according to experience?—Yes. But, of course, under an extended sub-divisional system of working such as has been adopted in big towns, where the volume of trade allows it to be brought into existence, it means that some workers who are learners from that point of view are never efficient workers from the tailor's standpoint; they are always cogs in the wheel.

10,555. You mean learners who are not apprentices?—Yes. They are never able to make a garment, and they are as a consequence always at the mercy of the employer, because they can be replaced.

10,556. You have no actual piece rates, have you?—No. We have been advised to fix general minimum piece rates, and we are now meeting the employers for that purpose.

10,557. The work is paid by the log, which has to come up to the piecework basis time rate?—Exactly.

10,558. *Mr. Bell*: I understand that both employers and workpeople are desirous of attracting apprentices rather than learners?—Yes.

10,559. Do you think it attracts apprentices rather than learners if you pay the learners a higher rate of wage than the apprentices?—I think there is a desire on the part of the better class workers that their children should learn the trade, and they are self-sacrificing enough not to take the higher wage of the learner in place of the lower wage of the apprentice, in order to get the greatest skill.

10,560. But you may have parents and children sometimes taking the short-sighted and selfish view. Are they not rather inclined to look at the present good of the higher wage than the future good of the apprenticeship system?—That there are people of that

character there is not the least doubt. I cannot deny that.

10,561. *Chairman*: I thought you said the employer was more willing to take the apprentice?—Yes. We are acting with the employers in this matter. We are fully agreed.

10,562. *Mr. Pugh*: The point is that you are able, as the result of your Board machinery, to settle these matters satisfactorily, whereas you were not able to do so before?—That is so.

10,563. It is a great help to you in protecting the workers?—It is a very great help.

10,564. *Mr. Poulton*: As a result of your experience on the Board, would you say that Trade Boards have been advantageous to both sides?—Absolutely. They are in the general interests of the industry, and in the best interests.

10,565. And should be continued?—Undoubtedly. In fact, any difference in the position, so far as altering the powers as they exist in the retail bespoke trade is concerned, would be a tragedy in my humble judgment. It would mean reverting to the old sweating conditions.

10,566. And as you say, you have known the trade now for more than 40 years?—Yes.

10,567. So that you have full knowledge of it right through?—I have full knowledge of it.

Chairman: I think, incidentally, we have dealt with your general points. May I come now to the question of administration with which you dealt on page 5 of your statement?

10,568. *Mrs. Lyttelton*: Might I ask one question on this section first? You say that the Trade Board rates have not had any influence on the turning of the trade more towards the multiple factory-made clothes?—I do not think that has had anything to do with it.

10,569. Then I wanted to ask you whether you thought the tendency towards the factory-made garments is an increasing one, or whether it has reached its apex now?—I believe that the circle of the displacement of the handicraft worker has reached its limits. There is always a class of customer who demands the better class of garment produced by the highly skilled handicraft worker. There was an apprentice shortage even before the war with that class of worker, and there was a Committee set up under the County Council to induce boys to come into the trade again. That was due to the efforts of the West End employers themselves in order to attract boys again. They were willing to subsidise the position in order to attract the boys back to the trade. There was an absence of the highly skilled workers. They are just as short in the teams in the factories. The employers want them there as well. The highly skilled handicraft worker is essential in the factory. In the making of the highest grade ready-to-wear garments they are more valuable and have been better paid. They were attracted from the retail bespoke trade by the higher wage.

10,570. But you do not consider the tendency is an increasing one?—Not at all.

10,571. *Dame Adelaide Anderson*: There are two types of production, are there not? There is the general one, to fit a great many people, which is rather cheaper, and the better-class production?—Yes. They meet the different demands.

10,572. The handicraft production is slightly a luxury now, or it tends to be?—I do not say that it is a luxury; it is an essential to the well-dressed man. But in the early part of the war, of course, the circumstances of the case for a time largely killed the industry. The hoardings were placarded with bills saying that you were unpatriotic if you bought clothes; and the fact that we were considered as not essential to the winning of the war resulted in the authorities taking everybody in the trade who was able to go into the Army. In our Portsmouth branch, for example, they took our president, our secretary, our trustees, and our Committee into the Army, with the result that I was sent down to fetch the books.

25 January, 1922.]

Mr. GURNEY ROWLESON and Miss F. E. EDWARDS.

[Continued.]

10,373. The factory development enabled the State to introduce far better conditions as regards hours and hygiene; it was more possible to raise the standard of health in those cases than if there was a larger number of small places?—In giving my reasons I omitted to give one essential reason, and that was the absence of workshop accommodation in the trade. For 20 years we have been moving, through the labour movement generally, by resolutions at the Trade Congress, asking for compulsory workshops in this industry. I see that in other sections of the trade evidence has been given to this Committee that the Trade Boards Acts have lessened the evil of home-working. In the retail trade it has increased it tremendously. Employers have taken advantage of the home worker by reason of the fact that he can work any hours, and in that way they have escaped the payment of overtime.

10,374. *Mr. Poulton*: Because there are no hours set?—Exactly.

10,375. *Lord Weir*: How do you look after the home worker just now on your Board? What protects him just now?—Only the basis piece rate.

10,376. Which must be very difficult to apply, surely?—It is very difficult.

10,377. But how do you attempt to apply it?—Only by organisation.

10,378. I do not quite see how you can do it?—We have done it in many places.

10,379. *Mr. Poulton*: You have book rates, have you not?—They work on the same log as the in-workers. Take, for instance, Oxford as an example; that is an out-working town. Every man in Oxford is a member of the organisation I represent. Every man was asked to keep his records and to work the hours of the Trade Board. Every man has loyally abided by the decision of his executive and done it, and the records of his time and earnings are in the hands of the Department.

10,380. *Dame Adelaide Anderson*: But you can also do it by inspection at the place where the work is given out and taken in, and by examining written statements?—Yes; but there has not been in administration sufficient inspectors to administer the Act.

10,381. All I meant was that it is practicable if you inspect at the point of giving out and taking in, if you have a modicum of inspectors?—Yes.

10,382. *Lord Weir*: You still look upon it as an unsatisfactory method of protecting home workers?—It is unsatisfactory.

10,383. If you take them as really protected by a piecework basis?—We want a general minimum piece rate, which is what we are out for now. If we get something like what was mentioned in the last witness's evidence, which fixes exactly the price for an operation or for the making of a garment, then the position could be administered satisfactorily.

10,384. *Chairman*: For home workers?—Yes. We are now as a Board concentrating on that position. We are sitting in sub-committees both for the fixing of agreed piece rates which will govern the sub-divisional method of production, and also as to the position of the log worker and the conditions of labour that will apply to log workers.

10,385. *Lord Weir*: Those piece rates, of course, exist to-day?—Yes.

10,386. But you find it difficult to administer them?—The difficulty is that, supposing we have an agreed position with the employers as to the log rate to be paid in a certain town, an employer, although a party to that agreement, can escape the agreement by sending his work to the East End of London and getting it made up by the sub-contractors under the other position.

10,387. *Mr. Poulton*: Who in their turn become sub-contractors?—Certainly.

10,388. *Chairman*: But they have to pay the Trade Board rates?—They have to pay the Trade Board rates if they are found out.

10,389. It is really a question of enforcement?—Yes.

10,390. *Mrs. Lyttelton*: And they employ chiefly home workers, I suppose, which makes it extremely difficult to enforce the rates?—No, they run workshops of their own. The size of the workshop depends on the number of the teams. It is a one-machine team or a two-machine team or a three-machine team.

10,391. Then, in your opinion, it is largely a question of having sufficient inspection?—That is largely so.

10,392. *Lord Weir*: The difficulty in settling a scale of piecework rates is due to the existing scales varying in the different areas or different towns?—There is a difficulty in that; but the fixing of general minimum piece rates will immediately remove that. If general minimum piece rates are fixed, those rates will apply. They can be differential rates in different areas to meet the requirements of the trade, and we are meeting the employers again for the purpose of agreeing differential rates in rural areas.

10,393. You are a believer in differentiation?—I am not personally. I am appalled at the difficulty of administration. Take Messrs. Gieves, Ltd., the naval and military outfitters. I think they trade in about 18 different towns. They trade in Edinburgh, in London (Bond Street), in Sheerness, in Chatham, in Devonport, in Portsmouth, in Aldershot, and they are just opening a business in Woolwich. They are also in Winchester.

10,394. *Mrs. Lyttelton*: And Harwich?—Yes; and they have agencies abroad. If you have differential rates in rural areas, what is to prevent Messrs. Gieves taking orders in Bond Street and doing as they did in the past, namely, make the garments up by sweated labour in Portsmouth? If there is a differential rate of a low character fixed for any particular area in which they trade, what is to prevent the transference of the orders to places where the rate is low, although the customer thinks he is getting his things under West End conditions?

10,395. You think the differentiation ought to be by agreement, and that you should fix a general minimum and then have higher rates fixed by agreement?—Yes, that is my opinion. We are meeting in the 14 different areas of this country. I believe the main objection to differential rates will come from the employers, because, after all is said and done, in the country areas the tailor's shop is the market place. If you go to such places as Newton Abbot or Barnstaple, you will find the tailors on market day at the market ordinary sitting shoulder to shoulder with the farmers. After all, the market place is largely the tailor's shop in the country.

10,396. *Lord Weir*: They tell us now that they do not go to the market place, but they go to the nearest county town and order a ready-made suit?—Who told you that?

10,397. I think that is the general trend of the evidence?—I deny it from my knowledge of these country towns, and I have a very large knowledge of them. I believe that some of the best trade in the country is made in the country towns. Take a hunting centre like Cirencester, for example. That is purely an agricultural area, and I say that the best tailoring is done in Cirencester; it is the highest class and the highest paid for. Take places like Cheltenham or Bath. The highest class trade is done there for which the employers obtain the highest money. In the past the complaint of the employers, when asked for adequate wages for the skill of the employees they employ, has always been: "How can I pay more when I am competed with unfairly by somebody who pays a lower rate in the immediate neighbourhood?" They have said on hundreds of occasions that they were willing to pay more.

Chairman: I see; the old excuse for London that you must go and see your tailor is obsolete now!

10,398. *Mrs. Lyttelton*: If you live in Cirencester, anyway—Bath always paid higher than Bristol. The Bath employers, when I asked for an increase, referred me to Bristol, and said: "How can we pay more in Bath when they pay less in Bristol?"

25 January, 1922.]

Mr. GURNEY ROWLERSON and Miss F. E. EDWARDS.

[Continued.]

Go to Bristol and deal with them first." We did that, and we got a higher rate there than we had in Bath. Then I went back to Bath and said: "We have done as you said; we have gone to Bristol and they are now higher than you, and we ask you to pay the same as Bristol." The reply was: "Look at the years we have paid more than Bristol."

Chairman: Are there any other questions which the Committee desire to ask?

Witness: I hope you will make a note of the fact that the absence of the workshop accommodation has been largely responsible for the difficulties with which the industry has been faced, and for the bad conditions which apply.

10,399. *Chairman:* I am afraid that hardly falls within the scope of our inquiry; but you have made the statement. (*To Miss Edwards:*) Have you anything to add? I think you have had personal experience in the trade?—(*Miss Edwards:*) Yes.

10,400. And you were for 14 years a tailoress in the Manchester area?—Yes, and I am still working.

10,401. Both in wholesale and retail?—Yes.

10,402. Have you anything to add to what has been said by Mr. Rowlerson?—I think not, except that I would like to emphasise that prior to the Trade Board coming in there were very varied rates which existed amongst the workers, principally in the retail section. I come from Manchester, and I have worked in the Northern area the whole time, and I have found since that the conditions in the North, bad as they were, were the best conditions that existed in the whole of the country at that time. The usual custom was that an apprentice started in the trade for nothing in the retail section; she might serve two years for nothing; the third year she might possibly get 2s. 6d., and the fourth year about 5s., and after that, after the 5s. rate, it was a question of what the employer paid you, and up to the time of 1918, which was the first time there were any rates fixed whatever in Manchester, it varied from 5s. up to about 16s. at the very top.

10,403. Is that for learners—for young people, or adults?—For fully experienced girls, girls who were in many instances turning out the same work exactly as the men. It did not matter whatever system you worked on, and the retail tailoress has the advantage of the girl in the wholesale and factory system to this extent, that she takes, we will say, one garment, and she goes through the whole of the operations until she turns it out completely. In a good many cases she does not only take one garment, but goes straight through, and the small employer has this advantage, that he can take a girl, and she can take any garment whatever that she is given, whereas in the case of the large employer he will just take a girl for whatever garment she can make. In the factory the girl of course depends upon what ever operation she is taught. In 1918, which was the first time that there were any rates whatever fixed, even then it did not work out satisfactorily, because, as you will see in the statement, the Merchant Tailors' Federation at that meeting made the statement that 95 per cent. of the trade was out of our hands, and it meant this, that although there might be a rate fixed by the trade union which the girls could demand, for every girl there were 95 that could come in and work for the under-payment; and when the Trade Board came in that was where we found the advantage, because although the Trade Board did make very little difference to us in the question of rates, yet it stopped the competition of the unorganised workers. It did more than that. When there was a rate fixed, it meant that with regard to any employer who was not in the Federation—and there were hundreds of unorganised employers who said that that rate had nothing whatever to do with them, although we had organised the workers—there was nothing left for us except the strike weapon, to bring the workers out on strike or else make the employers pay the rates. This, I think you will admit, was unsatisfactory. There is just a further point I should like to deal

with. A question was asked about the Factory Act and the hours. Now the usual custom was this in the past, that if you went into any workshop there was the Factory Act up, and the hours for that workshop were always put to the full extent of the time, which was usually from 8 in the morning till 8 at night, making 12 hours. I am not going to say that those hours were always worked, but still in a large number of cases they were, and it meant that the employers could enforce that number of hours on the workers; they could compel the girls to stay in the workshop 12 hours a day. Usually it was about 11½ or 11, but those were considered the universal hours. But there was more than that. Throughout the busy season they used to apply for overtime papers by means of which they could work the girls 2 hours a day extra for three days. This was always done in all cases. The girls never received any extra payment, even if they received the ordinary minimum time rate, and that rate which was paid to them, the weekly wage, usually covered in the season practically 70 hours a week. Then in the winter, owing to the seasonal nature of the trade, the girl was dismissed. The coming of the Trade Board Act has again favoured us by being able to enforce after the average hours the payment of that overtime. It has also done what is in my mind a great deal better, for it has in some cases, unless the overtime has been absolutely necessary, abolished the overtime; because previous to that, when the employers could work the girls without paying them at all, or just giving them perhaps the ordinary time rate, it meant that they have worked them when there was never any necessity for it, and that again is why I say that the Trade Board has done a great deal, for it has helped to bring about the average working week for the working tailoress. I do not think there is anything further that I should like to say, except this, that there have been statements made by the employers about the people who are on the Trade Board not being practical people; that they have been simply trade union officials. I should like to say that as far as our Board is concerned at any rate, on the workers' side they are practically the only practical people. It is more the other way, if anything. I have no complaint whatever against the employers, because, taking them on the average, they are fit to come to any working agreements whatever; but I do deny that the trade union officials who are on our side of the Board are not practical people. I myself have fought tooth and nail for the tailoresses right through, and I have taken the trade right through from start to finish, until at the place where I work at the present time I am recognised as on a parallel with the male tailors, and I receive the same rates. (*Mr. Rowlerson:*) I should just like to supplement, if I may, the fact that the rates of the Retail Bespoke Board are the proposals of the employers. They were not even voted for by the workers.

10,404. *Mr. Pugh:* You are a member of the Board, are you not?—Yes.

10,405. And you have 40 years' experience?—Yes.

10,406. *Mr. Bell:* Can you tell me if you have ever had a shortage of workpeople in your industry?—(*Miss Edwards:*) Yes, there has been. At the time when there came the great influence of the military work into the tailoring trade, it meant that the rates were considerably higher in the factories, and they took not only girls who had perhaps never been in the tailoring trade at all, but most of the retail tailoresses went into the factory, because they were receiving very much higher rates.

10,407. You mean they went on munition work?—Yes.

10,408. But, altogether apart from the war period, have you ever had any shortage of workpeople in the trade?—No, I do not think I can say that in my experience I ever remember an actual shortage—only in the seasonal time, at any rate.

10,409. When the girl who entered the trade had to wait, say, four, or five, or perhaps more years,

25 January, 1922.]

Mr. GURNEY ROWLERSON and Miss F. E. EDWARDS.

[Continued.]

before she got either no wage at all or a very small wage, what was the attraction which induced the girls to come into the trade at all?—Well, speaking for myself, I think that the attraction in the tailoring trade—speaking personally, and from the personal knowledge of girls—is this, that it has been an attraction because at the end of the time they were able to have something at their fingers' ends which perhaps, when they would not be in any trade at all, was going to be useful to them.

10,410. You mean that being able to make their own clothes, or perhaps their children's clothes, or may be their husbands' clothes, would be an attraction to them?—Yes.

10,411. *Dame Adelaide Anderson*: There is one little point which I should like to clear up. Did I understand you to say that you thought 70 hours was permissible under the Factory Act?—No, I did not say 70 hours; I said 70 hours in the workshop. If you take from 8 o'clock in the morning till 8 o'clock at night, that is 60 hours—and it was 8 to 4 on Saturdays—

10,412. But the Act prescribes meal times—pauses from work?—Yes. I said 70 hours in the workshop. I am including in that the meal time; and I also said that in the season it was common to claim the three nights a week till half-past 9.

10,413. Yes, I quite understand. You think that the Factory Act could be amended with advantage with regard to the limiting of hours?—Well, I do not think it could be to this extent, as I pointed out, that that is putting a maximum on the time, and it was my experience that the maximum was always the minimum.

(The Witnesses withdrew.)

Mr. W. RINES, J.P., called and examined.

The Witness handed in the following statement as his evidence-in-chief:—

The Witness will state:—

That he is a journeyman tailor, with upwards of forty years' experience in all branches of tailoring trade and that for the greater part of that time he has been associated with retail bespoke and handcraft tailoring.

That he was a member of the first Tailoring Trade Board and has been a member of the Retail Bespoke Tailoring Trade Board since its establishment.

That he is a member of the Executive Board of the Tailors' and Garment Workers' Union, having been elected to that position by ballot vote to represent the handcraft section; that the membership in the "journeyman tailor branches" of the Union he represents forms a district embracing England and Wales.

That similar branches in Scotland also form districts for purposes of representation on the Executive Board.

That, although those branches are termed "journeyman tailor branches," there is a very considerable percentage of tailoresses who are members of the Union and to whom the continued existence of the Retail Bespoke Tailoring Board is of vital importance.

On behalf of both sections of workers he will submit:—

1. That legal regulation of life is recognised in all sections of life, sanitary, social, commercial.

2. Past experience shows that wages regulated entirely by supply and demand results in payments which are insufficient to provide the bare necessities of life. This results in the supplies being obtained through irregular channels—Poor Law relief, charity and even less commendable means.

3. To support life it is imperative to provide sufficient food, housing accommodation, rest, and recreation. Any wage inadequate to the supply of these is a menace to society as well as to the workers concerned.

10,414. That was the effect of the regulation by limitation of hours to a fixed period from the morning till the evening?—Yes, that was my experience, that it was always the case. You never went into a workshop and found the hours they might work—

10,415. But that did not aim at being a standard; it was an outside limit, was not it?—Yes.

10,416. And the outside limit under the Trade Board Act was 48 hours?—Yes.

10,417. Under the Factory Act the net outside limit was 60 hours?—Yes.

Dame Adelaide Anderson: That is deducting meal times.

Chairman: There is no outside limit to the Trade Boards Act.

Dame Adelaide Anderson: I mean a standard, 48 hours.

Chairman: That is not under the Act.

Dame Adelaide Anderson: Oh, it is left to the Board, but practically all of them have fixed a 48-hour week, I understand.

Chairman: Most of them have, yes.

Dame Adelaide Anderson: All I meant was that, beyond the time fixed by the Board, it is overtime.

Chairman: After the 48 hours.

Witness: After the 48 hours, yes. (*Mr. Rowlerson*): It is very difficult indeed because, as is pointed out in our statement, the men and women are in pawn at the end of the slack time, and they have to redeem themselves before the end of the busy season.

Dame Adelaide Anderson: I only wanted to clear up that point—that it was a 60-hours week under the Factory Act.

4. Tailors and tailoresses being skilled workers should receive a wage in excess of this basic wage so as to enable them to participate in some of the good things of life, for special welfare of children, holidays, provision against sickness, unemployment and old age.

5. Tailoring being a season trade, wages must be so adjusted as to provide a good average. An allowance of 15 per cent. to 20 per cent. should be made for slack or idle times.

6. Tailoring has hitherto been invariably associated with the worst forms of sweating. The operation of the Trade Board has considerably improved its character in that respect and helped it to occupy a more dignified position.

7. The tailoring trade being very difficult to organise Whitley Councils are not possible, hence the Trade Board is the only alternative.

8. The apprenticeship system had practically died out in retail bespoke tailoring; the Trade Board has drawn up an admirable scheme which, if given a fair chance by the employers, will re-establish a sound system of training and produce a body of highly skilled men and women in the trade. Complaint has been made that the rates fixed by the Retail Bespoke Board for apprentices and learners are too high, but we submit that the ensuring of a reasonable wage will attract a better standard of youth. Education and refined taste are essential to the production of the best classes of tailoring.

9. Much has been made by witnesses on behalf of the merchant tailors of the hardship of a general minimum wage. For many years past in all negotiations they had complained bitterly of the practice of the union in permitting different rates under the log system of payment. We submit that it is the skill and experience of the worker that should be assessed in the setting up of a minimum rate and not a locality. We are in favour of maintaining a general national minimum, leaving it to collective bargaining between the associations of employers and workpeople to settle outside that minimum any questions of superior skill and payments. We urge that

25 January, 1922.]

Mr. W. RINES, J.P.

[Continued.]

a general minimum places all employers on an equal footing, prevents unscrupulous employers securing lower cost of production than the fair and good employer.

10. The Committee has been told that "the tailoring trade is fairly well organised." It is, unfortunately, a very badly organised trade, and a trade in which no amount of activity on the part of the unions can maintain a given or uniform standard of organisation. Wage agreements with employers have very little stability, nor have the Merchant Tailors' Federation much control over their members in honouring an agreement when it has been made. The Committee will have gathered that much from the statements of witnesses on behalf of the Merchant Tailors.

We disagree with the statement that the operation of Trade Board rates has caused, or materially added to, unemployment amongst journeymen tailors and tailoresses: it is a permanent feature of the trade—not more than six months can be classed as busy.

The joint tribunals consisting of employers and union representatives, which the Committee have been told had been operating for over 20 years in wage settlements, were never very successful in agreeing to a wage rate that raised the position of the worker above the sweating level. I have looked up some of those agreements and find that, just prior to the war, a large number of tailors in various towns were working for 3d., 4d. and 4½d. per hour. It must be remembered that these rates were the result of negotiations that generally ended with the formula "accept or strike." The state of organisation was such that the union dare not accept the latter alternative with any great hope of success.

Towards the end of the war period—in the spring of 1918—a trade journal, "The Tailor and Cutter," sent out a circular to secretaries of branches of the Amalgamated Society of Tailors and Tailoresses asking for particulars as to the rate per hour then in operation. Replies were received from 23 centres in England, the average rate per hour being 5½d. Wales returned particulars from 7 centres, the average rate being 4½d. Taking the 30 centres of England and Wales, the average rate works out at 5½d. per hour. Scotland, which has always been considered to be somewhat better organised than England and Wales, made a half-yearly return of wages from January, 1914, to the end of June, 1914. Sixty-two centres are comprised in the return: the highest rate was 6½d. per hour, the lowest 4d. The average rate per hour for the whole of Scotland was the same as England and Wales in 1918, viz., 5½d. In the 1918 returns 16 centres in Scotland show an average rate of 7d. These are log hour rates.

12. In the West End of London high class tailoring and the organisation of the working tailor and tailoress is fairly well centred, and provides perhaps the best example of organised handicraft workers to be found anywhere in England and Wales. Two unions are in existence in the West End, viz.: the Tailors and Garment Workers' Union and the Amalgamated Society of Tailors. The former union represents at least two-thirds of the organised workers, and until pressure was exercised by the Ministry of Labour they were expressly excluded from the Conciliation Board spoken of by representatives of the Association of London Master Tailors. I understand those gentlemen speak of 50,000 employers in the trade. The Association of London Master Tailors comprise somewhere about 100 out of that number. I would like to refer to a subject touched upon by one witness when dealing with apprentices. He complained that his employees would not take apprentices on account of the high rates fixed by the Trade Board. That statement does not in any way reflect the attitude of the journeyman tailors on the apprenticeship question. The complaint of the journeymen is that employers shirk the responsibility of apprentices as they largely do in the matter of workshop costs, by throwing it back upon the

workmen. Those workmen are pieceworkers very often without work for days, and even weeks, together: they cannot accept the responsibility to pay a wage to an apprentice when they may not have work or wages themselves. We hold that any apprentice scheme which is to be of value to the boy or girl must be a concern for the firm to deal with, and not a fellow employee whose very existence in the firm is at all times precarious and uncertain.

Much of the seeming difficulty that has arisen on the Retail Tailoring Board has been the result of unwillingness on the part of employers' representatives to recognise any ordered Government regulation in the industry. Right away from early 19th century times the trade has been in a chaotic state. Employers seem anxious to maintain that state. We on the workers' side gave them every opportunity to frame definitions dealing with various classes of workers suitable to the conduct of their business. We did agree especially in respect of female rates, but immediately they made the definitions abortive by altering workshop practices and flooded the Board with questions and objections.

I understand employers' representatives have made much of what is termed the "long-established habits of the trade, that piece-working tailors are the freest workmen in the world," &c. These alleged facts have been advanced as a reason why Trade Board determinations and regulations cannot be carried out in retail bespoke tailoring.

The workmen generally have no desire to perpetuate those free and easy and demoralising conditions that did undoubtedly exist 25 or 30 years ago. The workmen are anxious to raise the status of the trade to a level they and their descendants might be proud of, and to the honour of many employers throughout the country, it must be said, they have co-operated with the workmen in remedying many evils in the conduct of their business.

The term "the customs of the trade" was a favourite plea used by employers in Police and County Courts when wage actions came up for settlement, and so varied and evil were the customs generally, before the advent of Trade Boards, that anything might be excused under that plea. In point of fact, those sitting in judgment in those courts gave decisions so conflicting that the journeyman tailor and tailoress was practically robbed of their citizen right of wage recovery under the law.

I understand it has been stated on behalf of the Scottish Merchant Tailors' Federation that female rates were fixed upon the requirements of London and large towns. The rates fixed for the skilled tailoress was not fixed for "girls," but for highly-experienced female tailors. The 1s. 0½d. so fixed by the Retail Bespoke Board was and is still considered too low by the workers in the trade, even in rural areas, considering their skill and experience in the trade.

Bearing upon this class of female worker, I understand a statement has been made to the Committee that the same class of labour for which the retail bespoke employer pays 1s. 0½d., the wholesale and ready-made employers pay 8½d. per hour. The class of skill for which the 8½d. per hour is paid is not in any sense so highly skilled or experienced in garment making as that possessed and exercised by those female tailors for whom 1s. 0½d. was set up by the Retail Bespoke Tailoring Board.

Our Conclusions.

We are satisfied that the Trade Board system is a good one and that it has worked to the benefit of all concerned in the tailoring trade. What delays and confusion have resulted from the operations of the Retail Bespoke Tailoring Board are less the fault of the machinery than the desire on the part of employers to maintain a vicious, chaotic, and anti-control position.

That the setting up of differentiating rates will tend to perpetuate the evil conditions from which the journeyman tailor has always suffered. That it will also perpetuate the under-cutting and evasions which employers have at all times complained of.

25 January, 1922.]

Mr. W. RINES, J.P.

[Continued.]

That prevailing rates, even in rural districts, are not too high for the skill and experience demanded under the Board's determination, for in many of those county towns and areas you approach much nearer to old-time handicraft methods than in many of the larger towns. This was undoubtedly in the mind of one of the witnesses for the Association of London Master Tailors when he spoke of "rural areas whence we obtain our sartorial recruits." Machine work plays a minimum part in garments made by West End tailors.

We are of opinion that no Conciliation Board, district, or area system would be so beneficial or satisfactory in its operations as the present Trade Board system. Improvements brought about by the first Tailoring Trade Board in wholesale and sub-division workshops left the highly-skilled handicraft tailor and tailoress the last remnants of neglected and sweated workers in the clothing industry.

We are satisfied the officials of the Board and the Department have grappled with a century-old problem and its accumulations of chaotic evils in a manner that reflects great credit upon all concerned. We have no complaint to make against the continuance of the system of appointed members on the Board.

We believe that with slight overhaul and alteration the machinery of the Boards can be made a blessing to all concerned.

10,418. *Chairman:* I think you are a journeyman tailor with upwards of 40 years' experience in the tailoring trade?—Yes.

10,419. And you have been associated chiefly with retail bespoke and handicraft tailoring?—Yes.

10,420. You were a member of the first Tailoring Trade Board?—Yes.

10,421. And you are a member of the Retail Bespoke Tailoring Board?—Yes.

10,422. You are a member of the executive board of the Tailors' and Garment Workers' Union?—Yes.

10,423. In the handicraft section?—Yes.

10,424. How many members has that union?—The last returns show between 80,000 and 90,000. The handicraft section of that number would be somewhere between 10,000 and 11,000.

10,425. Are your members wholesale workers, or retail?—The large proportion are wholesale. You see, we are taking several branches of the clothing industry; the total membership of the union would be between 80,000 and 90,000, and the proportion of the handicraft section—the journeyman tailors' and tailoresses' section—would be between 10,000 and 11,000.

10,426. Then the majority of the members of the union would be workers in the wholesale trade?—Yes, coming under Boards other than the retail.

10,427. You also have branches in Scotland?—Yes, we have somewhere about 60 or 70 or more branches in Scotland.

10,428. Have you women members?—Yes.

10,429. You submit a statement on behalf of both sections of workers. We will print this, if we may, as part of your evidence—as your evidence-in-chief?—Thank you.

10,430. You first deal with general considerations, which fill the first three paragraphs. You say it is imperative to provide sufficient food, housing accommodation, rest and recreation. Then you say: "Tailors and tailoresses, being skilled workers, should receive a wage in excess of this basic wage so as to enable them to participate in some of the good things of life"?—Yes. Well, unfortunately, the conditions that have prevailed in our trade have not provided them with those.

10,431. You mention that, and you confirm the statement that the apprentice system had practically died out in the retail bespoke trade?—Yes.

10,432. Then you say that the Trade Board has drawn up a scheme which you say will re-establish a sound system of training. You approve of what has been said, that it is a good thing to allow the apprentice to be paid a little less than the mere learner, on condition that he is taught the trade?—

Personally, I think the more attractive you can make the industry the better. It is the parents, I claim, that you have got to influence in the early stages of a child's life, in order that they will take the children into the industry that you are interested in, if you want them there at all; and the conditions generally prevailing have been such, as you heard Mr. Rowleson say, that even tailors themselves would not put their children to the trade. I am not at all favourable to the point of making the remuneration for learners higher than for the apprentice. As a matter of fact, the terms are so confused in the retail bespoke tailoring trade—the terms "apprentice" and "learner"—that one hardly knows what they mean when they speak of the two, and frequently you have to get from them whether they mean apprenticeship in the ordinary acceptation—that is, under an indenture, because in most of the tailoring trade there has been no indenture, even if they have got apprentices; they have only been taken on a very flimsy kind of contract—

10,433. I was looking at the Order of the Board, where the two are, I think, plainly distinguished?—Yes, they are.

10,434. The apprentice is the young person who is taken as an apprentice under an indenture for a term of years. The learner is the young person who is simply taken in?—Yes. That, of course, was adopted by the Retail Board to conciliate the views of the employers' side of the Board, as they claimed that in dealing with apprentices they had to have more care and attention, and consequently were not so remunerative to them as the learners might be. That, very likely, is a sound argument from one standpoint, but we, who are anxious to establish a real apprenticeship system in the industry, fear that the inducement on the employers' side will be to take the learner rather than the apprentice, and that we shall perpetuate the system which has unfortunately prevailed of a sort of semi-trained lad or girl in the trade, without getting the real craftsmen that we want.

10,435. You prefer the apprentice to the learner?—I do personally, and our section of the industry also, I think.

10,436. Why do you say that the inducement to the employer will be to take the learner rather than the apprentice?—Because he claims that they can be made more remunerative, and in that sense it means they are only trained to a certain point.

10,437. I do not understand you. Why does the employer claim that the learner can be made more remunerative than the apprentice?—I do not know why he does, but the employer does claim that.

10,438. The employers who have been before us have claimed the opposite—I do not know what they have said before this Committee, but I know their arguments.

10,439. *Mr. Pugh:* But you have a proper form of indenture for apprenticeship, as part of your Trade Board arrangements?—Yes, we have that arrangement.

10,440. Is that not being given proper effect to?—It has not had time to operate at all yet; it has only just been recently adopted.

10,441. But as it is a joint arrangement between the employers and workers on the Board, you anticipate that some good results will accrue from it?—Yes.

10,442. The tendency then would be rather to take apprentices than to take learners?—We think that if there could be something attractive offered to parents to put their children to a trade, we may hope that will be so.

10,443. Attractive after the period of apprenticeship is over?—And attractive even at the period of apprenticeship, because I think we must take into consideration the circumstances of the family for a very large part even of the early years of the lad's or the girl's life so far as any little income that the family may take is concerned, in order to help to keep them.

25 January, 1922.]

Mr. W. RANES, J.P.

[Continued.]

10,444. In that respect the learner would be a big competitive factor against the apprentice?—Yes, against the apprentice; that is our point.

10,445. *Lord Weir*: Surely the factor that Mr. Rowlerson spoke of—that is, the tendency in bespoke tailoring towards the sub-division of operations—requires people of the nature of learners, where they specialise in an operation and where you cannot give them proper apprenticeship training. Surely that is a factor?—That applies to the lower grades of tailoring.

10,446.—There are two divisions in your industry now, one of which would require learners, and the other, the old craft department, would remain where you could employ your apprentices?—Yes. We are anxious to resuscitate, if possible, the craftsmen of the trade, and at any rate to keep alive those establishments which deal with that particular section of the clothing industry; and it is in order to have a good, attractive scheme, and a sound training under some recognised governmental authority, that we are anxious to retain the Trade Board, so that a scheme may, if possible, have some chance of operating.

10,447. But alongside of that you have growing up this other new division of your industry where you do not really require many apprentices; you want to specialise in what I think is called machine people?—Yes, that is the tendency; it has unfortunately been the tendency.

10,448. Will not that grow?—Yes, I am afraid it will grow. Many of us think it has grown to the fullest extent that it can without really wiping out the higher class trade; but there are many of us who are hopeful that that element of industry will always maintain with those who can afford and desire to be well dressed.

10,449. *Chairman*: This is the point that I want to get from you, and I have not got it quite clearly yet. You say the learner gives the employer rather less trouble than the apprentice?—In training.

10,450. And therefore that the employers would rather have the learner than the apprentice. To meet that you allow them to pay the apprentice rather less; that is the effect of your Order?—That is the position as it stands.

10,451. Do you approve of that?—Personally I do not approve of it, but as a Board we have carried it.

10,452. But why do you not approve of it; that is what I cannot see?—Because I want to see the apprentice well catered for in the matter of wage conditions and conditions of trade.

10,453. Yes, but if you want the employers to take the apprentice rather than the learner, is not it good policy to say, "Very well, he is more trouble to you, you can pay him rather less wages," and so encourage the employers to take the apprentice?—No. Personally I feel the other way. I feel that the situation as far as the trade is concerned necessitates some inducement being held out, and, as I said before, it is the parent that you have got to induce.

10,454. *Mr. Bell*: Then it is your view that the payment of a lower rate to the apprentice as against the learner is an attraction to the employer?—No. I say he takes the learner because his argument is that in a shorter time the learner is more remunerative to him, although he pays a higher rate at the commencement.

10,455. Yes, but the fixing of the lower rate makes it more attractive to the employer to employ the apprentice because of the lower rate?—I am afraid that that does not operate, and I am afraid that it will not operate.

10,456. I want you to answer that question, because I am going to follow it with another: Does it increase the attractiveness to the employer to allow him to pay a lower rate to the apprentice than to the learner?—Personally, my own opinion is that the policy of the employer is less in the direction of apprenticeship than in the direction of learnership, and the point, in order to get the learners, is to make the wage payment higher at the commencement

to induce the influx of learners as against the apprentices. That is my conception of the move.

10,457. Then it is your view that the people who need attracting are the parents and the children who are coming into the trade, and that if you want them to come in as apprentices you must make the wage at least equal, if not more?—That is my point.

10,458. *Mr. Poulton*: Are not you talking rather about two different sections of your trade, because the West End trade is an entirely different thing, and is in an entirely different category; that is to say, they are generally recognised—at least, I understand so—to be the finest tailors in the world, and therefore the people who enter that trade must be taught under a very exact method to maintain that high standard of craftsmanship which I am sure you want to maintain?—But I hope we shall not confine the idea of tailoring to the West End only.

10,459. No, I do not want to do that, but I am only using that as an example?—In all the big centres in this country the better class firms are famous all over the world.

10,460. We have heard Mr. Rowlerson's evidence on this point; no one would question Mr. Rowlerson's statement about it?—I do not want to confine apprenticeship to the West End of London only.

Mr. Poulton: No; but you referred to that in your evidence, and that is where the evidence came from about that.

10,461. *Mr. Bell*: Should I be right in saying that the difference between an apprentice and a learner is that the apprentice comes in to learn the trade, and that the learner may become little more than a general labourer?—Unfortunately that is the tendency, I am afraid.

10,462. That is, that the learner can be put to any kind of occupation—running errands, sweeping up, or anything?—Yes, and trained to certain sections of work.

10,463. Is that why you think that some employers prefer the learner rather than the apprentice?—That has been the position up to now.

10,464. *Chairman*: But does it not follow that you ought to encourage the employer to prefer the apprentice rather than the learner?—That is what I want to do, but I say you have also to consider the parent, and I think that a differentiation in rates as between learners and apprentices is a wrong policy.

10,465. But what encouragement do you propose to give to the employer to take an apprentice rather than a learner?—The earning capacity to the firm of a skilled worker, whether of two years or three years or more, and the ability to produce better class work, is the employer's return.

10,466. Yes, but according to you he does not believe in that, and he still prefers the learner. How are you going to persuade him?—That has been the policy of the trade, and I say that differentiation between the rates seems to me to tend to perpetuate the system which has already prevailed.

10,467. *Mrs. Lyttelton*: Do you mean it has not been so much a policy as a fact that it has been much easier to get the learners than the apprentices?—Yes.

10,468. *Dame Adelaide Anderson*: You mean, perhaps, that it is the supply of young workers which determines the thing?—Yes.

10,469. That the parents forcing their children in, or offering them freely, really determines whether they shall become learners or apprentices?—There is no doubt that that operates; undoubtedly it does.

10,470. *Mrs. Lyttelton*: Therefore it is more important to consider the parents as regards the apprentices than the employers?—I say they are the determining factors as to who comes into the trade.

10,471. That is what I meant?—And it is in a very large way the remuneration which is offered to the parents which induces them.

10,472. *Mr. Bell*: But there is, at the same time, the guarantee of learning the trade; that is an

25 January, 1922.]

Mr. W. RINES, J.P.

[Continued.]

important factor?—It should be an important factor with the parent.

10,473. *Chairman*: Now perhaps we may pass on in your statement. You say this, paragraph 9: "We are in favour of maintaining a general national minimum, leaving it to collective bargaining between the associations of employers and workpeople to settle outside that minimum any questions of superior skill and payments." That is your view, is it?—That is so.

10,474. Your point is that a general minimum places all employers on an equal footing, and prevents unscrupulous employers securing lower cost of production than the fair and good employer?—That is so; that is our position exactly, as against the endeavour to set up some other arrangement against the Trade Board.

10,475. So far as the minimum is concerned?—Yes.

10,476. Do you agree with what was said by Mr. Rowlerson about local differences? We were told that in his trade, at all events, the minimum should be a national minimum, and that there should never be differential rates in different localities. You agree with that?—I agree with that, yes.

10,477. *Mr. Pugh*: But is that a practical proposition?—Would you not in actual practice have to make some differentiation between different districts?—Well, we say—or at least I think I have said here in my statement—that we claim that it is the skill and experience of the worker concerned that ought to be assessed, and not a particular district. I also say—and I think that Mr. Rowlerson very largely bore that out—that the more closely you approach to those country towns and rural areas, the more closely you approach to the old-time methods.

10,478. You would have to take those factors into account, but I am just looking at it from the practical point of view, as to whether it is a practical proposition for you to have a uniform minimum rate in your trade?—We think it is, and we think that the Trade Board minimum, with a fair amount of inspection and enforcement, would be the genuine, sound method of controlling the matter.

10,479. Have you got it now?—Yes. We have set up our national minimum, and the great difficulty has been the lack of inspection and enforcement. That is, if I may say so, the sole complaint we have to make.

10,480. Then your Board has practically agreed that it is a practical proposition?—Yes.

10,481. *Mr. Bell*: I gather that in the rural areas you are contending that your tailors are amongst the most skilled in the country—in the rural districts?—Yes, they are, very largely. They are not permeated with the sub-division ideas, and they are not trained to them. They are trained up and worked upon the older methods of the trade—the handicraft methods of the trade.

10,482. You know the argument is advanced that in the rural areas a lower minimum should be fixed?—Yes.

10,483. Do you not agree with that?—I do not. I say that what I want is what the Board has done, to fix a minimum which shall govern the whole country, and then we are anxious that, where those higher elements of skill come in, the trade union, if circumstances will permit, may obtain the higher remuneration for them.

10,484. And the sweating that has taken place in your industry has not been in the rural areas, but in some of the larger towns?—Yes, mostly in the larger towns. Of course, there are circumstances in which establishments have been set up in what may be termed rural areas, but it is not the prevailing system.

10,485. But you have found in your experience, have you not, that there have been employers in the country who have evidently been on the look-out for some district—it might be Brighton, or it might be Blackpool, or some other seaside place—where

they thought there were a large number of young females without a suitable occupation?—Yes.

10,486. Are those the places where you have found the lowest wages being paid to females?—No, I have not. I think since the operation of the Wholesale Board they have received protection, and in that way they have been cared for, because the organisation of our union and others has centred upon those individuals who were brought under that condition; but so far as that element obtains, it is not the prevailing element that I speak of in my statement.

10,487. *Mr. Poulton*: Did you read any of the evidence that we had before us of complaints, particularly from far away and remote places in Scotland, complaining of this rate that you had fixed in view of their cost of living there and the cost of living, say, in Glasgow, which they themselves stated?—Yes, I have heard Stornoway brought into question.

10,488. As far as your statement as to the national minimum is concerned, have you considered whether you would be running any undue risk if you had one minimum—whether that minimum would be fixed upon those rural districts, and thus would be a detriment to the town worker?—Not if it is the character of labour which is brought into assessment; I mean to say, if you have got the question of a factory-made garment as against the handicraft garment, then there is no difficulty, I think. If the handicraft tailor is called upon to supply a certain number of years of training and experience in the trade, I think wherever he works that minimum ought to operate.

10,489. You still think, despite that, that there should be one minimum for the whole of the country?—Yes, based upon that consideration.

10,490. *Chairman*: Do you think they should be paid in Stornoway just as much as in Glasgow?—Decidedly. It is quite possible that the man in Stornoway will be called upon to produce a more handicraft garment than the man in Glasgow may be, and it frequently happens.

10,491. You think the Stornoway fisherman requires as good a cut as the Glasgow merchant?—Yes, I mean to say, so far as hand work goes, I have worked and made garments for fishermen and merchant captains and men of that sort which required a greater deal of sewing and hand-work than a garment for yourself might do.

10,492. But you do not have regard to the cost of living at all, or rent, or matters of that kind?—The main regard, as far as I look at it, is to establish some condition of life for the worker who is called upon to give his skill.

10,493. That is not very definite. Do you have any regard to the cost of living in one place as compared with another?—Well, we have got to have that regard under present circumstances, and in that sense it has been the plea which has brought wages down to a very low level.

10,494. *Mr. Poulton*: That is why I put it to you whether you had considered the effect that might have upon the town worker who is in a very serious position?—Yes, but there are difficulties whichever way you try to approach this matter.

Chairman: That is quite right.

10,495. *Lord Weir*: You remember the Order of the original Tailoring Board?—Yes, for about the last two years of its existence; not, I think, from the commencement of it.

10,496. Did that Board fix minimum rates for nearly all grades of skilled labour in your trade?—Yes, but the particular section with which I am dealing now was not under the operation of that Board.

10,497. I am speaking now entirely of the trade which was covered by the old Board?—Yes.

10,498. Suppose you take adult males, to what degree did it differentiate in skill?—Well, of course, it is split up into more divisions than in the particular industry with which I am dealing, but each one has its amount of skill, and the rates were based, of course, upon the fact that they had had so many

25 January, 1922.]

Mr. W. RINES, J.P.

[Continued.]

years' experience in the trade, and were at certain ages.

10,499. Did you start with that right away on the old Board?—I do not know about what they started with right away.

10,500. When you were a member?—I only came in at the later stages.

10,501. Did it exist then?—When I went on they were based upon age and experience.

10,502. You mean the young people; I am speaking of adult males. How many rates had you for adult males?—I could not say particularly; there were cutters, and machine hands, and people of that sort; all the grades were fixed.

10,503. They were all protected separately?—They were all on a minimum rate.

10,504. They were all separately protected?—Yes, and of course the particular section, the journeyman tailoring section, were not under the operations of that Board. They never had any protection, even under the ordinary Factory Workshop Act. They received no protection of any sort which was beneficial.

10,505. *Chairman*: I will now come to your conclusions, if I may; I have read the statements. You are satisfied that the Trade Board system is a good one and has worked well?—Yes.

10,506. You say that "what delays and confusion have resulted from the operations of the Retail Bespoke Tailoring Board are less the fault of the machinery than the desire on the part of employers to maintain a vicious, chaotic, and anti-control position"?—Yes; there has never been any control in our particular industry for a century other than can be won to-day by a strike or a lock-out, and that went away again within a very short period because of the lack of organisation to keep it in force.

10,507. Then you say "that the setting up of differentiating rates." I suppose that means different rates in different areas?—Yes.

10,508. "—will tend to perpetuate the evil conditions from which the journeyman tailor has always suffered. That it will also perpetuate the undercutting and evasions which employers have at all time complained of." Then you say "that prevailing rates, even in rural districts, are not too high for the skill and experience demanded under the Board's determination"?—That is so.

(The Witness withdrew.)

(Adjourned for a short time.)

Miss A. LOUGHLIN and Mr. A. HEADON, called and examined.

10,515. *Chairman* (to Miss Loughlin): You are a member of the Dressmaking Trade Board, the Hat, Cap and Millinery Trade Board, the Ready-Made Tailoring Trade Board, the Shirtmaking Trade Board, and the Wholesale Mantle and Costume Trade Board?—(Miss Loughlin): Yes.

10,516. (To Mr. Headon): You are a member of the Ready-Made Tailoring and Shirtmaking Trade Boards?—(Mr. Headon): That is so.

10,517. (To Miss Loughlin): Are you a member of any union?—(Miss Loughlin): Yes, I am the National Organiser of the Tailors and Garment Workers' Trade Union, but I am here to-day on behalf of the Shirtmaking Trade Board. I have been appointed to attend here.

10,518. For the workers' side?—Yes.

10,519. Will you first of all tell us something about the general circumstances obtaining in the shirt-making trade before the establishment of the Board?—The position may be described as being deplorable, or something considerably worse. The circumstances were such as permitted the most extreme form of what is understood by the term "sweating." One with any general knowledge of the trade knows full well that Hood's "Song of the Shirt" did not contain any form of exaggeration of the circumstances in which women worked in the shirt trade in days gone by.

10,509. That refers to the skilled rates?—Yes.

10,510. Then you say "that no Conciliation Board, district, or area system would be so beneficial or satisfactory in its operations as the present Trade Board system"?—That is our belief, and we have experience behind us to justify that statement, we think.

10,511. *Mr. Poulton*: I understand you have had experience, not only of the 1918 Act, but also of the 1909 Act?—Yes.

10,512. So you have experience extending over a series of years?—A good many years, yes. If I may, I should just like to deal with a point which has been dealt with in regard to the sub-division system and the way it has undermined the wages. As a matter of fact, the operation of the first Board so raised the position of the sub-division worker that the highly skilled tailor was very much below, and is still very much below him even to-day, in his earning capacity. I do not say that exactly from the standpoint that the system allows itself to give the other section of the trade more work during the year, because we have to consider that in the particular section with which I am dealing now six months in the year is as much as you can say is anything like a busy time; and under those circumstances, even under the Wholesale Board, those who have been working under the sub-division system have been able to obtain by their organisation, outside the rates fixed for them, a very much higher lever at the rate per hour than the ordinary journeyman tailor, when the point of skill required is in no sense commensurate with that which the other man has to supply.

10,513. But it has raised his status as a citizen wonderfully?—Yes, as a citizen. If I may, I should like to elaborate one point for a moment. I give you some figures with regard to statistics sent in as to the rates per hour which were in operation prior to the war in 1914, and also in 1918.

10,514. *Chairman*: I noticed that. We have had that information so fully from other witnesses that I think we are quite satisfied that the rates were exceptionally low.—I have no desire to add anything to that, as long as the point is quite clear.

Chairman: That is why I did not wish to press you on that point.

10,520. What is the date of the "Song of the Shirt"?—It is many years ago.

10,521. I know.—But until comparatively recently the shirtmaking trade was in a very chaotic condition.

10,522. *Mr. Poulton*: By "chaotic" do you mean also that it was in a very bad condition regarding wages?—Yes.

10,523. Wages were low?—Previous to the Trade Board being established. In the Shirtmaking Trade you have a large centre in Manchester, and you have also large centres in Glasgow and London; then you have the West of England; and anyone who has any knowledge of the trade knows full well that it is quite easy to commence a shirt factory and that the state of wages, particularly in the West of England and Wales, were very deplorable indeed. The girls were working for very low wages.

10,524. *Chairman*: It was piecework, I suppose?—Yes, piecework.

10,525. So much per garment?—Yes. (Mr. Headon): Per dozen garments.

10,526. That continued more or less until when?—(Miss Loughlin): It continued until the establishment of the Shirt Trade Board. It is within my knowledge that there has been a general and gradual improvement, both as regards the conditions of labour, organisation of factories and unfair com-

25 January, 1922.]

Miss A. LOUGHLIN and Mr. A. HEADON.

[Continued.]

petition as between the types of employers that may be described as fair and otherwise. One concrete instance which I should like to bring out is that in the Lancashire area the employers got together following the 1909 Act being passed and the Shirt-making Trade being scheduled under the Act, and compiled a uniform piece rate list with the assistance of Trade Board inspectors from the Department in London. The trade in Manchester and the Lancashire area was in such a chaotic state that inspectors had to be brought in to assist the employers to form some kind of uniform piece rate to prevent the unfair competition of which the employers were complaining.

10,527. Has your Board fixed a piece rate?—Yes. The conditions in the Shirtmaking Trade for girls have always been piecework.

10,528. *Mr. Bell*: Can you give us any idea what were the wages which were paid before the Trade Board came into operation?—You had varying wages, the finishing end of the trade, was the worst-paid branch of the female section of the industry; wages varying from 5s. to perhaps 30s. per week for adult women.

10,529. What was the reason of the variation?—I do not exactly follow your point.

10,530. I suppose you are speaking of adult women?—Yes.

10,531. Why did some women get 5s. and others 30s.?—That, of course, depended upon the town that they worked in. For instance, in Manchester some of the employers paid much better piece rates than the employers in the West of England.

10,532. *Dame Adelaide Anderson*: Because of local competition with the textile trades, partly?—Perhaps that would not be the whole answer. Wages in the agricultural areas, or perhaps in the West of England, were lower generally than they would be in Manchester.

10,533. *Chairman*: You told me that you fixed piece rates. Is that so? You fixed a general minimum time rate and a piece-work basis time rate, did you not?—Not under the 1909 Act. The general minimum piece rate was fixed under the new Act, the 1918 Act. Under the 1909 Act we had only one time rate, and the piece rate had to yield not less than the time rate.

10,534. I am well aware of that, but I think your answer was not quite correct when you said that you had fixed piece rates. What you had done was to fix a piecework basis time rate?—What I was referring to was that, following the Shirt Trade being scheduled under the 1909 Act, the employers in Manchester got together and fixed a uniform piece rate list to cover the whole of the employers in the area.

10,535. My question referred to the Trade Board, not to the employers.—We had no piece rates covered by the Board.

10,536. You have not that to-day?—Only a piecework basis time rate of 1d. in addition to the time rate.

10,537. That is what I wanted to get quite clear. 8½d. is the ordinary time rate and 9½d. is the piecework rate?—Yes, that is right.

10,538. *Lord Weir*: Have you many homeworkers?—There was a considerable number of homeworkers previous to the trade being scheduled under the Acts, but it has gradually done away with the homeworking.

10,539. Has it almost killed it?—It is almost non-existent to-day.

10,540. *Mr. Bell*: Can you tell me what would happen to a woman who was working on piece rates if she did not obtain 8½d.?—To-day we have a piecework basis time rate of 9½d. per hour for the ordinary worker, and if you had a woman who did not earn the 9½d. per hour and the inspector thought that the rates in that particular factory were quite all right, the employer could not be touched in any way, even if the woman was only receiving 6½d. per hour.

10,541. *Chairman*: That would be the result of her own slow working?—Exactly.

10,542. *Mr. Bell*: So that in the shirtmaking industry you have what you would describe as a minimum piece rate, not a minimum wage?—Yes, we have a minimum time rate for girls employed on time work, and we have a minimum piecework basis time rate to yield to the ordinary worker not less than 9½d. per hour.

10,543. Who decides which are the ordinary workers?—It has always been very difficult to define who is an ordinary worker. I do not know anyone who really has been able to give a very complete definition, but the Trade Board inspectors, if they visit a factory, would define whom they would consider to be the ordinary worker: a person who was not suffering from any physical disability and appeared to be quite normal.

10,544. If a woman, say, of 30 years of age were to all appearances quite normal and she did not receive 9½d. per hour from her piece rate, what would happen?—If there were a complaint made the inspector would decide as to whether the person of 30 years of age was an ordinary worker or not, and whether the employer's piece rates yielded to the ordinary workers the proper rate of wage.

10,545. So that if she were what is generally described as a slow worker she might have a considerably less wage than you would describe as a living wage?—Yes.

10,546. So that to that extent a minimum wage would not be in operation?—No, only in so far as the ordinary worker was concerned. (*Mr. Headon*.) Might I say that there is no such thing in the shirt trade as a minimum wage; it is a minimum rate that is in operation either per hour, or per hour piecework basis; and it is quite immaterial what are the earnings of the worker providing that the rates in the factory are proved by the inspector to be adequate to yield the rate according to the Trade Board Schedule.

10,547. To an ordinary worker?—Quite so. May I be permitted to say at this juncture that as a worker in the shirt trade for 33 years it was my privilege, prior to the setting up of the Trade Board, to be brought very largely into touch with the workers—the indoor and the outdoor workers—in the Manchester area, who were working under most terrible conditions as far as actual conditions of labour and rates of pay were concerned. It was then found on investigation by someone in authority at that time that the actual average rate of the shirt worker prior to the operations of the Trade Board Act worked out at something about 2d. per hour. When Trade Boards became a recognised thing and the Shirtmaking Trade Board was established in 1914, the first rate which was fixed by the Board itself was that of 3½d. covering outworkers and indoor workers, but by the instrumentality of the Trade Board operations the rates had been increased from time to time, so much so that the workers as a whole look upon the Trade Board undoubtedly as machinery by which a certain amount of safety is granted to them with regard to their rates of pay.

10,548. The unions, I suppose, assisting that process of getting the rate gradually raised?—With the assistance of the Trade Board, naturally.

10,549. I think we are quite convinced of the fact that the wages in this trade were exceptionally low; indeed, they were proverbial. You have something to say about the want of inspection?—(*Miss Loughlin*.) Yes. I think this is the most important of the attacks on Trade Boards. I think within the first 12 months of the Trade Boards being established under the 1909 Act dissatisfaction was witnessed and protests made in respect of the absence of sufficient inspectors. For instance, when Trade Boards were under the administration of the Board of Trade, deputations waited upon Mr. Sydney Buxton, Mr. Gladstone, and, I believe, Mr. Winston Churchill, calling attention to the inadequate number of inspectors appointed or available to attend to the enforcement of the decisions of the Trade Boards established under the 1909 Act. Resolutions were moved and

25 January, 1922.]

Miss A. LOUGHLIN and Mr. A. HEADON.

[Continued.]

adopted unanimously at Trade Union Congress after Congress, demanding the appointment of the necessary number of Trade Board inspectors whereby the determinations of the Board, small in number in those days, could be enforced, and I think in every case when deputations met the Board of Trade the invariable reply was to the effect that economy must be practised, and that the expense of additional inspectors would not be sanctioned by the Treasury.

10,550. I suppose these workrooms were visited by the factory inspectors?—Yes.

10,551. Do you see any reason why the factory inspectors should not be asked to consider the question of minimum wages also?—I have no knowledge of the number of factory inspectors, but I think that you want people who specialise on Trade Board determination who would be "able to state to the employer whether the employer was paying the proper rate of wages or not."

10,552. Dame Adelaide Anderson: The factory inspector inquires, does he not, into particulars as to pieceworkers?—I mean whether written particulars are being given to the pieceworkers?—I have no knowledge of any factory inspector ever going to girls on piecework or even to men on timework, and asking them what rates were being paid.

Chairman: That is not the question.

10,553. Dame Adelaide Anderson: The point is that the Order requires that pieceworkers shall have written particulars of the rate which they are going to work for, under the Factory Act?—Yes.

10,554. Do they have those particulars given to them?—They are usually hung up near where the girl receives her work. The girl goes to the table and receives her work, it is numbered, and at the side of the table there is usually a typewritten statement stating what the number is and how much pay she is going to be paid for the garment.

10,555. But the duty of the inspector is to find out that the girl is getting the information?—The information is always there.

10,556. But then she needs to have the clue with her work?—Yes, and it is there, too. She gets it even with her work as well as it being hung up—usually typewritten; but even if she knows how much she is going to receive for a particular garment, either for one garment or per dozen, it does not follow that she is going to receive at the end of the week what the Trade Board has determined she should have.

10,557. Not at all; I did not mean to suggest that. I merely meant to ask you whether the factory inspector did already inquire whether that Order is or is not carried out?—Yes.

10,558. Chairman: I think Dame Adelaide's point, and mine also, is that the same inspector who sees to that might also be authorised, by Act of Parliament or otherwise, to inquire as to the question of the rate of wages. Do you see any objection to that? I know it is not part of his duty now, but is there any reason why it should not be made part of his duty?—The Act would have to be so amended whereby the factory inspector would have to specialise, because I do think that it takes a special inspector to deal with the complications, particularly when you are dealing with piece rates.

10,559. I suppose no one is a factory inspector who has not a great deal of such knowledge?—I have no doubt they have.

10,560. Mr. Bell: Are you aware that demands had been made time after time for an addition to the number of factory inspectors on account of their already having more work than they could attend to?—Yes, I have heard from factory inspectors themselves that they are overworked.

10,561. So that if this work were put on to the factory inspectors it would still mean an additional number of inspectors, would it not?—Yes.

10,562. Have you thought of any other means by which the rates fixed by the Trade Board could be enforced?—You will have to have inspectors, and additional inspectors to the ones who are already appointed, if you are going to have the determinations

of the Trade Boards carried out effectively, because while you have the present state of trade in industries, particularly amongst the unorganised women, who have no redress unless you have thorough inspection.

10,563. The workpeople themselves generally know whether they are or are not receiving the correct rate, do they not?—Yes.

10,564. Have you thought of any method by which the workpeople themselves could complain and supply the evidence to anyone so that the necessary proceedings could be taken?—They do that now, particularly those that are organised. They will go to the trade union secretary and complain that, instead of their piece rate yielding, say, 9½d. per hour it is only yielding 8½d. per hour, or 7d. per hour, and the trade union secretary in the ordinary way interviews the employer, and usually, without complaint being made to the Trade Board and an inspector brought in, the position is rectified; but you have under the 1909 Act thousands of women who are unorganised, and it is those women that want looking after.

10,565. I am addressing myself more to the position where the rate is satisfactory but where the rate is not paid—not a rectification of the rate at all, but where the rate is not paid?—(Mr. Headon.) But where the rates are satisfactory?

10,566. Yes; the rate posted up in the mill or in the workshop may be the Trade Board rate, but the employer may not be paying it. Have you any method to suggest whereby proceedings could be instituted against the employer even without an inspector?—(Miss Loughlin.) Not unless the people were organised. You would have to have an inspector to discover that the employer might have the schedule hung up in the factory but was evading paying the rates of wages.

10,567. Chairman: Of course, if the girl were a member of a union she would go to her union?—Yes, if she is a member of her union she does report that she is not being paid the rate, but if you have an employer who has a number of unorganised people, if they do not complain, the only method that you have of finding out is through inspection. (Mr. Headon): May I say at this point, as an illustration, that at this present moment there is a case in London—or shall I say just on the outskirts of London—where the Trade Board notice is exhibited in the factory; the girls are unorganised, and naturally they believe, by the fact of the Trade Board Bill being put up in their factory, that they are under its operations, and that they are receiving the consideration due to them by the administration of that Act; and I find women of ten years' experience in the trade working 49 hours and receiving the miserable rate of £1 1s. 6½d. That came to me quite accidentally.

10,568! That is under the Trade Board rate, is it?—They are supposed to be receiving the Trade Board rates, and according to Mr. Bell the firm are not recognising that. The only thing that I can do with that case as a representative of the workers is to put it into the hands of the Trade Board officials for inspection. That is being investigated at the present time. It was quite accidentally that we got hold of the matter, from an unorganised centre.

10,569. Lord. V'oir: Assume that the worker was unorganised: Do you see any reason why she should not go to the local Labour Exchange, which is the representative office of the Ministry of Labour who administer Trade Boards, and complain and make them take it up?—The difficulty is in persuading the workers to take up that attitude. You have the greatest difficulty in persuading them to do it.

10,570. What is the difference between an organised worker going to her union and an unorganised worker going to the Labour Exchange?—(Miss Loughlin): If I may be permitted to answer, you usually get the most intelligent section of the workers organised, and therefore they usually have some knowledge of what they should be paid; but as regards going to the Labour Exchange, when you are dealing with unorganised people they often have really no knowledge of what they should be paid, and they would be the

25 January, 1922.]

Miss A. LOUGHLIN and Mr. A. HEADON.

[Continued.]

last people in the world to go and complain. Therefore, from the employer's point of view, it is unfair that one employer should pay the rates while another employer is evading paying the rates.

10,571. Therefore you suggest that the only way is to have an inspectional body?—Yes.

10,572. That can only be altered by inspection?—Yes.

10,573. *Mr. Poulton*: What you mean is that there should be a sufficient inspectorate to go round to the factories entirely independently of any complaints a union may make?—(*Mr. Headon*): Quite.

10,574. So that they shall see the list, and then go to the employees and say: "Are you receiving those rates?"—Yes.

10,575. That is what you really mean?—Yes.

10,576. *Dame Adelaide Anderson*: So that no worker appears in the attitude of a complainant against her or his employer in that particular place; it is an independent official enquiry?—Quite so.

10,577. Are there many factories in which there are no organised workers? I can quite understand that some shops are much less organised than others, but are there many places in which there are no trade unionists?—(*Miss Loughlin*): It would be mostly in the smaller towns or outlying districts. If you take the larger industrial towns you will find them more or less organised, if not the whole of the factory, a portion of the workers; and you see if you get a complaint from one or more of them actually an investigation takes place, because you yourself are endeavouring to find out whether the employer is evading paying the rates to the whole of the workers, and you may only have 50 workers out of 200 unorganised in the particular place.

10,578. The enquiry of a trade union official is always weaker where there is very little organisation?—Yes.

10,579. *Lord Weir*: Would it be altogether unreasonable to throw the responsibility on the worker for knowing what he or she should be paid? Do you think that is unreasonable?—Personally, I may not think it is unreasonable, but it is a statement of fact that you have a number of workers who do not know that they come under any Trade Board, and are perhaps not sufficiently interested in their every-day life to find out exactly what the employer should be paying to them.

10,580. Do you not think that understanding will grow very rapidly?—Of course, the Trade Boards are comparatively new, or the larger proportion of them. Do you not think that it could be reasonably anticipated that within a very short time 99 per cent. of the workers would learn what they ought to be paid? Would it not be a reasonable view to take?—From experience, we find that the girls under the Wholesale Tailoring Board and the Shirtmaking Board, and the old Boards that were set up under the 1909 Act, gradually became accustomed to the Boards, and they themselves know exactly what they should be paid; but even in those circumstances, and particularly during the slumps in trade, these women want some measure of assistance and protection, there is the fear of being dismissed, and some of them will not make complaints even to their own secretaries, because they are afraid of being thrown out of employment; and you have got to have some kind of protection for women.

10,581. *Mr. Layton*: There are two points raised. I think *Mr. Headon* quoted a case just now of a woman working 49 hours for 2s. 6d. Do you suggest that in fact that woman was not aware of the piecework basis time rate and what she ought to have had at the end of the week?—(*Mr. Headon*): You ask: Do I mean to imply that she would take that in ignorance of what the rates were?

10,582. Yes; I think that is the suggestion. There are two quite separate points: One is that the workers do not know, and the other is that they are afraid to take action. I think you suggested that sometimes many of them did not actually know what they ought to earn.—(*Miss Loughlin*): Yes, that is so.

(*Mr. Headon*): I am not in a position to say whether the usual custom of booking the piece rate for the garment on the worker's book is actually carried out at that establishment or not.

10,583. But the point is that the piecework basis time rate must be on a notice in the factory?—Per hour, yes.

10,584. She knows how long she has been in the factory and what she ought to earn?—Yes.

10,585. Would it be possible for a worker consistently to be taking home a wage below that fixed by the piecework basis time rate without knowing it?—Yes, I think so.

10,586. You think it would be?—Yes.

10,587. It seems a very astonishing thing?—(*Miss Loughlin*): It is quite correct, nevertheless.

10,588. *Mr. Bell*: You stated just now that if you had, say, 50 out of 200 who were members of the Trade Union, and they came and complained about the rate, you might visit the place without the inspector being called in and get the correct rate put into operation?—Yes.

10,589. What would happen to the back pay?—The back pay is paid, too. The Trade Union always has a way of testing piece rates. Usually we have some first-hand knowledge of piece rates, and if you have a complaint we call a shop meeting, and get the girls who have complained to give, as far as they are able—and often they have their wage books—their wages for a period of weeks; and turning over their wage book after wage book you probably find repetitions of similar numbers, and you know that for a period of months, probably, these girls have been engaged upon this particular work, and their piece rate has not been yielding the proper rate of wage. It does not follow that you go to the employer and tell him that you have only 50 workers. You go on behalf of the whole of the workers, organised and unorganised, and you state that the piece rates for a period of months have not been yielding the Trade Board rate, and if he does not alter the piece rates, and if he does not pay the back money to which the workers are entitled, you will have to report it to the Trade Board. In nine cases out of ten, particularly when trade is normal, the employer at once states that he is not responsible, and probably he did not know exactly what was being paid, or the organisation in his factory is wrong, and he puts the matter right and pays to the workers, without it being taken to the Trade Board, the money that is due to them.

10,590. *Chairman*: That is an excellent effect of organisation?—Yes.

10,591. I suppose it comes to the knowledge of other workers, and I daresay members of the union, of course?—Yes.

10,592. *Mr. Bell*: So that in those cases, or under those circumstances, there is no need for any additional inspectorate?—Perhaps you might have 10 employers who would pay up, and then you might have another 10 employers who would refuse point blank, and say: "Take it to the Trade Board. I am not going to pay the Trade Board rates"; and it is for those employers, perhaps, even when you are dealing with organised and unorganised workers, that you have got to bring the inspector in; and the inspector has a right which we have not: the right to request the employer to give him the books, and he himself can go through the books for a period of weeks or months and find out what is due to the workers.

10,593. *Mr. Poulton*: I take it that your point is that there should be a sufficient inspectorate altogether apart from trade union activity or trade union inspection?—Yes.

10,594. They should be able to go to the factory and independently go and see from the books that the workers are having their proper rates?—Yes. I venture to suggest that most of the attacks and propaganda against Trade Boards are partly due, or wholly due, to the lack of inspection. You have a body of employers who, when the 1915 Act was being talked about, welcomed the idea of some machinery

25 January, 1922.]

Miss A. LOUGHLIN and Mr. A. HEADON.

[Continued.]

so that they would be able to utilise it to prevent unfair competition; but, owing to the fact of the lack of inspection, the very employers who welcomed the 1918 Act have been its most bitter opponents, because they say that they want to pay certain rates, and the employer, perhaps next door to them, is evading paying the rates which they are willing to pay. It is from that point of view, I think, that you get most of the attacks.

10,595. *Mr. Bell*: I want to put another position to you. The appointment of the additional inspectors may be resisted on the ground of expense. Suppose, as a trade union official, you get sufficient evidence that a certain employer is not complying with the orders of the Trade Board, do you think it would be effective if you could then take your evidence, say, to the Chief Constable, who might send an officer to ascertain whether the evidence which you had supplied was correct or not, and a prosecution might then ensue?—It certainly would assist, but I do not think it would be as effective as having additional inspectors.

10,596. Of course, you are well aware that the ordinary police machinery is used for seeing that the

(The Witnesses withdrew.)

Sir ALFRED HOPKINSON, K.C., called and examined.

10,602. *Chairman*: You are the Chairman of the Aerated Waters Trade Board, of the Cotton Waste Trade Board and of the Laundry Trade Board?—Not now of the Laundry Trade Board. I was for a time, until the first period expired.

10,603. You have been asked to deal with certain points affecting the administration of Trade Boards, and first as to the fixing of a minimum rate. Is your opinion that the fixing of rates trade by trade is the right process?—Yes, so far as I have seen. I do not see any other way, subject to this: that it may be right also to have differentiation according to districts in some cases.

10,604. That may be very desirable in distributive trades, but what do you say as to the productive trades?—Take one case, the laundry trade. There, I think, was a strong case, on the evidence which was before us when I was a member of that Board, for having differentiation of districts. We had piteous letters from Stromness in the Orkneys saying that the rate that had been fixed for London was inapplicable there. Inspectors were sent down, and I have little doubt that those complaints were well founded. That is not a distributive trade nor yet a productive trade.

10,605. But it is nearer the distributive than the productive, because it is not a national trade; it is really a local trade?—That is so, but, on the other hand, we did find considerable difficulty with aerated water in having a different Board for Scotland from England because, in the North, the two Boards were in competition, and it was unfair to the English maker to have a higher rate than the Scottish rate, or *vice versa*.

10,606. That is a productive trade?—Yes, of course, that is a productive trade where English and Scottish makers are in competition. I think the whole point is: should the trades be in competition in different localities.

10,607. *Mr. Layton*: Will you pursue that a moment? Do you think that wages in the aerated water industry of Scotland and of England were different before the Trade Board was set up?—I do not know; I do not remember whether they were different before that or not; but still, in one case the law steps in and says to one set of people: "You must pay so much for your wages," and it may affect the price in the border districts.

10,608. You would agree that it is not at all unusual—in fact, it is common all over industry all over the country—that you will get competition between industries from different districts whatever

Weights and Measures Act is applied and that correct weights and correct measures are used?—Yes.

10,597. Do you know of any reason why the same people should not look after correct wages?—I would naturally welcome any suggestion or any additional methods of enforcing the rates of wages already in existence.

10,598. *Chairman*: Then you have some suggestions for more efficient administration. Have you anything to say on the point of inspection other than what you have said?—No. With regard to administration I support the majority report, and I regret that the Ministry of Labour has not seen its way clear to put that Report into operation.

10,599. What Report is that?—The Majority Report. I think it would have gone a long way towards overcoming our difficulties.

10,600. That is the Report of Mr. Wolfe's Committee, as we call it?—Yes, exactly.

10,601. (To *Mr. Headon*): Have you anything to add?—(Mr. Headon): No, I think Miss Loughlin has covered it all, and it is no use reiterating.

Chairman: Thank you; we are much obliged to you.

different rates of wages prevail?—Yes, but it is better to avoid it if you can, where the article is definitely in competition and can be easily carried from place to place. In the case of the laundry trade, of course, you have to do it on the spot, and in certain other cases the work done on the spot—

10,609. Would you consider the fact that industries compete at a given line tends to equalise the wages in different districts serving that neutral territory?—I think it would be much better to put it all under the one Board in those cases where there is possible competition, and to leave the matter to be dealt with by District Committees of the same Board or for the Board to deal with it on the report of District Committees, not two quite independent Boards in those cases; whereas there are other cases in which two Boards for England and Scotland would be a positive advantage, where there is no competition and very different conditions.

10,610. *Chairman*: On the question of the minimum rate, have you had occasion to consider the basis upon which the minimum rate should be fixed?—In fixing it by the Board, do you mean?

10,611. In fixing it by the Board?—Yes, a good deal; and in one Board the suggestion was made to make the rate vary automatically according to the index figure. I do not think that is quite satisfactory. For one reason, there are administrative difficulties; another thing is that the index figure is not by any means the only element arising; there is the condition of trade, and all sorts of things; and although it is a very important element, it is not the sole element in the case. There are other elements that come in.

10,612. In the case with which you are familiar, how do you fix your minimum?—Take one case, say cotton waste. We consider the fact of the cost of living; we consider the rates which are paid in similar employments as near as may be, and all the other elements of the case; and then the parties talk it over, and in the result, after talking it all over together, we have in that case arrived at what we thought was the fairest minimum rate, ultimately adopted by agreement of employer and employed. Then afterwards, when the index figure of the cost of living, which had been one element in the case, fell very largely, the point was raised again, and the wages have been reduced, not exactly in the same proportion, but to some extent, owing to the cost of living having been reduced, and also owing to the fact that the trade, instead of being prosperous and well able to pay, had become exceedingly

25 January, 1922.]

Sir ALFRED HOPKINSON, K.C.

[Continued.]

unprosperous. Both elements came in, and the wages were reduced in that case by agreement after two discussions, in steps.

10,613. Take a case like the laundry trade; I suppose it is a fact that the cost of living differs in different places?—Yes, very much.

10,614. It is higher in one place than in another?—Very much.

10,615. Upon which of those places do you base your minimum wage, so far as it is influenced by cost of living?—There we did the best we could; that is about the long and the short of it. The cost of living varied very considerably, but not as one would have expected, *a priori*. We tried at one time to get up a scheme, dividing the country into areas, and I think we got a fairly good scheme; but you cannot carry out that kind of scheme unless there is something like general agreement about it, because you can always point to anomalies in some individual cases, because you must draw the line of area somewhere; and the thing broke down.

10,616. In the end, upon which cost did you base your rate; was it on the cost of living in the area where the cost was lowest, or did you take some other figure for your minimum rate?—For the whole country?

10,617. Yes.—It is difficult to say when the thing is settled by agreement. The Appointed Members do not act as arbitrators, and where it is a question of agreement I may say at once that one is not always sure what are the elements which have resulted in a certain vote. It is a different thing in the case of an arbitration; an arbitrator knows why he does it, but I should say, so far as one can, although it is really guesswork, that the tendency was to go according to the sort of average, as near as you could. It operated hardly in some cases upon employers and also upon customers where the cost of living was very low, and perhaps a little hardly on the operatives where the cost of living was high. The laundry case was, in my opinion—I may be wrong—a strong case for differentiation of rates; it was one of the strongest; but I am told that it has not come off. I do not know.

10,618. *Lord Weir*: In dealing with these principles, or perhaps lack of principles, in fixing minimum rates, have you in view a single minimum rate, or are you speaking of all your minimum rates?—Do you mean according to area or according to age, or what?

10,619. Take male adults, for example?—Take male adults; I think the same would apply to fixing the rate for male adults or female adults.

10,620. That is not exactly what I meant. What I meant was this: You have explained the principles under which you fixed your minimum rate. Was that for the lowest grade of labour the lowest minimum, or for each a different minimum?—I see, according to the character of the work done?

10,621. Yes.—In the two Boards with which I am now concerned—and I think from recollection it was the same in the Laundry Board—we fixed according to the lowest scale for everybody and did not fix graded rates according to the character of the employment. Do I make my point clear?

10,622. Yes. You refer merely to a single minimum for adults, say, over 21?—Yes, for adults. In the Boards with which I am concerned—I believe it is different in others—we have not fixed different rates according to the grade of work.

10,623. You have not attempted to regulate wages?—No, we have not attempted it, and as far as I remember, I do not think we have been asked on either side to do so. It is owing to the character of the trade, I suppose.

10,624. You did not consider it your duty under the Act to regulate the wages?—Not unless it was raised. I think it is very important that Appointed Members as a rule should await the initiative from some of those engaged either as employers or workers, and we have not had it brought up, as far as I recollect, on any of the three Boards with which

I have been concerned; but I believe that it is different in other cases.

10,625. *Chairman*: Yes, it is.—I would rather not offer an opinion, although perhaps *a priori* one would think that it was a good thing to do; but it has not been brought before us.

10,626. *Dame Adelaide Anderson*: A question which I want to ask is simply whether in the laundry trade, which has been referred to repeatedly, the conditions are really very much the same in the long run as in productive industries as regards a general rate instead of local district rates? The clients do choose one district or another according to the cost. If you did it more cheaply in a place not very far from London the laundry work would certainly go out there?—There is a difficulty there, and we had that difficulty to face.

10,627. It is the same in almost any part of the country. It is only partial, because those who are very poor, and who are in the locality, would use the local laundry although other laundries some distance away might have cheaper rates?—Working it out in practice one got, I think, a fairly satisfactory kind of scheme of differentiation varying partly according to living and also based on this, that if prices are much raised you might have a village where people would not send their things to a distance or even to any laundry, but would do them at home, which is different from London conditions.

10,628. It is, in fact, only the distributive industries where you can very well fix local district rates without upsetting the balance of trade?—I should like to try it in any individual case. In the laundry case I think we did work it out fairly well, but, as I said, I think it is quite possible in any one of those areas to find that you would have some glaring anomaly, and if there were disagreement on any one Board in fixing it originally, they would use that to discredit the whole thing. It is just the case that one suggested about the area a little out of London. You will do this injustice if you apply it, but you may do a bigger one if you do not vary the rate, and I think you would in some trades; but I do not think that that would apply in the case of cotton waste or in aerated waters, as far as I have seen. There has been no demand of either side for differentiation in either of those cases, except as regards Scotland in the case of cotton waste; and in Scotland the aerated water trade is under a separate Board.

10,629. *Mr. Layton*: Was your scheme on the Laundry Board based on the difference between town and country, or did you take counties or groups of areas in the country?—Areas, not counties. Counties would not do a bit. Take Birmingham, for example: there are places in Warwickshire, Staffordshire and in Worcestershire, which are within the Birmingham area. We took areas and carefully settled them according to the evidence as to the cost of living and general conditions.

10,630. What sort of areas? Did you cut the country up into 50 or 5 areas?—It would depend upon the thickness of the population. Take Manchester as a centre: you have a large area round Manchester; and you might take the Eastern Counties as one. I forget the exact details, but we worked out the scheme after a good deal of trouble; but it never came into operation, and never could in the face of strong opposition, because the anomalies, as I pointed out, would appear so unanswerable.

10,631. Were those objections from individual people?—I think there was a general feeling amongst the workers in favour of a uniform rate throughout the country. We did fix a differential rate for the London area, but whether that has come into operations or not I do not know. I forget how many miles round London it was, but enough to take in the suburban areas and the sort of district which would be served by motor from London.

10,632. Do you consider that the agricultural districts were fully represented on either side of the

25 January, 1922.]

Sir ALFRED HOPKINSON, K.C.

[Continued.]

Board?—I should say not in that case, if you are speaking of the Laundry Trade Board.

10,633. Yes. I am?—With regard to the Aerated Water and Cotton Waste Trade Board, cotton waste is a very concentrated industry.

10,634. I am speaking of the laundry trade?—No, I do not think they were.

10,635. Might that not be one of the reasons why this differentiation was turned down?—Quite possibly; it is very likely indeed; but I think it was also because of the general feeling against it on the part of the workers, who felt that there should be a national rate. I think that is the general idea. They were against the rates, and then the practical detailed difficulties of settling it were so great that you could not force the thing through against that opposition. But I do not think that the problem is insoluble in a case like that.

10,636. *Chairman*: Then you have been asked about rates being enforceable, and you say—and I am not surprised—that the minimum rates ought to be enforceable, but as regards rates above the minimum you have no personal experience?—No, I have not had anything to do, on our Boards, with cases where there are higher classes of workmen or workwomen who expect a higher rate. I believe in many cases they get it.

10,637. Undoubtedly—I mean they get it by agreement; and of course any fixing of minimum rates does not in the least prevent that.

10,638. Obviously not. Then as regards time, you think, agreeing I think with every witness whom we have heard, that the time which it takes to vary a rate is too long?—Quite too long. There is a good deal of feeling about that. It was quite right when fixing the rate originally to give plenty of time to turn round, but variations are often quite small, and the time is definitely too long and could be shortened now.

10,639. Then as regards the need for appointed members, you think them essential?—Yes, quite. There is one point there. I am afraid that my short answer has been omitted, about the number of appointed members actually sitting. Three are much more effective than a larger number. We talk together, and we know where we are; and you cannot with a bigger body than that. There would be no harm in having a fourth to be appointed as a sort of extra man to come in when required. Sometimes it is awkward for the chairman to be sitting alone; other members may be occupied with some engagement elsewhere; and it would not be at all a bad thing to have an odd man out who could be put in as a substitute; but not more than three should sit at once.

10,640. You mean what is sometimes called an alternate?—Yes, one to come in as a substitute. The three can talk together, and three are much more effective than a larger number.

10,641. Then you would rather have three than one, I suppose?—Very much. We have a lady sitting with us regularly; and in cases where there is a large number of women engaged I think that is important. Then there may be somebody who is a really good economist, who is of great help to a person like myself, who is only a lawyer. It is useful for three, but no more, to act together.

10,642. *Mr. Pugh*: What do you think of a Chairman covering a number of Boards? Do you think that a sort of permanent Chairman covering a number of Boards is better than a Chairman operating only on a single Board?—I think a man is better if he has two or three Boards. I do not know that it need be a large number, but I think that certainly the experience in one helps with another. He gets a different type of people; he sees different classes of problems; and I think he is a better man for the job if he has two or three Boards. It does not matter to a rigid number. But there I was going to raise a point, if I may do so, which I think is somewhat important. I think from what I hear and from

what I have seen that it would be a highly desirable thing to group a little more. We are having a great many awkward questions about the scope of the Boards—under which Board a case falls. I will mention one monstrous case, if I may, and it is this: Take the Aerated Water Board; if you carry on beer bottling in conjunction with the bottling of aerated waters you come within the Board, if the employment is interchangeable. If that beer bottling is going on on the other side of the street you do not come within the Board if it is a separate thing, although not carried on by the beer manufacturer at all. It is a very great hardship if A B on one side of the street is under a Board, and C D can pay any wages he likes on the other side of the street for doing exactly the same work. Also there is the same inconvenience in allied trades. The shopmen, I am told, may have a dozen different Boards to go to. You want some grouping—some better means of defining the scope of operations of Boards. At present the Minister sends to the Board, and the Board sends in its advice, no doubt often very good, but there is no very satisfactory body for determining the scope of the Board, and if we could have the Boards more grouped to avoid variety and also to secure less varying rates for similar work, it would be a very good thing. The Boards want sorting.

10,643. *Mr. Pugh*: What about a central authority for that purpose—some sort of central court representative of Boards which would co-ordinate and deal with these particular questions of scope?—There are two things that are allied, but one rather wants to keep them distinct; one is fixing the character of the Board at first and defining the extent of the order which determines the jurisdiction of the Board, and the other is after the Board is once constituted, and its scope defined—to determine the judicial questions which arise afterwards, namely, for example, is a particular trade or a particular operation within the scope of the Board; there ought to be more uniformity of decision. That is when the Board is constituted, to guide the Board. There I think the work which is done by the Ministry confirming, and some of the work which would be done by magistrates, would be a great deal better if you could get, as is suggested, a kind of uniform tribunal with such a person as an experienced chairman of Trade Boards who is a lawyer acting with a couple of other people, say, and possibly with two representatives of workers and of employers as sort of assessors. To take an example, there is one thing with which we have to deal quite constantly in that sort of judicial way, that is to say, cases of people who are debilitated and who ought to get some different rate of wages from the minimum fixed by the board. Applications are made for permits, and I have found that sitting with a small committee of three or five representing the workers and the employers, with one Appointed Member, we usually get through those permits without any friction whatever, and they are treated perfectly judicially; and I believe that that sort of working together does a great deal of good. The workers' representatives see the employers treating it quite fairly for the benefit of the men, and *vice versa*, and those tribunals get through their work very quickly, and without any friction whatever as far as I have seen.

10,644. *Mr. Poulton*: You look upon that as very valuable?—Quite valuable. It has a good moral effect, and also it does its work.

10,645. *Mr. Pugh*: The point is that, based upon your experience of that type of machinery for dealing with those local questions, you think that an outside similar body as a central authority might be useful for larger and more general questions which the Board has to deal with?—Yes, I think so. I think a body of that sort might be very useful indeed, especially if it would keep in touch with the officials at Chancery Lane—or the Old Bailey now. From what I have seen there, I believe that those who come there inexperienced, as naturally a chairman often does find the greatest advantage from

25 January, 1922.]

SIR ALFRED HOPKINSON, K.C.

[Continued.]

consultation with the officials there, who know their work down to the ground. They are not obtrusive, but you can rely upon their work as being thoroughly well done, and upon their advice as being thoroughly sound, and that helps to secure a certain amount of uniformity; but it is not enough.

10,646. *Chairman*: Have you the same favourable opinion about the accommodation at the Old Bailey as you have about the officials?—It is on the right-hand side of the street going north. The situation is all right, I think; and the accommodation is not very bad.

10,647. We have had some attacks upon it.—I should not like to commend it too much, but I have seen worse.

10,648. *Dame Adelaide Anderson*: Some people are much more sensitive than others to lack of air?—Yes, and I think meetings of our Board sitting in that building have not been very prolonged, as a rule; we have got through fairly quickly. Certainly the help given by the officials is very great.

10,649. *Chairman*: It was after your time that a member of the Laundry Board, it was said, was carried out of the room?—Yes, I was saying that my two Boards now sitting are as a rule short. The sittings of the Laundry Board were not short, and I must say were a little exhausting at about half-past 7, after being in a close room all day; but still, it was difficult in the nature of things. I have sometimes found the Courts worse.

10,650. I think we have taken you through most of your other topics. You say at the end that the influence of Trade Boards on the whole has been good?—I think so. I think the people get together, some of the trade union workers and some of the employers, and they see at once that they are both really out for doing the best they can for the workpeople; and I think both sides see that they are doing their best; and I think that a third party coming in sometimes does help in that way.

10,651. *Mr. Pugh*: Have you anything to say on apprenticeship schemes?—I am sorry I have not, because I really do not know enough about it to give anything which to a Committee of this sort would be of value. As to the age question, we have had a good deal of discussion about whether there should be an apprenticeship period, and upon that I do not think that there is any general rule laid down.

10,652. You have just discussed it?—We have managed to get a sort of working system, decided in that case by vote of the appointed members between the view taken on each side. We had to get it through on a vote.

10,653. *Mr. Bell*: In arriving at a minimum on the Boards with which you have been connected, have you aimed at a minimum wage, or a minimum piece rate?—A minimum wage in the two Boards which I am on now. We had the question of a minimum piece rate a good deal discussed at the Laundry Trade Board, but upon the Boards which I am on now we have been dealing principally with a minimum wage, practically an hourly wage.

10,654. There is one other question that I want to ask you, and it is contained in paragraph 6 of your statement: "The Minister's position as the rate-confirming authority." You state: "Apparently necessary to maintain this, but if the Board are agreed, and indeed in any event, the Board's decision should very rarely be interfered with." Do you know of any reason why the Minister should have any option in the matter at all but to confirm if the Board are agreed—if the representatives of the employers and the representatives of the workpeople are agreed?—I would not like to say off-hand that there could not be such a case, but in a case of that sort what I mean is that he should have the case set up, and he or his advisers should take the papers at once and say, "That is done," unless there is some reason to the contrary, and he should pass it at once without hesitation.

10,655. *Chairman*: What about the consumer; is he not to be considered at all?—Yes, I say that there might be a case, but on the evidence which comes up

before the Trade Board it would be very difficult to get the consumers' view properly represented.

10,656. *Dame Adelaide Anderson*: Did not the old trade guilds rather come to pieces over that?—Over running it up?

10,657. Over running it up as against the general welfare of the whole?—I think the point there would be that the two parties are rather a check on each other, and they will not have the trade killed by too high wages.

10,658. Their interest is really that of the consumer at the bottom?—The consumer will then take care of himself as a rule.

10,659. *Mr. Pugh*: Then really there is no difference between an agreement between the two parties on a Trade Board and an ordinary Board in another industry?—Yes, I would not like to shut the door. I think there might be a case in which the Minister might be allowed to interfere; there might be a case where really he saw that the two parties were together, and had got the consumer by the throat, if it were a matter of providing water, or some necessity of life.

10,660. *Dame Adelaide Anderson*: Or milk?—Yes, quite so; and therefore those rare cases, I think I should keep the Minister's powers of intervention; but I should make it clear that instead of leaving the thing to be considered for a fortnight he should, if there were an agreement of the Trade Board, and unless there was some special reason to interfere, endorse it at once as confirmed.

10,661. *Mr. Bell*: The only thing, I think you will agree, which would have an effect upon the consumer would be the fixing of an unreasonable rate. Are employers ever likely to agree to an unreasonable rate being fixed?—I think it is possible. There are cases in which I think it is possible, although I have not come across one. I think they would be rare, but the two which have been mentioned are cases in point.

10,662. Have you ever come across a case where the employers have agreed to an unreasonable rate in a well-organised trade, altogether apart from a Trade Board?—I have not come across one. I do not know, but there may be cases. I like to be on the safe side if it does no harm.

10,663. *Mr. Poulton*: I take it from your summary, in reply to Question No. 10, that on the whole you are satisfied that the Boards have been for the advantage of the community?—So far, I do not mean by that that they ought to be extended; I do not mean to say by that that they ought to be indefinitely continued even. But so far as I can form an opinion upon a limited experience, I think they have done good—good to the worker, and I do not think any harm to the good employer in the trades with which I have had to do; and I think a good feeling has been created rather than the reverse, speaking of the two Boards upon which I am now.

10,664. It is an advantage, surely, to bring about a better understanding?—Yes, distinctly. One feels on both sides that these are men who will act judicially; they know their job; and the Appointed Member, if he knows his, is guided very much by them when the employers and workers are agreed, and they see each other's point of view, and act fairly in the main.

10,665. *Mrs. Lyttelton*: I wanted to ask whether you could tell me at all how far the minimum piecework basis time rate has produced applications for exemption—whether under the ordinary wage rate you get more exemption applications than you do under the piecework basis time rate?—I have not enough information to give you any information which is worth having upon that.

10,666. You deal almost entirely with wages?—It is a matter upon which anything I said would really have no value. It would be rather guess-work than experience.

10,667. *Lord Weir*: There is one point which I should like to ask you about grouping which would

25 January, 1922.]

Sir ALFRED HOPKINSON, K.C.

[Continued.]

help us a little. You gave us an example of a beer bottler and an aerated water bottler?—Yes.

10,668. How would you deal with a question like that in grouping? Would that not tend to lead you towards an occupational rate?—I would say there a bottling rate.

10,669. Would that not destroy the whole edifice of the present system of Trade Boards?—No, I think it would help it. These things have grown up quite haphazard; you have found a few cases where there was scandalous under-paying and sweating, and a Board was created; then another, and then another, almost at haphazard. Now the whole field ought to be surveyed, and you ought to divide your trades and group them, so as to have men doing similar work receiving the same minimum wage as far as possible.

10,670. *Dame Adelaide Anderson*: You would have to have a rate for the bottling of beverages?—Yes.

10,671. Because otherwise you would have warehouses, and all kinds of different occupations, brought in?—This question of scope we are constantly considering, and constantly deciding, or giving our opinion upon, and I am not quite satisfied with those opinions sometimes. I think they are the best we can give, and I think they are as sound as anybody could give, but—

10,672. *Lord Weir*: What I want to get at is this: whether you seem to discern the final outcome of this to be division by occupation, or whether, if we go on as we are going on to-day, you will arrive at purely arbitrary divisions?—And it gets worse with every new Board you establish.

10,673. Yes. Each new Board complicates the position of the next half-dozen Boards?—If I chose—but it would take up your time for too long—I could give you curious conundrums which arise as to the scope of the Board. Those might be got rid of. Our decisions are by no means always satisfactory, but we have to act according to the wording of the Order. Those Orders ought to be reconsidered, and they ought to survey the whole ground, and the Government ought to say, "If you are going to continue Trade Boards at all, these trades should be dealt with by the Boards"—to see which trades are suitable for that

(The Witness withdrew.)

Mr. W. H. STOKER, K.C., called and examined.

The Witness handed in the following statement as his evidence-in-chief:—

STATEMENT OF W. H. STOKER, K.C., Chairman of Corset, Fur and Made-up Textiles Trade Boards, and Appointed Member and Deputy-Chairman of Paper Bag Trade Board.

In this Statement I am confining myself in the first instance to answers to the various points set out in the margin.

1. *The principles of minimum wage legislation.*
 - (a) *National Minimum wage;*
 - (b) *Legislation trade by trade;*
 - (c) *Legislation district by district.*

I am not in favour of one national minimum wage for the whole of the trades covered by Trade Boards, but think that legislation should be trade by trade, that is to say, the Trade Board for the particular trade should legislate for the trade belonging to it. This comprises my answer to (a) and (b). As regards Legislation district by district (c), I am of opinion that it may be necessary in some trades to have district rates of wages fixed by the Trade Board concerned, but my view is that instead of establishing a district Trade Board, the rates should be fixed by the Trade Board dealing with the whole of the particular industry. The power already existing of setting up district Trade Committees, in my opinion, sufficiently meets the position, where such Committees are necessary. At present District Committees if and when appointed report to their Board their recommendations as regards rates of wages for their particular district, which are then considered

purpose. Having got them, you group your Boards according to the character of the occupations.

10,674. *Mrs. Lyttelton*: In fact, you think that the bottling is more important than what is in the bottles?—For that purpose very much more important. I mean one is quite equally willing to consume ginger ale, or the ale which is not ginger, but why on earth the poor person who does one is paid at one rate and the person who does the other at a different rate, I cannot see.

10,675. *Chairman*: But still, you would not include all bottling of any kind?—No, that would want defining; but there is a clear case, and a startling anomaly, and a practical injustice done.

10,676. *Mr. Pugh*: Do you claim that the Board is the most competent machinery to settle that question, and, granted the responsibility of the Board, it should have full autonomy with regard to settling the scope of its operations?—No, I would much rather keep two things distinct. There is the scope of the Order creating the Board, which ought to be dealt with by the Ministry on a survey of the whole of the facts, and then, having got that Order, whether a particular case comes within it is a matter for judicial determination, and I should think that there the Board ought to be consulted; but I do not think that it will be at all a bad thing to have a determining tribunal for determining all these judicial questions. A magistrate's clerk cannot do it satisfactorily as a rule.

10,677. Such as you were mentioning just now?—Yes. To take questions of this kind before the average magistrate's clerk, however good he may be, is not very satisfactory.

10,678. *Chairman*: You would have a central authority, such as Mr. Pugh described a short time ago?—Yes, keeping the two things quite distinct—the selection of the Board and definition of limits of scope and the judicial decisions as to the meaning of the Orders and their effect after the Board has been created.

Chairman: Thank you, we are much obliged to you for coming.

by the Board and can be given effect to if approved. The Board no doubt has to take a broad view of the industry as a whole in the country, but has a duty to consider the conditions also of the particular district and the recommendations of a Committee. The particular Trade Boards of which I am a member have not hitherto, with the exception of one district Committee. In the case of this Board one has been set up for Scotland, mainly at the instance of certain members representing the trade in Scotland. I think that the reasons underlying this were mainly that it was desired to secure a somewhat lower rate for Scotland, and that the Jute and Flax and Hemp Boards, the trade of which is somewhat allied to the made-up textiles, had their meetings as a Board in Scotland where those industries were principally carried on. The rates fixed for these Boards were somewhat lower than those proposed for the made-up textiles industry. No rates have yet been finally fixed in the made-up textiles industry, but when the Board met to consider the proposed rates and also the recommendations of the Scottish District Committee, which had recommended lower rates for male workers than those proposed for the county generally and 1d. per hour lower rate for the lower section of female workers, the Scottish members agreed to the same rates for Scotland as had been originally proposed for both countries, upon the workers' side agreeing to meet again in two months' time to consider proposals for variation of rates generally. There were some rather peculiar circumstances as regards the Scottish meeting, at which, after a somewhat prolonged

25 January, 1922.]

Mr. W. H. STOKER, K.C.

[Continued.]

sitting, both sides suddenly came to an agreement, which was in the nature of a compromise. This was the first meeting of the Scottish Committee, and I do not think that the result can fairly be regarded as a proof that such Committee was a failure or that District Committees if appointed by other Boards are likely to lead to similar results. I am of the opinion that District Committees may prove of great value. Even if their recommendations are not adopted by the Board, yet a useful purpose will have been served by the ventilation and discussion of local conditions. On the other Trade Boards of which I am a member there appeared to be no desire on the part of the Board to have District Committees set up, probably for the reason that in the Fur Trade Board the industry was very largely confined to the metropolis, and there were no allegations of any special local circumstances elsewhere which called for differentiation in wages rate. There is a somewhat larger distribution of trade in the Corset and Paper Bag Trade, and I am not able to say exactly why there was no desire to set up District Committees, but when the subject was first brought out it was dismissed by the members of the Board as unnecessary in the trades, at all events at present. All these Boards are young Boards.

2. *The principles on which minimum rates are settled by Trade Boards.*—As regards the principles on which minimum rates are settled by Trade Boards, my experience is that a variety of considerations enter. The employers generally propose some rate which is less than they are prepared to pay, and the workers' side proposes some rate which is higher than the one they are prepared to accept. What is eventually settled as a minimum rate is generally based on mixed considerations, the rates generally paid by employers where there is a certain amount of organisation amongst the workers which has had the effect of raising rates, the rates paid by the more liberal employers, by those less liberal, the rates previously fixed by other Boards in comparable trades, the rates of wages paid prior to August, 1914, considerations as to what extent this was too low a wage, the rise in the cost of living since then, the general state of the trade and of employment, etc., etc. All the above considerations enter into it, not one of them by itself determines the matter, but it is a case of weighing all considerations and getting a result which does justice to the worker and also to the employer. This sounds somewhat ideal, but I think it represents the general principles on which the Trade Boards, of which I am a member, have acted or tried to act. There is, of course, always a certain amount of give and take, as in married life, and sometimes one party is less dissatisfied than the other.

3. *The method by which Trade Board rate settlements are reached, e.g., how far such settlements are reached by complete agreement between employers' and workers' representatives: how far they are reached by*

(a) *The influence;*

(b) *the votes of the Appointed Members.*

The method by which rate settlements are reached is indicated to a certain extent by the foregoing remarks as to principles. It is seldom that they are reached by complete agreement at the outset between employers' and workers' representatives, but they are often reached after a process of bargaining and consultation between the parties without the influence of the Appointed Members. In some cases they are reached by the aid of the influence or views of the Appointed Members, and sometimes by the direct influence of the Appointed Members. It sometimes happens that the Appointed Members, whilst not prepared to vote for one side or the other, yet feel that their views are nearer to one side than the other. In these cases the Appointed Members see the two sides separately, and thus bring about a compromise. In extreme cases they sometimes suggest to the side to which their own views are nearest, that if they can bring themselves to coincide, they, the Appointed Members, will vote with them. The side to which

the Appointed Members are nearest in their views will then amend their proposals accordingly, and the rate is fixed with the aid of the vote of the Appointed Members. It is, however, only after prolonged discussion and careful consideration by the Appointed Members of both sides of the question, and after the Appointed Members have formed their own views clearly that this takes place, and the decision of the Appointed Members is analogous to that of an impartial arbitrator. It is conceivable that another position may arise, in which either the Appointed Members' views are too far apart from those of either side, or the side nearer to the views of the Appointed Members will not budge. This would probably lead to no rate being fixed at all at that meeting. This has not actually happened on any of the Boards of which I am a member, but on one or two occasions there has been an adjournment to the next day, to give the parties a further opportunity of consideration and approach. As regards the Appointed Members, these have always been unanimous in vote, but there have been interchanges of views and sometimes small compromises between them after discussion, I do not think it is correct to say, as has, I observe, been stated in evidence, that the employers' representatives have given way or agreed from sheer weariness. At all events, not on my Boards, or by undue pressure by the Appointed Members. I have discovered no signs of weariness on the part of either side, nor any enforced surrender. The fact that on more than one occasion the rate has been carried generally on quite a small difference, by the vote of the Appointed Members, is evidence that both sides are game to the last. Any representative or body of representatives who agree merely from sheer weariness are obviously abrogating their duties and functions.

4. *The present rate-fixing powers of Trade Boards. Are the present powers*

(a) *adequate;*

(b) *excessive?*

As regards the question whether the present powers are (a) adequate or (b) excessive, I am of opinion that they are adequate so far as their powers to fix rates are concerned, but it is open to question whether they are adequate so far as concerns the getting of information as to all factors which require to be taken into consideration. For instance, employers may, and frequently do, urge a depressed condition in the industry as regards prices, markets, competition profits, or losses, on which it is quite impossible for the Appointed Members or for the workers or, indeed, the Board as a whole to come to a satisfactory conclusion. The employers alone know what their profits or losses are, and know more about the selling conditions of the trade than the workers or the Appointed Members. It is not suggested that an inquisitorial investigation would be possible or advisable into the position of individual firms in this regard, and it is very difficult to formulate any method by which the position of an industry as a whole can be correctly ascertained. But the workers' side naturally largely discount the employers' statements when unfavourable, and sometimes without real cause, and on suspicions which at present go undisplaced by actual evidence.

I do not think that the present powers are excessive, but I think that some variation is advisable, so that the present permissive powers of the Boards to fix piece-work rates and minimum time-rates for the higher grades of workers should not be exercised by a Board except on the agreement of both sides to consider and fix them, and even then they should be agreed rates. I am assuming, in going so far as this, that the employers' side of the Board contains adequate representation of the smaller employers. I am of opinion that a minimum time-rate should be fixed in respect of each sex. The other rates, if not fixed by consent as aforesaid, should be built up upon these by agreement or contract outside the Board. The minimum rate should, I think, be a

25 January, 1922.]

Mr. W. H. STOKER, K.C.

[Continued.]

rate for the workers at the industry itself. It is probable that it may be necessary to also have a minimum time-rate for the workers appended to the industry, such as porters, messengers and the like. This would mean a special separate minimum rate for that class. The alternative would appear to be by permit to allow employers to pay to that class wages below the minimum rate for operatives (in the manufacturing trade) and counter-hands (in the distributive trade).

5. *The sanctions behind Trade Board rates. Should State enforcement be*

- (a) *maintained;*
- (b) *restricted in respect of any rates or classes of workers?*

I am of opinion that Trade Board rates, if and when fixed, should be enforced as at present, and that with the safeguards already mentioned as regards fixing the higher class rates the enforcement should not be restricted. It may be open to doubt whether the ordinary magisterial tribunals at present hearing these cases are suitable. The adjudication in this class of case requires rather special qualification, and the ordinary magisterial courts have not always the knowledge, time, or inclination to deal with them. It might be possible to revive for these cases the tribunals which dealt with cases under the Wages (Temporary Regulation) Act. I believe the personnel of these tribunals still exists, and the chairman of the Courts of Referees under the Insurance Acts would still be available. Whilst on this subject I would like to refer to the question of the adequacy of the inspecting staff for the discovery, investigation and prosecution of breaches of the law as regards rates paid and otherwise. This has already been referred to, I believe, by other witnesses. On one of my Boards (the Fur Trade Board) both sides are convinced the evasions and contraventions go on to a very large extent and escape discovery and punishment, which is unfair to the workers and also to employers who are observing the law, and they feel very strongly about it, so much so that one of the leading employers' representatives of the Board is disposed to resign unless the Act is more generally and rigidly enforced.

6. *The Minister's position as the rate-confirming authority.*—As regards the final confirmation of rates fixed by the Trade Boards, I was at one time inclined to hold the view that the proposed rates should become absolutely fixed upon confirmation by the Board, letting the Board bear the full and sole responsibility, reaping the fruits of its own errors, if any, and rectifying them itself, if necessary, on fresh proposals. But I have come round to the view that, for the present, at all events, it is desirable to maintain the check and protection of the Minister's confirming authority. Apart from the above, other considerations come in, such as the interests of the public, and other industries.

7. *The need for Appointed Members.*

- (a) *Chairman;*
- (b) *Additional Appointed Members;*
- (c) *Voting powers.*

As regards the Chairman and Appointed Members, and their voting powers, I have no fault to find with the present system. I think that it is absolutely necessary to have some deciding factors on the Board unconnected with either side. It might, however, be considered whether it would not be as well to add somewhat to the number of Appointed Members on the larger Boards, and even on the smaller Boards. There are sometimes unavoidable absences during the whole or part of the proceedings, and it is undesirable that the Board should be left, as sometimes has been the case, with one Appointed Member in the chair only.

8. *Provision for special local conditions. Possible differences to which regard must be had in making such provision between manufacturing or wholesale and retail distributive or making-up trades:—*

- (a) *Settlement of district rates nationally.*
- (b) *District Committees.*
- (c) *Possibility of grouping retail distributive and making-up trades by districts.*

My evidence under Question 1 has, I think, dealt with the question of provision for special local conditions. I think district rates should be settled by the Board, with the assistance of District Trade Committees, where such exist. I think those should be set up more generally than at present, but no hard and fast rule can usefully be laid down either as to distinguishing between manufacturing and distributing trades nor as to grouping by districts, though probably more feasible in the distributing trade. I have had no experience of Trade Boards in these trades.

9. *The value of the special powers of Boards in regard to juveniles:—*

- (a) *The fixing of rates on a pure age basis.*
- (b) *The fixing of rates on an experience basis.*
- (c) *Apprenticeship schemes.*

As regards juveniles, I think that rates should be fixed on a mixed age and experience basis. It is not very easy to devise a completely satisfactory scale, but it is possible, given sufficient time and attention, and with recourse to a committee or committees for that purpose. One of the difficulties as regards matters requiring prolonged consideration is that sometimes too much is crammed into one day's meeting, which is natural when many of the parties come from some distance.

Apprenticeship schemes are, I think, a good thing in the more highly-skilled trades, but learnership systems generally answer the purpose in the others.

10. *The influence of the working of Trade Boards on relations between employers and workers.*—I think that the working of Trade Boards improves the relation between employers and workers. Some employers, even in these advanced days of trade unions, object to and resent the intrusion of trade union officials into their relations with their workers. But their association under a scheme of meeting, to which they have been parties, and upon which they have been consulted in regard to its establishment, and in the presence of neutral persons, is quite a different thing. So far as my experience goes on the Boards of which I am an appointed member, the relations of employers and employed, so far at all events as their representatives are concerned, appear to improve at every meeting. This cannot but influence and reflect on employers and workers generally in the trade, and employers find that the Trade Boards protect them from unfair competition.

10,679. *Chairman:* Mr. Stoker, I think before 1914 you were first Attorney-General and then Judge of the Supreme Court in the Colonial Service?—Yes, I was.

10,680. And your experience of labour questions dates from 1915?—Yes.

10,681. When you were appointed Chairman of the General Munitions Tribunals and assigned to the North-East Coast?—Yes.

10,682. And then from 1916 to 1920 you acted fairly continuously as an Arbitrator and Chairman of Arbitration Boards and Courts?—Yes.

10,683. And during the last three months of the existence of the Interim Court of Arbitration and of the Wages (Temporary Regulation) Act you were one of the chairmen under that Act?—That is so.

10,684. I believe you began your Trade Board experience in 1919?—Yes.

10,685. Then you were appointed Chairman of the Corset Trade Board?—That is so.

10,686. You have since become Chairman of the Fur Trade Board?—Yes. That was towards the end of the same year.

10,687. Then you became Chairman of the Made-up Textiles Trade Board in 1920?—Yes.

10,688. And Deputy Chairman of the Paper Bag Trade Board in 1919?—Yes.

25 January, 1922.]

Mr. W. H. STOKER, K.C.

[Continued.]

10,689. You have been good enough to give us a statement of your views on certain points which you will allow us to print as part of your evidence?—Yes.

10,690. First you say you are not in favour of one national minimum wage for all the trades covered by Trade Boards?—That is so.

10,691. And you think that legislation for the fixing of rates should be trade by trade?—Yes.

10,692. Will you kindly give us your reasons for that view?—I think that to fix one minimum rate for all of the trades which are covered by the Trade Boards of the country would not work equitably in all cases, either for the employer or for the employed—certainly not for the employers. The rates of wages which have been paid hitherto in some industries have been lower than in others, and there is some difference in the class of worker working for the industry.

10,693. *Mr. Bell:* Suppose a man is a labourer. Is there any reason why he should get a different wage in one trade as compared with another?—The question depends very much on the particular industry, and on whether it is working on a very small margin of profit or not. Also to a certain extent I think it depends on the wages which have hitherto been paid to the worker in the industry and on the class of work that he is doing. In some industries, for instance, as regards male workers, the work is very much heavier than it is in other industries and entails a very much greater amount of physical labour. In some other cases, as regards the minimum-rated labourer, there may be a certain degree of semi-skill involved, which might not be the case in other industries. I think also it would be rather unwise to suddenly establish one flat minimum rate of wage for all the industries in the country covered by Trade Boards. It might gravitate towards that in the end, but to do it in the first instance would, I think, be a mistake.

10,694. *Mr. Pugh:* Is it really a practical proposition to have no regard at all to the different conditions which operate in different trades?—Is it a practical proposition?

10,695. Yes—not to have any regard at all to the different conditions which exist between one trade and another?—You would have to do that.

10,696. *Mr. Poulton:* Is it a question of developing?—Yes.

10,697. *Chairman:* Each trade has its own history and conditions?—Yes.

10,698. *Mr. Bell:* You are aware that in some respects organisations have attempted to set up a minimum wage for the same class of work no matter which trade the man happened to be working at. Take the general labourer. A man might be a labourer in an engineering shop or in a cotton mill. If he was a member of the same trade union, the same trade union rate might be brought into operation. Do you see some objection to that?—I think there is a difficulty in legislating as regards the same rate of wage for all workers per trade union that they belong to, and that because they happen to belong to a particular trade union they should be paid different rates of wages from those paid to workers who either do not belong to a trade union or who belong to a different trade union.

10,699. But you see my point: if all the labourers happened to be organised in the same labourers' union, the same rate would be brought into operation?—Is that not a condition which could not possibly arise? Could the whole of the workers in all the industries covered by Trade Boards belong to one general union?

10,700. That is the object?—Yes, but it does not exist at present.

10,701. *Lord Weir:* As a matter of fact, there is an extreme variation in the rates of wages in the different trades paid to labourers belonging to the same trade union, is there not?—I was not aware that the difference was very great. Of course, I have only an intimate knowledge—or what should

be an intimate knowledge—of the rates of wages in the Trade Boards of which I am a member. But, speaking generally, I do not think there is a very great difference in the rates of wages in the different trades that belong to Trade Boards. There may be a difference of 1d. or 2d. per hour. I am speaking of the minimum rate. I do not think the difference is very great.

10,702. I am speaking really in connection with Mr. Bell's question?—I grant that is so.

10,703. I said that as a matter of fact the labourer's rate varies very considerably in the different industries?—I agree that is so. But I think that has been rather a recent development during the war, because some industries have been very much higher paid than others, and the labourers' rates have followed.

10,704. *Mr. Layton:* In the answer you gave just now, explaining why there must be different minima in different trades, you said that in some cases the work might be harder and that in a sense the lowest grade of labourer might be semi-skilled. I think that is what you said?—Yes—or approaching to semi-skilled.

10,705. Do you think it is the function of Trade Boards to fix their minimum in some relation to the character of the work done, and not merely in relation to the least skilled kind of worker?—I think that is one of the considerations which should, or does, enter into the fixing of minimum rates on Trade Boards. Of course, the Board in the particular trade consists of people who are familiar with the trade and are familiar with the wages which have been and are being paid and with the general conditions, and I think that is a state of things that they do or should arrive at.

10,706. To take the matter one stage further, you think that the Trade Boards with which you are concerned should fix more than one minimum?—We fixed several minima, but we fixed one minimum for the lowest grade of worker and then worked up on that. Every Trade Board is obliged to fix one minimum time rate for both male workers and female workers. In most of them, and certainly in all on which I have been, they have proceeded after that to exercise their permissive functions by fixing minimum rates of wages for workers as they go upwards, beginning perhaps with the semi-skilled and going up to the top skilled rate.

10,707. *Mr. Poulton:* But that is the minimum rate for the particular section, is it not?—It is a minimum rate for the particular section.

10,708. And does not preclude them paying above that rate if they think right so to do?—No, it does not.

Chairman: We will come to that later. I think you have no district committees on your Boards?—Only on the Made-up Textiles, and that is quite a new district committee.

10,709. That is for Scotland only, is it not?—Yes.

10,710. *Mr. Pugh:* What is your opinion of the value of district committees?—I have had a very slender experience, but I am inclined to think that it would be advisable to exercise that power a little more generally and to set up district committees in more of the Trade Boards; not necessarily that you get a different rate of wage, but it gives the opportunity of more effectually and completely considering local conditions and variations, if any. In Scotland I have got the figures. The Scottish District Trade Committee, as regards the skilled male worker, have suggested 1s. 2½d. per hour as against 1s. 4½d. which the Trade Board have proposed to fix. As regards the lowest unskilled male labourer they have suggested 1s. per hour as against 1s. 1½d. So that it will be seen there was a difference of 1½d. per hour in the case of the more skilled male and 1½d. in the case of the lowest worker. But that recommendation was not given effect to with the consent of the Scottish members, and the proposal was carried for one rate for the whole of the country, including Scotland.

25 January, 1922.]

Mr. W. H. STOKER, K.C.

[Continued.]

10,711. It means that the proposal of the district committee was not adopted by the Board?—It was not adopted. There were rather peculiar circumstances about it. At the meeting the male workers were only represented by one member, and I think there were three ladies representing the female workers. The male worker was rather anxious to get the female workers up to the same rate as the male workers, and the female workers were rather suspicious of his motives in doing so. There was a great deal of discussion, and the representative of the male workers did not fight very hard for the same rate. He did not mind getting them down a little bit, but his fear was to displace them by the female workers.

10,712. *Lord Weir*: It is more important to have these district committees in at the fixing of the original rate. That is the more important time at which to have the district view, is it not?—Yes. In this particular case the Scottish District Committee had met after the original proposals by the Committee. They were set up rather late in the day. Perhaps it would have been better if they had been set up at the outset.

10,713. *Chairman*: They are consulted, are they not, after the proposal has been made?—In this particular case they were. They came into being, I think, rather late in the day. It would have been more useful if we had started immediately with the District Trade Committee.

10,714. The Act only requires that they shall be consulted before the rate is fixed?—Yes, that is so.

10,715. And I think many Boards do not consult them until after that. They frame their proposal and publish it and then consult the District Committee. Would it not be better to consult them before the proposal is put forward?—I agree that is so.

10,716. *Mr. Pugh*: If that were done it would probably save some time after the Board had come to an arrangement?—I think so. In this case we might just as well have not had a meeting of the District Committee in Scotland for the Made-up Textiles. It might have been more useful if it had been set up at an earlier stage.

10,717. *Chairman*: As to the basis on which a minimum rate is settled, I do not think you put forward any very definite principle. You say the minimum rates are generally based on mixed considerations?—Yes.

10,718. You say: "The rates generally paid by employers where there is a certain amount of organisation amongst the workers which has the effect of raising rates, the rates paid by the more liberal employers, by those less liberal, the rates previously fixed by other Boards in comparable trades, the rates of wages paid prior to August, 1914, considerations as to what extent this was too low a wage, the rise in the cost of living since then," and other matters are considered. On a general view of that might you arrive at your general rate?—That is how it is got at. The members on each side generally come to the meeting after a side discussion and consideration by each of their proposals. The employers make their proposals. They do not tell us on what principle they make the proposals. The workers' side also make their proposals. They do not enunciate any theoretical principle on which they base them beyond that they think that is a wage which is the lowest living wage which should be paid to the worker.

10,719. Paid to the lowest grade of worker in the trade?—Yes.

10,720. *Mr. Pugh*: You have had a good deal of experience on wages questions outside Trade Boards, have you not?—Yes.

10,721. Would you say that the general considerations which govern the fixing of wages in other trades also govern the fixing of rates by Trade Boards? There is no material difference, is there, between the considerations which govern the discussions for the fixing of wages under a Trade Board from those under the machinery operating in other industries?—I think they are the same practically.

10,722. *Chairman*: Is there not the difference that the Trade Board is fixing the lowest figure and the other bodies are fixing what would be the standard figure?—Yes; but I think what Mr. Pugh had in mind was that the principle underlying it is more or less the same, except that in the case of these other industries they are adding something for the amenities of life. I think that the original object of Trade Boards was anti-sweating, so that there should not be a sweated wage, but there should be a subsistence level.

10,723. *Mr. Pugh*: What I am thinking of is that with all bodies of people with a practical knowledge of the trade they are dealing with, the tendency is to consider every factor affecting the trade and to fix wages which they feel the trade can bear, and that they are not so much impressed with the idea of fixing the lowest wage as to fix something which is consistent with the conditions of their trade?—I think in the Trade Boards the tendency has been latterly to get nearer to standard wages. But I think the real intention is to fix a living wage; perhaps on not too narrow a basis, but still to fix the living wage. That is what I think our Boards have kept in view.

10,724. What I want to get is this: Of necessity it seems to me the tendency must be towards the regulation of the wage rather than the mere fixing of an absolute minimum, and that you cannot get rid of that, whatever kind of machinery you have?—It undoubtedly has been the tendency of the Trade Boards, since I have been on them, to get more near to the conditions to which you have referred.

10,725. *Lord Weir*: Do you mean that the spirit which originally was protection for the lower paid worker has really been departed from?—I would not like to go quite so far as that, but the tendency certainly has been in the direction of getting a little bit above the bare subsistence or anti-starvation level.

10,726. *Dame Adelaide Anderson*: A slight modification?—Yes, but at the same time we have rather avoided—at least the Boards I have been on have—putting it as high as a standard wage. For instance, in the Made-up Textiles Board we have had instances of a general range of wages stated in the north western part of England and that neighbourhood—wages which are being paid, which are appreciably above those we proposed to fix.

10,727. *Mr. Layton*: You said just now that the two sides, when they brought their suggestions before the Board, did not say the principles on which they made their proposals?—May I correct that and say: Not exactly the theoretical principles. They set out the principle that it is the proper wage to pay, and so on, but they do not go into economic theories on the subject, as a rule, at the outset.

10,728. But they have to put before the Appointed Members the same kind of information that you are accustomed to get if you are acting in an arbitration, so as to enable the Appointed Members to come to a conclusion of their own as to what the district can afford to pay?—When there is not an agreement, they do. The views of both sides are stated. But generally, in fixing the wages at the outset, my experience has been that both sides have, by a series of side consultations and meeting with each other, agreed on a figure.

10,729. So that the question does not arise?—The question does not arise really. It is when they are in difference on the subject that all these matters are gone into; and when it is a question of proposing variations in rates, very often the whole ground is gone over then.

10,730. *Dame Adelaide Anderson*: When you speak of a standard wage, do you interpret it in the same way when you apply it to a woman as you do when you apply it to a man?—Yes; we are thinking of the same thing as regards both.

10,731. Something that affords more than the strict minimum living wage?—When I say the standard wage, I mean rather the wage which is generally

25 January, 1922.]

Mr. W. H. STOKER, K.C.

[Continued.]

paid by the employers by contract with their workers or voluntarily, which is frequently above the Trade Board minimum rate when fixed.

10,732. A sort of rough average?—It is a rough average.

10,733. Of what the average employer would pay?—Yes. Some employers may pay above the standard rates for particular reasons of their own, or because they have got a specially good lot of workers.

10,734. Then does that tend to bring the wages of the women up more? Do they get rather more from their standard wage as individuals than a man would get?—I think as regards the women that perhaps the tendency has been more in the direction of elasticity in the standard wage for men than for women. I think there has been rather less tendency to add a bit to the women's wage to make a standard wage.

10,735. Rather less tendency?—Yes. I mean the tendency has been rather to give it to the men than to the women.

10,736. In the Trade Boards of which you are Chairman, the majority of the workers concerned are women, are they not?—Yes. I think the larger number of workers would be women. I do not think that is so in the made-up textiles or in the fur trade, but it certainly is so in the case of the corset trade. I think the proportion of male and female workers has been set out in some evidence given here. I think they are nearly equal in the fur trade; nearly equal, but rather more women, in the made-up textiles, and considerably more women in the corset trade.

10,737. *Chairman*: When you refer to women, you mean standard wages fixed outside the Trade Board?—Yes. Of course, we hear what the standard wages are. They are very often quoted, but I think in regard to the difference between the standard wage and the minimum wage in the case of women, the tendency is for it to be less than it is in the case of the male workers.

10,738. *Dame Adelaide Anderson*: I thought you said that the tendency was for the Trade Board wages to come nearer to the standard than to the bare minimum?—I do not think that is so in the case of women.

10,739. *Lord Weir*: When you fix a women's rate, it is really more nearly a standard rate than in the case of the males, is it not?—I do not think there is very much difference, because I think we appreciate the fact that the women's standard wage is not so much above the subsistence level as the men's is, and therefore, when we come to fix a minimum Trade Board rate, we rather try to give the women back a little bit of what they have lost in the difference as compared with the men.

10,740. *Dame Adelaide Anderson*: Assuming that in the majority of cases, or in a great many of them, the woman has no dependents?—I am afraid that question is not gone into directly very much. It is a very difficult question to regulate wages according to the number of dependents.

10,741. But I suppose the minimum for a man must take that into account?—Yes, I think it does. I think one assumes that the men have people dependent on them mainly—that they have more dependents than the women have.

10,742. *Chairman*: Then as to the process by which settlements are reached, I have nothing to ask you beyond what is in paragraph 3 of your statement. And as to No. 4 I have nothing to say except that in the second paragraph you say: "I do not think that the present powers are excessive, but I think that some variation is advisable, so that the present permissive powers of the Boards to fix piece work rates and minimum time rates for the higher grades of workers should not be exercised by a Board except on the agreement of both sides to consider and fix them, and even then they should be agreed rates. I am assuming, in going so far as this, that the employers' side of the Board contains adequate representation of the smaller employers. I am of

opinion that a minimum time rate should be fixed in respect of each sex. The other rates, if not fixed by consent as aforesaid, should be built up upon these by agreement or contract outside the Board." That is your view?—Yes, that is my view.

10,743. That is, you would confine what I may call the power of the Board to act by a majority to the anti-sweating functions?—Yes.

10,744. To fixing the minimum of the lowest grade?—Yes.

10,745. Leaving it to them to consider and agree upon any rates above that minimum?—Yes, that is my view. I think the practice of Trade Boards, having fixed the minimum wage, has been rather as a matter of course to then proceed to consider the higher rates of wages, that is, the rates of the higher grades. I think there should be more deliberation about that, unless the Board, as a Board on both sides, are agreed that they should fix them.

10,746. Would you require a unanimous vote, or would you say that it should be governed by the majority?—I mean without the Appointed Members. I do not think I have had any experience of cross-voting. You see, the equality of the sides is preserved. As a rule, it means that you have an agreement practically between both sides that such rates shall be fixed.

10,747. But if they are agreed, then you would make them compulsory?—I would make them compulsory if the rates themselves are so agreed. The Board might say: "We have agreed to consider them," and then one side might regret that they had agreed on account of a rate being carried which they thought was not right.

10,748. *Mr. Pugh*: Is that not what happens now?—No, I think the higher rates are sometimes carried by the votes of the appointed members, and I think it should be by agreement. I do not know whether the Committee would like me to give my reason for that.

10,749. *Chairman*: Yes, certainly—My reason really is that there is an approach to standard rates, which I do not think is right as regards the true functions of the Trade Board, as being an anti-sweating Trade Board. You may get rates which are either standard rates or approach them, which it might be hard on smaller employers to be compelled to pay.

10,750. *Mr. Pugh*: I do not understand that you are expressing any adverse view. Why does that not apply to a high rate fixed by agreement?—I am assuming, of course, that the smaller employers are adequately represented. I do not think the trade should be compelled to pay Trade Board rates as regards the higher rates unless they have agreed on those conditions.

10,751. *Mrs. Lyttelton*: You mean you would make it a condition of their being enforceable that they were absolutely agreed?—If they were agreed rates.

10,752. Then other rates which were not fully agreed you would not have enforceable by law?—That is so.

10,753. Beyond the minimum?—If they are not carried and there is not an agreement to consider them, they are not Trade Board rates.

10,754. *Chairman*: Suppose the Trade Board agree that 80s. or 90s. a week is a proper rate of pay for certain skilled work. Then you would make it compulsory?—Then I would.

10,755. On what principle would you make that compulsory?—On the ground that the Board is supposed to be representative of the trade and workers, and that they have solemnly, and after due consideration, agreed that certain rates are the proper minimum rates to be paid to this higher grade of worker.

10,756. But the same applies to rates agreed outside by unions and associations, yet they are not enforceable in the sense of being enforceable by law?—But then those are really standard rates.

10,757. Would not these be standard rates?—Not necessarily.

10,758. Not the skilled rates?—Not necessarily. They are not really standard rates. The tendency is

25 January, 1922.]

Mr. W. H. STOKER, K.C.

[Continued.]

rather for them to approach towards standard rates, but they are not standard rates. In the case of associations outside Trade Boards—for example the Whitley Councils—they are standard rates.

10,759. *Mr. Layton*: But have you evidence that in the case of these skilled rates there are people who are paid rates different from those, because that is the only test, after all?—Of course we have had objections from individual employers against some of these rates.

10,760. That would be that they want to pay lower rates?—Yes.

10,761. But is it common to find employers paying higher rates by agreement?—That is by no means uncommon.

10,762. *Chairman*: Higher than the skilled rates?—Yes.

10,763. *Mrs. Lyttelton*: But in the case of the higher skilled rates, it is not almost always the fact that the employees are organised and therefore they have the power?—Not universally.

10,764. *Mr. Pugh*: May I suggest that that is the fundamental distinction between the machinery in organised trades and that of the Trade Boards?—In the well organised trades you have the means of enforcement which you have not in the other case unless you apply the compulsory powers under the Trade Boards in respect of the particular trades?—Yes.

10,765. Therefore you must have something to take its place?—Yes. In the case of the Whitley Councils you have got the organisation behind them. In the case of the Trade Boards you have in some cases, but the whole idea of setting up a Trade Board is that the industry as a whole is either unorganised or incompletely organised.

10,766. *Dame Adelaide Anderson*: Does that not militate against the principle of unanimity in the case of some of the rates just above the minimum in certain industries which are low grade right through as regards payment? You might have a difference of opinion as to some of the upper rates?—It may be that I am rather influenced by the fact that there is a tendency in Trade Boards to approach towards the standard rates, and that the original idea of Trade Boards was, and I think still is, anti-sweating.

10,767. To get anti-sweating you might sometimes have to fix the upper rates?—You cannot say that a higher skilled rate, although it may be a low rate, is a sweating rate. I mean the worker has the means of livelihood, and it is a sufficient rate for livelihood, although it may be a poor rate for the class of work that he is doing.

10,768. *Mr. Bell*: Is not one of the ideas why Trade Boards should take the place of, say, a Joint Board, that there is not already adequate machinery for fixing wages which would be above the sweating level?—I think that is one of the circumstances which has to exist before a Trade Board is set up; it is only one of others. The main idea, I think, is that the class of work is paid a wage which is unreasonably low as regards the cost of living. I do not remember the exact words of the Act, but I think there are dual or more considerations which have to exist before a Trade Board is set up in an industry.

10,769. Take the whole experience throughout the war. Would it be fair to say that the whole work on which the boards have been engaged has been rather in setting up standard wages than mere anti-sweating minima?—I think that has been their tendency.

10,770. Then following upon that you get the 1918 Act which provides for an extension of these powers under conditions where there is not sufficient organisation to establish proper machinery. Does not that seem to carry with it that you should get somewhere beyond merely fixing an anti-sweating minimum wage?—I think you have got slightly beyond that. I have not got the Act before me. (*A copy of the Act was handed to the Witness.*)

10,771. *Mr. Pugh*: Under the old Act it is where the wages are exceptionally low. Under the second Act it is want of organisation and having regard to

rates?—I see it says: "Having regard to the rates of wages prevailing in the trade, or any part of the trade, it is expedient," and so on. I think that rather points to what is mentioned in the principal Act. I do not think that the latter Act means that you have got to set up a Trade Board because the trade is unorganised.

10,772. Of course, you have legal experience, but it says: "If he is of opinion that no adequate machinery exists for the effective regulation of wages throughout the trade, and that accordingly, having regard to the rates of wages prevailing in the trade, or any part of the trade, it is expedient that the principal Act should apply to that trade"?—Yes. I think that continues the principle of the first Act, and that therefore the dual considerations do come in still. I speak subject to correction as regards that, but that is my own view about it.

10,773. And there is the custom and practice as established during the five years of war which has to be taken into account in the application of the 1918 Act which was passed subsequent to the custom and practice existing?—Of course the war conditions are transitory; at least, we hope they are. I do not think we have simply got to have regard to the war rates of wages and to the fact that no organisation exists, and upon that we have got to build up the functions of the Trade Board. I think you still have to consider the principle of the earlier Act, and that in fixing the higher rates of wages you should not, as a Trade Board, fix standard rates of wages.

10,774. *Mr. Layton*: You would agree, would you not, that the experience of fixing standard rates of wages during the war, which was in fact done in a very large field of industry under conditions in which the cost of living was largely under the control of the Government, is in fact no criterion of the conditions which obtain to-day?—Roughly speaking, I agree with what you say as regards that.

10,775. *Chairman*: May I take an allied point which interests me very much, and which you raise? Going back now to the lowest minimum—the real minimum rate—you say: "It is probable that it may be necessary to also have a minimum time rate for the workers appended to the industry, such as porters, messengers, and the like." Now that is departing to some extent from the anti-sweating principle, is it not?—Yes, I think I must admit that it is to a certain extent. The trouble, in my mind, was that if you fix one minimum rate that would be a rate which would be applicable to people who were porters and messengers and the like, and if you paid the worker at the industry, the same rate as that of the porter you would not be dealing quite fairly with him, because my view is that the worker at the industry should have a higher minimum rate than that of the mere appendage to the industry.

10,776. But would he not get that by process of bargaining?—He would with some employers, but not with others.

10,777. We were told by one witness that if you gave the trade a bottom rate all workers who were above the lowest grade would secure something more?—Well, I doubt it with employers as a body. I think if you were to fix a minimum rate which was rather low for the worker at the industry, but which might be sufficient for the porter and the messenger, and so on, there might be a difficulty in getting a good many employers to pay more than the minimum rate.

10,778. *Mr. Pugh*: Is it a practical proposition in the case of different workers of different skill, or different responsibility, or different extent of physical effort required in carrying out their jobs, to fix an absolute uniform minimum and just leave it at that and imagine that the machinery had fulfilled its functions? Would you not immediately have to say what should be paid in addition to this or that man because of extra skill or labour? Is it possible for the Board to confine itself merely to fixing the minimum and leaving it at that?—I am obliged to suggest that other rates are fixed by agreement. But I see the force of your suggestion that in default of agreement you would only have one rate fixed—that

25 January, 1922.]

Mr. W. H. STOKER, K.C.

[Continued.]

is the minimum rate—and not any higher rate for the higher grades of labour.

10,779. *Mr. Layton*: Is that not what was done by the 1909 Act in fact?—Yes, that would be what was done.

10,780. That is exactly what it did?—Yes. I should think there would be less difficulty in getting the higher rate for the higher class of labour. I do not think that presents the same difficulty as the case of the ordinary unskilled worker, who might have forced upon him the very lowest minimum rate which one had in one's mind for messengers and porters. I think the higher skilled workman, or the semi-skilled workman, would have less difficulty in getting by contract or agreement with the employer a rate of wages above the minimum rate.

10,781. *Mr. Pugh*: Can we consider what was done in the first instance under the 1909 Act a satisfactory criterion for what must apply now that you have got a great many trades brought under the Trade Boards Act of an entirely different character involving a considerable number of different grades of labour? Is the 1909 Act, or what was done under it, a satisfactory criterion by which to judge as to what is practicable to be done under the existing conditions?—Of course, if the Board agreed, you would still have the fixing of the rates of the higher grades. The view I express, for what it is worth, is that it should be left to an agreement by the Board. I do not think there is very much fear that Boards would fail to consider and agree to fix the rates for the higher grades.

10,782. They would do what they are doing now, I suppose?—I think they probably would.

10,783. *Mr. Poulton*: They are already doing it?—They are already doing it, and there has been no real demur or opposition in my experience to fixing those higher grades.

10,784. *Mr. Pugh*: It seems to me that the two things are so inseparable that you cannot lay it down and say: "You must fix that uniform minimum and there stop." Consequently the point I want to make is this: It would be no use placing the Board in that position, because they could not give effect to what they wanted if you confined them to that and said: "You must not do anything else"?—My suggestion is not that they must not do anything else. At the present time they have the power to do it, but they are not obliged to do it. The Board are bound to fix minimum time rates, and my suggestion is that, having done that, they should approach the subject of the higher rates, and, if they agree to them, that they should fix them and that they should be Trade Board rates.

10,785. *Lord Weir*: You have some trades now under the Trade Boards where you have fixed merely a single minimum rate for adult males and you have left the remainder of the grading to be done outside of the Board altogether?—That has not been the case in any of the Boards I am on.

10,786. There are some Boards which have done that?—I was not aware of that.

10,787. *Mr. Pugh*: That would be where the trade represents one operation and there is one grade in it?—Yes.

10,788. *Lord Weir*: Can you imagine a trade which has not more than one grade?—There may possibly be such a trade.

Mr. Bell: I think it is quite possible. Take hop-picking. You might have so many hop-pickers and so many people looking after them.

Lord Weir: But the Board would perform its proper function in protecting the low-paid worker.

Mr. Pugh: In the case of a porter there would be but little difference between the grades, so that the question would be very simple.

10,789. *Chairman*: Yes, but there must be a difference where one rate has been fixed?—It is rather difficult to conceive of a trade in which there is only one dead level of worker and in which there are not grades with some greater skill than the lowest stage.

10,790. *Lord Weir*: That difference in skill and merit is generally looked after. If you have the

bottom rate fixed, the skilled worker is looked after and receives credit?—He ought to be, and one would think that he would be.

Lord Weir: In fixing the minimum you have a basis on which that skill may be paid for.

10,791. *Dame Adelaide Anderson*: We have had it in evidence that in some cases the standard was so low that in fixing a minimum that could pass for the lowest you tended to bring down the upper people because the employers had built up their trade on so low a margin?—I do not know that I quite follow you.

10,792. The fixing of the minimum for the lowest had a tendency to cause the employer to bring down the better-paid people in order to recoup himself for the increase in the cost of the minimum. We have had evidence to that effect?—That would be a reason against making it only by consent that the higher rate should be fixed.

10,793. It might be necessary to make it compulsory even if the employer could not agree?—I follow.

10,794. In order to raise the industry?—Yes, to do justice to the higher grade of workers who had been brought down through having to make up for the lower-paid worker.

10,795. *Chairman*: I think those are cases in which it was said that the minimum had been fixed too high. In order to average the wages the employer had to bring down the higher-paid workers?—I do not know whether that would be by consent of the workers' side, Dame Adelaide Anderson, because I have rather found that the highest skilled workers have been inclined to be generous in order that the lower-grade workers may be put up. I have known cases where the higher-grade workers have said: "We will come down a little as long as you will bring up the lower-grade workers." Notably that has taken place in the iron and steel trade. When the eight hours' day was introduced the very highest workers paid the whole of the extra cost of the third shift. They had a sliding scale under which the lowest-paid worker got exactly the same wages for the eight hours as he got before, and he got it partly, and wholly at certain stages, at the expense of the higher worker.

10,796. *Dame Adelaide Anderson*: That was in the case of an organised industry with a margin; but the particular kind of case I was thinking of was where it was a depressed industry, such as lace. I do not know whether the paper bag trade is one which was built up on a very low margin?—I am afraid I do not know very much about the paper bag trade. I am on that Board, but I have not been consistently at the meetings, I am afraid.

10,797. *Mr. Pugh*: Where there are a number of grades, do you take an intermediate grade for fixing the minimum or do you take the absolute lowest?—Each grade has been considered and a rate has been discussed for each grade. After some discussion between the parties we have agreed.

10,798. The tendency has been to fix a minimum for each grade?—Yes.

10,799. *Mr. Poulton*: And that is the lowest rate which must be paid?—Yes.

10,800. *Chairman*: I think we have sufficient evidence on that point. We will now pass to the next question. You make a suggestion about the tribunal for enforcing the Trade Board rates, do you not?—Yes.

10,801. And you say that the ordinary magisterial courts have not always the knowledge required to deal with these matters?—That is so. I think it must be a great bother to some of them to consider some of these sometimes rather difficult and complicated wages questions.

10,802. But that would be not so much, I suppose, on a minimum as on piece rates?—It would be more especially on the piece rates—on the higher rates.

10,803. You say in your statement: "It might be possible to revive for these cases the tribunals which dealt with cases under the Wages (Temporary Regulation) Act 1918"?—Yes.

25 January, 1922.]

Mr. W. H. STOKER, K.O.

[Continued.]

10,804. *Mr. Pugh*: Would not the idea of a central body, if elected by the Boards themselves, be preferable to that tribunal?—I do not know. You get representatives of both sides on that tribunal. That really was the local munitions tribunal. On the local munitions tribunal they had representatives of each side, employers and employed, on a panel, and they had an independent chairman who was already, I think, the Chairman of the Board of Referees under the Insurance Acts. They were utilised to hear and decide questions as to whether the provisions of the Wages (Temporary Regulation) Act had been observed or not.

10,805. *Chairman*: Does that machinery still exist?—It only died a very short time ago. I should think all the materials are there for it, and could be invoked without much difficulty.

10,806. *Mr. Pugh*: It has been merged in the new Industrial Court, has it not?—No, that is quite distinct.

10,807. *Chairman*: That is under a different Act?—That is under a different Act. When they set up the munitions tribunals of the second class under the Munitions of War Act, panels were formed and they used the Chairman of the Court of Referees. That was a body which sat and heard cases under the Wages (Temporary Regulation) Act.

10,808. Did the Chairman select his two assessors, or how were they appointed?—They were taken from the panel. I think they were taken in rotation by the Clerk to the Tribunal.

10,809. *Mr. Pugh*: But that would be purely to deal with cases of disputes on wages. Have you thought of a central body exercising other functions besides that, such as co-ordinating?—They could impose fines. The tribunal which dealt with the questions under the Wages (Temporary Regulation) Act had power to impose penalties.

10,810. I was thinking of functions outside the settlement of disputes on wages, or the non-payment of wages which were due. I was thinking of an authority which would be able to co-ordinate the work of the Boards and deal with large questions of scope which the Boards could not settle themselves, and so on?—I do not know how it would work if you were to use them for that purpose. I doubt whether it would be advisable.

Mr. Pugh: The idea has been advanced before this Committee.

10,811. *Chairman*: I quite follow what Mr. Pugh says. There might be some central authority to co-ordinate the work of arbitration on questions of scope, and so on, consisting of an experienced chairman and perhaps experienced members of the Boards. But what we are dealing with now is a tribunal for enforcing the rates, is it not?—Yes.

10,812. To take the place of the other Courts?—Yes, the magisterial Courts.

Mr. Pugh: I rather thought, my Lord, that it was proposed that a central body of that kind should also carry out the powers of enforcement.

10,813. *Chairman*: I have not understood that it was suggested to combine the administrative with the judicial work?—It might be rather inconvenient to have a local tribunal, so to speak, deciding the question of scope, because you might have different decisions on scope from the different local tribunals dealing with exactly the same matter. My suggestion had reference really to the enforcement of the Act for penalties. Incidentally, no doubt, the tribunals would have to consider the question of scope, because an employer might say, "This worker does not come under the Trade Board."

10,814. *Mr. Pugh*: Your tribunal would take the place of a Magistrates' Court?—Yes.

10,815. *Dame Adelaide Anderson*: That would tend to alter the character of decisions. They would be regarded as less than under the criminal law?—Perhaps the same stigma might not attach to them.

10,816. It is important not to multiply criminal Courts, is it not?—Yes, I think that is so; I agree with you. I do not think it is quite right that the

employer who does not pay the right rate of wages should be at once branded as a criminal.

10,817. There would be no harm then in having another Court with a slightly less criminal flavour?—I think not.

10,818. *Mr. Bell*: If I went to a 'shop and asked for a pound of butter and I got one ounce short, the shopkeeper would be liable to a criminal prosecution. If I gave him a week's labour and he paid me 1s. less than he ought to have paid me, is not the crime equally as great?—In the case of selling a pound of butter an ounce short, he is representing that he is selling you 16 ounces of butter, but he is only selling you 15 ounces, and he is obtaining the price of 16 ounces of butter by a false pretence. In the case of paying a labourer under the Trade Board rate, he is not making necessarily any allegation to the worker that he is paying the worker the Trade Board rate. He says, "I pay you so much," and the worker may know nothing about the Trade Board rates, and there may be no false representation about it at all. There may be a breach of the law, but not a fraud in the same sense as there would be in the former case.

10,819. But the employer knows that he is paying the worker less than he ought to pay, just as the shopkeeper knows that he is giving less weight than he ought to give. What is the difference?—The employer might not always know that he was paying the worker less than he ought to pay him. An employer who is paying less than the Trade Board rate may do so in ignorance; it is possible. But the man who sells you 15 ounces of butter when he ought to be selling you 16 ounces, and does it by means of a false weight, knows he is committing a fraud on you.

10,820. But a mistake is possible in both cases?—I think there is a difference.

10,821. I do not want to pursue it too far, but if an employer pays a less wage than the Trade Board fixes, and he knows what the rate is, why should we be concerned as to whether it should be a criminal prosecution or not?—I am not very greatly concerned about that myself, I must admit. The basis of my suggestion rather was that it was a more suitable tribunal to deal with cases of that sort than the ordinary bench of magistrates.

10,822. *Mr. Poulton*: And more likely to get at the real facts?—I think it would be more likely to get at the real facts. It is a more suitable tribunal.

10,823. *Dame Adelaide Anderson*: My question was simply directed to finding out whether it would not tend to make the offence have less of a stigma?—Yes, it would; and it would therefore make it more likely that you would get a conviction in a proper case.

10,824. *Chairman*: Then you call attention, like other witnesses, to the want of adequate inspection?—Yes.

10,825. As to the Minister's position as the rate-confirming authority, you say in your Statement that you were at one time inclined to hold the view that confirmation might be dispensed with, but I think you have come round to the other view?—Yes.

10,826. *Mr. Poulton*: On the question of inspection, evidently the Fur Trade Board has had considerable experience on this matter, because you say in your statement that one of the leading employers' representatives of the Board is disposed to resign unless the Act is more generally and rigidly enforced. Would it be a fair inference to take your statement as meaning that there really are wholesale evasions which are having a detrimental effect on employers who are honestly trying to carry out the Act?—That is the view on the Fur Trade Board. Both the workers and the employers are very rampant about it.

10,827. That is a very serious thing, is it not? It brings the whole thing within danger of breaking down?—We had an interview with Mr. Wolfe, and to a large extent what he told us displaced some of the views that we had that sufficient had not been done in the matter as regards particular cases which we

25 January, 1922.]

Mr. W. H. STOKER, K.C.

[Continued.]

brought to their notice. But I think we still remained convinced that, owing to the want of inspection and to there not being a sufficient number of inspectors, a very considerable number of evasions were going on in that particular trade.

10,828. Which all goes to show that there is a very strong foundation for the allegations that are made and that there ought to be more inspectors?—Yes, that is so.

Mr. Poulton: I know a great many people feel very strongly upon that matter.

10,829. Mr. Bell: Are you of opinion that any very superior qualifications are necessary for these inspectors?—I think you want an inspector who is not easily hoodwinked by unscrupulous employers. These latter do exist. You want somebody who knows something about the trade and who is not easily put off.

10,830. Is a knowledge of the trade absolutely essential?—I think the inspector should know something about it. I do not say that he should have been brought up in the trade, but he should know sufficient of the trade not to be put off by answers which are given by employers, and deceived by them.

10,831. But suppose a minimum wage of, say, £2 a week had been fixed, does it need a great amount of intelligence to ascertain whether a workman has been paid £2 or not?—Not in the case of the mere minimum wage—perhaps not. But very often the calculation of hours and the entries in the books may require a certain amount of knowledge. For example, in the fur trade there are a great number of ignorant workers who do not understand English, and it may be very difficult with them, and also with an employer who perhaps also imperfectly understands English—or perhaps understands a little more than he would have the inspector believe—to find out exactly what he is paying to the workers, especially if the books are not properly kept. I do not think you want to have an expert in all these trades to go and inspect, but you want somebody who is firm, and who is not a fool, and who knows something about the industry.

10,832. Would it need any more intelligence than is now required to inspect, say, under the Weights and Measures Act?—Well, that I am afraid I could not answer. I should think probably it would.

10,833. So you do not think that the ordinary machinery of the police would suffice; you want an officer specially selected to do the work?—I think the ordinary policeman would be really incapable of adequately dealing with it, and probably he would not have the time.

10,834. They have to look after weights and measures, have they not?—Yes.

Chairman: Not all of them, I think.

10,835. Mr. Bell: They also have to look after the law affecting licensing?—I am afraid you would have a great increase in burglaries and undiscovered murders if you were to switch the police on to the inspection of firms to see whether they were paying proper rates of wages, or else you would have largely to increase the police force.

10,836. If it would require all that displacement of labour on the part of the police force to look after evasions of Trade Board rates, how many inspectors are you going to require efficiently to do the work?—I am afraid a very large number. That, I understand, is the difficulty; that, with the number of Trade Boards which there are, and the number of places that might have to be inspected, you would want a very large number of inspectors, and that would cost a great deal of money.

10,837. Dame Adelaide Anderson: Is not inspection by sample generally sufficient, together with the uncertainty as to when and where the inspector may come down?—I think that is what would have to be relied on, really.

10,838. It does not mean a visit once a year, or possibly even once in two years, to every work place under the Board?—No. I think that is what will

have to be done, that you will have to rely upon that more or less. A great many cases may go undiscovered, but the fact that an inspection may be made, a surprise inspection at any time, should be some sort of deterrent.

10,839. Chairman: And also inspection on complaint, of course?—And also inspection on complaint.

10,840. Dame Adelaide Anderson: A certain amount of routine inspection by sample, combined with the accessibility of the inspector to every complainant?—I think that is what we shall have to rely upon, really, because it would be quite impossible, indeed hopeless, to get sufficient inspectors really to tackle the subject.

10,841. Besides, it would not be good for the workers to have always nothing to do themselves?—No.

10,842. Chairman: Then perhaps we may pass shortly to the next point, about the confirmation by the Minister?—Yes.

10,843. You give the reason which was put to the last Witness: "Apart from the above, other considerations come in, such as the interests of the public and other industries"?—Yes.

10,844. So that there must be some confirming authority. Have you considered in that connection the point put to you by Mr. Pugh as to whether a Central Board, a good strong central authority, might be the body to which these rates should be referred in the first instance, so that that body might either settle the matter or, at all events, give advice which the Minister would be practically certain to follow?—I think that is a good suggestion; I think that might be done.

10,845. Such a Board would, as Mr. Pugh says, co-ordinate the rates throughout the Boards?—Of course, such a Board would have the grasp of the whole position in the country really, the same as the Minister would have.

Chairman: That is what you had in view, was not it, Mr. Pugh, something of that kind?

Mr. Pugh: I think it might get rid of a great deal of friction, and also save a good deal of time in the application of the Board's decisions.

Witness: Yes. I think it is a good suggestion.

10,846. Chairman: Then as to Appointed Members, you rather differ from Sir Alfred Hopkinson in wanting a smaller number, at all events, not more than three. You suggest that there might be additional members?—I think on the larger Boards there might be one or two more Appointed Members, but I am rather inclined to agree with Sir Alfred Hopkinson as regards the smaller Boards, that three is a very good number to work on if you can have them all there; but my experience tells that you do not always get them all there, and sometimes the Chairman is left in the position of being the only Appointed Member, and having to vote.

10,847. Mrs. Lyttelton: In your definition of "agreed skilled rate" I understood you to say you would not take the Appointed Members' vote as binding; is that so?—They would not have to vote at all.

10,848. Then if that suggestion were carried out, would Appointed Members be needed?—Well, very often agreements are arrived at with the assistance and by the influence of the Appointed Members.

10,849. Although they do not vote?—Yes; I think they would still fulfil a useful function in bringing the parties together.

10,850. Mr. Bell: What do you mean by "agreement" there? I want to be clear on that point. Do you mean both parties meeting in the same room, and every single individual voting the same way?—What I mean is, when both sides come in and say they have come to an agreement, and the one side proposes it and the other side seconds it; the Appointed Members do not vote at all; it is an agreement between the parties. When they have met and agreed

25 January, 1922.]

Mr. W. H. STOKER, K.C.

[Continued.]

without the assistance of the Appointed Members they sometimes come in and say, "We have agreed on the rate," but formally it is proposed by the one side and seconded by the other and carried by their votes. That is what I mean by an agreed vote.

10,851. So that if later an employer who might have been present objected and said he was in a minority, you would still consider it an agreed rate?—Oh, yes. I do not know by what process the

(The Witness withdrew.)

Professor D. H. MACGREGOR, called and examined.

The Witness handed in the following statement as his evidence-in-chief:—

SUMMARY OF EVIDENCE of Prof. D. H. MACGREGOR, Deputy-Chairman, Hat, Cap and Millinery; Dressmaking; and Aerated Waters Trade Boards (England and Wales); and Rope, &c., Trade Board (Great Britain). Formerly Deputy-Chairman, Hat, Cap and Millinery; Dressmaking; and Aerated Waters Trade Boards (Scotland).

1.—The minimum rate.

The Acts prescribe only a legal minimum. The economic content of this might be defined as "what can be earned by the ordinary worker of lowest grade in the class considered, under an employer of ordinary efficiency." It is normally more than a subsistence rate.

The Trade Board method is better than a national minimum (a) since the Boards are also meant to assist the organisation of their trades, (b) in view of the variety of conditions, (c) to avoid a single point of political pressure on wage rates.

2.—Appointed Members.

The existing depression has increased the number of enforced decisions and thrown into prominence the responsibility of Appointed Members. In the absence of any Appointed Member, negotiations would often have been broken off. It might ease the position if the Board had a voice in their election, provided they were independent when elected. The British system of more than one independent member allows for consultation, and is a good one; though for some purposes the Chairman alone might act. They should vote on time rates only, including piece-work basis rates; piece rates should be fixed by agreement on report from sectional committees.

3.—Rate-fixing powers.

The powers are adequate. The "dispersion" as regards skill varies with trades, and it would be difficult at present to say the powers were excessive. The trade should be held up by time rates at a few points. The grading of the rope trade is an example.

4.—Methods by which settlements are reached.

In a few cases, agreement is reached outside the Board and ratified by it. In most cases the influence of the Appointed Members has been essential to an agreement. When there is no agreement, each side is free to go back on its concessions and adhere to its original proposal. This would create a dilemma, since neither proposal would be acceptable, and the Appointed Members themselves cannot carry anything. In practice the dilemma rarely, if ever, occurs in that form; one side or the other (or both) moves its maximum concession. The Appointed Members are fully aware that enforced decisions are to be avoided if possible. It might be feasible for the chairman to sit with two or three of each side to make an award. The hindrance to agreement often comes from one or two members, and in full Board the sides usually vote as units.

5.—Procedure.

Rates when fixed should be in force for not less than six months. The Board should have a Rates

employers agree with the employed, but it may be perhaps a majority vote amongst the employers.

10,852. And amongst the workpeople too?—Yes.

10,853. Chairman: Then as regards learners, you suggest that both age and experience might be taken into account?—I think it should be a combined scale if one could be fixed up. We have done so recently in the fur trade, and I think in the made-up textiles too, although that has not been confirmed yet.

Committee, including the Chairman, which should be the co-ordinating Committee with allied Boards. Allied Boards should reconsider their rates at the same time. It is desirable that two or three allied Boards should have the same Chairman.

A great deal of wear and tear will be saved if new proposals come to the Board through the Rates Committee. A Board of 50 or more is too big for a first discussion, and the difference between the proposals too wide.

6.—District rates.

The safest cases are manufactures quite special to one area and retail trade. The problem of country districts is liable to be confused with that of the small employer. The test of ordinary efficiency has to apply to the country district as well as to the small employer in a city. A lower cost of living is plainly not enough for a special rate. There may be special costs of delivery in manufacture. In retail trade there may be an impoverished local market. I prefer district rates to committees as regards manufactures. For retail trade it matters less.

7.—The Minister's position as the rate-confirming authority.

Some open and statutory method of appeal is desirable, to be available either to a certain proportion of the Board or to the Minister, if he does not confirm in 14 days.

8.—Influence on relations between employers and workers.

Most Boards are very recent, and the times have been exceptional. The sides sit in separate rooms for most of the day, and this prevents social developments. Reforms in procedure are important to make the Boards more deliberative and lessen speeches. I would not express an opinion as to the betterment of relations thus far.

10,854. Chairman: You are Professor of Economics at Oxford University?—Yes.

10,855. And a Member of the Committee of Inquiry into the Working of Employment Exchanges?—Yes.

10,856. And you are Deputy-Chairman of a number of Trade Boards—the Rope, Twine and Net; the Hat, Cap and Millinery; the Dressmaking and Women's Light Clothing; the Aerated Waters; and for some time you were Deputy-Chairman of the Aerated Waters Board for Scotland; the Hat, Cap and Millinery for Scotland; and the Dressmaking for Scotland?—Yes.

10,857. You have considered the question of the meaning of "minimum wage" or "minimum rate"?—Yes.

10,858. You, on your Boards, have interpreted that expression?—We have not regarded ourselves as getting any guidance from the law as to an economic principle for fixing a minimum rate. I do not think that any fixation has taken place solely with regard to cost of living.

10,859. You have considered other matters?—Most of the rates, all the rates, I think, when first fixed, on my Boards were fixed when trade was very good, and the condition of the trade was quite as important as any other consideration in fixing these rates. We do not get the guidance that, for example, the Victorian law gives as regards their Wages Boards.

25 January, 1922.]

Professor D. H. MACGREGOR.

[Continued.]

10,860. What does the Victorian law say?—It states that the minimum rate has to have regard to the health of the worker, and I think a reasonable cost of living—something like that. There is no such guidance in our law at all.

10,861. So that you have considered both subsistence and the state of the trade?—And the risk of the trade, say, in aerated waters, and the skill of the trade.

10,862. *Mr. Pugh*: That is to say that the same considerations which would govern employers and workmen in other trades outside Boards have also governed those inside the Board in the fixing of rates?—I do not call it a standard rate here, because I do not want to argue about a word.

10,863. *Chairman*: You define it as "what can be earned by the ordinary worker of lowest grade in the class considered, under an employer of ordinary efficiency"?—Yes.

10,864. And I suppose in the place, in the area, to which the rate relates?—The employer of ordinary efficiency is the difficult question when you are coming to country rates, but in fixing a minimum we do not accede to the request, say, that was put in one case, that we should fix a rate which could be paid by the worst employer in the worst location. That is a request that has been made more than once.

10,865. The worst employer?—I beg your pardon, the least efficient employer. I did not mean the worst employer.

10,866. The least efficient employer, yes, but do you fix a rate with reference to the least favourable place in the area?—Well, there is a question when you are dealing with wages as to whether the trade in the area exists there at all only because there are very low rates—whether the trade is an efficient branch of the trade, say the country rope walks. And we do not fix a rate which is going to underpin all existing employers.

10,867. *Mr. Layton*: At the same time you would say you fix a rate roughly on the basis, in a trade which is both in the country and in the town, of the rate which could reasonably be paid in the country?—Well, in the case of manufacture I should say no. In the case of manufacture we have no right to put a temptation on certain employers to move into certain places because the rates are lower. In retail trade it is quite different.

10,868. Yes, but even in manufacturing, is it not the case that the employer who is in the country probably has more transport charges?—That is what I say here; that is a particular case. It is often not less expensive to work in the country than in the city.

10,869. But it may be more?—It may be more.

10,870. In those cases, on this plan you would fix your minimum on the basis of the country rate?—Yes. It would not be a country rate, it would be just a minimum rate.

10,871. But that is the same thing, I mean; you would fix the minimum on what the employer in the country could pay—a reasonably efficient employer in the country?—An ordinary employer, yes.

10,872. *Chairman*: I do not want to tempt you into using the word "standard" if you do not wish to do so, but would the rate so fixed differ from a standard rate for the lowest class?—For that grade of workman I should say no.

10,873. As between the Trade Board system and the system of a national minimum rate, you prefer the Trade Board system?—Yes.

10,874. *Lord Weir*: I have one question about that last point, where you speak of "in the class considered." In saying that you are visualising different minima according to skill?—I think the best thing that has been done in that way is the graduation of the Rope, Net and Twine Board.

10,875. That is what you referred to?—Yes; I think that is maximum dispersion; that is highly skilled, skilled, semi-skilled, and unskilled. I think that is the maximum dispersion with regard to minimum rate fixing.

10,876. *Mr. Pugh*: Would that case have been satisfactorily met if you had confined yourself to your lowest grade?—No, because if we had confined ourselves to our lowest grade we would not have helped organisation among certain classes of workers which only come in under Grades II and III in certain places in the country.

10,877. *Mr. Layton*: Do you consider it part of your function to assist organisation?—The Acts contemplated clearly a time when Trade Boards will no longer be necessary.

10,878. *Mr. Poulton*: It was to lay down particular grades?—In the Act?

10,879. No, what you have said just now?—Yes. Of course, it is a very slight difference; it is only farthings.

10,880. No, but it was recognised that there were to be grades, and therefore you set a minimum for those grades?—Yes.

10,881. *Dame Adelaide Anderson*: And that the workers would have been paid something less than the minimum that was desirable for them if you had not fixed those rates?—Yes. It is this, that in some localities there are special kinds of work. It is a very complicated trade, though it is very small, and they are paid by piece, and it would not have done for the piece rate to have been based on a time rate which applied to workers in a different place altogether. They wanted a time rate to work their piece rate.

10,882. *Mr. Pugh*: Would not the practical result of your fixing of that with the lowest class of worker mean that you would have done nothing for the other classes of worker, and therefore they would not have had the advantage of the Board?—That is a question of dispersion. Take aerated waters; there is a Board which gave less trouble than any other Board. It fixed a minimum for the whole trade, and went home and apparently never thought of meeting again for a long time.

10,883. *Mr. Bell*: That is the Aerated Waters Board?—Yes, for England.

10,884. *Chairman*: I suppose the higher-skilled man in the Aerated Water Board gets more than the minimum?—I suppose there are men who get more than the minimum, yes. There is not the dispersion of skill.

10,885. *Mr. Pugh*: There is not the same dispersion of skill as in the rope trade?—No.

10,886. *Chairman*: In the rope trade you have, of course, four very elaborate schedules?—The rope trade is already a group—rope, twine and net. You are often discussing rates on the Board which are of no interest to a large section of the Board.

10,887. But your schedules are not divided according to the three trades, are they?—No.

10,888. Each schedule contains a number of occupations?—Yes. Every occupation in the trade was graded by a committee, which went into it and collected the vernacular from everywhere; and there are words in that gradation which I cannot find in any dictionary.

10,889. *Mr. Bell*: Are you of the opinion that the Trade Board in those badly-organised industries adequately fills the place of the Joint Board in well-organised industries?—I do not know what you mean; I am not very sure.

10,890. In a well-organised industry we have Joint Boards?—Yes. Do you mean Joint Industrial Councils?

10,891. No, I mean apart altogether from the Whitley Councils. In the badly-organised trades there were set up Trade Boards under the Trade Boards Act. Is it your opinion that the Trade Boards Act was intended to set up machinery as nearly like the machinery in well-organised trades as possible?—As voluntary Conciliation Boards?

10,892. No, I am speaking of the machinery, because I know the Trade Board is not voluntary?—You mean as similar to the machinery of voluntary Conciliation Boards as possible?

10,893. It is machinery for fixing the rates of wages?—I am afraid I do not quite understand. Do you mean would resemble in its operation as much as possible, say, what happens in the boot trade?

25 January, 1922.]

Professor D. H. MACGREGOR.

[Continued.]

10,894. In an organised trade they have machinery for settling rates of wages?—Yes.

10,895. By agreement. In these badly-organised trades no machinery was in existence?—No.

10,896. The Trade Board came in and set up the machinery: is it your opinion that the machinery set up by the Trade Board was intended to take the place occupied by the Joint Board in a well-organised industry?—In a sense that is a truism, I should say.

10,897. So that the Trade Board in fixing wages, say, more than the minimum wages, is simply carrying out what was intended by the Act?—Oh, now I see what you mean. Of course, it is a truism to say that it takes the place of the joint committee in an organised trade. If you mean, was the Trade Board intended to fix all the rates which can be fixed by a voluntary committee, I do not know.

10,898. *Dame Adelaide Anderson*: Probably not?—My interpretation of the Act is, No, because it says we must fix a minimum time rate, and only gives us optional power to fix anything else.

10,899. A sort of stepping stone to better organisation?—Clearly. There are clauses in both Acts which contemplate a time when the Minister may withdraw the Board.

10,900. *Mr. Layton*: You interpret that to mean that one of the functions of the system is to produce organisation, and I am not quite clear why that follows. I quite recognise that in the Whitley Council Report which succeeded the Act of 1918 it was contemplated that the Trade Boards should merge in the Whitley Councils; but how does that follow in the Act itself?—From the fact that the Act gives us power to consider a great many other things than wages, which power has practically never been used, and that the Act gives the Minister power in certain circumstances to withdraw the Board. I do not see what ground he can have except that the trade is well enough organised.

10,901. *Mr. Pugh*: It therefore assumes that you will reach through the Board a state of organisation which will make the Board unnecessary?—Yes. The original idea, I believe, was that it would pass into a Whitley Council, and that a Whitley Council was better than the Board; but that is not the view now taken by everybody.

10,902. The view is that the Board is better than the Council?—That the Board is better than the Council.

10,903. *Mr. Bell*: You would agree that if the Minister was satisfied that adequate machinery existed in a trade he would not set up a Trade Board?—I would rather not interpret the Minister's intentions at all. I cannot say. I can only say what the Act seems to me to provide for.

10,904. I am trying to refer you to the Act, where it says, "If the Minister is of opinion that no adequate machinery." Those are the words I am quoting, "no adequate machinery"; so that if there is adequate machinery there will be no Trade Board?—I suppose not.

Mr. Bell: So that the Board must be intended to be set up if there is no adequate machinery.

10,905. *Chairman*: It must be intended to take the place of other adequate machinery, and when other adequate machinery comes into existence outside, then you think the basis of the Trade Board is gone?—I think that the Act contemplates that. I ought to say that there is a considerable difference of opinion among people engaged on Trade Boards as to whether that development ought to take place or not; but it seems to be the development contemplated in the Act.

10,906. *Mr. Pugh*: I think we had a case where the Minister did contemplate taking away a Trade Board and substituting a Whitley Council, and both employers and workpeople opposed it?—Yes.

10,907. *Chairman*: Now to go to the next point, you were saying that you did not believe in a national minimum wage. You give first the reason that the Boards, as you say, may assist the organisation of the trade; secondly, in view of the variety of conditions; thirdly, to avoid a single point of political pressure on wage-rates?—Yes.

10,908. *Mr. Layton*: Do you mean on (b) that there ought to be, leaving aside for the moment the question of higher minima for higher grades of labour, minima for the lowest grade of labour in different trades—that it is desirable that there should be?—Yes, since the condition of the trade matters; since it is not a subsistence rate. Our minima do vary, especially for men.

10,909. They do in fact, of course, but do you think that they should do so?—Yes, I do not see how you can get away from that, especially when you are considering rates that should be fixed in good times, when some trades are enjoying far more exceptional prosperity than others.

10,910. Assuming for a moment that it were removed from the duty of the Trade Board to fix any other rates than a minimum, do you think that it should be the duty of a Trade Board in fixing minimum rates to obtain for the lowest grade of labour what the trade can afford to pay?—Yes.

10,911. You think that it should be used as a means of getting higher remuneration?—For the lowest grade of labour, yes.

10,912. It should not be confined to giving subsistence?—No, I do not think so.

10,913. *Chairman*: Then, as to Appointed Members, you say that the system is a good one, but you say that they should vote on time rates only, including piece-work basis rates; piece rates should be fixed by agreement on report from sectional committees?—That is, in practice, what happens. The Appointed Members cannot have the technical knowledge to vote on piece rates. If they had, they would not be there.

10,914. *Mr. Pugh*: How did you manage to fix these (indicating document)?—Which are these?

10,915. The Rope, Twine and Net?—These are all agreements. Of course, we have fixed the minimum time rate, and the minimum piece-work basis time rate, and all that we have to be satisfied about is that these piece rates work to that minimum; but when it comes to 300 rates for hand machine braiders and so on—well, we have to leave it to a sub-committee composed of representatives of each side to work it out. For example, it was done last week. The Board met last week, and proposals were made to vary the rates, and all these will simply be sealed down by a private meeting between representatives of the two sides, who will send the result to the secretary of the Board to be printed.

10,916. *Lord Weir*: Do you think piece-work prices should be the subject of a guarantee by the law, and enforceable?—Well, there are the three ways. There is the way in which the Appointed Members can vote on them; there is the way in which the Appointed Members do not vote, but if there is agreement (you have to define and say how much agreement) then they have become Trade Board rates; and there is the system by which they simply become recommended to the trade—they simply become rates recommended by the Board, which perhaps a federation of the employers might minute their intention to pay, as they did in one case—well, not quite that, but something similar.

10,917. *Chairman*: These piece rates really are agreed outside your purview, so to speak?—It is a very considerable responsibility to vote on a list like that.

10,918. *Mr. Poulton*: Do you attach importance to these words: "Piece rates should be fixed by agreement on report from sectional committees"?—Yes.

10,919. You think in all cases they should have their reports alone first?—Say there is the rope section, there is the net section of that Board. Well, the net section is quite different; it is a different place, it is a different trade. Their committee would report; the Board would have to be satisfied that it worked to the piece-work basis time rate; that is all that the Appointed Members can possibly satisfy themselves about. We can ask, "What is your output per week?" of an ordinary worker if we have got one on the Board.

25 January, 1922.]

Professor D. H. MACGREGOR.

[Continued.]

10,920. *Chairman*: I do not follow a sentence in your next paragraph: "The trade should be held up by time rates at a few points"?—"Supported" is perhaps better than "held up."

10,921. I see; it may have just the opposite meaning. Even now I do not quite follow it; what do you mean by "supported at a few points"?—Well, as I said, you might have an ordinary rate and a skilled rate.

10,922. *Mrs. Lyttelton*: Why take four or five rates?—I do not think you would have more than four, with piece-work basis rates, because you will have to allow for piece-work payments.

10,923. And overtime?—Yes; you must fix overtime rates if you fix a rate.

10,924. That makes six, then?—The overtime rates are generally paid on the basis of the rates already fixed, so there is no difficulty; it is automatic.

10,925. *Lord Weir*: Those points, I notice, are financially a very small distance apart?—In the Rope Board?

10,926. Yes.—In the two lowest cases for women they are the same. It has been a very difficult matter, but I think it is the beginning of a good system.

10,927. It really is a new system?—Yes.

10,928. *Mrs. Lyttelton*: To simplify the grades, in fact, as far as local enforcement is concerned?—The complete grading of the trade.

Mrs. Lyttelton: I suppose in some trades it would be practically impossible.

10,929. *Chairman*: Then you deal with the methods of arriving at settlements. I have not myself anything to ask about that. Then you come to procedure, and you say that the rates should be enforced for not less than six months?—There is a sentence under paragraph 4 which ought to come out. I say: "The Chairman might sit with two or three of each side to make an award. He knows more about it than any outside referee." The latter sentence is out of its place; that refers to something else.

10,930. *Mr. Layton*: On that paragraph, have the Appointed Members got sufficient information? Your view is that the rates should not be fixed simply with a view to subsistence?—Yes.

10,931. And you therefore have regard to the capacity of the trade to pay?—Yes.

10,932. Do you consider that the Appointed Members get the information necessary to enable them to form an opinion on that?—We do not get cost accounts; we do not get information about costing; we have not the power. I think the original Wages Boards had the power; not in this country, but the Boards on the example of which we were founded had the power to call for documents and to call people on them. We are in a different position altogether.

10,933. *Mr. Pugh*: But you have just about as much power as an ordinary Arbitration Court would have?—I have only seen one system of accounts presented to us. We have not the information on which we could make an award, such as an arbitrator would get.

10,934. That is the point I put to you; you have just about as much information as an ordinary Arbitration Court would have?—They can examine people on oath.

10,935. Oh, no, surely?—Oh, an Arbitration Court, no; I thought you said an Industrial Court. No. We are absolved when we get an agreement.

10,936. *Mr. Layton*: You have persuasive powers to get information?—We are totally absolved if we get agreement.

10,937. *Chairman*: Yes, because the majority of the Board passes the rate without you?—Yes. If there is no agreement, then the position may be very difficult, because, as I say, each side can then go back on every concession it has made in order to obtain an agreement, and you may therefore go back to proposals differing 2d. or 3d.

10,938. *Lord Weir*: The detailed figures for any one firm, for example, in an industry would be of

very little value; really you would require all the figures for the whole industry?—Yes.

10,939. Which, of course, in these classes of industry, it would be quite impossible to get?—Well, if you sit all day on a Trade Board, and perhaps for two days, till 7 o'clock at night, even if you have no technical knowledge of the trade, and you are considering what rate ought to be fixed, a great deal will emerge in the time which will give you a very good idea.

10,940. *Chairman*: Then if I may pass on to procedure, you suggest that the Board should have a rates committee. That, of course, is within the power of the Board to-day?—Yes. I do not know that that interests this Committee; it interests me considerably. We are 50 strong or more—

10,941. Which "we"?—The Trade Boards in this country.

10,942. I thought you were talking about one Trade Board?—Well, the Rope is 57.

10,943. *Mr. Poulton*: Are we talking about the whole of the Trade Boards?—No, I am talking about an average Trade Board; on one Board there are about 50. We are founded on the examples of Wages Boards in Victoria, which have a maximum strength of 10 by law. Now 50 is a large body to start discussing proposals varying between, say, a motion for 8d. an hour and a motion for 1s. an hour. I do not know whether this Committee have attended a meeting of a Trade Board, but they will know what I mean.

Chairman: We can imagine it quite well.

Mr. Pugh: Very well!

Witness: One of the ideas of the Board is harmony, to get the trade to work harmoniously together, and to consider other things than rates, and it is in the inevitable speeches on proposals differing as widely as that when the things which endanger harmony most are said. Besides, it means that at a late hour at night you often have to give quick decisions. You cannot get an agreement. I feel strongly that the rates should be filtered through a rates committee, and that the Board should discuss the recommendation of such a committee, which would have brought them within a reasonable distance of each other, in view of the great difference between the British Boards and the Victorian Boards.

10,944. *Chairman*: That is within your power, is not it?—It is within our power, yes.

10,945. *Mr. Pugh*: How is it that you do not appoint what I should call your standing committee?—I think the Boards will work out their own developments in that way.

10,946. You know the practice in ordinary Wages Boards, do you, outside Trade Boards; that they have a standing committee which practically functions the whole year, the main Board being called only when necessary?—Yes.

10,947. It is quite practical to adopt that with your Trade Boards, is not it?—Yes. I am not only thinking of it from the point of view of one Board, but from the point of view of allied Boards. Take Dressmaking and Millinery; just take what has happened. Within the last month we fixed a rate for millinery in England, a women's rate, at 8d., a reduced rate. We sat till late at night. The Millinery and Dressmaking are carried on in close relation to each other, and a few days later the Dressmaking reduced its rates as far as 7d. for women. Now we shall probably have another meeting of the Board for Millinery to consider whether our rates should not come down to 7d.

10,948. The amalgamation of allied Boards would be a difficulty?—They are amalgamated already—the Hat, Cap and Millinery. What relation is there between millinery and gentlemen's hard hats?

Mr. Pugh: Well, I am not an authority on that.

10,949. *Chairman*: Then as regards districts, I gather you prefer district rates to district committees; that is to say, you would rather have a district rate made by the Board itself than have district committees making rates?—Yes; I do not see how you

25 January, 1922.]

Professor D. H. MACGREGOR.

[Continued.]

can get over the difficulty in manufacture of tempting manufacture to go somewhere else if you offer it a lower rate. Of course, there may be that difference of rates now, but you are doing something which is to be enforced by penalties, so you are fixing the thing. There was a case of exempting some employer, I think, in Shetland, from some rate or other because it was so far away, but we found that his agents were going to come to Edinburgh and he was going to work in Shetland. He would simply have cut the rest of the trade out.

10,950. That, I suppose, was a productive trade?—Yes.

10,951. It would not apply with the same force to a distributive trade?—I say that in regard to retail trade the case is quite different.

10,952. *Mr. Lanyon*: But even in productive trade if you fix that rate for the country, will not you thereby set up a movement, a change of location, in cases where at the present moment differing rates are, in fact, paid?—I do not say it is a flat rate; I say you must consider district rates very closely by the whole Board in relation to each other. That is my point. I certainly do not agree with the lower cost of living; if there is a lower cost of living I do not see why the employer should get it all.

10,953. Have you varying district rates on any Board with which you are concerned?—No. I see that a member of the Rope Board gave evidence about that, that the Appointed Members had prevented the establishment of a district committee in the Rope Board. That is quite contrary to my memory as to the first meeting of the Board. We have had some rates applying to Dorset and Somerset on that Board, but these are not really district rates; I think the trade only exists there. It is quite a special local development.

10,954. *Chairman*: Bridport, is it?—Yes.

10,955. *Mr. Lanyon*: But you would agree that it is desirable that the Board should fix varying rates where, in fact, the present condition of the trade shows there to be substantial difference?—If there is substantial difference, yes.

10,956. How does that apply in the case of millinery? Have you considered that as between, particularly, country districts and towns?—Well, millinery is a difficult case, because of the movement that is going on. I must not confuse it with dressmaking. In regard to millinery, the difficulty has been in fixing country rates, whether the small employer is not uneconomically small or uneconomically dispersed. That has been the difficulty in millinery.

10,957. Take the case of dressmaking, because it is simpler?—Yes. There is a change going on in the trade; that is to say that people are buying to a greater extent ready-made dresses and having them done up, than they are ordering retail dresses.

10,958. *Dame Adelaide Anderson*: Are not they also doing that in millinery?—Well, I was not sure about millinery. I am not sure if we have had that in millinery. That, of course, lessens considerably the reasons for maintaining a very large number of small retail dressmakers. That is the kind of thing we have had to consider in that trade; but we have, I think, on the Dressmaking Board allowed local rates. Yes, the Dressmaking Board has allowed local rates, and also in Scotland.

10,959. *Mr. Lanyon*: You would consider it a disadvantage if the Trade Board had the effect of producing a considerable volume of unemployment and the transfer to the town?—Well, it will be transferred. I do not see how you can help it unless you take what I proposed on a Scottish Board—simply remote districts such as Wick and Caithness; get them remote enough. But what are you going to do with the district between Glasgow and Edinburgh, for example, if you try to vary rates? People can so easily move.

10,960. What have you in fact done?—We have taken Boroughs of 12,000 and over for one rate, and all other parts of Scotland for another, with a special

qualification for the Glasgow area. I would much rather have had remote districts on a special rate.

10,961. Then as regards confirmation, you suggest a method of appeal?—I think it is most undesirable that when there is not agreement on the Board and a rate is fixed by the Appointed Members, one side or the other goes to the Minister behind the Board. If there is to be an appeal, I think it should be regular, and that we should know where we are.

10,962. *Mr. Pugh*: What do you think of the central body which you have heard discussed this afternoon? Do you think that would meet your case?—A central body between the Boards and the Minister might be a temptation, a greater temptation than I should like, to appeals against any decision at all. I am afraid that a central body like that would be regarded as a kind of normal Court of Appeal by dissatisfied people on the Trade Board. They would take it all to the Central Committee.

10,963. You think the tendency would be for the Boards to shoulder their responsibility upon the central authority instead of trying to settle for themselves?—If you are going to have a Central Committee, I think you will have to be very careful that it does not become an incessant Court of Appeal.

10,964. *Chairman*: That would a good deal depend on the conduct of the Committee?—Yes.

10,965. And on the lines they laid down for themselves in the beginning?—Yes.

10,966. If they insisted upon a decision in every case and simply regarded themselves as a revising authority, that danger might not arise?—You must avoid what is becoming rather common now; that is, getting decisions not carried by the Appointed Members, but carried by one side refusing to vote and then going to the Minister. That is getting very common. What can we do? A decision was taken on the Millinery Board in England, the workers refusing to vote. It was a reduction of wages. Now, if the workers had voted against that reduction I should have voted against it; but three Appointed Members can do nothing if one side refuse to vote, and any definitely established committee above the Trade Boards is liable, I think, to lead to abstentions of this sort which destroy the harmony of the Board in favour of appeals to that Committee. They will say: "We will not vote; we will appeal to that Committee; we will minuate a protest."

10,967. That happens now?—It happens now, and there will be a much more definite temptation to do it unless you guard very carefully the functions of such a Committee.

10,968. Surely they would not be better able to appeal to a Committee if they abstained from voting than if they had voted against?—I beg your pardon?

10,969. They would not be in a better position for appealing if they had refused to exercise their privilege of voting at all, than they would be if they had voted against the proposal?—No. I merely say they will abstain from voting on the Board and appeal to the Central Committee.

10,970. *Mrs. Lyttelton*: As a protest?—The procedure is: Abstain from voting; minuate your protest; and go to the Minister.

10,971. *Chairman*: Why is that better than: Vote against, and then go to the Minister if you are beaten?—Ah, because of a feature in the constitution of the Boards. They could not in some cases vote against; that is to say, in those cases where the reduction was really an agreement between the two representative sides of the Board.

10,972. But surely if there was agreement, even though not carried out by universal vote, neither side can properly appeal to the Minister or anybody else?—It is not an agreement on a full Board; it is not voted by both sides. It is not moved and seconded and carried as an agreement.

10,973. We need not follow all these intricacies; but is not it right to say that an appeal authority would be, at all events, a useful body in dealing with all these questions, subject to the caution which you have thrown out that it might lead to people abstain-

25 January, 1922.]

Professor D. H. MACGREGOR.

[Continued.]

ing or appealing as a matter of course?—That is really what it comes to?—Yes.

10,974. You think that the tendency of appeal would be rather greater in the case of a Central Board than in the case of the Minister?—I think so, yes.

10,975. *Lord Weir*: To what extent do you believe that the grouping of the present boards would result in greater success?—I say they are grouped already—my Boards. The Hat, Cap and Millinery is a group; the Rope, Twine and Net is a group.

10,976. And do you think more grouping could take place, from your general knowledge of the Trade Boards?—I think in the clothing trades it could.

10,977. *Mr. Poulton*: Do you mean in Item 8 that there should be standing orders drawn up where you say: "Reforms in procedure are important to make the Boards more deliberative, and lessen speeches?"—Yes. That, as the Chairman pointed out, is a matter of procedure. I think it might interest the Committee to know what I thought about that. I got a memorandum this morning—I do not know if I ought to mention it—from Mr. Layton, or submitted to a Committee by Mr. Layton, with a request that I should say something about it; but it does not matter very much.

10,978. *Chairman*: By all means let us have it. That is a memorandum on the wages current in the various industries?—Yes.

10,979. What do you say about that? We have copies of it?—I think the point is that we have to attend, in fixing Trade Board rates, to the rates which exist especially in export industries, and secondly that at present rates of wages have got chaotic, and there are Trade Board rates which are actually above the rates in organised trades. (*To Mr. Layton*): Is that right? I think these are the two points.

10,980. *Mr. Layton*: Yes.—My point is that though the rates in other trades are chaotic, our very function is just not to do that on Trade Boards, and that if we were to follow the rates of industry outside we should really be giving up practically our main function as Trade Boards, which is to prevent that kind of thing happening in our trades. Mr. Layton has taken his figures at a time when Trade Board rates are above the rates in certain organised trades, but in other times they will not go nearly so high, and what I call a minimum rate is a minimum rate calculated over a long enough time for reserves to be held and drawn upon.

10,981. The question of what are minimum rates depends on what is going to be the ultimate movement of wages generally?—Yes.

10,982. But the implication there was that wages are moving in a particular way. I did not deal particularly with Trade Board rates, but it is obvious that Trade Board rates have not moved in the same way and to the same degree, and that is creating and may create a certain amount of difficulty in the country generally.—Well, I should not expect Trade Board rates to fluctuate in the same degree simply because they are regulated by Trade Boards. I do not expect them to go so high and I do not expect them to fall so low.

10,983. The real question that arises about that Memorandum which was put to you is this: Is it possible for Trade Boards to fix a minimum, an appropriate minimum, on the basis of what is happening in other industries rather than in the main on

a basis of cost of living?—What is happening in other industries, as it affects our trades, is taken into account in fixing a rate in our trades; it enters into the consideration of what this trade will bear. I do not see how a Trade Board could work if it regarded itself as tied to the fluctuations of any other industry.

10,984. Of course, it has not been suggested that it should be; but what considerations were taken into account last week, for example, when you were discussing the matter?—Well, that was the Rope Trade; that is largely an export trade.

10,985. You were speaking of millinery, I thought?—Millinery was this week.

10,986. Was any account taken of the general movement of wages in industries, generally speaking, in the big trades of the country?—Not except in so far as that affected the millinery trade; so far as that affected the purchasing power over millinery products; no.

10,987. *Mr. Pugh*: So when you fixed your wages previously you would have no regard to the fact that the lowest-paid worker in the steel trade, the rate for whom is quoted as below the Trade Board rates, was then getting 225 per cent. above pre-war; and not having taken that into account then you would not feel disposed to take it into account now?—Our rates were not anything like so high in proportion as that. The idea, I understand, is to fix a rate for a period and hold it for a period long enough for proper reserves to be held to stabilise it for that period.

10,988. *Mr. Layton*: What do you mean by proper reserves?—Well, the employers know that they have to pay that rate for a certain period, so they do not dissipate that money in dividends.

10,989. Financial reserves, you mean?—Yes.

10,990. *Mr. Pugh*: In any case, if you were considering, say, the iron and steel trades, you would have to have regard to the average value of wages, rather than the value at a particular moment owing to the factors which obtain in the iron and steel trades?—Yes. I should not expect Trade Board rates to fluctuate nearly so much.

10,991. *Mr. Layton*: How much is the weekly reduction which you have made in the Millinery Trade Board?—In the Millinery Trade Board the rates have only come down to 8d. as against 8½d. for women.

10,992. That is about 2s. a week?—Yes. May I say that that is by agreement with the employers.

10,993. The employers agree to that?—Yes.

10,994. Does that compare with 3s. or 4s. or 5s., that being the average reduction which has taken place in most of the big trades such as engineering, railway service, and the main organised trades of the country?—Yes.

10,995. Did you reach that figure simply on the proposition of the employers?—On our proposition accepted by the employers.

10,996. Was yours a compromise between the two?—No, the workers made no proposal.

10,997. Did the employers make some other proposition?—Yes. The employers finally accepted unanimously, I believe; at least, their Chairman spoke for them and accepted that reduction only from 8½d. to 8d., on the concession, I should add, of other reductions on highly skilled rates.

Chairman: Thank you.

(*The Witness withdrew.*)

(Adjourned to Wednesday next the 1st proximo at 11 a.m.)

1 February, 1922.]

Mr. ARTEMUS JONES, K.C.

[Continued.]

TWENTY-THIRD DAY.

Wednesday, February 1st, 1922.

PRESENT:

THE RIGHT HON. THE VISCOUNT CAVE,
G.C.M.G. (*Chairman*).
THE RIGHT HON. LORD WEIR OF EASTWOOD.
DAME ADELAIDE M. ANDERSON, D.B.E.
THE HON. MRS. ALFRED LYTTELTON, D.B.E.

MR. W. T. LAYTON, C.H., C.B.E.
SIR ARTHUR F. PEASE, BART.
MR. A. MACCALLUM SCOTT, M.P.
MR. H. D. HANCOCK (*Secretary*).

Mr. ARTEMUS JONES, K.C., called and examined.

The Witness handed in the following statement as his evidence-in-chief:—

My experience of the Trade Boards system is confined to the four Boards of which I am chairman:—

1. The Stamped or Pressed Metal Wares Board.
2. The Button Board.
3. Pin, Hook and Eye and Snap Fastener Board.
4. Perambulator and Invalid Carriage Board.

At the date of my appointment, in April, 1921, the abnormal trade depression, which began to set in at the end of 1920, was producing its full effect. All the rates had been fixed during the chairmanship of my predecessor, Mr. Jeeves, K.C., and throughout the whole of my time the chief controversy at the meetings has turned upon proposals brought forward by the employers for reduction in the rates of wages previously fixed. These reductions have invariably been carried by the votes of the appointed members. Short as my experience of the system has been, it has been wide enough to enable me to see its machinery working under the most adverse conditions. No one in the Parliament of 1918 foresaw either the extent or the intensity of the present trade slump, so that the machinery of the Trade Board system has been subjected to a more severe strain than its framers ever contemplated. The defects of the machinery as disclosed in its working since 1919 are accepted on both sides, and the statutory changes necessary for the removal of these defects are not in dispute. The points on which I should like to try and help the Committee are:—

1. The methods by which settlements are reached.
2. The part played by the appointed members in such settlement under the Act of 1918.
3. The nature of their real function in the Trade Board system.
4. The statutory changes necessary to improve the machinery.
5. The influence of the Trade Board system upon the relationship of workmen and employers

(1) On three out of the four Boards an Administration Committee, consisting of representatives of both sides, meet together some days before the Trade Board meeting to explore the avenues along which an agreement may be reached. On the fourth Board (the Pin, Hook and Eye and Snap Fastener) I have suggested a similar arrangement, and both sides have now accepted it, so that henceforth the initial method of settlement will be the same on the four boards. The Administration Committee deals with most questions of importance, such as matters on which the interests of the workers and the employers are in conflict, *e.g.*, variation of the rate of wages; other matters in which the interests of both sides are not in antagonism, *e.g.*, schemes for the training of disabled soldiers or matters affecting the conditions of the trade on which, under Section 10 of the Act of 1918, the Board can make recommendations to

Government Departments; still other matters on which both sides are at one in opposition to the Labour Ministry, *e.g.*, the definition of the articles coming within the scope of the Board. General harmony prevails on every subject except one, and that of course is the question of wages. In one or two instances the Administration Committee has overcome even this difficulty when the workers' representatives have been authorised by their constituents to agree to a reduction. As a rule, however, the variation of the rates is only decided after an exhaustive discussion at the Board meetings. When the proposed reduction comes before the Board, the discussion pursues a course invariably the same. On the employers' side emphasis is laid on four points:—(1) the slump in trade; (2) the competition created in neutral markets by reason of depreciated exchanges in Mid-Europe; (3) the allegation that the workers themselves, appreciating the abnormal state of trade, would be content to accept reduced wages if left to themselves without the intervention of the Board; (4) the impossibility of paying existing wages without closing down the works. The points urged by the workers are likewise the same:—(1) the high cost of living; (2) the inability of the employers during the slump to guarantee full employment even were the reduction agreed to; (3) the inadequacy of the proposed reduction to meet the terrible drop in the depreciated exchanges; (4) the impossibility of living in reasonable comfort if the wages are further reduced. When the discussion closes, each side is approached by the appointed members with a view of ascertaining if any compromise is possible. They indicate the views they have formed and what they are prepared to vote for. Sometimes the employers have been content with a smaller reduction than they asked for, and now and again the workers do not vote against it. On other occasions the appointed members have had to discharge the disagreeable task of voting in favour of reducing the workmen's wages.

(2) In fulfilling this function the appointed members derive no assistance from the language of the Statute itself. The Act of 1909 gave in express terms two principles which were to govern the fixing of rates under the Act: (a) where the wages were at an exceptionally low level in any trade or part of a trade; (b) where the other circumstances of the trade were such as to render expedient the application of this Statutory power of fixing rates of wages. These two guiding principles are no longer available, for (a) and (b) were repealed by the Act of 1918. The latter Statute sets out two considerations which the Minister of Labour must bear in mind in setting up a Board: (i) the absence of adequate machinery for the effective regulation of wages in any trade; (ii) the rates of wages prevalent in the trade. These are the only words in the Statute which indicate what the policy of the Legislature was in enacting it.

1 February, 1922.]

Mr. ARTEMUS JONES, K.C.

[Continued.]

To the appointed members, whose task it is to find some solvent for this difficult problem of reducing wages in a period of high prices, such language offers no guidance at all. The only principle on which they can act is to try, on the evidence before them, to take a dispassionate view of the dispute if the parties cannot arrive at an agreement. On the one side the employers insist that the dominant consideration shall be the purely economic aspect of the question, viz., that the appointed members should vote for repeated reductions of wages in order to save the industry from being crushed by foreign competition. On the other hand, the workers contend that the Act was passed for the purpose of raising the level of wages and that the question whether the trade is carried on at a profit at any particular period is an entirely subordinate consideration—in other words, decent wages come before profits. These two views, diametrically opposed to one another, lead inevitably to the question, did the Legislature intend to authorise such wages as must lead to the closing down of the industry and thus throw out of employment the very workers whom it intended to protect? Between the two extremes the appointed members have to steer their course. They are sometimes questioned by the employers as to the principles on which they are supposed to act. As I have said, at present there is nothing in the language of the Act itself to guide them. This uncertainty as to what the Legislature intended should be done by the appointed members is, I am satisfied, a source of irritation to the employers who are unfriendly to the Trade Board system. It leads them also to form wrong conclusions as to the real attitude of the appointed members. For instance, it was asserted to the Committee by a member of the Pin, Hook and Snap Fasteners Board that professors of economics and social welfare workers, who form the rest of the appointed members, are inclined to be more partial to the workers' point of view than to the strictly economic view. My experience of them is the exact contrary to this. On many occasions I have found my colleagues more impressed by the case made by the employers than I have been. In my humble judgment it would ensure a more satisfactory working of the system in the future if the two Acts of 1909 and 1918 were repealed and a consolidating statute passed which set forth in clear language the mischief which the statute is enacted to prevent or the objects which it is intended to achieve. The function of the appointed members should be defined in a separate section setting out the considerations which should guide them in voting if the workers and the employers cannot agree upon a rate, viz., the circumstances of the trade at the time when the rate of wages is fixed or varied, the level of such wages in relation to the cost of living, and the desirability of maintaining the rate of wages at or above subsistence level.

(3) According to my experience of the Trade Board system, the real function of the appointed members is not clearly understood by either the workers or the employers. No Trade Board falls clearly within the limits of a single one of the recognised methods of industrial settlement (which range from the Compulsory Arbitration of Australia to the purely Collective Bargaining of British Trade Unions). A Trade Board is, in fact, an amalgamation of the attributes of more than one of these methods. Apart from the compulsory enforcement of its rates, it becomes, during the first stage of its working, simply a method of collective bargaining between workers and employers. This was the obvious intention of its promoters, because the Right Hon. George Roberts, in introducing the Bill into the House of Commons, explained that it was to apply to those industries where the workers were not sufficiently well organised to insist upon the benefits of collective bargaining. If collective bargaining becomes impossible upon the voluntary basis (which sometimes happens with powerful trade unions) the next step is that of conciliation, and at this point the duty of the appointed members

is to try and get both sides to compromise. If this becomes impossible, a third stage is reached when the appointed members, ceasing to be conciliators, become in the last resort nothing more or less than arbitrators. The varying role, which of necessity the appointed members have thus to play, has caused no little confusion in the minds of their colleagues. Some employers have complained that the casting votes of the appointed members determine rates of wages in an industry of which they are completely ignorant. This criticism is only true in a literal sense. What the Board aims at is a rate of wages which is fair to the workers having regard to the conditions of the trade. Those who know everything about the trade put forward two figures:—(1) the rate offered by the employers; (2) the rate acceptable to the workers. If both sides come to an agreement, then the Trade Board rate has been fixed by those who know everything about the trade. If no agreement is reached the appointed members step in and take roughly the average of the difference between the two figures, and the rate then fixed thus becomes the highest common measure of agreement between the two sides, i.e., those who know everything about the trade plus the appointed members.

As to the *personnel* of the appointed members, my colleagues are two professors of political economy and two ladies who are familiar with the social welfare movement and also versed in economic science. I do not agree with the suggestion made to your Committee that the best type of assessor to assist the chairman is a commercial or business man rather than a professor of economics or a social worker. This view overlooks completely the essentially arbitral position of the appointed member. The workers could never be induced to accept as an appointed member a commercial or business man, who would of necessity approach every problem from the same standpoint as the employer. It would be just as reasonable for the workers to demand that a Labour M.P. or Trade Union official should sit as an appointed member. Once the arbitral character of the appointed member's position is conceded, it follows that he should either be a lawyer who is accustomed to weigh evidence or somebody who possesses a knowledge of economics or of the social conditions under which the workers live. A business man is an expert in his own particular line, but it does not follow that he has such a grasp of the industrial system generally as is afforded by economic science. From my own experience I can testify to the invaluable assistance I have received from my colleagues, and in particular Professor J. H. Jones, of Leeds University, whose profound knowledge of industrial economics and whose marked impartiality have more than once been publicly acknowledged by both sides. Where a large number of women are employed (as on these Boards) it is of vital importance that one of the appointed members should be familiar with the social conditions in which the women workers live.

(4) The statutory changes necessary to meet the defects disclosed in the machinery of the Act may be briefly put. The period of lodging objections to a proposed variation under Section 3, Sub-section 4 should (after the first rate is fixed) be reduced to a fortnight, with a further period of ten days for confirmation by the Minister of Labour. Once a rate is varied by the Board and is confirmed by the Minister for Labour, it should come into operation on the date mentioned in the notice. This reform will do much to remove the dissatisfaction which exists on both sides with regard to delay. Moreover, the Minister for Labour, if he exercise his power for postponing the confirmation of the rate or variation, should be directed by the statute to give in writing the reason for his decision. At present his power in this respect is absolutely arbitrary, and I cannot help thinking that the workers now and again become a little suspicious where the power is exercised lest some parliamentary or political pressure is being exerted to interfere with the administration of the Act. If in the future the Labour Party comes into power em-

1 February, 1922.]

Mr. ARTEMUS JONES, K.C.

[Continued.]

ployers would equally naturally entertain the same misgiving. It would be fatal to the working of the system if the confidence of either side were undermined by fears that political or parliamentary influence were interfering with the Executive, and the suggestion I make would, I think, prevent any such suspicion arising.

Another statutory change, as to which there is no difference of opinion, relates to Section 9, which governs legal proceedings or offences against the Act. At present the power of the Court of Summary Jurisdiction to order defaulting employers to pay all the arrears of statutory wages is discretionary, and more than once the magistrate has exercised the discretion in favour of the employer. This has had an unfortunate effect upon the minds of the workers' representatives. I would suggest that the word "may" in the ninth line of Sub-section 1 of Section 9 should be superseded by the word "shall," so as to make it obligatory to order payment of all arrears. I would also suggest that the piece-work basis time-rate which is dealt with in Section 6 of the Act of 1918 should receive a similar definition to the other rates contained in Section 3, and added to them. Another change I would recommend relates to procedure. At present the appointed members are dependent, in ascertaining the facts of a dispute, upon *ex parte* statements made upon both sides. They should be equipped, in my opinion, with some powers of Discovery (as it is known in the High Courts) whereby they could verify or otherwise the statements made to them. Parties to a dispute sometimes deceive themselves as to the facts; at other times statements are made on one side which are not accepted on the other side. For instance, at the last meeting of the Hook and Eye and Snap Fasteners Board, where a reduction of wages was carried, the case for the employers rested on the assertion that trade was so bad that they could not give the workers any assurance they would be put on full time. A woman delegate from a town outside Birmingham assured me, however, during the negotiations, that a firm employed in producing the same article in another town was working full time. Again, there is the delicate question as to whether the industry is carried on at a profit. At present there are no means of ascertaining what the facts are in this respect. A limited liability company publishes what the profits may be in its balance sheet, but a private company need not do so, and the same remark applies to partnerships and firms. At one meeting of the Pin, Hook and Eye Board the employers very fairly offered to produce their balance sheets to me privately in order to show the serious position in which the trade found itself. This offer I declined, on the ground that the workers could not possibly be satisfied with a decision resting upon facts which they had no opportunity of challenging. In the Commonwealth Industrial Reports of Australia I have read judgments which show that this difficulty has been overcome in Australia. A power analogous to the machinery of Discovery is vested in the Australian Courts for the purpose of enabling the judge to require the production of all documents relevant to the issue before him, that is to say, the balance sheets of the employers. If the Trade Board is to continue and develop, it will be found in time that a similar power should be conferred on the appointed members for determining the facts in dispute.

(5) The effect of the Trade Board system on the relations between employer and the workman is beneficial on the whole. It varies in degree on different Boards. At one extreme stands the Perambulator and Invalid Carriage Board, which, meeting in London, embraces employers and workers drawn from various parts of the country. Here the utmost cordiality prevails between the two sides, and most of the employers regard the system as a legitimate form of protection to the worker against the undesirable type of employer, and both sides are at one in the desire that the provisions of the Act should be fearlessly enforced. When, by reason of the slump in

trade, the rates of wages had to be reduced I experienced little or no difficulty in negotiating between the parties. Indeed, it is only fair to say that I was deeply impressed with the common sense and the reasonableness which animated the workers in trying to meet the employers. Where a deadlock occurs the only implement left to the negotiator is an appeal to the sense of fair play and to the reasonableness of temper which, according to my experience, are inherent in both employer and workman alike. The task of finding some accommodation between the two extremes is diminished or increased according to the general attitude of the employers towards the Trade Board system.

The three other Boards of which I am Chairman meet in Birmingham, where the attitude of the employers is by no means friendly to the sort of legislation which is embodied in the Trade Boards Act. This is particularly the case with regard to the Pin, Hook and Snap Fasteners Board. This hostility rests upon more than one ground. It is founded mainly upon the opinion held almost universally among employers before the system was introduced, that the State has no right to interfere in any matter of bargaining between one man and another. Approaching the subject from this standpoint, they look upon the State regulation of wages as a mischievous interference with the freedom of exchange, and ignore the economic theory which treats this view as a fallacy. They feel also very strongly that the practical difficulties in the way of applying the machinery of the system to the actual conditions of the trade were not taken into consideration when the Act of 1918 was passed. The Act may or may not have been in advance of public opinion, but it was not preceded by any preliminary discussion or controversy so as to prepare the minds of employers for what was undoubtedly an innovation. There was, of course, the preliminary enquiry which is held under the statute before the Trade Board is established, but I cannot help feeling that had public opinion among Birmingham employers been rendered more familiar with the policy upon which the Acts are based the misconceptions which exist to the prejudice of the system might have been avoided. There is also widespread misgiving among some of the employers lest the Trade Board system, tending as it does to strengthen the organisation of labour, may lead, at a period of unexampled trade depression, to trade aggression. A somewhat significant illustration of this distrust or misgiving as regards trade unionism occurred quite recently. A good deal of controversy had taken place upon the Pin, Hook and Snap Fastener Board with respect to the yield of some rates, and the result of certain tests conducted by the Ministry of Labour were challenged. So much time and discussion was wasted on what was purely a point of fact that I suggested a test under conditions satisfactory to both sides. When the tests came to be made, one of the firms on whose premises the tests were conducted objected to the presence of the workers' representatives on the ground that they were trade union officials. On the Button Trade Board and the Pressed Metal Wares Trade Board the hostility of the employers towards the system is not so pronounced. Taken collectively, nearly all the employers have worked the Act with loyalty, notwithstanding the political objection of some of them to the system. When the abnormal character of the existing trade conditions has ceased Trade Boards must, in my opinion, prove of increased advantage to both employers and workmen. The discussions enable them to understand and appreciate one another's point of view—the worker comes to realise the risks and anxieties which industrial enterprise involves, and the employers wish to understand and sympathise with the natural desire of the worker to reach a reasonably good standard of comfort for himself and his family. The great merit of the system as it exists is that it tends to humanise as well as to harmonise the relations between employer and workman. Its potential value lies in the

1 February, 1922.]

MR. ANTEMUS JONES, K.C.

[Continued.]

fact that it supplies the foundation upon which the State can, if it chooses, build up some code or system of general principles for the settlement of disputes arising from industrial relationship. Just as modern industrialism increases steadily in its complexity, so do the economic problems to which it gives rise become more and more numerous. These problems can only be solved in one of two ways—either by an appeal to force, which means strikes and lock-outs, or by an appeal to reason and justice, which means some system of conciliation of which Trade Boards are an example. However unsatisfactory or incomplete the justice of the system may appear to be to the unsuccessful disputant for the time being, it is at least less ruinous to the community than the appalling waste and loss which industrial strife entails. An immediate extension of the Reign of Law to the domain of industrial relationships is too much to expect, but if civilised communities are ever to attain the ideal of coping with industrial disputes on lines of reason and justice, they can only do so upon such a foundation as the Trade Board system provides.

10,998. *Chairman*: I think you are Chairman of four Trade Boards, the Pressed Metal Wares Board, the Button Board, the Pin, Hook and Snap Fastener Board, and the Perambulator and Invalid Carriage Board?—Yes, that is so.

10,999. You say that at the date of your appointment, in April, 1921, the trade depression was already producing its full effect?—Yes.

11,000. The first rates, I suppose, had been fixed under the Chairmanship of your predecessor, and the questions with which you had to deal were mainly questions of reductions in rates previously fixed?—Yes, almost entirely, I think.

11,001. With regard to those reductions, was there on your Board agreement between the two sides, or did the Appointed Members exercise their voting powers?—I should say that on nine occasions out of ten the Appointed Members had to intervene and exercise their casting vote.

11,002. Therefore, you have really seen the system at work at the moment of its pretty drastic test?—I have.

11,003. You say that in 1918 no one quite foresaw the intensity of the slump which was coming?—Neither the intensity nor the extent, I think, of the slump.

11,004. Of course, people knew that there was a probability of a fall, and there is no doubt that it was partly for that purpose that the Trade Board system was extended in 1918?—Yes, that is so.

11,005. But you think that nobody foresaw the intensity or the extent of it?—Not to the extent of the abnormal slump which has occurred.

11,006. You deal mainly with three points; the first is the system by which settlements are reached, and you say that in three out of your four Boards an Administrative Committee, upon which both sides are represented, meets some days before the Board meets to explore the avenues whereby an agreement may be reached?—Yes, that is the system.

11,007. *Lord Weir*: There are no Appointed Members upon that Committee?—No, there are not. I must qualify my answer there: I am not quite sure whether one of my colleagues, Professor Jones, has not been called in once or twice. I think he has been called in once or twice on some particular question or other as to which the Administrative Committee were not in agreement.

11,008. But this Administrative Committee really gives an opportunity to a few of each side to explore the position?—It acts as a sort of preliminary canter for both sides to narrow down their differences, and if possible to come to an agreement before the Trade Board meeting is held.

11,009. *Mrs. Lyttelton*: Does it usually present an agreement?—On every subject with the single excep-

tion of the wages; and in one or two instances they have agreed as to the wages.

11,010. You mean that hours and conditions of employment, and all that sort of thing, have as a rule been agreed on?—Yes, the general conditions of labour.

11,011. *Chairman*: With regard to the wages, there is usually a contest on the Board itself?—There usually has been a contest during my time. What the position was in the days of my predecessor, of course, I do not know.

11,012. The points which are put forward in argument at the Board meetings you summarise as being these. First, on the employers' side, you say that stress is laid on the slump in trade; the competition in neutral markets; the statement that the workers themselves would be content to accept reduced wages if the Board did not exist; and the impossibility of paying the existing wages without closing down the works?—Yes.

11,013. On the workers' side the points urged are, first the high cost of living—reference being made, I suppose, to the index figure?—Yes, constantly.

11,014. Also the inability of employers during the slump to guarantee full employment; does that mean that they think that they may have to take short time?—Yes, that has occurred recently. On most of the businesses the workers are only partially employed, and when we have discussed the rates of wages the workers' representatives have said: "We would not mind accepting the reduced wages provided you gave us some reasonable assurance that you would give us full time."

11,015. Do you mean that in view of the risk of their being employed for a short time they ask for higher rates per hour?—No, not quite that. I do not think that is putting it accurately.

11,016. I should like to know exactly how you would put it?—What they say is: "We would not mind accepting your lower rate provided that we were not kept on short time as we are now; we are only employed now, say, two or three days a week."

11,017. It comes to very much what I say, when you work it out, does it not?—In substance I think it does, yes.

11,018. Then they also urge the inadequacy of the proposed reduction to meet the terrible drop in exchanges?—Yes.

11,019. That means that however much you reduce, you will never meet that one difficulty urged by the employers?—Yes. I ought to say that the employers' case with regard to the export trade always turns upon that: they refer to the depreciated exchanges as regards Germany and Czecho-Slovakia and so on, and they say that they cannot hold their own in competition, and they must bring down their cost of production, and therefore there must be a reduction in the rate of wages.

11,020. *Lord Weir*: Do they not also point out the competition with countries where there is no depreciated exchange?—Yes, I think that in two instances that I know of they have spoken of the competition of the Japanese and Americans.

11,021. *Chairman*: Then the fourth point is the impossibility of living in reasonable comfort if the wages are further reduced. That is very much connected with No. 1, the high cost of living?—Yes, it is.

11,022. I suppose when the argument has proceeded so far the Appointed Members endeavour to effect an agreement?—Yes, they see whether there is any compromise possible.

11,023. Do you have meetings with the sides?—What happens, as a rule, is that one side withdraws, and then the Appointed Members are left alone with the side that remains; and then having sounded them they approach the other side and get to know how far they are prepared to go in order to come to some sort of agreement.

11,024. If you cannot make peace, you have to vote?—In the last resort, of course, if we cannot make peace we vote.

1 February, 1923.]

Mr. ARTEMUS JONES, K.C.

[Continued.]

11,025. *Sir Arthur Pease*: Do neither the employers nor the employed bring in in their arguments a comparison with what is paid in other trades?—Yes. For example, quite recently it has been a familiar argument on one or two of the Boards that that the rates arranged by trade unions by voluntary arrangement in the non-Trade-Board industries in some instances are lower than the Trade Board rates. That is not general; it is only on two or three particular instances where that point has been made. I do not think that the disparity between the two rates is a very great one.

11,026. Do the workmen not bring in that argument too—that in a particular trade they are not paid as good rates as in another trade?—It has been urged on the workers' side that the Trade Board rates are lower than the rates fixed by trade unions with regard to other industries.

11,027. Of course, that is really the crux of the thing is it not; to get a rate which is reasonable compared with what is paid in other industries throughout the country?—That is one way of putting it. It really is the crux of the whole thing. You see, the Trade Board system was really introduced, as I understand it, to apply to those occupations where workers were not sufficiently well organised to insist upon the benefits of collective bargaining. I have read Mr. George Roberts's speech in introducing the 1918 Bill into the House of Commons, and that was the ground which he took in putting forward his scheme.

11,028. *Chairman*: Then you draw a contrast between the language of the two Statutes?—Yes, I do.

11,029. The Act of 1909 made the establishment of the Boards contingent upon the wages being exceptionally low?—Yes, that is so.

11,030. And also authorised the taking into consideration of the other circumstances of the trade?—Yes.

11,031. On the other hand, the Act of 1918 altered both those things?—Yes.

11,032. It left out the words "exceptionally low," but it did have some words which told the Minister to have regard to the rate of wages in the trade?—That is so. It was put in more general phraseology. I think the phrase is "The absence of adequate machinery for the effective regulation of wages in any trade and the rate of wages prevalent in the trade."

11,033. Does not that latter expression mean that he ought not to set up a Board unless the rates of wages are unduly low; otherwise what does it mean?—Yes, I should say that that was so. I take it that the Minister, before he sets up a Trade Board, has a preliminary investigation to satisfy himself as to what the rates of wages are.

11,034. Then with regard to the other circumstances, do you take the view that the Minister is no longer to take them into consideration? Take such a factor as foreign competition, or the history of the trade, or the fact that you cannot go too fast in altering wages; are those things not now to be taken into account?—I should say they ought to be taken into account in an abnormal time like this, and it may be that the absence of any specific language in the Act upon those points may have been intentional, in view of the possibility of that rough time ahead. Certainly the absence of that language gives a sort of elasticity to the whole thing, which enables you to extend in any direction you please.

11,035. I should have thought that the presence of considerations of that sort would have made the Minister take a wider view and consider the whole facts before setting up a Trade Board; and the same would apply to a Trade Board when it was acting?—Yes.

11,036. However, you are quite right in saying that they do not appear in the new Act. Then the effect is, as you say, that members do not get guidance as to the principles upon which they are to proceed?—That is so. I think that is one of the defects in the Act myself.

11,037. *Dame Adelaide Anderson*: With reference to this insistence of the employers on the purely economic aspect of the question of wages, has not the mere fact of discussion tended to make employers take into account the vital needs of the workers?—Well, take the position which we have reached now, for example, on the Pin, Hook and Eye Board, where there is demand after demand made by the employers for a reduction in wages, and they all insist that unless they get the reduction they will have to close down their works.

11,038. But they know that there is a limit to the reduction which is practicable with a human being?—They ought to know, but they sometimes present their argument as though that consideration did not exist at all. They say, "Unless we get this reduction we cannot carry on our business."

11,039. Then there are some cases where anything but a merely nominal wage would still be insufficient?—I have tried by gentle cross-examination to put those points to them, as a matter of fact; but you see the difficulty they are in. I am accepting what they have said as being perfectly correct with regard to the position of the trade. They say, "We cannot hold our own; we are carrying on the business at a loss, and until we get this rate reduced we shall have to shut down, and the very workers whom the Act is intended to protect are thus thrown out of work."

11,040. *Lord Weir*: In other words, that unemployment is the alternative to a low rate?—That is so.

11,041. *Chairman*: What you say leads to this, I think, does it not, that it is desirable to define more clearly both the conditions under which a Trade Board should be formed and also the duty of the members in fixing rates?—Yes, I am certainly of that opinion.

11,042. Then as regards the formation of a Trade Board, are these the conditions which might be wisely laid down: first that the rate of wages is unduly low—or whatever the proper expression is; secondly, that there is no adequate organisation for dealing with wages outside; and, thirdly, perhaps, the other circumstances of the case?—Yes, I think that those considerations would be wide enough to cover the position.

11,043. Do you think, still dealing with the formation of the Board, that it would be useful to require a public inquiry in each case before a new Board is formed?—Yes, I should be strongly in favour of that, I think, because I have got the impression, rightly or wrongly, that many of these employers have never realised what the policy of the legislature was in passing this kind of legislation.

11,044. There is, as we all know, an informal inquiry by the Ministry, through its agents, but it has occurred to me, and I think others would agree, that if a public inquiry were held the Ministry would get all the facts before it?—Yes; I certainly think that; and it would have this additional advantage, I think, that you would not have the employers asking, as they do sometimes now, "What is the object of this Act, and what are you supposed to do?"

11,045. The whole thing would be discussed publicly, and they would have full notice of what was in the wind?—Yes, and they would understand also, I think, the workers' point of view as to what the humane considerations are upon which this kind of legislation is based.

11,046. *Lord Weir*: If that ambiguity was removed, you would then be getting at the root of most of the trouble?—Yes, that is my view.

11,047. *Chairman*: Then you come to the other question on which greater clearness is desired; that is what the Boards are to do in fixing minimum rates?—Yes.

11,048. Have you considered how a minimum rate should be defined? Take first a general minimum rate. Have you ever thought as to what class of

1 February, 1922.]

Mr. ARTEMUS JONES, K.C.

[Continued.]

workers that should apply to?—No, I have not. You see, I have no experience in fixing an original rate at all. I came in at a time when the rates had been fixed. You could not fix, I think, a uniform minimum rate, because circumstances vary so much.

11,049. You mean for all the trades?—Yes.

11,050. Then you go on to discuss the position of the Appointed Members, which, you say, must be clearly understood by either side?—Yes.

11,051. And you say quite truly that the Appointed Members are not arbitrators?—They are not arbitrators. They act, I think, in a sort of three-fold capacity. They first of all act as a sort of friend to each side. Then if a disagreement arises they have to try to conciliate or placate either side; and when that fails they play the part of an arbitrator.

11,052. And not even the part of an arbitrator, because they have not got the right to decide. All they can do is to vote on one side or the other?—Yes. You see the distinction I was drawing between conciliator and arbitrator. The conciliator would have no power to reach an agreement, and the arbitrator would. That is the sense in which I meant it there.

11,053. They are not free arbitrators?—No, not in our sense; not in the lawyer's sense.

11,054. *Mrs. Lyttelton*: The mechanism by which their decision is enforced is their vote; that is the difference, is it not?—Yes.

11,055. *Chairman*: Their own opinion is not dominant; that is to say their vote must be given either to one side or the other?—Yes, that is so, and instances have sometimes occurred where the appointed members are not in agreement themselves. I have known two or three divisions in my time where one of my colleagues has voted one way and another has voted another way.

11,056. Then the side for which you, as Chairman, voted prevailed?—That is the idea of having the third, I suppose.

11,057. I suppose it is a help to a Chairman to have other Appointed Members with him?—Oh, undoubtedly, and especially in these Boards, I think, because there are a lot of women workers, and I suppose of all sections of the community which require the protection of the legislature, it is the woman workers in a district like this. I have two lady colleagues who have been connected with the social welfare movement, and I think have studied economics also, and I think they know a good deal about the conditions under which these people live, and I have found over and over again that I have had useful information from both of them on that point.

11,058. It is suggested to us that instead of having members nominated by the Ministry, there should be a panel of Appointed Members from which the Board itself should choose two, one on each side. Does that commend itself to you?—Well, that has not occurred to me. I can quite understand the objection of either side really to the Appointed Members being nominated by a Department. I should think that is rather a good idea for the moment; I should say the idea of having a panel is rather a good one.

11,059. On the other hand, would you not rather tend to have selected as Appointed Members persons who would be likely to take on the one hand the employers' view, and on the other the workers' view, and in that case would you not be really adding one to each side?—Yes; making no headway practically.

11,060. You would really make no headway?—I quite agree.

11,061. However, that point has not been put to you?—That point has not been put before.

11,062. Now you pass to the defects in the machinery of the Act, and you say first that the

period for lodging objections to a proposal or a variation of a rate should be reduced to a fortnight. Let us take that first. Would a fortnight be enough? It has been put to us that the persons interested must have some time to hold meetings of their union or their executive council, and so on, and that it would be very difficult to do that in a fortnight. The period mostly suggested to us was a month. What do you say to that?—Well, it would depend, of course, upon the size of the industry; the number of the industries covered by the Board. If it is a small Board with a comparatively limited number of industries, I should have thought a fortnight would be quite sufficient. I ought to say this, that when I came on the scene on these four Boards there was universal complaint on both sides with regard to the delay. The men suffered from the delay, of course, when the rates were going up, and the employers suffered from the delay when the rates were going down.

11,063. Not in the same degree, did they, because after all the men could get the wages raised, but the employers could not reduce them until the variation was approved by the Board?—I think it cut both ways equally. I do not suppose the employer would pay the increased wage until the rate became enforceable under the Act.

11,064. We have had many cases where he has done so, but no doubt chiefly in cases where there has been considerable organisation, and where the organisations have been able to insist upon the rates being raised?—Yes.

11,065. *Lord Weir*: Or where there has been competition for labour?—That, of course, would affect it.

11,066. *Chairman*: Still, it is true that wages can be raised, notwithstanding the Act?—Wages can be raised notwithstanding the Act, provided, of course, that the workers are sufficiently organised to hold the revolver at the head of the employer.

11,067. Or provided there is sufficient competition for good workers to induce the employer to put up the wages rather than lose his men?—Yes.

11,068. *Sir Arthur Pease*: Do you consider that the Act has to fix minimum rates or standard rates? Which do you think is the object of the Act?—You have to take the language of the Act itself. It says "minimum rates."

11,069. Do you think those minimum rates ought to be fixed at such a level that they would really be the standard rates, except under exceptional conditions?—Well, that is a very difficult question to answer. I should want to think it over before giving a definite answer to that.

11,070. Would you mind thinking it over?—Yes, I will.

11,071. *Lord Weir*: In those Boards with which you have been associated, do you believe that those minimum rates are in fact the standard rates?—Oh, no, I do not think they are. I believe that in one of the industries covered by my Boards, I think the Pin, Hook and Eye, the evidence has been given before this Committee that it was almost classified as a sweated industry many years ago, and there, of course, I should think that the economic position of the women workers is rather low. I do not know what the actual wages current in the trade were before the Board was introduced.

11,072. *Mrs. Lyttelton*: Very low?—I believe they were very low.

11,073. *Chairman*: In cases such as that probably the process of raising the rate was gradual; you could not jump at once to a high rate; you would have to go by degrees, and I believe the earlier Boards did so?—Yes.

11,074. Then going back to machinery, you would only allow the Minister 10 days for confirmation?—Yes, I should have thought that 10 days was a sufficient period. I know I am dealing with a

1 February, 1922.]

Mr. ARTEMUS JONES, K.C.

[Continued.]

Government Department; they do not move very quickly; but I should have thought that 10 days was quite sufficient.

11,075. It depends very much, does it not, on what the Minister is to do. Supposing you could interpose between the Board and him some process of revision, then he might be content with a very short time for confirmation?—Yes.

11,076. If he has to listen to objections from the public and so on, then he must have reasonable time?—Yes. Still, may I say this, that so far as my experience goes there are very few objections which come in really. Those that do come in are of a belated kind; they raise very general objections to the rates which were thoroughly discussed at the time when the rates were fixed or varied. That is what has struck me very much in the course of my experience, that the objections that do come in during the period for objection are no good at all.

11,077. Do you mean the objections which come in to the Minister?—No, to the Board. There is a period allowed after the notice has been published by which objections can come in, and what has struck me is how very irrelevant and how utterly useless these objections are. When they are relevant they relate to matters which have been thoroughly discussed by the Board when the rate has been varied.

11,078. Yes, but no doubt Boards differ in that respect. Some seem to have very many more objections than others, possibly owing to a difference in the method of fixing the rates?—It may be so.

11,079. But with regard to the Minister, if he is to act in any sense as a Court of Appeal which is to exercise discretion, he must have a little time, must he not?—He must have time, yes; I quite agree.

11,080. *Dame Adelaide Anderson*: I suppose a great many of these people who raise objections which have already been considered fully have no knowledge and no access to information as to what really took place. Do you think anything could be done to quiet them by giving them more access to information?—It is very difficult to say that: I know this, that had the writers of these objections been present at the Board meetings, they would not have taken the trouble to write the objections. What means you have, of course, of communicating with all the workers and employers affected by the rates I do not know; I suppose that would be rather an expensive process. If you wanted to circulate the arguments put before the Board on variation, it would be a very expensive thing.

11,081. It makes a very great difference to anyone who has a grievance, especially to an Englishman or an Englishwoman, if they know that the thing has been thoroughly considered?—Oh, yes, I quite agree.

11,082. *Lord Weir*: It could only be done, presumably, by better organisation on both sides?—On both sides; I should think so.

11,083. *Chairman*: Then you think that the Minister should be required to give reasons as to his decision?—Yes, I am very strongly of that opinion.

11,084. *Sir Arthur Pease*: In cases of organised industry which I know of, where a secretary of an association is on the Board, he generally keeps a summary and communicates it to the members in the district or the country?—Yes.

11,085. Would he be allowed to do that, or is it absolutely confidential?—Oh, no; it is not confidential at all. He is at liberty to explain to his constituents what was the case brought forward. Then, of course, all the workers are not organised. On my Boards there are certain trade union representatives on the Board, such as the Women Workers' Union, and so on, and they are very helpful. Then you have women workers who are not organised coming to the Board—women especially.

11,086. Might they have a shorthand writer present?—They could, but I should think it would be a terrible waste of money and printing and everything else.

11,087. I do not know anything about that, but would it be allowed by the Chairman of the Trade Board?—I should say so. There is no objection to it. No such application has ever been made to me, but if an application were made I should see no objection to having it done.

11,088. *Chairman*: Would it not tend to hamper discussion to some extent? I take it that there is an informal discussion among members with a view to coming to an arrangement, and it might put a harness on their tongue?—Yes, I appreciate that. The discussion sometimes lasts for three or four hours; it is a regular debate. Personally, I would have no objection to a shorthand writer, but I should rather take the view that there would be a good deal of waste of money if that were done.

11,089. *Lord Weir*: You really would encourage each side to have a summary, and that that summary should be made as public as possible on both sides?—Yes, I think that might be done.

11,090. And it might be accessible in some place which everybody knows about where everybody could get it? You could not send a copy to everyone, but you could tell them where they could get at the information?—Yes, I should think it could be supplied in some way in the works, for example, where notices are affixed now with regard to the variations in the wages.

11,091. *Chairman*: I do not know whether any of your rates have been referred back to the Minister?—No, I do not think they have, but once or twice the matter has cropped up in the course of discussion. Of course I may be wrong, but I have formed the view that some of the workers' representatives are rather afraid of pressure being brought to bear in Parliament to interfere.

11,092. In fact, when the Minister does refer back he does give reasons, does he not?—I think I know one instance where he has not done so. My recollection is rather vague at the moment; I am not quite sure.

11,093. My information is that he does give reasons?—Of course, there is nothing in the Act itself which compels him to give his reasons.

11,094. No, but Ministers are sometimes wise enough to do something which they are not absolutely compelled by statute to do. Then your third proposal with regard to time is that a rate should come into operation at the date fixed by the notice; that means, I suppose, the notice of proposal?—Yes, so as to prevent any further delay. That is my sole idea there.

11,095. That would be a date, I suppose, allowing time for objections and some little further time for publication of the fixed rate?—Yes, that is so.

11,096. Then you refer to the question of legal proceedings for offences against the Act. You say that at present the Court of Summary Jurisdiction has power to order the payment of arrears of statutory wages?—Yes.

11,097. But you think that is discretionary?—It is discretionary. I ought to say (if I may interrupt you for a moment) that that matter cropped up on the Perambulator and Invalid Carriage Board. There is one employer in London here who persistently defies the administration of the Act. He has been summoned more than once, and he has appealed more than once; and in one instance the magistrate did not order him to pay the arrears of the statutory wages, and the workers considered that rather a grievance and brought the matter forward.

11,098. Was a reason given for that?—No, none.

11,099. I suppose the worker might have sued for arrears?—He could sue in the County Court, but the difficulty with these people is that many of them are

1 February, 1922.]

Mr. ARTEMUS JONES, K.C.

[Continued.]

very poor; they have no union, and I suppose it might be that they do not realise what their rights under the Statute are.

11,100. *Mr. MacCallum Scott*: Is that in the perambulator trade?—Yes.

11,101. Is it Simmonds?—Yes, Simmonds is the man.

11,102. *Chairman*: But in most cases the magistrate would order payment of the arrears, would he not?—I am not quite sure. What I want to do, if anything, is to see the Trade Board system enjoy the confidence of both sides equally, and somehow or other the workers have got a notion in their minds that the magistrates are not sympathetic to the administration of the Act, and that this optional power which they have as to whether they should impose a fine or not is a power which they are really inclined to use against the worker and in favour of the employer.

11,103. *Sir Arthur Pease*: You would have to limit the period during which you could go back for wages, would you not? I mean, if the Act went on you could not go back four or five years?—No, nobody would suggest that.

11,104. You would have to limit it to a period of months, or since the last regulation of wages?—Since the last variation, I suppose.

11,105. A great many employers hardly know where they are under the Act, do they?—I think we find frankly that many of them do not understand what the objects of the Act are, and they have never understood the case upon which this sort of legislation is based. That is why I think that originally it would have been much better if there had been the sort of controversy which you had, for example, preceding the National Insurance Act, when every platform resounded with the arguments for and against it. I think if the matter had been thrashed out in that way the misunderstanding and the prejudice against the Trade Board system would not exist. That is my view, for what it is worth.

11,106. *Dame Adelaide Anderson*: In the case of the National Insurance Act it was applied to the great mass of the people; this was only by degrees brought in to affect the different trades, and it would have been more difficult.—Yes, but in 1918, when this Act was introduced, in fact it had been the subject of reports by the Whitley Council and documents of that sort, but so far as the vast mass of the employers in the country were concerned—I mean in these particular industries—very little was known about the Trade Board system; and I should think that the first intimation which they had of it at all was when the preliminary investigation was made by the Minister before he set up the Board.

11,107. *Lord Weir*: This doubt extends even to the Boards themselves?—Yes.

11,108. *Chairman*: Then you have a suggestion about discovery?—Yes, I have.

11,109. Rather a serious suggestion, is it not?—It is, I quite agree. It is a serious suggestion, but I make it for this reason, that on one of my Boards one of the employers very fairly offered to produce their balance sheets. The difficulty I find is that there is so much conflict of fact in what is said at the Board as to what the position in the trade is, that I take the view some kind of machinery ought to be provided by which the Appointed Members could ascertain what the facts really are.

11,110. That means that they should have the power and duty of going into the books of a firm?—No, hardly that. I should think, for example, if you gave the Chairman power to call upon the employer to produce his auditor's balance sheet for the year or for the particular period in question to show what the actual position of the business was—I mean as to the profitable side of it—it would be some guidance.

11,111. *Sir Arthur Pease*: Do you mean individual firms, or a grouped number of firms?—Say a representative firm on the Board which would indicate generally what the position of the industry was.

11,112. *Lord Weir*: That could hardly extend to very many industries. Take the distributive trades, for example: how would you arrive at the position of the grocery trade?—No, I quite agree that it would not be applicable there. It is a mere suggestion that I have thrown out because the employers very fairly said to me: "We will produce these things to you privately, but not to the workers, because if you look at this document you will see in what a really dangerous position we are. We are carrying on the thing at a loss," and so on. Of course I could not accept it, because I should then have to ask the workers to accept a decision which really rested upon facts which they had no opportunity of challenging or verifying. I mean that is one of the difficulties of the Appointed Members in dealing with disagreements, when they do arise upon the Board: you have no machinery for ascertaining what the facts are; you are bound to accept *ex parte* statements made on both sides.

11,113. *Lord Weir*: Of course, in a specific industry you might at one time have one firm publishing an extraordinarily good balance sheet but another firm showing a very heavy loss?—Yes, I quite agree.

11,114. It would be very difficult?—I quite agree. I do not know whether Lord Cave will allow me to refer to it, but there is the case of the Australian Commonwealth Industrial Court Reports: there are one or two judgments there by Mr. Justice Higgins, and in one or two instances in his judgment they appear to have those powers of discovery.

11,115. That is a Court, is it not?—Yes, that is a Court; that is true.

11,116. I suppose you could now, as Chairman, say to the employers' representatives: "Your arguments would have more effect on our minds if you had produced more figures"?—Yes, you could do now, of course, and indeed I ought to say, in fairness to the employers, that some time ago they got Mr. Impey, a chartered accountant, to come on the Board with them and present their case on their behalf, and his information is really very useful as indicating what the position of the trade is; and it was, in fact, he who made the offer to which I referred just now to produce their balance sheet in order to satisfy me that they were really carrying on at a serious loss.

11,117. *Dame Adelaide Anderson*: They would have to show returns for several years, really?—No, I do not think so. I think the question would be as to what was the position of the industry at the time when you were dealing with it—when you were dealing with either a proposed increase or a reduction in the rate of wages.

11,118. Supposing that for some little period before they had been fairly prosperous but that they had had, say, two, three or four bad years prior to that, and they were trying to balance on the whole?—Yes, I agree. To be just to them you would have to take a period of comparison over some time.

11,119. Would that kind of Board be the place where such evidence could be weighed at all? It would put the Chairman into the position really of a Judge?—Yes. You cannot get courts established with all the judicial machinery, at any rate, at this stage of our history, but I suppose in time we shall reach that.

11,120. *Chairman*: I suppose, to make this discovery effective, you would need in some cases the assistance of a chartered accountant yourselves?—What I had in mind was this: a mere general statement as to whether the industry was being carried on at a profit or not I think would not require any detailed investigation, or anything of that sort, and I do not think any question of accountancy; but at present you have no information; that is the difficulty that one finds. You have the employers making one statement, stating that they cannot keep on at full time—that they are keeping men on short time, and so on; and then you have a statement made to you

1 February, 1922.]

Mr. ARTEMUS JONES, K.C.

[Continued.]

privately in the course of negotiations by a person on the other side that that is not true of the trade generally, because he knows of an instance in another town where the same article is produced and where the workers are being employed on full time.

11,121. That opens a vista of a long inquiry, and a very difficult one?—Yes, it does. That is merely a suggestion that I am throwing out with a view of seeing whether something can be done.

11,122. *Lord Weir*: On that subject it is quite obvious, is it not, that to disclose the position of an industry as a whole by means of a balance sheet discloses the position of the industry at a time anterior to the time when you require the information?—That is true, of course.

11,123. It is quite impossible to disclose by figures the position of the industry at the date you would require the information?—I was not thinking so much of a yearly balance sheet or a statutory balance sheet which is required from a public company; what I had in mind was something more than a mere *ex parte* statement—something in the way of documentary evidence to show what the position is.

11,124. If you had relative cost figures, for example, foreign costs and home costs, at any date, that would give you the information?—Yes, it would.

11,125. *Sir Arthur Pease*: But if you got a thing like that, do you think it would be any use unless you had the results of the firms grouped to get your general view; because firms would have specialities, and one firm which had a speciality in the same trade might be doing quite well, and a man in the general trade might be doing very badly?—Yes, that is so.

11,126. It would be no use unless you had a group, would it?—No, the information would not be useful to you unless it were equally true of all the firms covered by the Board.

Mrs. Lyttelton: It is too complicated.

11,127. *Dame Adelaide Anderson*: And it implies, does it not, something like a proportion of wages to the profits of the industry rather than settling what is a reasonable rate for human beings in the kind of work in question?—I made the suggestion about discovery more particularly with regard to the case which is now being made by the employers on these Boards—on one Board in particular, the Pin, Hook and Eye Board—that they are really carrying on the thing at a loss. Of course, I accept it; I am perfectly sure that it is absolutely correct; but then the parties to a dispute sometimes deceive themselves, and if you have statements made on the workers' side which are inconsistent with what is said on the employers' side, you then feel that there is a conflict of evidence and you would like to have some machinery by which the thing could be determined. That is what I mean.

Dame Adelaide Anderson: My sympathy is with finding out all that there is to find out; my questions were simply directed to bringing out the difficulties, and how they could be overcome.

11,128. *Lord Weir*: The point of an example such as you are raising could easily be settled by the unemployment figures for that industry?—The difficulty with regard to that is the classification of the groups in your Board of Trade returns. Once or twice I have looked at the "Labour Gazette" with a view of checking the statements which are made with regard to unemployment, and I am told that the classification of the Board of Trade does not follow the classification of the Trade Board system.

11,129. The difficulty would be to get unemployment figures in the Trade Board industries?—That is so.

11,130. *Chairman*: Then you go on to discuss the effect of the Trade Boards on relations between employers and employed?—Yes.

11,131. You think that on the whole it has been good?—Yes. I am emphatically of that opinion.

11,132. On one of your Boards the working seems to have been very harmonious from the beginning?—Yes, it has been very harmonious indeed on the Perambulator and Invalid Carriage Board.

11,133. On the three others it has been less so?—Yes, less so. In the Birmingham group the atmosphere is rather contentious, I regret to say.

11,134. *Lord Weir*: On the Perambulator Board the men concerned consist very largely of skilled workers?—Yes.

11,135. Who are presumably well organised?—I do not know what was the position of the workers before the Board was constituted; I know that it is almost a pleasure to preside at the Board; they are so cordial on both sides, and so very reasonable. We have had lots of discussions there, but there is practically little or no difficulty in getting both sides to take a common-sense view and to come to an agreement.

11,136. As a rule skilled workers would, in that particular trade, be members of a craft union?—Yes. I forget now the name of the union; but it is very likely.

11,137. The rates in question are to a very considerable extent, I suppose, the rates agreed upon outside by those craft unions; that is to say, the Trade Board rates in that trade are simply a confirmation of the rates agreed on by trade negotiation outside?—Yes, I believe you are right there. I think that on the Invalid Carriage Board I have not had to put my casting vote at all; I think they have come to an agreement almost every time. On two occasions I think I had to negotiate to and fro, but as a matter of fact the thing has been practically settled beforehand by the administration committee. You have got some very able trade union leaders on the one side and some very reasonable employers on the other, and there is practically little or no want of harmony at all in the Board.

11,138. Presumably they are only confirming rates which have been agreed by the craft union outside the Board altogether?—Yes, I should say so, because the trade union representatives would know what those craft union agreements were.

11,139. It happens, of course, to a greater extent in this particular trade, which embraces trade union members?—Yes.

11,140. *Chairman*: As you say, on the Birmingham Boards the position is quite different. Then you have some general observations at the end?—Yes, they are very general, and I am afraid they are not quite relevant to the terms of your reference.

11,141. The effect of it is that you think the Trade Board system substitutes for the weapon of strike and lock-out a system of what you call the reign of law?—Yes.

11,142. That means compulsory regulation, does it not?—It must mean that, yes. I see no reason why the Trade Board system should not be utilised to build up a similar sort of system to that which you have in operation now in Australia, and indeed in New Zealand, that is to say, if this difficulty about strikes and lock-outs is going to be overcome.

11,143. Have you studied the recent history of Australia?—The recent history of Australia is against my theory, I quite agree. You have compulsory arbitration in Australia, and there is no doubt that certainly for a period of 20 years, according to Mr. Hamilton's book on the subject, the system worked very well. I think I am right in saying that it is only during the last four or five years that there has been a recrudescence of strikes and lock-outs.

Lord Weir: And also, of course, in Australia you have a protective system; and it is basically an agricultural country.

Chairman: With a limited population.

11,144. *Lord Weir*: Yes, and a very limited population?—I am not advocating compulsory arbitration here. I am only suggesting that I think that the State has in the Trade Board system the nucleus of some kind of other system or modification of the Australian system which would serve the purpose of negotiating disputes which are now carried on to the point of strikes; because as time goes on these workers in the less-organised trades will become organised,

1 February, 1922.]

Mr. ARTEMUS JONES, K.C.

[Continued.]

and I should have thought myself that it is a great advantage to the community if some kind of system of this kind is provided for dealing with disputes.

11,145. Following on that, would you consider it necessary to extend the principle of Trade Boards to all industries?—Yes, I would.

11,146. Even to organised industries?—I do not think you require it in the organised industries, do you, because in the organised industries you have the weapon of collective bargaining. They are able to look after themselves.

11,147. Would not that be the line to go on perhaps: to encourage organisation so that collective bargaining might take the place of the Trade Boards?—Yes, that is part of the Trade Board system, because the Minister has power to put an end to an existing Board where he is satisfied that the workers are so well organised that they do not require the help of the Trade Board.

11,148. *Mrs. Lyttelton*: Do you not think that on the whole that is a better tendency than your plan, which would be to extend the Government interference all up and down the whole of industry?—That is a large question. I am afraid I cannot compress an answer into a sentence or two.

11,149. *Sir Arthur Pease*: The difference between arbitration and the Trade Board system is really that arbitration fixes a wage for both, whereas the Trade Board system only fixes the minimum wage which the employer must pay, and therefore the Trade Board system is one-sided, and arbitration is comprehensive. Is not that the difference?—Yes, that is roughly the difference between the two, I think; but I think that the appointed members on the Trade Board serve in a sort of three-fold capacity really; they are there to be used if necessary; then if there is disagreement they will try to get them to compromise, as conciliators, and when conciliation fails they will use the power of voting at the end.

11,150. *Lord Weir*: Have you any special experience of home workers on your Boards?—The home workers constitute a very large proportion of the workers in two of the industries, the Button Board, I think, and the Pin, Hook and Eye Board.

11,151. And to protect those home workers, I presume, you see no better system than fixing a piece rate?—No, there is certainly no better system than that, it appears to me.

11,152. It is really impossible to protect the home worker by means of an hourly rate?—Quite. I think that in Birmingham the proportion of home workers is very considerable, both in the pin, hook and eye trade, and in the button trade as well; and I think it is fairly large in the pressed metals trade as well.

11,153. When you fix piece rates applicable to factory workers, presumably those piece rates are the standard rates payable for the work?—Yes.

11,154. So that they are not in a true sense minimum rates?—No, that is true.

11,155. *Mrs. Lyttelton*: Is the system of the middle-woman or middle-man used in home work in that

trade?—Those come up in one Board of mine; I think it is the Pin, Hook and Eye Board.

11,156. That further complicates it, of course?—Yes, it does; it complicates it very much.

11,157. May I ask one general question: in those cases where you have had great struggles and arguments over the wage, I want to know whether they have been in the main over the minimum, or whether they have been over the highly skilled rates. Which have produced the most controversy?—It is a reduction of a wage previously fixed for both.

11,158. You would not say that one was more than the other: that was my point?—No. What the employers have asked for is a reduction all round, so as to lessen their cost of production and enable them to compete.

11,159. The struggle has not been over the minimum, in fact?—No.

11,160. *Lord Weir*: They do not suggest any abnormal reduction on one part of the scale; they preserve the scale?—They preserve the scale generally.

11,161. *Mr. MacCallum Scott*: Among the factors which count in the minds of the Appointed Members in fixing a scale, there are no doubt things like the cost of living—a living wage?—Yes, quite so.

11,162. And the comparison with other trades?—Yes.

11,163. And what the trade itself could stand?—Yes.

11,164. What would you say was the order of importance of those factors? Which would you say was the most important factor?—That is the difficulty. There is no guidance in the Act; this is the crux of the whole thing. In my case I tell you frankly that I should consider it my duty to give the first position to the sustenance level, provided I was satisfied that the existing rate did not mean the extinction of the industry, because in that case the workers would be worse off than they are.

11,165. *Mrs. Lyttelton*: Do you think that the conditions may be so bad in one industry that it is better that it should disappear? If it can only be kept going at the cost of the worker, had it not better go?—Yes, I should agree with that if it came within the category of sweated industries, but of course the position with which I am dealing is entirely different. I am thinking now of an industry which is not a sweated industry, but in which, by reason of the very abnormal trade depression now, that problem is presented.

11,166. *Mr. MacCallum Scott*: The problem is different during a period like this from what it would be in normal times?—Quite. The problem is quite different in an abnormal period as it is now. I should think that my predecessor must have had rather a nice time of it, because at that time the wages were going up, and in good times the employers presumably were quite reasonable in agreeing to increases.

Chairman: Thank you.

(*The Witness withdrew.*)

Mr. W. ADDINGTON WILLIS, called and examined.

The Witness handed in the following statement as his evidence-in-chief:—

PRELIMINARY.

I am Chairman (since April, 1921) of the Boot and Shoe Repairing Trade Board (Great Britain) and of the Toy Trade Board (Great Britain), and Deputy-Chairman of the Brush and Broom, the Hair, Bass and Fibre, and the Grocery and Provisions (England and Wales) Trade Boards, and have been a member of these Boards from the dates they were respectively established.

Before receiving the above appointments I had acted during 1915-1918 as arbitrator or conciliator in over 260 industrial disputes, including several actual or threatened strikes of magnitude. Later, on the invitation of the Minister of Labour, I had

joined the Panel of Chairmen for *Ad Hoc* Boards of Arbitration under the Industrial Courts Act, 1919, and had acted as such Chairman.

I propose in the first place to deal with the points on which the appointed members have been invited to express their views.

POINT I.

Some form of minimum wage legislation appears to me necessary.

(a) *National Minimum Wage*.—Without generally discussing this subject, I would point out firstly that no system of a national minimum wage can be satisfactory unless it meets the special circumstances of a vast number of employable persons who are sub-normal in earning power. The number would depend upon the minimum rate which was fixed,

1 February, 1922.]

Mr. W. ADDINGTON WILLIS.

[Continued.]

but unless the rate was so low as to be worthless to the normal worker, the number would be very great. These sub-normal employables cannot be dealt with in the bulk; they must be considered individually and in the light of the circumstances of their case. A man who is sub-normal for most occupations may be normal for a particular industry if he chances to get employment in it. A deaf mute in the boot repairing trade is said often to be a superior workman. Again, a man who is sub-normal to-day may not be so twelve months hence. To deal with such cases equitably under a system of a national minimum it would be necessary to constitute or utilise bodies of persons to investigate the cases and to fix individual rates, as is done by Trade Boards when exercising their powers of granting permits. The task is heavy enough on the Boards; it would be gigantic and expensive when applied to all possible forms of employment.

Unless such arrangements were made the result would be that a great number of sub-normal employables would be thrown out or kept out of employment.

A further objection is that a national minimum wage would not do anything to benefit or protect the position of piece-workers, who are found in large numbers in Trade Board and other industries, and who, especially the female workers, require protection and assistance.

Again, I fail to see how national minima could be applied to skilled workers. No practicable definition could be found for them. Nor could such minima be applied with any advantage to workers in all the varying occupations involving some degree of skill or experience, and yet these often form the bulk of the workers in an industry. Experience of Trade Board industries shows that workers who do operations involving skill, manual dexterity or experience require the protection which Trade Boards can give them.

(b) *Legislation trade by trade.*—Whatever may be the agency by which legislation is effected, I regard its application trade by trade as the most practicable, satisfactory and equitable for employers and workers alike. The legislating body can meet the conditions peculiar to the trade; it can deal with all the varying classes of workers; it is able to protect and provide for piece-workers; it can secure uniformity of minimum remuneration to workers in the trade; and it can, to a considerable extent, eliminate unfair competition between employers in the same industry, in so far as that unfairness arises from the neglect on the part of some employers to recognise their responsibility to their employees.

(c) *Legislation district by district.*—Except perhaps in retail distributive trades, I should not expect to find legislation district by district satisfactory. It would not be likely to contribute to uniformity of rates of wages which is desirable over as wide an area as possible in any given trade. In making-up trades it would result in a transfer of work to the lower paid districts. In manufacturing trades variations of rates would not be fair to employers making the same products and competing in the same markets; nor would such variations conduce to harmony among workers doing identical skilled work in different districts.

POINTS II AND III.

The principles upon which minimum rates are settled and the methods by which rate settlements are reached.—The course usually adopted in the proposing of rates is that the two sides put forward and discuss their respective figures. During this discussion the Appointed Members endeavour to elicit and check information, to test arguments, and to point out the principles upon which the inquiry should proceed.

The proposed figures are discussed and tested in the light of the following principles or considerations, and the respective sides rarely fail to make the most of them in so far as they are applicable and support their case. They are: the necessity of providing a minimum to be paid in the least favoured portions

of the area in which the rates are to operate; the pre-war rates in the trade; the sum which may be regarded as a fair minimum rate of pay, having regard to the claims of the workers to attain a better position than in pre-war days; the cost of living; the capacity of the trade to bear the proposed rates; the wages paid in comparable trades; and the advisability of proceeding with caution and by degrees, especially in an industry where the existing rates are of widely varying quantities.

If agreement is not reached on the Board after full discussion, conferences are held either between the respective sides or their negotiating committees, or between the Appointed Members and those sides or committees, either separately or together. There is no settled practice. It depends upon circumstances. The aim is to see how much agreement can be reached or to reduce to a minimum the distance between the sides.

I desire to impress upon the Committee that Appointed Members dislike, above all things, having to resort to a vote. Their main aim is to secure agreement, and they dismiss from their minds all idea of voting until driven to it. They act as conciliators, and if an opportune suggestion can be made for the consideration of the sides, they make it. It is only when the issues are narrowed and all chance of settlement has vanished that the question of voting arises. It was not until the eighth day of such negotiations that the proposals on the Grocery Board were first voted upon.

If the Appointed Members feel that they can accept either of the sets of figures put forward they vote accordingly. If they do not feel justified in accepting either there is a deadlock. (In such a case they may suggest for the consideration of the two sides other figures which seem equitable, but if neither side is prepared to entertain them the deadlock continues.)

I do not recollect any instance on the Grocery Board, in which, as alleged, the Appointed Members moved an alternative set of figures, nor can I find any record of it.

I have attended all the meetings of the Grocery Board except on the seventh and eighth days, and at no meeting of the Board which I have attended have the Appointed Members threatened either side that if they did not accept figures put forward by the Appointed Members they would vote for the figures of the opposite side.

During the two and a half years I have served on Trade Boards, I have never heard any such threat.

POINT IV.

The present rate-fixing powers of Trade Boards.

(a) *Whether excessive.*—As I have not had an opportunity of reading much of the evidence submitted to the Committee, and as I am not sure that I rightly understand the contention of those who regard the present rate-fixing powers excessive, I prefer to confine my remarks under this head to a few general observations.

As I understand the general purpose and design of the Trade Boards Act, 1918, they are to secure an adequate minimum rate of pay for workers who, owing mainly to their being unorganised, are at the mercy of circumstances and are, or are likely to be, exploited in the trade in which they are employed. The Act insists upon a general minimum time rate being fixed. The fixing of rates for classes of workers or processes, or for piecework is left to the discretion of the Boards. In many instances the Boards find it desirable to fix such rates, or some of them.

Looking at the trades with which I am connected as an Appointed Member of their respective Boards, I cannot see how adequate protection can be given to the general body (I exclude here foremen and the like) of time workers in those trades without leaving to their respective Boards the power of fixing rates for all of them, whether the workers are adults or juveniles, males or females, unskilled or engaged in work which involves some amount of skill or practical knowledge.

1 February, 1923.]

Mr. W. ADDINGTON WILLIS.

[Continued.]

The rates which most, if not all, of them in these respective divisions received before their Boards were established were below a fair level. It is only by dealing with them as they are found already grouped and classified in the trade that the purpose and design of the Act can be successfully carried into effect.

As regards pieceworkers, I understand it is contended that the power of the Boards should be limited to fixing a piecework basis time rate. This is all that is done or that is thought necessary to be done in some trades. But if a trade is such that the employers and workers agree that a scale of piecework prices is necessary for their common protection I can see no reason for taking from them the power which the Act has given them.

Such is the case of the boot and shoe repairing trade. It has always been a piecework trade, and 85 per cent. of the benchmen are pieceworkers. At the first meeting of the Board it was unanimously agreed that a piecework statement should be made and a committee was then formed for the purpose. A list of piece-rates has been in operation since April, 1920. It has been welcomed by both employers and workers, and both would view with dismay a limitation of their powers in this direction. Nearly every item in the list was fixed by agreement.

Moreover, in a complicated trade like boot repairing a piecework basis time rate would be worthless and unenforceable. No inspector, however well trained, could tell whether a worker was being paid in accordance with the basis rate.

(b) *Whether adequate.*—The powers or working of Trade Boards, in my opinion, should be improved in the following particulars:—

(i) The time which has to elapse between proposing and confirming rates should be much reduced;

(ii) If the Minister of Labour is to continue to be the confirming authority (see point 6) he should not be regarded as, or act as, a court of appeal from the decision of the Board, at least as to the *quantum* of the rate. Its confirmation within (say) one month of the notification of its fixing should be compulsory, save where there are grounds for believing that there has been some informality in the proceedings or where there is doubt as to the rate being *intra vires* of the Board. The feeling, which undoubtedly exists, that what a section of the Board cannot effect by discussion on the Board can be accomplished by agitation and by deputations to the Minister of Labour, tends to weaken the responsibility of the members of the Board, individually and sectionally.

(iii) As to objections to proposed rates, my submission is that the Board should have full power to give effect to any objections which they consider established and worthy of acceptance, whether this means an increase or decrease of the proposals, without having to republish the alterations. To limit this power to alterations which are not "material" or "substantial" would lead to uncertainty and confusion. To limit them to such alterations as are unanimously agreed would be valueless. If thought necessary the power of alteration might be limited to the alteration of details within the four corners of the scheme as proposed and published.

The publication of a proposal for the purpose of allowing objections implies the possibility of making such amendments as, in the light of wider knowledge gleaned from the objections, may be considered necessary or equitable, and so long as this is made clear to all concerned it may be left safely to the Trade Boards not to abuse the power given to them.

POINT V.

Sanctions behind Trade Board rates.

Legal enforcement of Trade Board rates by penalties seems to me necessary.

I believe the inability to enforce their rates by Joint Industrial Councils is felt to be a weakness and that efforts are being made to remedy this

defect. If that is the experience of a body founded solely upon the goodwill of their industry, how much greater the weakness will become when the rate-fixing authority is a Board created by statute and thrust upon employers, who are not in all cases kindly disposed towards it.

Nor can I see any reason for limiting legal enforcement to particular rates. There is no obligation on a Trade Board to fix any but general minimum time rates. Any others are imposed because the representatives of the trade on the Board think them necessary or advisable in the interests of the workers and the employers in the trade. If the rates cannot be legally enforced, the organised workers, with the strong backing of the Board's decision, will insist upon their payment; while the unorganised workers, who require the greater protection and in whose interests mainly the Board and the rates have been established, will not be likely to obtain them in many instances. Fair-minded employers and those who have been forced to submit by trade union action will be at a disadvantage as compared with those who choose to evade their moral obligations.

The suggestion, which I think has been made, that some rates should be enforceable only by civil action looks attractive, but it is no adequate substitute for enforcement by penalty. It is a species of contracting-out. The employer and worker might, and probably in many cases would, agree upon a lower rate than that fixed, the employer taking the risk (not a heavy one among unorganised workers) of his worker standing by the bargain. The effect of this, if such cases were numerous, would be to undo the good work and defeat the purposes of the Trade Board system, namely, the prevention of rates from falling below a line fixed by authority.

Lastly, I fail to understand what reasonable objection any employer, who intends himself to abide by the decisions of the Board as to rates, can have to those rates being enforced by penalty against other employers in the same trade.

POINT VI.

The Minister of Labour as rate-confirming authority.

Some rate-confirming authority is necessary, but I doubt whether the Minister of Labour is the best for the purpose.

By confirming rates the Minister may be taken to have satisfied himself that there has been no informality in the proceedings from which the rates result, and that the rates fixed are not *ultra vires* of the Board. To this extent no difficulty arises, and I should not propose to interfere with this responsibility.

But it seems as if the power of confirming rates carries with it, to some degree at least, responsibility for the *quantum* of the rates, including their fairness, adequacy and suitability, and for their possible consequences. This is a responsibility too heavy for one who has not been a party to the proceedings from which the rates have issued. In these circumstances the Minister is prepared to listen and must listen to deputations from one side or the other, or both, and cannot be impervious to Press and other agitation.

To avoid this position I suggest that the Minister should have power to refer the question of confirming or rejecting rates, if opposed, to some tribunal.

The Industrial Court has been suggested as a suitable tribunal for some purposes. I do not know whether it has been proposed for this. My only objection—and it is a strong objection—to this Court operating in any Trade Board matters is that it is an arbitration tribunal. Trade Boards and their work should be kept as far as possible from the arbitration atmosphere. Their best feature is that they are friendly meetings of employers and workers to discuss problems in which both are equally interested, assisted by independent members who may be conciliators but can never be arbitrators. The value and success of Trade Boards depend on this.

1 February, 1922.]

Mr. W. ADDINGTON WILLIS.

[Continued.]

If the work of the Board is to go for determination before a tribunal outside Trade Board influence and atmosphere the whole system is undermined and practically destroyed. The arbitration tribunal will dominate the Trade Board and supplant it.

My suggestion is that the body to which the confirmation or rejection of the fixed rates should be submitted should be a tribunal composed of members of Trade Boards. It need not be a permanent committee though that has its advantages. But it might consist of three, five or more members drawn from three panels, namely, a panel of appointed members selected by the Minister, a panel of employers' representatives selected from each Trade Board and chosen by the employers' section thereof, and a panel of workers' representatives selected from each Trade Board and chosen by the workers' section thereof.

The choice of the members from the panels to constitute the tribunal for any case might rest with the Minister.

POINT VII.

Appointed Members.—It is not often that the two sides of any Board on which I serve have come to agreement without some assistance from the Appointed Members, and after two and a half years' experience, I am convinced that impartial and independent members are necessary on Boards.

I have already referred to the work of such members during the discussion and working out of general minimum time rates (Points II and III). But the fixing of these rates is by no means the only work done by the Boards. I can illustrate this from the work of the Boot and Shoe Repairing Trade Board.

It has an excellent list of piece-rates which was regarded as essential and which has been greatly appreciated by employers and workers alike throughout Great Britain. The list contains pages of items. In the compilation of this list by the Administrative Committee there were many items upon which difficulties arose, not so much as to amounts of rates as to the manner in which the items should be expressed so as to carry out the unanimous wishes of the Committee. The solution of these difficulties was generally found through suggestions of an Appointed Member.

The services of the Appointed Members were in much request when the Board were devising and drafting the schemes of apprenticeship and learner-ship.

Owing to the trade having been flooded in the past with cripples and mental deficients the Board, through the Administrative Committee, have a very large number of applications for permits, each of which has to be examined. Here again the Appointed Members do good service.

Similar work is done or has been done on other Boards with which I am connected, and indeed it may be considered the usual work on a well-established Board.

POINT VIII.

Provisions for special local conditions.—In considering whether special rates or special methods of fixing rates are necessary owing to local conditions, trades may be divided into:—

- Manufacturing.
- Retail distributive.
- Wholesale distributive.
- Making-up.

One of the advantages of the Trade Board system to employers, and indirectly to their workers, and an advantage which I believe is appreciated by fair dealing employers (and in my experience they form the great majority) is that the system tends to secure them against unfair competition by a minority who trade on underpaid labour. The area of competition varies with the character of the industry, and becomes an important factor when considering the necessity and justice of differential rates based upon local conditions.

Manufacturing trades.—Speaking generally, employers in manufacturing trades compete with their fellows in open markets. Differential rates of wages based upon the conditions of the locality in which the goods are manufactured are not likely to find favour, either with workers who are to receive a lower rate of pay for an equivalent amount of skill, or with employers who manufacture in localities of higher rates and have to compete with others whose works are in places paying lower wages. The only form in which this matter has been presented to any Board on which I sit was that the rates in the Brush and Broom Trade should be lower in the country than in the towns. The suggestion was not pressed to a division; it apparently received little sympathy from town manufacturers and none from the workers.

Unless there are very peculiar circumstances or conditions, I should think it is neither necessary nor equitable to have differential or district minimum rates in a manufacturing trade.

Retail distributive trades.—The retail distributive trade possesses characteristics of its own, the following among them:—

- (1) Speaking generally, employers in it are in competition with each other only within a restricted area. Deliveries by motor traction have widened the area, but it is still limited.
- (2) The trade is directly affected by the conditions of life and spending power in its immediate locality.
- (3) In seaside towns, holiday resorts and, perhaps, some inland watering-places, the trade is a seasonal one. During two or three months in the year there is a rush of work which cannot be confined to ordinary hours. During the remainder of the year there may not be enough work to occupy the full time of the staff, and, it is alleged, they are generally retained during this slack period and thus obtain some compensation for the extra labours of the season. It may happen, however, that extra hands are taken on for the rush period.
- (4) Businesses in country districts entail a large and disproportionate expenditure of time and money in having to make distant deliveries by motor or horse traction.

The above characteristics were disclosed on the Grocery Board as existing in that trade. How far they exist in other retail distributive trades I do not know.

The Grocery and Provisions Trade Board (England and Wales) have endeavoured to meet some of the above conditions by fixing differential rates for three separate areas formed on a population basis. Such a basis is fairly sound in principle, but it does not touch all the conditions above enumerated and it calls into existence anomalies and inequalities which are none the less regrettable because they are inevitable. The last remark will be found to apply wherever district rates exist, but a district body sitting in the area would have better means and knowledge for reducing the anomalies than a central Board.

In the absence of further discussion I hesitate to express a very definite opinion as to the best way of providing for the conditions mentioned. The remedy seems to me to lie in the direction of District Trade Committees, constituted so as to be thoroughly representative of the conditions and interests in the area.

I doubt whether the present Committees would be effectual for the purpose. They have nothing but advisory powers, and as a rule the recommendations they send forward are not those of a majority but are separate recommendations from each side, and generally antagonistic. The real value of the present Committees lies in the fact that they bring local employers and workers into personal touch with members of the Board, and destroy any suspicion that their local interests are overlooked or ignored.

1 February, 1922.]

MR. W. ADDINGTON WILLIS.

[Continued.]

If, then, District Trade Committees are set up to deal with the problems peculiar to the retail distributive trade, they ought to have greater powers than those of making recommendations which might meet with fatal hostility on the Board, and I see no alternative to giving them rate-fixing powers for their area. I should prefer to see some measure of control by the Board, but find it difficult to suggest anything practicable which would fall short of either crippling the work of the Committees or vetoing their decisions.

Wholesale distributive trades.—So far as I have heard the matter referred to on the Grocery Board, it seems that the grocery wholesale trade varies very widely in character. Some businesses supply an open market with an unlimited area; some may supply an unlimited area, but most of their connection is local; others, again, are limited almost entirely to their immediate locality; and some businesses are combined with retail shops.

The subject appears to be one for expert evidence, and, without hearing the matter fully discussed, I do not feel able to express any opinion as to the way in which rates should be fixed for such trades.

Making-up Trades.—The only making-up trade with which I have had any Trade Board connection is the boot and shoe repairing trade. Although District Trade Committees exist under the Board, there has been no real movement in favour of fixing district rates. So far as employers are concerned, I believe there is a fear that work would be transferred from the higher rated localities to those paying lower rates of pay.

POINT IX.

The value of the special powers of Boards in regard to juveniles.—The control of the employment of juveniles is one of the most useful opportunities afforded to Trade Boards by the Act of 1918. In the boot and shoe repairing trade, and no doubt in others, the exploitation of child labour, often at excessively low wages, has had a damaging effect on adult employment and remuneration, and on the supply of craftsmen. It has had a worse effect on the juveniles themselves, for they are found at 18 or 21 years of age turned out of employment without any knowledge of the trade which is marketable.

There are three ways in which Trade Boards can and do deal with juvenile employment:

- (a) by fixing juvenile rates;
 - (b) by establishing learnership schemes;
 - (c) by establishing apprenticeship schemes.
- (a) *Juvenile rates.*—Whether juvenile rates should be based on age alone or on experience alone, or on a combination of both, depends on the particular trade or occupation.
- (i) It is conceivable that there are some trades, or at least sections of trades, in which skill and experience scarcely enter and the juvenile in a time measured by weeks or even days can proceed successfully with his task. Possibly, it will be found that older juveniles first entering the employment can pick up what little knowledge is required more readily than a younger child.

In all such cases the pure age basis of remuneration seems sufficient.

(ii) There are other trades in which skill and experience play a greater part. There is something substantial to be learned which takes time and requires instruction and supervision. Proficiency is only attained by practical experience after the rudiments of the operation have been mastered.

In such cases the juvenile rates seem fairer if based solely on experience or on a combination of age and experience. As an alternative to this, special provision should be made for late entrants.

(b) *Learnership and apprenticeship.*

There are other trades which are so far skilled that proficiency can be obtained only by an extended and thorough course of training.

The employment of juveniles in a trade outside these schemes tends to the result that when the juvenile approaches full age he is dismissed and another juvenile started. It often happens that what the dismissed juvenile has been doing is either peculiar to the employer's business, or else is such a small part of the work of the trade that he finds his experience of little or no value in the industry. In other words, he finds himself at the end of a blind alley. It was appreciation of this position which prompted the Boot and Shoe Repairing Trade Board to abandon juvenile rates of general application and to introduce a learnership scheme as well as an apprenticeship scheme.

Schemes of learnership and apprenticeship have this much in common. They aim at securing to the worker such an amount of instruction in the occupation that when the period of training is finished he is possessed of an amount of skill which will enable him to obtain employment in the market at full remuneration.

The schemes differ in the following respects. The apprenticeship scheme binds both employer and apprentice for a definite period sufficient for complete training, and is so designed that at the end of that time the apprentice of average intelligence and industry has an all-round practical knowledge of either the trade or of some recognised branch or process of the trade. For example, a juvenile may be taught both the making and repairing of boots or he may be taught repairing only. In either case he will find in normal times ready employment for his handicraft.

Under a learnership scheme, when well devised, the juvenile and the employer are not bound for any definite period, but systematic instruction in specific work is required which will make his skilled labour marketable at the end of a reasonable period under his original employer, or, if dismissed before his training is complete, will make him acceptable to another employer under whom his instruction can be continued.

I strongly advocate apprenticeship in all really skilled trades. It not only provides the juvenile adequate instruction in his craft, but in many cases secures him permanent employment with the employer who has trained him.

The Boot and Shoe Repairing Trade Board and the Brush and Broom Trade Board have each adopted forms of Indenture of Apprenticeship designed to secure adequate training in practical work, and, when available, theoretical instruction.

MISCELLANEOUS RECOMMENDATIONS.

Permits.—The Boards require extended powers in the granting of permits. At present they are limited to cases of "infirmity and physical injury." There are cases in which neither of these exists yet the worker is sub-normal. I suggest that the Boards should be able to give permits in all cases in which, owing to personal reasons, the worker is incapable of earning the minimum rate. I believe this extension of power would be welcomed by workers and employers alike. There would be no fear of the power being abused. The committees dealing with applications for permits are constituted of employers and workers in equal numbers, and, in my experience of hundreds of cases, both sides of the committees are equally critical when considering applications and equally anxious to prevent the exploitation of lower priced labour. Cases of slow workers, which the extension is designed mainly to cover, would not present to the investigators greater difficulties than they have now to face, for example, cases of alleged mental deficiency.

Legal difficulties.—Questions of scope upon which there are real doubts should be determined by a method of prosecution. If such a tribunal as I have suggested as confirming authority were set up, that would be an eminently satisfactory tribunal to determine these questions. The decisions should be made final and binding by statute.

1 February, 1922.]

Mr. W. ADDINGTON WILLIS.

[Continued.]

Power to disestablish Boards.—It appears that so long as the conditions which justified the establishment of a Trade Board exist the Board must continue to operate until the Act is repealed, even though, owing to special circumstances, the Minister may be of opinion that the continuance of the Board is inexpedient. It is suggested that the power of terminating the operations of the Board, that is to say, the power of withdrawing the trade from the operation of the Act, might be extended so as to meet special conditions.

Power to suspend rates.—There is no power either in the Minister or in the Board temporarily to suspend the operation of existing rates. A power of summary suspension in circumstances of emergency might be useful. It might be vested in the Minister and made exercisable on the resolution of the Board.

11,167. You are the Chairman of the Boot and Shoe Repairing Trade Board (Great Britain) and of the Toy Trade Board (Great Britain), and you are Deputy-Chairman of the Brush and Broom Trade Board, and the Hair, Bass and Fibre, and the Grocery and Provisions (England and Wales) Trade Boards?—Yes. You will notice that I have only been Chairman of the Boot and Shoe Trade Board since April, 1921, when Professor Hobhouse resigned.

11,168. With that exception you have been a member of all the Boards since they were established?—Yes, and I was a member of that, too. I have been a member of all the Boards since they were established.

11,169. Before being appointed on those Boards, you had acted as arbitrator in a very large number of industrial disputes?—As arbitrator or conciliator.

11,170. To a number of over 260, I think?—Yes.

11,171. Including several actual or threatened strikes of magnitude?—Yes.

11,172. You also joined the panel of Chairmen for *ad hoc* Boards of Arbitration under the Industrial Courts Act, 1919?—Yes.

11,173. You deal, in your statement, first with the points which were put to you, and first with regard to the minimum wage. You deal with the proposal for a national minimum wage?—Yes.

11,174. That means a national minimum for all trades?—That is what I assume the point refers to.

11,175. You point out first that no system of a national minimum wage can be satisfactory unless it deals with the persons who are sub-normal in earning power?—Yes.

11,176. And that those must be, you think, considered individually?—That is my opinion from the experience which I have had on the Boot and Shoe Trade Board, where we have to deal with applications for permits, not by the dozen, but by the score; and indeed I have had as many as 100 before me on the table.

11,177. People of what kind?—They were disabled people, that is to say, they came within the provisions relating to physical disability and mental infirmity.

11,178. You might also have workers who were sub-normal in being abnormally slow workers?—Yes, I think I have referred to those later in my statement.

11,179. In both cases you would have specially to deal with them if you had a national minimum?—Yes.

11,180. I suppose it would be a very big business?—I really cannot appreciate it; it is too enormous.

11,181. *Dame Adelaide Anderson*: A great deal could be done, could it not, by much more care in guiding people into occupations—by physical tests, and so on?—Yes.

11,182. There is a great deal to be done in developing that side?—Yes, but when you have done that you must have an enormous residuum left, I should have thought. If you consider the number of people, first of all, who suffer from some disability—it may be physical or it may be mental—and you think of the number of people there are about who manage to “potter along” getting an odd job here and there, they must number very many thousands; and it seems to me that you must deal with them indi-

vidually unless you put the minimum so low that you could reduce your margin in that way, but if so it would be worthless.

11,183. *Lord Weir*: At all events if you extended the Trade Board system wide enough, I take it that those people would practically never be able to get anything at all?—The Trade Board system?

11,184. Yes?—I think that is not so.

11,185. If you extended the existing Trade Board system on the existing lines, you would block those people practically out of employment altogether?—No, I think you give them employment; you give them a chance. If they are physically unfit—

11,186. I did not refer to physical disability, which comes in under the Trade Board system, but to the sub-normal worker who, as you say, potters about just now?—That you will find is generally due to some physical disability; I do not mean anything that is apparent. It may be mental.

11,187. *Dame Adelaide Anderson*: Or it may be adenoids?—It may be all sorts of things. All those would come within the scope of the Board in granting permits. The only person who is left out, as I understand it, is the man who is generally referred to as a slow worker, unless his slowness is due to anything in the shape of physical disability, and so on; but in my experience the administrative committees who generally deal with these applications, treat them very liberally in dealing with the disabilities.

11,188. *Lord Weir*: But in the case of the slow worker you have no power to grant him any exemption?—No. I am asking for an extension of that power. If you limit me to our powers to-day, then I agree that what you say is correct.

11,189. My point is that under the existing system, if you extended it to all industries, the sub-normal slow worker would be completely blocked from getting a job?—Under our existing powers, I agree.

11,190. *Dame Adelaide Anderson*: Unless by development of public health, care and advice in getting into an occupation, you improve the physique of the whole nation?—Yes, and then you reduce the number that has been referred to.

11,191. Yes. It means the development of another policy?—Quite so.

11,192. *Chairman*: You also point out that the national minimum without more would not protect the pieceworker?—No, it would not.

11,193. Especially the home worker?—Yes, especially the home worker.

11,194. Therefore you prefer legislation trade by trade?—Certainly.

11,195. As regards legislation or wage fixing district by district, what do you say?—With regard to that, I exclude for the moment the retail distributive trade, because I deal with that later. It does seem to me to present problems of its own which are peculiar to itself.

11,196. Will you just develop that before you leave it? You are a member of the Grocery Trade Board, are you not?—Yes.

11,197. Do you not think that, with regard to that Board, district rate fixing would be possible or desirable?—Through district committees, yes.

11,198. You think so?—So far as I have been able to form an opinion upon it. It is not a matter that we have discussed on the Board and thrashed out. The subject of district committees has been mentioned, but it has not been debated; it has been left over for further discussion.

11,199. The system which you have adopted is fixing rates according to population?—Yes, which I do not think anybody regards as really satisfactory. It is the best we could do in the circumstances.

11,200. What is the matter with that?—You have got three areas. Where they meet you must have a number of anomalies and difficulties. Let me take the London area; the London area, if I remember rightly, is the police district; I am not quite sure, but I think it is the police district. The police district goes out, I know, as far as Epsom on the south, and how far it goes on the west I do not know, but at any rate I believe it goes to Ealing.

1 February, 1922.]

Mr. W. ADDINGTON WILLIS.

[Continued.]

11,201. Yes, I think so.—I think it goes beyond Ealing. At any rate, if you take that, it is an enormous circle and you have there really agricultural districts. It includes a number of small villages, and they complain; they feel the pinch of it. Of course what they feel the pinch of very much more is the fact that the large stores and so on in London serve the whole of that district through their daily deliveries.

11,202. How would you fix your district?—For the retail distribution?

11,203. Yes.—I think I should want to think about that a good deal, but I have formed the notion that you might deal with it somewhat widely by taking the whole country and dividing it, say, into seven or eight portions. You would have down in the south-west an area including Cornwall and Devon.

11,204. And Dorset?—Yes, Dorset, and Wilt, I think; I think I should include that. I do not say that you have there an area which is alike throughout all its parts, but you have not got the same differences that you will find, say, where you have a large industrial population such as around Lancashire, for instance. It would be possible, I should have thought, to have divided up the country and mapped it out in some way like that, by which you would have the industrial portion in one area and the agricultural portion in another. For instance, the Midland might be one division; I should put the whole of Wales as a separate division; the northern division possibly might be north of the Humber and the Mersey. If they had district trade committees for each of those districts they would be able to deal with them much in the way in which the building trade have dealt with their problem. If I remember rightly, they have districts which are large districts, not divided up into small districts such as you find, for instance, in the Grocers' Association; they have large districts, and there they used to have—I do not know what they have to-day—no fewer than five different grades, A, B, C, D and E; they used to fix a separate rate for each. I should have thought that a district trade committee could have dealt with its particular area so as to meet those various and peculiar conditions to which I have referred later in my statement.

11,205. And would you give the district committee power to fix the rate?—Well, I do not see any alternative, but, as I say, I am expressing this without having had the matter thoroughly discussed so far as the retail distributive trade is concerned. I have heard it discussed on the Boot and Shoe Board.

11,206. Then with regard to the making-up trades, what do you say?—With regard to the making-up trades, I have had no experience of those with the exception of the boot and shoe. That, of course, is a making-up trade. That is a trade which you will find carried on in every village in the country. Men are not necessarily employed there; they may be engaged in the trade, but not employed. So far as that Board is concerned, both sides object to district trade committees having any power to fix rates. I do not know whether there is absolute unanimity on the employers' side, but one would have thought that the employers would rather have relished the idea of district trade committees. I know some of them are against it; I think Mr. Crabb, who was before you the other day expressed himself as antagonistic to separate rates for districts.

11,207. Is there much transfer of work from district to district in those trades?—Well, I have been told so. The instance that has been given has been given as relating to Cheshire and Lancashire. In Lancashire the piece-workers—and most of the trade is piece-work—are in enjoyment of an increase of 60 per cent. above a specific basis, whereas the Trade Board basis is 33½ per cent. above that; so that the employees in Lancashire are better paid, its workers are better paid, and I am told—though I have no authority for it beyond what I have heard on the Board—

that, as a matter of fact, work is transferred to cheaper districts out of that. But I cannot give you any authority beyond that.

11,208. You think there would be a difficulty in fixing district rates?—I believe it would be a very serious thing in some of the making-up trades. One knows, for instance, how many collecting places there are in the dyeing trade, and the work is sent away to particular works. Well, if that can be done profitably, I should imagine that the other could be done; you could collect, say, your boot repairs at one place and send them from that district to a cheaper district to have the work done.

11,209. The same applies with greater force to the manufacturing trades?—Yes, certainly.

11,210. *Sir Arthur Pease*: Do you not think that a Board ought to have regard in some way to the rates prevailing in other industries in a district?—In the district?

11,211. In various districts?—Well, we always have regard to that on our Boards. We have regard to that amongst a great many other considerations which are more or less inconsistent with it, but that is one of the points, certainly; one of the points always brought up by both sides when they are discussing the fixing of a rate. You will have the workers give a dozen examples. I have not the slightest doubt that if I were sitting to-day I should have the wages paid to the Southwark road-sweepers raised at once. They come up on every Trade Board, the road-sweepers; they are always instanced by the workers as an instance of high rates, and they say, "Here is a road-sweeper getting £3 13s., and here, for a skilled worker, it is only £3 5s." On the other side, the employers will give you all the low rates that they can collect, and you have got to steer amongst the whole lot, and the other considerations that you have before you. Those things are not lost sight of.

11,212. But in different parts of the country the ordinary rates have been different for generations?—Yes.

11,213. Do you not think you ought to give effect to the traditions that have gone on for all these years?—Well, there is generally some reason for that, I think. I think there is generally some reason for variation of the rate. It is due, perhaps, to the presence of some manufacturing industry, and the result of that is that the workers around it—although they are not in it—will get higher rates. Otherwise the workers would not be obtainable.

11,214. Do you not think there is a difference in the capacity of the ordinary worker in different parts of the country?—Physical working capacity?

11,215. Yes.—Well, I do not know that I have applied myself to that problem. You see, we are fixing minima, and we leave it to those higher rated places, such as Lancashire—I gave you an instance just now in the boot trade where they have higher wages in the boot trade than we have fixed on the Board; they have higher piece rates; they have been able to command them. We only fix a minimum which we think will be fair in the less favoured portion of the country, and we leave it to the districts—

11,216. Then it gives no protection to the people in other parts of the country at all, the minimum which you fix?—To the worker?

11,217. Yes.—Oh, the workers get more than our minimum in many places. If they did not I should begin to suspect that it was not a minimum.

11,218. But several witnesses have said that it was practically a standard rate?—In the boot trade?

11,219. No, not in the boot trade.—Of course, I am only speaking of the five trades.

11,220. *Lord Weir*: Suppose we take, say, the brush and broom trade, where I think you have a very elaborate scale of piecework prices?—No, none there; I think not. You are speaking of the boot and shoe?

11,221. No, the Brush and Broom has a very elaborate scale of piece-work prices?—I have not brought that with me, because I am going to be followed by the Chairman of that Board.

1 February, 1922.]

Mr. W. ADDINGTON WILLIS.

[Continued.]

11,222. *Chairman*: You are the Deputy-Chairman?—Yes.

11,223. Do not you know that your Board has fixed a most elaborate scale?—Yes, of course; yes, I had forgotten.

11,224. It is so?—Yes, it is so.

11,225. *Lord Weir*: Do you suggest that prices higher than those are paid in the industry on any scale?—Do I know whether they are?

11,226. Yes?—No, I do not know about that.

11,227. So that those are standard prices paid irrespective of the district?—Well, they are standard prices in this way. No—I should call them standard minima; that is to say, they are the minima which are to prevail throughout the country, and it will not be surprising if no employer pays beyond them. I think you may fairly say that they are standard piece rates. At the same time they are minimum rates; they are considered as the fair rate which ought to be paid to the piece worker in any part of the country. He may get more.

11,228. And do you consider that there is no danger in Trade Boards fixing rates which are standard or are used as standards for different districts, when as a matter of fact in the large industries of the country you have differentiation by district? You have the one policy of the large industry, which is differentiation by district. Here you are starting in these other trades practically to impose a standard. Do you not conceive that that is rather dangerous?—I do not know about the Brush and Broom; I do not remember whether I have heard of higher rates being paid in that trade; but speaking of the Boot and Shoe Trade, where we have a very long list of piece rates, a very complete list, I am told that higher rates are paid, and, if I remember rightly, Glasgow is one of the districts, and Lancashire. They are meant to be standard rates, but they are meant at the same time to be, of course, the lowest rate that you can pay. There is nothing to prevent workers obtaining higher rates in other districts if they can obtain them by organisation; and they do obtain them. In London they do not work to those piece rates, so I am told.

11,229. Do you not differentiate in any way between the principles underlying a minimum time rate and a minimum piece price?—Piece rate?

11,230. Well, I call it a piece price, because I think that term expresses the idea more definitely. It is a sum of money paid to someone for doing something; the other is a rate paid to a worker per hour, without any necessarily definite implication of work done?—Well, what they have in common is the fact that they are both minima.

11,231. *Chairman*: That is because you make them minima?—We make them minima; true. The time rate is regarded as the minimum, as the lowest sum which we think in our particular trade the worker should be paid in any part of the country. The piece rates, similarly, are what we think are the lowest rates that should be paid to any piece worker working in any part of the country. They are on an exactly similar basis; the foundation is the same.

11,232. *Sir Arthur Pease*: What would you do if a new method was invented for doing work under a piece rate, which reduced the labour involved very much for the same process? What would happen then? Supposing you put in a machine that would do twice as much as the previous one, would the employers still have to pay the same piece rate?—I imagine they would bring that up for discussion.

11,233. It would have to be settled by the Board?—We should consider that case, certainly, just in the same way in which we consider what deduction shall be made if part of the work that a man is employed upon in the boot repairing is done by machinery. We provide for a percentage to be deducted. Of course, he does not do the work, it is true; but the same principle would apply. We should have to consider that case; we should consider it if it were brought before our notice.

11,234. *Dame Adelaide Anderson*: If the manufacturer put forward a plea for a special rate on account of special conditions?—He is entitled to do that. We have not had any application of that sort on any Board that I have been on.

11,235. You have not?—No.

11,236. *Chairman*: Then you go on to deal with the method by which settlements are reached on the Boards, and I think your account tallies very much with that which Mr. Artemus Jones gave just now. You heard that, I think?—Well, I am afraid I did not hear it all. I think it tallies very much with what Professor Hobhouse said the other day. I had not read his evidence before I wrote this statement; if I had done I could possibly have shortened it.

11,237. You say at the end, as you are quite entitled to say, that you can find no case of the Appointed Members moving their own set of figures?

—Yes. I am going to qualify that in a moment. I say "I do not recollect," but I should rather like to strengthen that, and say in fact on the Grocery Board on no occasion have the members formally moved a set of figures, I mean from the table, as distinguished from suggestions. I want, if you will allow me, to deal with a matter which arises there owing to the evidence which has been given, particularly by Mr. Stamper. I do not want to labour the matter, but I really do think that Mr. Stamper cannot have meant all that his words really implied. The idea is conveyed by his evidence that the Appointed Members, having said that conscientiously they cannot support one set of figures, and having equally said that they cannot support the other set of figures, have then said, "We will put forward some figures, and if you do not vote for those we will go and vote for those which we have just conscientiously objected to." Well, that position has never arisen, and I am perfectly sure will never arise on any Trade Board. I should not have referred to this in detail were it not for the fact that he says it happened on the last occasion. I did not know until Professor Hobhouse gave his evidence that that last occasion was an occasion when I was presiding; it seems it must have been, and that being so, I should like to make it perfectly clear to the Committee what did happen on that occasion. It was an occasion when the rates had been returned by the Minister to be re-considered *de novo* with a letter accompanying them pointing out his objections to them. The Board met, and owing to the absence of Professor Hobhouse I had to preside, with two other Appointed Members. The employers put forward their figures; the workers put forward their figures, which really amounted to "Send these figures back to the Minister just as we received them." Well, the Appointed Members considered, and we came to the conclusion that we could not accept either of the suggestions. Fortunately we have a most excellent staff in the office of Trade Boards, Mr. Poppell and his assistant, Mr. Montgomerie, and others. They keep excellent records of the proceedings and I can tell the Committee exactly what happened. After we had heard what the two sides had to say—I am reading from the Minutes—"The Chairman stated that no basis for agreement had yet been found between the two sides"—they had been conferring—"and that the Appointed Members saw difficulties in both the employers' and workers' suggestions. They accordingly suggested that both sides should consider the possibility of putting forward suggestions on the basis of the rates already fixed by the Board and referred back by the Minister of Labour, making such alterations therein as would meet the objections raised by the Minister, and as would meet the changed position in respect of the cost of living; that these alterations should proceed on the basis of a percentage reduction, not necessarily strictly proportionate to the fall in the cost of living index number, and that the rates so arrived at should then be subject to adjustment in particular cases." That was our suggestion of a general way in which they might proceed with the matter, and they adopted that, and they got to work, and we had long negotiations. I have taken the

1 February, 1922.]

Mr. W. ADDINGTON WILLIS.

[Continued.]

precaution in recent days of keeping notes of what occurs during the negotiations. I have those notes here, but I am not going to trouble you with them unless you desire it. The point is this, that at the end of the day, somewhere about 6 o'clock in the evening, I think, we were getting somewhat nearer together, but there was no further move on either side, and the Appointed Members then—whether they were asked, as they often have been asked by the employers, to say what is in their minds, I do not know; I do not remember—put forward a suggestion to them of the percentages that we thought might apply. They were rather near the employers' ideas, and they were a good distance away from the workers'; at any rate, they were nearer the employers', and both negotiating committees stated that the suggestion was worth considering. Thereupon I had the Board called, and this is the minute, and this must be, so far as I am able to trace anything at all, the occasion to which Mr. Stamper refers: "On the resumption of the Board the Chairman stated that as no agreement has yet been reached it would be necessary to adjourn the consideration of the matter until another meeting." I think it was about 7 o'clock, if I remember rightly. "The negotiations had, however, proceeded a considerable way, and the Appointed Members, without expressing any view of their own, had put forward the following suggestions as a basis for negotiations between the sides, and of possible agreement, which he would be glad if the sides could consider before the next meeting"—and then follow the suggestions; the difference was in the amount of percentage for various years—and "that the rates arrived at by the percentage reduction" as suggested "be open to discussion and adjustment in any particular cases in which either side might consider that the figure so arrived at would operate harshly." It was agreed that the suggestions set out in the previous paragraph be worked out in detail and circulated to all members of the Board as soon as possible." That was done, and the Board met again a few days later. We began negotiating on this suggested basis, and rather early on in the day the employers announced that they were willing to accept, provided the workers did, and the difficulty lay with the workers; and it was not until quite late in the afternoon that finally the workers came in and said, yes, they would agree to the figures. That was reported to the Board, and that is the whole of the matter, shortly. The next day they had other rates to consider. I never saw the Board, or any members of the Board, until the afternoon, because the two sides were negotiating, talking it over together, which I always think is the best thing, as they are the people who are concerned; they are the people who should settle it if they can; and it was not until about 4 o'clock or 5 o'clock in the afternoon that they reported to me that they were at a deadlock. I had the Board called at once, and I asked each side to tell me exactly what the position was, and when I got the two positions I found that there was really precious little between them. As a result I called up the two leaders, the two Chairmen, quite informally, to the table and said: "You know, there is very little between you; there is no principle involved: do not you think you could compromise it?" and within two minutes they had left me and gone to their sides, and within five minutes the whole thing was settled.

11,238. That is the whole story?—That is the whole story. I did want to put it before you, because it was such a serious allegation. May I supplement that portion as to votes? The idea is prevalent that the Appointed Members are constantly out-voting—that they use this vote as a weapon. Now I want to tell the Committee this. I am not going to trouble you with the Brush and Broom or the Hair and Bass, or with the Grocery, because you have had the Grocery from Professor Hohnhouse and you will have the other two from Mr. Wethered. I know; but with regard to the Boot Board, there have been 33 cases upon which we have dealt with substantial rates questions. I am

not including all the items in the piece rates, but as to minimum rates of any substance at all; and on those 33 cases there was agreement in 25 of them; there was one—the rates relating to juveniles—when they agreed most of them, and we had to vote on two or three; so that on 26 cases you may say there was agreement. We voted seven times, and of those seven times in only three cases did the vote of the Appointed Members carry, because in the others there was cross voting; that is to say, the resolution would have been carried without the assistance of the Appointed Members. Now that is the history of the voting on the Boot Board. On the Toy Board, a very difficult trade to deal with, there has been more voting, and on each occasion the voting has been in favour of the employers, not designedly, but so it happened, with one exception, and that was as to the fixing, after the rates had been proposed, whether the rate should be fixed; and there was a vote.

11,239. Then perhaps we can pass from that, and go to the rate-fixing powers of the Board. You say that the Act insists upon general minimum time rates being fixed, but the fixing of rates for special classes of workers and for piece-work is left to the discretion of the Boards?—Yes.

11,240. Now what do you say as to the power of fixing rates for skilled workers?—It is very difficult to say where the skilled worker begins, but taking the term in its widest sense, if they form the bulk of the trade they surely must be provided for. Take the boot and shoe industry, for instance; every man is a skilled man there. There are various degrees of skill, it is true, but we only deal with skilled men, and nobody else. Take the toy trade. In the toy trade I do not know whether you call it skill, but, at any rate, you require some amount of teaching; you have got to learn something. Now all the workers are in that capacity, with the exception, perhaps, of the odd man about the works.

11,241. Perhaps the question might be put in a different way. When you have fixed your minimum for the lowest grade of worker in the trade, whether he is skilled or unskilled, do you think it necessary and desirable that the Board should go further?—Oh, yes, because, to take the boot trade—I am sorry if I harp on that, but it is a skilled trade—what I say about the boot trade, for instance, is this: there is nobody that we are competent to deal with except the man who is actually engaged in the operation.

11,242. I am assuming that; I am taking that as one of the cases. Supposing you have fixed your rate for him, that is for the lowest grade of worker in the trade, on what principle do you go further and fix higher rates for men of greater skill who do more difficult and more skilled processes?—Well, as a matter of fact we do not in that trade. We have only got one level man to deal with. There may be personal differences, but with those we are not concerned. What we do is to fix a rate for the man in the boot trade. We have no power to deal with anybody except a man who is actually engaged in making or repairing. Other Boards have power to deal with people about the works or about the factory, but in that trade we have nothing but the skilled worker.

11,243. Lord Weir: Who suggested first that you should fix foremen's and managers' rates in the boot and shoe trade?—Do you mean the workers or the employers?

11,244. Who suggested it?—I do not remember for the moment who did. It was done by agreement.

11,245. Do you suggest that foremen and managers should be protected by Trade Board rates?—I was going to say I do not think it matters very much whether they are or not. Personally I am not very greatly concerned with them. What I say is this, that in that case the Board were exercising powers which undoubtedly were given to them by the Act.

11,246. Chairman: No doubt; but surely you were mistaken in your answer to me just now when you said you had only fixed one rate? The ordinary

1 February, 1922.]

Mr. W. ADDINGTON WILLIS.

[Continued.]

male worker is fixed at 65s.; in other classes you have fixed it at 75s. and 80s.?—I am afraid I was having my mind upon the low worker to which your Lordship referred—the lowest worker. I mean, the unskilled worker. I apologise; I am wrong there. We have taken the bulk of the trade, the great bulk of the trade; we say that there is a certain minimum to apply to the whole of that bulk. Then with regard to certain operations, the working of machines of particular kinds, for instance, which require care and higher skill, we have provided time rates, and in the case of foremen and managers we have provided other rates. Yes, I am sorry; I was forgetting the position just at the moment.

11,247. Is that on the principle that it is desirable to regulate the wages throughout the trade?—I think it is on the principle—yes; amongst those people. That was the express desire on the part of both sides of the Board. I mean, they got no lead from the Appointed Members that they ought so to provide. Personally I do not want to go any higher up in the scale than I can avoid. That is my own personal feeling, as a rule, so long as I touch the main bulk of the employees.

11,248. In the case of the Boot Board you do not deal with the subsidiary workers, the people who sweep the shop and so on?—No, we are not allowed to.

11,249. That is consequent on the manner in which the scope of your Board was defined?—Yes. I think we are about the only Board limited in that way.

11,250. I think not the only one?—One of the very few Boards, at any rate.

11,251. *Lord Weir*: Do you want to try, if possible, to protect the majority class?—That is my idea; I hope it is right; but then you must remember, of course, that the Appointed Members are quite helpless if the two sides of the Board have made up their minds to a particular thing. I mean we could scarcely say, "Well, you have made up your minds that you must provide rates for foremen and managers, but really do you think it necessary?" They will say, "Yes, we certainly think it necessary, because we find that foremen and managers are generally people who are put in charge, say, of a branch shop"; in fact the definition of "manager" is limited to them, the man who is a journeyman who has to run a branch shop, doing his work there, and responsible for everything that comes in and everything that goes out. They found that he was not being properly treated, not being treated in the same way in different places. They found also that he was multiplying. I think that is a reason why they thought it advisable to include him.

11,252. But you do not consider yourself that that manager's wage rate should be protected by law?—Speaking generally, no; but I can quite see, as I have just stated, that he may require some protection just in that particular instance which I have given you—a journeyman who really is nothing but a journeyman, but who has the full financial responsibility of a place imposed upon him, and at the same time he is not organised. He may be or he may not be organised, and if you find variations, if you find that that is a class of any number, and you find great variations in their rates of remuneration, I should think it is a matter that the Board ought to have power to consider. As a rule, I do not care about going higher up in the scale than is absolutely necessary; but I never have the opportunity of saying whether I will go or not; I am taken.

11,253. *Dame Adelaide Anderson*: As it is, in this particular industry, those particular processes that have special rates for them are very special?—Very special, oh yes.

11,254. The power sole stitcher, or the operator on the Blake machine, is doing a heavier and more skilled class of work?—It is the responsibility for the machine. One of those machines—I do not know which it is—is a very delicate machine, and can easily be damaged.

11,255. The press man also is on a very special machine?—Yes.

11,256. Cutting very heavy leather?—Yes; but it is not so much the weight of the leather as cutting it to waste. So much depends upon the cutting. The whole of the profits of a butt would depend upon the man who cut it out.

11,257. And you say that the foreman and the manager in this industry with small local shops is in a peculiar position?—That is so.

11,258. There is no special rate for the female worker apart from the 65s.?—Except the 45s.

11,259. For a female surgical bootmaker?—You will find 45s., I think.

11,260. For workers of 21 years of age and upwards?—On a patching machine, that is so.

11,261. Is that as special as a power sole stitcher or Blake machine operator?—Well, it is special; I am not prepared to say whether the machines are identical; I do not know.

11,262. It is a lower rate?—As a general rule it is lower—it is a machine upon which women are put. Of course, we have very few women in the trade.

11,263. *Chairman*: You have fixed piece rates on your Boot Board?—Yes.

11,264. For everybody, or only for home workers?—Oh, for everybody.

11,265. Are there many home workers?—Well, yes; but they are not called home workers. I will deal with repairing, because there you have the man who repairs for the public, and who also takes orders from shops. An ordinary retail boot shop will send him a number of boots to repair. In that sense they are the home workers.

11,266. *Lord Weir*: They are not protected, of course?—By the piece rates?

11,267. Suppose a man does not take anything from the shop, but deals entirely with the public himself?—Oh, by himself, employing no one?

11,268. Yes.—No; I know; he is our great trouble.

11,269. We are told that that is growing very rapidly?—Well, I think Mr. Crabb said he hoped it would be reduced—yes, growing through unemployment, growing temporarily. You see, every man who has been in the boot trade who falls on bad circumstances can always go and buy a piece of leather, and sit down in his place, wherever it is, his bedroom or his lodgings, and repair boots for the public.

11,270. It has been suggested, of course, that higher rates have caused unemployment also, especially in country towns?—Well, I do not know; I have never heard of any proof of it. I have kept my ears open; we have District Trade Committees, as you know, and I am always on the look-out for any indication as to the effect of our Trade Board Orders; and I have been surprised that I have not heard more of unemployment owing to that cause, simply because where you are introducing something new, and which you think is an improvement, very often you do dislocate things; but on only two occasions have I come up against anybody who has been able to make the assertion that owing to our Trade Board rates he has thrown men out of employment. One case was, I think, in Northampton; if not Northampton, it was Norwich; and in the course of argument, not on this question, but on some other question, an employer did say: "When the Trade Board rates came out I had to discharge half my men." That astonished me, and of course I followed it up, and I found that the men he was employing before were two. They were both skilled; he told me they were both equally skilled, and I asked him what he was paying them. To one man he was paying a sum which was about £3, somewhere near our rate. The other man he was paying 26s.

11,271. *Mrs. Tattleton*: Which did he discharge?—He discharged the 26s. man, and I was anxious about that man, and I said: "Well, what became of him?" "Oh," he said, "he went and got another job." I said, "Where?" He said, "In the town." "What as?" "A boot repairer." The other case was down at Exeter, and there I was told by an employer that he had had to discharge two men, or it may have been three. When I came to ask about it, it was owing to the terrible condition

1 February, 1922.]

Mr. W. ADDINGTON WILLIS.

[Continued.]

of things in Cornwall that we have all heard of, and had nothing to do with the rates. I have sometimes asked the question, in order to get information: "Tell me, is it the state of trade generally, or is it the high rates which account for the trouble?" and the answer I get on almost all occasions is: "Oh, there is no trouble about the rate when work is booming, or when work is good." But you must remember that, say, during the last 12 months, the boot repairing trade has been very badly hit, and the thing that has hit it almost as much as anything is the fine weather. That is a fact; they will all tell you that it is the dry weather. What they like is rain; what they prefer is snow; and if the tramway authorities will put a little salt on the snow, they regard those authorities as a fairy godmother.

11,272. *Chairman*: Of course, it is just in a bad time like that that the rate would be felt?—Well, it is not a question of feeling the rate, because you remember that 85 per cent. of the work done by benchmen is piecework.

11,273. He gets a piece rate?—He gets a piece rate, yes. It is simply that they cannot get the work to do; the piecework will not provide it.

11,274. *Lord Weir*: Is not the reason that they cannot get the work to do, that the work is too expensive?—Well, yes; the charges are too high to the public, you mean?

11,275. Yes.—Whether it is due to the labour is, of course, another problem. They reckon the cost is somewhere about one-third of the price which is obtained from the public, roughly.

11,276. The labour cost?—The labour cost.

Chairman: Perhaps we had better just finish this heading as regards the confirmation. You think that the Minister of Labour should not regard himself as a Court of Appeal on the question of quantum?—That is right.

11,277. Then, as regards objections, you think that the Board should have power to give effect to objections. I suppose that means without re-publication?—Without re-publication, and within the four corners of the scheme.

(Adjourned for a short time.)

Witness: May I qualify or supplement an answer which I gave to Lord Weir about piece rates? There is no doubt about it that the object of piece rates is to establish standard rates for the trade in order to avoid any trouble between the employer and the worker. That is the main purpose, and when I referred to their being minima, in a sense, what I meant was that it must not be understood that because we had a list of piece rates therefore nobody could or would pay higher rates, because, as a matter of fact, you do get higher rates; but they are meant to be the standard.

11,278. *Lord Weir*: You do agree that there is a substantial difference between the effect of a minimum time rate and what you called a minimum piece rate, because the piece rate tends to be the standard, but the minimum time rate is very frequently a true minimum, and not a standard?—It should be, and in the majority of cases it is, but if you heard the workers on the Board, they would tell you that however low it is, the employers are trying to make it a standard. But that is the object of the piece rate; it is to avoid trouble between the employer and the worker.

11,279. *Mr. MacCulloch Scott*: In some trades do not piecework wages prevail which are higher than the piece rates fixed by the Board?—Yes, I was saying so. In Lancashire, for instance, in the boot trade they are considerably higher.

11,280. Then why do you say that that is a standard rate?—It is meant to be. In most trades it is. In the hush and broom trade, for instance, it is a standard rate. There is a peculiarity in the case of the boot and shoe trade, because before the Board started Lancashire had got a certain percentage above the then basis rate. The Board could not go to that length; they only went to 35½ per cent. instead of 60.

11,281. *Chairman*: Then we come to the sanction behind Trade Board rates. You say that the legal enforcement of Trade Board rates by penalties seems to you to be necessary?—Yes.

11,282. And you would extend that to the legal enforcement of rates above the minimum?—Yes, any rates fixed by the Board.

11,283. You do not think that it would be useful to limit the remedy to a civil remedy even in the case of those rates?—No. I give my reasons for that. They may be bad, but they are on paper.

11,284. You say that it is a species of contracting out?—It is a species of contracting out.

11,285. Then we come back to the Minister of Labour as the rate-confirming authority. You agree that some confirming authority is required, but you do not think that the Minister of Labour is the best authority for the purpose?—Not so far as quantum is concerned.

11,286. If he finds that a rate has been informally fixed, or goes beyond the powers of the Board, then you think that he should have power to intervene?—Yes, certainly.

11,287. But as regards quantum you think that some other tribunal should be selected?—I say so because he has not really got the machinery for determining the question.

11,288. As regards the suggestion that the Industrial Court should be chosen for that purpose, you feel some difficulty?—Only on the ground of its being purely an arbitration chamber. I think the great advantage of the Trade Board is that it is simply an Industrial Council; there is a friendly discussion between the two sides—heated at times, but still it is a friendly discussion—and an attempt to do something for the benefit of the whole industry; and the arbitration element does not enter into it.

11,289. No, but on those occasions when the two sides finally differ, and the Appointed Members have to decide, then you have got beyond the area of friendly discussion?—That is true.

11,290. In cases like that, should there not be some tribunal to which the matter could be taken?—I should not say so necessarily in all cases, because very often the difference between the two is fractional. I mean it may be a farthing.

11,291. We are discussing now the question of the confirming authority, and I understand you do think that there should be some body to which the confirmation of rates should be entrusted?—Yes, where the rates are opposed—that instead of the Minister hearing depositions and so forth, he should have some tribunal to whom he can send the rate if it really was opposed. I do not think it would happen so very often.

11,292. *Lord Weir*: Could you not assume that a rate might be quite wrong in the consumers' interest without it necessarily being opposed?—Yes, there is that, I agree.

11,293. *Chairman*: Would it not follow that every rate had better be confirmed by some authority—perhaps not the Minister, but some other body?—Having regard to the remark of Lord Weir, I think possibly it would be so. I had overlooked that point.

11,294. *Sir Arthur Pease*: You would think, would you not, that where a trade is a purely domestic one there might be such a combination between employers and employed that they could fix absolutely unreasonable rates?—Yes.

11,295. Unless it is kept in order by foreign competition; that is what you mean?—Yes. That is an omission. I remember I had noted that point, but I had omitted it from my draft. That is quite possible. That position might possibly arise, and therefore I would agree that all rates should go before some tribunal.

11,296. That body might have the effect also of co-ordinating the rates?—Yes, certainly.

11,297. And preventing so many wide differences as we find to-day?—Yes. It would be very useful indeed in some trades. We are trying to do it between the toy and perambulator trades, which do overlap. The toy trade is a kind of waste trade;

1 February, 1922.]

Mr. W. ADDINGTON WILLIS.

[Continued.]

I mean it is a trade in which people use up their waste materials. Builders use their waste materials; tin workers use their scrap for the making of toys, and the perambulator people, for instance, in slack times put their workers on to make toy perambulators. It creates great difficulty, and we have been trying to adjust that, but so far we have failed. That central tribunal would be able to bring things more into order in that way.

11,298. Would you suggest that that tribunal should be formed in the same way as the Boards, with a number of workers and employers on each side, and Appointed Members; or should it have powers of absolute decision?—I think it would have power to hear the respective sides' arguments.

11,299. *Chairman*: And to decide?—And to decide, yes. I know that you get a species of arbitration, it is true, but you get it in the Trade Board atmosphere. They are all members of the trade—I mean they are members of Trade Boards; at least, the tribunal I have in mind will be; and they will be able to co-ordinate the work of the various Boards. It is true that they will be acting as arbitrators in a way, but at the same time they will have a great deal of the element of a Trade Board. It would not be taken right away to an outside department. I am afraid that if you do that you will never get any real discussion on the Trade Boards in proposing and fixing rates, because the members will always have in mind: "Well, there is an authority outside of these Trade Boards that we can go to and try our luck there."

11,300. *Lord Weir*: Does not that exist now in the person of the Minister?—No, I do not think so. Well, it does exist to a slight degree, but I do not think it really seriously affects the work. It may have some influence on it.

11,301. *Sir Arthur Pease*: Of whom would you suggest that this Trade Board Court should consist?—I think the one which I suggest in my statement. There I have suggested that you should have a tribunal constituted, say—it does not matter about the number—of three, five, seven or more members drawn from three panels, a panel of Appointed Members, a panel of employers' representatives, and a panel of workers' representatives; and I would allow those panels to be filled up by the employers' sections and the workers' sections on each Board nominating one or two persons for the panel.

11,302. *Chairman*: Do you mean that you would have a different central authority on each occasion?—No. That would rest entirely with the Minister. The Minister could choose from the panels the number that he wanted to constitute the Court.

11,303. But if this Central Board is to co-ordinate the rates, is there not an advantage in having the same members acting every time?—I should have no objection to the Court being constituted of the same persons every time; my only wonder was whether that would not be a full-time job for them. I see difficulties in that way. How are you going to get members of Trade Boards to sit continuously?

11,304. *Sir Arthur Pease*: Would it be a good thing to have the Chairman of this Central Board permanent?—Yes. I do not see any objection to that, certainly. If he is permanent, of course, he will be in touch with Trade Board work. I only wish to have the Court really familiar with Trade Board work. I certainly have not any objection to the Chairman of the Industrial Court; I have no objection to the Industrial Court as a Court. It is the arbitration element—the outside element—that I do not care about.

11,305. *Chairman*: You suggest an *ad hoc* body?—Yes.

11,306. Then passing to Appointed Members, I think you have referred to their work; you say that they are often of service?—Yes.

11,307. Then you pass to provisions for special local conditions. Dealing first with manufacturing trades,

you say that the employers in manufacturing trades compete with one another throughout the country?—Yes.

11,308. That means that differential rates of wages are not likely to be favourably received?—I think not.

11,309. Then as to the retail distributive trades—?—I pointed out four characteristics which I have discovered in the case of grocery. Speaking generally, you have got the employers in competition with each other only within a restricted area. Motor traction, of course, has widened the area, but still it is more or less restricted. The trade is more affected by immediate local conditions—the spending power of the community which it serves in its locality. Then you have seaside towns and places like that, where you have almost a seasonal trade; you have a rush in two or three months, and you have a comparatively slack time for the rest of the year. Then you have in the agricultural districts the cost of delivery, which is very much higher than it is in the towns; you go long journeys for one delivery. Those are special conditions which seem to me, I will not say to render it necessary that the Retail Distributive Board should have local rates according to districts, but at least to render it worth considering whether the retail distributive trades should not have local rates according to districts.

11,310. *Dame Adelaide Anderson*: Do you not think that good housewives go into another district for lower rates?—I would have my districts as large as possible, not 52 or 50, as was stated by somebody or other on the Grocery Board. Mr. Cahill, I think, said you wanted 50. I should not dream of that.

11,311. *Chairman*: You would have larger districts?—I should have larger districts in order to avoid the transfer of custom.

11,312. *Lord Weir*: In those large districts you would have the same class of variation and the same necessity for differentiation?—I was trying this morning, I am afraid very ineffectively, to map out the country. What I wanted to convey was this: it does seem to me possible to get districts composed of localities which are more or less similar. I have not mapped it out, but I am speaking off-hand: if, for instance, you run a line, we will say, right across England just below the Thames, then if you divide that area up into two, each district is very similar.

11,313. You told us this morning that one of your difficulties, for example, was London?—Yes.

11,314. How would you get over the border-line ease?—I do not see any way of getting over it. I think the only thing you can do is to reduce it if you have any district rates at all; and the only justification that I can see for having district rates in the distributive trades is owing to these peculiarities, and the difficulty, as it seems to me, of a central Board having upon it thorough representation of all these peculiarities. I know great objections were raised—at least the point was often mentioned in objections—about these seaside towns: they could not work 48 hours during two months of the year. The people in the country said: "We have got heavier expenses to carry owing to the long distances that we have to deliver to." I know that the whole subject of district rates is extremely difficult. I do not see any solution of it except by having districts, and if you have districts they should be as big as possible.

11,315. *Chairman*: You prefer that to the system adopted by the Grocery Board of dividing according to population?—Yes, I think it is better.

11,316. Then as regards the wholesale distributive trades, the same considerations will not apply?—No. I am really afraid to speak about the wholesale trade. The wholesale is very similar to manufacturing to begin with, and it dwindles away until you have got simply the retail shop which has got a store or warehouse as an adjunct to it, and will supply the trade in the immediate locality. You have got such a variation that I am rather afraid to speak about the wholesale; I have not heard it discussed enough.

1 February, 1922.]

Mr. W. ADDINGTON WILLIS.

[Continued.]

11,317. As regards the making-up trades, you have not heard of any movement in favour of district rates?—No; the only one is the Boot Trade Board, and they are opposed to it.

11,318. Then passing to the question of juveniles, you say that the control of the employment of juveniles is one of the most useful opportunities afforded to Trade Boards by the Act of 1918?—Yes.

11,319. There was, I suppose, exploitation of what was called green labour in the old days?—It was very bad indeed in some.

11,320. You mention three ways in which Trade Boards can deal with juvenile employees: first by fixing juvenile rates, secondly by establishing learnership schemes, and thirdly by establishing apprenticeship schemes?—Yes.

11,321. As regards juvenile rates, some of them are fixed so as to vary according to age?—Yes.

11,322. And some according to length of experience?—Yes.

11,323. Which do you think is the better scheme?—I suggest that it depends entirely upon the trade. Supposing you have got an occupation which a boy can pick up as soon as he goes in—where it will take only an hour or two, or a day or two, to teach him what he has to do—in an occupation like that I should have thought that the age basis was sufficient. Then you get another class where you want not an extended period of training, but you have got to teach the youth something, and in that class I think it ought to be age and experience combined, or experience only, but I should think age and experience combined. I have not had to deal with that problem on any of my Boards. Then again you come to the other class of trade, namely a really skilled trade. That means that you want an extended period. For that, my suggestion is—and it is carried out by the Boot Board—that you should have either an apprenticeship scheme or a learnership scheme. The difference between the two, of course, is that in the former they are both bound for a definite period, which is fixed by the Board as being necessary. In the other case there is no period fixed, but the Board requires such an amount of training to be given that the youth, if he is dismissed by the employer who starts him, can take that amount of learning to another employer and gradually finish off in that way.

11,324. In a trade where real skill is needed, the longer the period the better within limits; that is to say, you would rather have apprenticeship than learnership?—Yes, I think apprenticeship is better, but some employers will not bind themselves for the full time, and then rather than that the juveniles shall suffer we say, "Here is an alternative scheme; make them learners. You do not bind yourselves if you get hold of a bad one; you can get rid of him easily, simply dismiss him. At the same time the youth will have gleaned so much which will be worth something to another employer."

11,325. How do you secure that result?—We require an agreement, which is registered. An employer cannot have a learner unless he has registered him with the Board, and by that agreement he binds himself to teach him certain things—not the full, extended training that he would get under an apprenticeship scheme, but at any rate certain things; and if he is taught those things he will be able to go into the market and get his living on them. For instance, he might only teach him repairing, or I suppose he might teach him finishing. I should not regard that as very good training, but still there are plenty of boys and men who are engaged in finishing. So long as he has got something that is marketable, that is what we want to secure.

11,326. *Dame Adelaide Anderson*: Is it on the whole a less skilled industry for men than the making of good new boots?—I should think so. I think I would rather sit down and repair my boots.

11,327. Then make your boots?—Yes. I mean I think you could learn that; although I do not know

that they would agree with me altogether. They reckon that it takes five years for making boots.

11,328. *Lord Weir*: I take it that the majority of the people who make boots are single operation people who learn very little?—Are you speaking of making?

11,329. *Dame Adelaide Anderson*: I was comparing the making of boots with repairing them. I was comparing hand processes so far as they march together in the two occupations, making and repairing of boots?—Did you say the making and repairing of boots?

11,330. I am simply trying to find out how far this is a skilled trade, that is to say, boot repairing as compared with boot making?—I see. Of course, boot making is a much more highly skilled operation than repairing; there is no doubt about that.

11,331. So that apprenticeship is not so urgently necessary for a worker; he can find work if he is not a thoroughly trained man?—There are men on my Boards, I believe—there are employers on the Boards, certainly—who do not make and do not profess to make; they are repairers. That is what I meant to imply: that you can teach him a portion of the trade, and that is marketable knowledge.

11,332. But I suppose there are repairers and repairers; some would do much higher-class work than others?—Yes.

11,333. *Chairman*: Then as regards permits, you would extend the power to all cases in which, owing to personal reasons, the worker is incapable of earning the minimum wage?—Yes. I do think it is a pity that the power of granting permits is so strictly limited. I know that there are dangers in it, but I do not think that it is any more difficult a task to tell whether a worker is really a slow worker than it is to tell whether his mental deficiency affects his work. We are allowed to do it in the one case; we are not allowed to do it in the other.

11,334. In the one case you find that it is quite fairly done?—Yes; every case is investigated except the people of old age—70 years of age. We do not trouble about that; we give a permit indefinitely straight away, so long as the rate looks reasonable.

11,335. I am glad to find that you fix 70 as old age.—No, I do not say 70.

11,336. Someone put it at 50 years of age, which was most distressing.—I think I ought to have said about 60; but there are some very good workers in the trade, I am told, at 60; and I know that there are in other occupations.

11,337. Then as regards the question of scope, you would refer it to the tribunal which we have been discussing?—Yes.

11,338. You would make your decisions final and binding?—I think it would be well, though one does not want to deprive the citizen of his right of appealing to a legal tribunal; but if you come to look at it, supposing that the tribunal determined the matter either way—it does not matter which way it is; supposing they decided that it was outside the scope, the Minister would never in the face of that proceed to enforce it. That is clear, and there you have finality to that extent. Supposing the tribunal said, "Yes, it is within the scope," then supposing the Minister did take proceedings, the Magistrate before whom it came would not be bound by that decision at all, but he would certainly hear of it, and I should think he would be very greatly impressed with it.

11,339. You think it is better to finish with it, so to speak, and to make it binding?—I think so. I do not see any real objection.

11,340. After all, these are technical matters?—Yes, it is a technical matter. It depends on a great many considerations which would take a Magistrate a very long time really to determine. It would be as big a problem as "the feeding of schoolboys."

11,341. Then you point out that there is power to dissolve Trade Boards?—Yes.

1 February, 1922.]

MR. W. ADDINGTON WILLIS.

[Continued.]

11,342. And you suggest that the power of withdrawing trades from the Act might be extended so as to meet special conditions. What do you mean by that?—I do not want to lay stress on that, but it has struck me as a peculiarity that once the Minister has started a Board working he cannot stop it until the Act is repealed, except under those conditions, namely, that there is an adequate amount of organisation.

11,343. What is the kind of condition which you have in mind which might be added?—I should leave it widely as "special circumstances."

11,344. A general power to dissolve or suspend?—Yes.

11,345. *Dame Adelaide Anderson*: Would it be in the interests of the industry or of the public?—It would be in the interests of—

11,346. Of either?—It would be in the interests of all, possibly. I think those two points of the disestablishment of Trade Boards and power to suspend might really be taken together. Perhaps I might say why it was that I hit on this. The Toy Trade Board was established, and it is an extremely difficult trade. Without going into its peculiarities, I do not think there is another trade like it really. I know that there was a great desire on the part of the employers either to suspend the rates or to stop the Board altogether. I do not say for a minute whether the Minister would have exercised his power in any particular way or not, but what he pointed out to them was, "I have no power. I have heard what you have got to say, but I have no power to do it." Supposing he had thought that he had made a mistake, or that his predecessor had made a mistake, in establishing a Board for this particular trade, and that on the whole there ought to be no Board; he is powerless. I do not know that there is very much value in it, and I do not press it; I simply draw your attention to it.

11,347. There is a power in the Act to withdraw a trade from the Act?—Only under certain conditions, namely the removal of those conditions which brought it into being.

11,348. *Lord Weir*: I am rather curious about the Toy Board, because as regards the Toy Board we have had very little evidence and very little representation made from either side. Is the toy trade a large trade?—I am not quite sure whether I have got the number. I am afraid to speak about that; but it is a peculiar trade.

11,349. *Dame Adelaide Anderson*: We heard, I think, that it had declined recently in numbers?—It must have done.

11,350. *Lord Weir*: You have raised this point yourself. Do you think that it is a trade where the depression has been directly caused by high rates?—No. May I shortly describe it, as I think it really does exist, and how it originated, too? There was no great toy trade before the war, with the exception of what I may call proprietary articles. That is not a correct term, but I mean articles such as Meccano, if you know it, which is made in Liverpool, and which formed, of course, a very large section of the business. Then there are lead soldiers, a very excellent production here.

11,351. *Dame Adelaide Anderson*: And stuffed dolls and stuffed golliwogs, and things of that sort?—Yes. I was just mentioning those in order to say that practically the toy trade was limited to some such trades as those before the war. Then during the war it was said—I have this information given on the Board by the employers—"Capture the German toy trade"; and the employers will tell you that they were promised that if they did they would not suffer; and a great deal of money was laid out in trying to produce English dolls to destroy the German doll market. Then during that time a great many people started toy businesses, because of the prices obtainable; for example, the price of a woolly lamb which before the war was 6½d. rose to 4s. 7½d. After the war, and especially when the market was free and

prices began to drop, those people gradually cleared out; they went out of the trade altogether. Builders, for instance, began during the war to convert their waste material, if they had spare time, into wooden toys, and tin box makers used to make tin toys, and so on. The result was this, that you get the allegation that the Trade Board has killed the trade. People say: "You see how many people have gone out of the industry." I have had it put up again and again on the Board, and on each occasion I have discovered that those businesses went out of existence before the Trade Board rates were working, and in some cases before the Trade Board was formed.

11,352. *Lord Weir*: You mean that they could not stand the wages of the pre-Trade Board days?—Yes; and they were shocking in some cases.

11,353. When was the Toy Trade Board established? It would be a war-time rate of wage that would be paid, would it not?—With the exception of those special sections of the industry of which I have been speaking, Meccano and, say, the soldiers, I think you will find that during the war there was not very much increase in the rates of the toy trade. It is very difficult to speak at all definitely about this trade, because a great many of them do not know of the existence of the others. It is not organised. It is organised to an extent on the employers' side, but on the other side it is not organised at all, except in Liverpool.

11,354. *Mrs. Lyttelton*: Your point is that it is not the rates which have made it fail?—I do not think so for a minute.

11,355. *Lord Weir*: Can you explain to us the reason why in a trade like this curious trade, where foreign competition is the largest factor effecting the trade, the present rate should be so much higher than the minimum rates in other Trade Board industries? For instance, we have, I presume, a comparable trade in the jute trade. Now the workers in the jute trade are protected to the extent of 43s. 6d., but if you take the toy trade the worker gets 56s. One would have expected to find your toy trade rate right down at the bottom.—I thought that was where it was. We are constantly told—I have it put against me by workers every time we sit—that we are lower than any other rate. I thought the only lower rate was a time rate fixed in the lace trade, but that was really not a working rate.

11,356. I am speaking, of course, of the male rate at the moment. The male rate is 56s.?—Yes.

11,357. The male rate of the corresponding worker in the jute trade is 43s. 6d. They are both highly competitive?—Yes, but I do not know about the amount of skill there. In the case of the jute worker, is he not an unskilled labourer? I do not know.

11,358. *Mrs. Lyttelton*: It requires immense skill to make toys?—I know they regard the jute trade rates as very low. It is confined, is it not, to one or two localities?

11,359. *Mr. Layton*: Was this rate fixed as a rate for toy makers?—Yes.

11,360. With any degree of skill?—Yes. It is not defined, it is true.

11,361. *Lord Weir*: This rate really means that you cannot have any male over 21 employed, even in connection with the making of toys, under 56s.?—That is so. That is an agreed rate.

11,362. *Sir Arthur Pease*: Do you not think that there must be a differentiation in rates between the different parts of the country?—In some trades, but I see great difficulty generally in the manufacturing.

11,363. I think you referred to the co-operative societies earlier to-day, did you not?—No, I have not mentioned the co-operative societies.

11,364. Their rates in their shops vary for a male of 21 years between 84s. in the northern district and 60s. in the southern district; that is something very near 30 per cent?—Yes.

11,365. The midland and the north-western have other rates. Those have been established without Trade Boards, from experience in the co-operative

1 February, 1922.]

Mr. W. ADDINGTON WILLIS.

[Continued.]

societies, who consider that they have to pay fair rates. If they make that difference, do you not think that other trades will have to?—That is distributive?

11,366. Mostly distributive?—I have said that in the retail distributive trade I think there should be differentiation. Those rates are retail distributive rates, are they not?

11,367. But if you do not vary the rates, you are going to put them out of joint with everything else in the district, are you not?—Yes. You cannot avoid that. That applies to every trade that I know; but we ought to fix a rate which should be a minimum for the least favoured district.

11,368. They divide the country into four districts, North-Western, Midland, Northern and Southern. That is the way in which they divide their rates?—Yes, they have very large areas. That is what I have been advocating this afternoon; that if you are going to have district rates, you ought to make your areas as large as possible. I myself see no objection to district rates in the case of a retail distributor, but my difficulty is this with the manufacturing: that we have got to look at both sides of the question, not only the worker, but also the manufacturer, or else you will not get that harmony which you hope to get. The manufacturer says: "I want to be protected as much as the worker; I want to be protected against my competitors, and why should I at my works in place A have to pay a higher rate than my competitor, who is supplying the same market, in place B?"

11,369. But if you get workers in a centre where they have been for generations carrying on that trade, they do a great deal more work in the same time than workers in an outlying district will do, very often?—Yes, I am quite prepared to accept that, but then it is impossible for a Trade Board to regard all those items, and therefore all we can do is to take the least favoured district and impose a rate for that, and leave the higher rates for either mutual arrangement or organisation.

11,370. But then that is not what many of the Trade Boards are doing. They are not fixing minimum rates, they are fixing standard rates which apply all round?—We have endeavoured to fix minima. I can assure the Committee that on every Board that I have been on, that principle of fixing for the least favoured area is considered. One may differ as to whether we have given real effect to it, but it really is a governing factor. I remember that on the Grocery Board the workers started away with a rate which was the Lancashire rate, I think

(The Witness withdrew.)

Mr. E. H. C. WETHERED, O.B.E., M.A., LL.B., called and examined.

The Witness handed in the following statement as evidence-in-chief:—

I am a Barrister-at-Law, engaged in local practice at Bristol.

Since 1913 I have been Chairman of the Court of Referees—until the end of 1918 for the Bristol and Swindon districts, and since then for the Bristol, Kingswood, Bath and Trowbridge districts.

During the War, from 1915 onwards, I was Chairman of the Local Munitions Tribunals for the Bristol and Swindon districts.

I am one of the panel of Umpires appointed by the West of England District Council of the National Wool (and Allied) Textile Industrial Council; and an Honorary Member of the National Council of the Pottery Industry.

I am also a member of the Juvenile Advisory Committee attached to the Bristol Juvenile Employment Exchange.

I am an Appointed Member of four Trade Boards, namely, the Brush and Broom Trade Board (Great Britain); the Hair, Bass and Fibre Trade Board (Great Britain); the General Waste Materials Reclamation Trade Board (Great Britain); and the

about 72s.—I will not pin myself to figures—and added to that 16s. or 18s., which made 90s., and that they put forward as their claim for a minimum rate for the whole of the country. I happened to be in the chair on the next occasion, and I took that in hand; and Professor Hobhouse came later. It took us a long time to get them to budge from the position which they had taken up. Those very people that you mention were so anxious that nothing done on the Board should weaken their position in getting higher rates. I only mention that to show you that we have not forgotten the principle, and that we do enforce it to the utmost of our power.

11,371. *Sir Arthur Pease*: If you fix a minimum rate having regard to the rates paid in the least favourable district, will not that have a tendency to drag down the rates in the better districts?—The workers say so on some of the Boards, but all we can do is to fix the minimum rate for the least favoured; we have no power to do anything else.

11,372. Unless you have differential rates in different districts?—Yes.

11,373. *Mr. Leyton*: I should like to know whether I understand this rightly; you said that the Grocery Board was not sufficiently representative to take account of the special considerations applying to different districts. Is that correct?—I do not like to say that the Board as constituted now could not sufficiently represent them, but I would rather put it in this way: that a District Committee could be so constituted as to be very much more representative. I cannot see how with 38 people you can have the whole of the country represented, with these peculiar characteristics. That is all that I meant to imply.

11,374. You think that you would have to increase the size of the Board to get the proper representation of the various districts?—I think the other would be the easier way. Yes, I think you would certainly have to increase the size, but I should have thought that district by district would have been very much the simpler way, and a more effective way.

11,375. Have you considered the question of having the same rates for different branches of the distributive trades—different kinds of distributive trade?—You mean distributive trade generally?

11,376. Yes.—I do not know what to say about that. Of course, from one's own knowledge one would imagine that distributive trades have a great similarity, but I do not know whether they have any dissimilarities.

Chairman: Thank you, we are much obliged to you for coming.

Retail Bespoke Tailoring Trade Board (Great Britain). I am Chairman of the first three and Deputy-Chairman of the last.

I was formerly an Appointed Member and Deputy-Chairman of the Laundry Trade Board (Great Britain). I ceased to serve on this Board in August, 1920, when, at the request of the Ministry, I was appointed an additional Appointed Member on the Retail Bespoke Tailoring Trade Board (Great Britain). I was appointed Deputy-Chairman of the latter Board on the 17th January, 1922.

I. THE PRINCIPLES OF MINIMUM WAGE LEGISLATION.

1. I think the Committee will be the better able to judge the reasons which have led me to the conclusions at which I have arrived as to the working of the Trade Boards system if I commence by shortly summarising my views as to:

- (a) The need for minimum wage legislation.
- (b) The guiding principles in determining minimum rates.

I will then deal seriatim with the various points suggested by the Committee for the consideration of the Appointed Members who are giving evidence.

1 February, 1922.]

Mr. E. H. C. WETHERED, O.B.E., M.A., LL.B.

[Continued.]

(a) *The need for Minimum Wage Legislation.*

2. In my opinion some machinery for fixing minimum rates of wages is necessary in every industry, for the following reasons:—

- (1) In order to secure and maintain a reasonable standard of life for considerable sections of the industrial population.
 - (2) To safeguard the economic position of women and girls.
 - (3) To safeguard the position of good employers.
 - (4) As a means of security against constant recurrence of industrial strife.
 - (5) As affording a basis upon which to establish a new relation in industry based on mutual confidence and goodwill.
- (1) *In order to secure and maintain a reasonable standard of life for considerable sections of the industrial population:*

Some form of organised effort is necessary if this end is to be attained and practical effect is to be given to the adhesion of the British commonwealth to the Labour Clauses of the Peace Treaties.

Each of these Treaties contains (*inter alia*) a declaration of the following principles (Treaty of Versailles, Article 427):—

- (i) The guiding principle that labour should not be regarded merely as a commodity or article of commerce.
- (ii) The payment to the employed of a wage adequate to maintain a reasonable standard of life as this is understood in their time and country.
- (iii) The imposition of such limitations on the labour of young persons as shall permit the continuation of their education and assure their proper physical development.
- (iv) The principle that men and women should receive equal remuneration for work of equal value.

Past experience shows that without some means of fixing and enforcing rates collectively determined, the wages of considerable sections of the industrial population tend to be depressed to an undesirably low level. This is particularly the case with reference to the wages of women and girls.

(2) *To safeguard the economic position of Women and Girls:*

The investigations conducted by the War Cabinet Committee on Women in Industry, presided over by Lord Justice Atkin, who reported on the 30th April, 1919 (1919 Cmd. 135), demonstrated that the wages paid to women and girls in the so-called "sweated trades" were little, if at all, below those generally prevailing in several thoroughly well organised trades before the War (Report, p. 174, par. 199). The Committee estimated that in 1914 the average wage of adult women in all industries could not have exceeded 13s. 6d. per week or 3d. an hour, while Dr. Janet Campbell, in her memorandum appended to the Report (Report, p. 218), estimated the average wage of women in 1914 at from 10s. to 12s. per week. The Committee reported that the witnesses who gave evidence before them, whether employers or trade unionists, were almost unanimous in the opinion that women's wages were too low, and they expressed the hope that wages would never return to the pre-war level. The Committee reached the conclusion that the great majority of female wage earners in this country, before the War, were paid less than a living wage, and that the old system was indefensible.

Similar conclusions were reached by the Committee of the Ministry of Reconstruction on Women's Employment in 1919.

The employers on the General Waste Materials Reclamation Trade Board (Great Britain) have stated that the wages paid to adult women before the war were from 7s. to 10s. per week.

My experience as an appointed member of Trade Boards convinces me that if the protection of enforceable minimum rates is withdrawn, the wage rates of very large numbers of women and girls will again speedily fall below a living wage, and all the attendant evils emphasised by the War Cabinet Committee on Women in Industry in their Report, and in the memorandum which Dr. Janet Campbell appended thereto, will again be brought into operation.

In confirmation of this view I am permitted to quote a statement made to me a short time ago by an employer, a member of one of the Boards of which I am Chairman, that if the Board in that trade was abolished, the result, in his opinion, would be most serious, since the wages of a large number of the workers involved would speedily be reduced to a figure below subsistence level. I have this gentleman's permission to furnish his name to the Committee if desired.

(3) *To safeguard the position of good employers.*

In every industry there are employers, and, I think, an increasing number, who are keenly alive to their responsibilities as employing the labour of others who depend upon them for their livelihood. These employers have become acutely conscious of the human factor in business, and are keenly desirous of doing the right thing by the people who work for them. There are, however, in every industry employers who have not yet arrived at any adequate sense of their responsibilities towards the people whom they employ, and who hold that they are entitled to obtain the labour they need at the lowest wages at which they can induce men and women to work for them. Employers of this class have given no consideration to the wider problems of industry, and are strangers to the whole body of thought on industrial and social questions which led the Government to declare their adhesion to the Labour Clauses of the Peace Treaties already referred to. Enforceable minimum rates of wages are consequently as necessary to the good employers as to the workers, inasmuch as bad employers are compelled to approximate their labour cost to that of good employers, who are thereby relieved of the pressure of unfair competition, and enabled to go forward in improving the condition of their employees to an extent which is impossible so long as they are exposed to the unchecked competition of those who conduct their business with a lower degree of social responsibility. In trades where the organisation of the employers is weak, the abolition of enforceable minimum wage standards would inevitably result in wages being depressed to the levels established by bad employers. The good employers would be unable to help themselves; the pressure of competition would compel them, speaking generally, to reduce their wage rates to the standards set by the bad employers; if they did not do so, they would, in many cases, find it impossible to remain in business.

(4) *As a means of security against constant recurrence of industrial strife.*

In the absence of any definite machinery for establishing and maintaining minimum rates of wages, there are no means open to the workers by which a reasonable standard of life may be attained, in many industries, save the coercive power of their industrial organisation. It is impossible to deprive the workers of the right to strike. The only way to prevent strikes, and the waste and bitterness involved in industrial strife, is to remove the causes of discontent. One of the root causes of discontent is low wages.

(5) *As affording a basis upon which to establish a new relation in industry based on mutual confidence and goodwill.*

While wages are not the only factor to be considered in establishing such a relation, I am convinced that a reasonable and secure wage basis is a condition precedent to the establishment of better relations between

1 February, 1922.]

Mr. E. H. C. WETHERED, O.B.E., M.A., LL.B.

[Continued.]

employers and employed and to the attainment of full productivity in the working of the industrial organisation.

(b) *The guiding principles in determining Minimum Rates.*

3. No modern definitive theory of wages exists. Various attempts have been made to frame some formula by which the adequacy of a given rate can be tested. Several tests have been suggested by the Court of Arbitration in New Zealand. In this country a guiding principle upon which the Agricultural Wages Boards should work was laid down in Section 5 (6) of the Corn Production Act, 1917, in the following terms:—

"In fixing minimum rates under this section, the Agricultural Wages Board shall, so far as practicable, secure for able-bodied men wages which, in the opinion of the Board, are adequate to promote efficiency and to enable a man in an ordinary case to maintain himself and his family in accordance with such standard of comfort as may be reasonable in relation to the nature of his occupation."

The question has been exhaustively considered by Mr. Seebohm Rowntree. Mr. Rowntree assessed the subsistence wage for an adult man, necessary to maintain bare physical efficiency, before the War, on the basis that such wage must be sufficient to provide for the bare necessities of life for a man, wife and three dependent children, at 26s. and for a single adult woman at 16s. ("Capital and Labour after the War," by various writers, edited by S. J. Chapman; published by J. Murray; p. 234).

These standards sufficed merely to maintain bare physical efficiency. They allowed no margin for contingencies or recreation. A reasonable minimum wage should provide for both. Accordingly in "The Human Needs of Labour" Mr. Rowntree carried his investigations further with a view to assessing the lowest figures, pre-war, at which a reasonable minimum wage should be determined. He adopted the following formulae for adult men and women respectively—in the case of men, the wages paid to a man of average industry and capacity should at least enable him to marry, to live in a decent house, and to provide the necessities of physical efficiency for a normal family, while allowing a reasonable margin for contingencies and recreation; and in the case of women, the wage of a woman of average industry and capacity should be the sum necessary to maintain her in a decent dwelling and in a state of full physical efficiency, and to allow a reasonable margin for contingencies and recreation. Mr. Rowntree assessed the figures to satisfy these standards, pre-war, at 35s. 3d. for a man and 20s. for a woman.

Mr. Rowntree's figures were suggested as reasonable minimum rates for unskilled labour. In determining the rate of wage to be paid to any individual worker or class of workers, a distinction must be drawn between the minimum, or basic, wage, and wages above the minimum, which may be referred to conveniently as "secondary" wages. The basic wage should be determined primarily by human needs, and the secondary wage by the value of the services rendered as compared with the value of the services rendered by workers who are receiving merely a basic or minimum wage, that is to say, by the cash value to be placed upon any special gift or qualification required for the performance of the work undertaken. The cash equivalent of the basic and secondary wages respectively in any industry or particular instance must be determined by discussion having regard to the current level of prices and relevant economic considerations.

These principles for determining wage rates were approved by a Conference of Quaker Employers, held in London in July, October and November, 1917, and January, 1918; and by a conference between organisers of trade unions, Bristol employers, and others concerned with the industrial employment

of women, held in the West of England in March, 1918, and I think they afford a practical basis on which to work.

It would, however, be utterly impracticable to immediately raise wage rates in many industries to levels which would satisfy Mr. Rowntree's formulae, especially at the present time, in view of the artificial currency values which prevail. But, nevertheless, the formulae suggested afford some guidance when the adequacy or otherwise of a given figure has to be considered.

Whether or not a given figure is practicable as a minimum rate must be considered not only from the point of view of any theoretical standard based on the cost of living, but with regard also to the capacity of the industry to pay. This is a very difficult matter to assess with any degree of accuracy. Ultimately it means, I think, arriving at the best estimation one can on the available evidence, and after "feeling the pulse," so to speak, of the parties interested, as to the highest rate which is within the capacity, if conducted with a reasonable degree of directive ability, of the weakest business which it is socially desirable to maintain in existence, in the weakest district, for the grade of worker under consideration. The discussions of a Trade Board, if properly conducted, seem to me to be the best means available for arriving at a reasonably satisfactory solution of this problem.

I shall return to this subject again later when discussing the principles upon which the Boards act.

(c) *The machinery for establishing and maintaining Minimum Wage Rates.*

4. Granted the necessity for some machinery for establishing and maintaining enforceable minimum wage rates, there appear to be four possible ways of achieving this object:—

(i) By the ordinary methods of collective bargaining between organised employers and workers.

(ii) By collective bargaining through the medium of Joint Industrial Councils, with or without compulsory powers.

(iii) By a statutory minimum wage or wages.

(iv) By Trade Boards.

(i) I need not dwell on the method of collective bargaining, which is well tried and fully recognised. It is, however, a method which, as practised in the past, has been inseparable from constant and dangerous industrial strife, which has become a grave menace to the public peace as the extent of the organisation on both sides has grown and the range of their activities has increased.

(ii) The Whitley Committee, therefore, recommended that the system of collective bargaining should be given a definitely constructive function by the formation of Joint Industrial Councils. The Whitley Councils constitute standing machinery for (*inter alia*) regulating wage rates by collective bargaining in the industries within which they are formed.

Methods (i) and (ii) have this in common, that they are only possible in thoroughly well organised industries and districts. Some other method has to be found to meet the case of partially organised and unorganised industries.

(iii) I do not think that a satisfactory solution can be found by attempting to establish a statutory minimum wage. Such a wage would in practice have to be fixed so low that it would afford no adequate protection for the great bulk of the industrial population. It would have to be fixed at a level within the capacity of the least well organised shop which it was socially desirable to maintain in existence, in the weakest district, and for the lowest grade of labour employed. If a national minimum wage was fixed at a level which would afford any reasonable protection for the bulk of the workers, it would inevitably ruin numbers of small businesses in economically weak districts. I am aware that the War Cabinet Committee on Women in Industry reported in favour of the establishment of a national minimum

1 February, 1922.]

Mr. E. H. C. WETHERED, O.B.E., M.A., LL.B.

[Continued.]

wage for women and girls, but this was only on the assumption of such a system being supplementary to a large programme of Trade Boards. The national subsistence wage which they proposed was only to affect the residue of women and girls not within the jurisdiction of any Joint Industrial Council or Trade Board, and I agree with the criticism of the proposal contained in the note of Sir William Mackenzie appended to the Report (pp. 335-341).

(iv) In my view the Trade Boards established under the Trade Boards Acts of 1909 and 1918 are preferable to any other method as a means of establishing, maintaining and enforcing minimum rates of wages. I hold this view because I think the policy for the better government of industry, contained in the Reports of the Whitley Committee, was conceived on sound lines. The essential idea of the plan they proposed was that, while individual factories and works should remain under private direction, private direction should function under a considerable measure of collective industrial control, a control imposed not from outside the industry by Statute or the Orders of a Government Department, but by determinations reached by consultation between representatives of all legitimate interests upon standing self-governing bodies within the industry itself. The bodies which the Committee recommended should be formed were (a) in organised trades, Joint Industrial Councils, with an ancillary organisation of District Councils and Works Committees; and (b) in unorganised trades, Trade Boards.

(d) *Should Minimum Wage Legislation be determined Trade by Trade or District by District.*

5. Assuming that Trade Boards are to be continued, the question arises as to whether Trade Board determinations should proceed upon the basis of legislation trade by trade or district by district.

In my opinion, minimum wage legislation, so far as manufacturing industries are concerned, should be carried out trade by trade, but I think there is a great deal to be said, in the case of the distributive trades, for making provision for legislation district by district. I have not, however, any practical experience of the distributive trades. I have not come to any definite conclusion with regard to the making-up trades. I am clear, however, that, while distributive trades might possibly be grouped, the making-up trades could not be grouped. Each requires its own Board.

In the manufacturing trades the feeling, both among the employers and workers, decidedly favours a national minimum rate for the industry. The town manufacturer cannot see what claim the manufacturer in a country district has to pay a lower rate of wages than he does, since both are catering for the same market, and if it be true that the cost of living for the worker is cheaper in the country, neither the town manufacturer nor the worker can see any reason why the employer alone should reap the advantage of the cheaper rate of living open to the country worker. Moreover, it is exceedingly difficult to arrive at any satisfactory method of demarcation between one district and another. The only satisfactory basis for a differential wage district by district is a distinct difference in the class of trade for which the employer caters, and in the case of manufacturing industries this differentiation rarely, if ever, exists under modern conditions of trading.

I think that to some extent a case for differential district rates can be made out with regard to industries dependent upon local custom, as in the case of some of the making-up trades, but there are many practical difficulties in the way of giving effect to the principle. For instance, on the Retail Bespoke Tailoring Trade Board we have this matter under consideration at the present time, and we are finding the difficulties very great, although I am not prepared to say they are insuperable. The difference, for instance, between the trade of a high-class tailor in Birmingham or Bristol and a small bespoke tailor in a country district is reproduced very closely as

between a high-class tailor in a good neighbourhood and a bespoke tailor in a poor neighbourhood in the same town. Indeed, it would seem that most of the difficulties which are presented to a national rate are reproduced within the district in the case of a district rate. Where a case for differential rates, based on the class of trade done, exists, the distinction is not between one district and another, but between shops or undertakings of a different class. I have had experience of two attempts to establish a differential district rate. The Laundry Trade Board, in July, 1920, proposed a differential rate for the district comprised within a radius of thirty miles of Charing Cross as contrasted with the rest of the country; the practical difficulties of giving effect to this were so great that the proposal was dropped. The General Waste Materials Reclamation Trade Board, acting on a suggestion made by me, originally proposed a differential rate for women employed as woollen waste sorters in the West Riding of Yorkshire as contrasted with the rest of the country; no effect was ever given to this proposal, as it was subsequently withdrawn, at the request of the employers, owing to the serious objection raised by the Yorkshire employers to a higher minimum rate being required of them than that required of employers in other parts of the country.

Another reason which leads me (apart from the distributive trades) to favour legislation trade by trade is the fact that most industries have a distinct corporate consciousness. This is more strongly marked in some trades than others, but I think it is fairly general, and I am inclined to think that the same tendency in our national psychology which has led us to stand so firmly for the principle of local self-government in our political and social life will make itself felt, and is, indeed, already making itself felt, in the government of industry. Neither employers nor workers will, I think, tolerate compulsory rates of wages unless determined by some form of legislative body within the industry. This trade consciousness has been very strongly marked among the employers on all the Trade Boards with which I am and have been associated, and is equally marked among the operatives' representatives on three of them, namely, the Brush and Broom; Hair, Bass and Fibre; and Retail Bespoke Tailoring. It is not so strongly marked in the operatives' sides of the Laundry Board and the General Waste Materials Reclamation Board, owing to the fact that the representatives of the workers on these Boards are drawn mainly from the representatives of general workers' Unions and have not the same craft consciousness as in the three Boards first mentioned.

II. THE PRINCIPLES ON WHICH MINIMUM RATES ARE SETTLED BY TRADE BOARDS.

6. I do not think that it can be said that wage rates are determined by Trade Boards on any definite principles. As I have already pointed out, no definitive modern theory of wages exists, and consequently the determinations of the Boards are arrived at by discussion and negotiation which aims at finding a rate which will be accepted by the generality of employers and workers in the industries as fair and reasonable. The Appointed Members act primarily as conciliators, but in the last resort can resolve a deadlock by their vote.

7. The procedure followed in determining a rate is, speaking generally, somewhat as follows:—

Either the employers' or workers' representatives move a rate for the class of workers in question. The proposal is considered by the other side, and is discussed by the Board as a whole, in side meetings of the representative members, and at private conferences of selected members of both sides with the Appointed Members. The proposal, either in its original or some modified form, is eventually agreed, or an amendment is moved by the other side. This in turn is discussed in like manner. Eventually the issue between the two sides is generally narrowed down to a comparatively small margin of difference between two alternative propositions. The deter-

Mr. E. H. C. WETHERED, O.B.E., M.A., LL.B.

[Continued.]

mination of the Board is finally arrived at by an agreement or compromise, or by a direct vote. In such case the determination of the Board is generally, but not always, decided by the votes of the Appointed Members. This is a general description only. A rate may be agreed by direct negotiation between the representative members, or may be referred to a Committee to consider and report to the Board.

8. While no definite principles have been adopted, there are certain factors which are always in the minds of the Board when considering a rate. These factors may be summarised as follows:—

- (i) The cost-of-living index figure.
- (ii) The character and economic position of the industry concerned.
- (iii) Wages paid in other comparable trades.
- (iv) The nature of the work, and the degree of skill or experience required for its adequate performance.
- (v) The relation in which the class of workers concerned stand to other workers in the industry or to comparable workers in other industries.
- (vi) Whether the workers are customarily piece workers or time workers.
- (vii) The capacity of the industry to pay the rates proposed.

These factors are, however, applied rather as tests of the adequacy or otherwise of the figures proposed than as strict determinants. They do not admit of precise statement. The capacity of the industry to pay, for instance, is very difficult to determine. How is the capacity to be tested? By the best or the worst organised shop or works—or by an assumed average shop or works, neither very good nor very bad? Again, the wage-paying capacity of an industry may be very bad because the management and organisation may be poor. In such case the workers can with justice urge that their standard of life ought not to be depressed in order to perpetuate inefficiency on the part of the employers. They may urge that if the employers are compelled to pay reasonable rates of wages, they will bestir themselves and re-organise on more efficient lines, and that this will in the end benefit the industry and the consumer as well as the workers. On two occasions prominent manufacturers have told me that, in their opinion, the average manufacturer is not a good judge of what the industry can bear in the matter of wages, and that it was surprising to find what some industries could pay when the employers were compelled to adapt their methods of doing business to higher wage rates than they customarily paid. It is unfortunate, I think, that the claim that the industries cannot pay the rates fixed by Trade Boards is advanced so readily and frequently. It tends, perhaps, to receive less consideration than it should because it is put forward so often and subsequent experience shows that it was not justified.

9. The Coffin Furniture and Cerement Making Board, on the 14th January, 1922, issued a proposal to vary the rates for male workers in the coffin furniture section of the trade on a sliding scale based on the cost-of-living index figure (all items), and the scheme seems to be framed on sound and workable lines. Several Boards have similar schemes under consideration. A difficulty in the way of adopting a sliding scale which has arisen is the absence of an agreed basis rate upon which to operate. This difficulty arises from the fact that the pre-war wages paid to women were so low that they are useless as basis rates to-day. The Paper Bag Trade Board are considering a sliding scale based on the cost-of-living index figure, which seems to me to contain some promising features. They have agreed basis rates for labourers at 32s. 6d., and for women at 20s., on the assumption of the cost-of-living figure falling to zero, and the rates at present in force are adopted when the index figure is 100. These rates drop towards the basis figures by reductions in the rates of 4 per cent. for every 5 per cent. fall in the cost-of-living index figure. The result is that as the cost-of-living figure falls below 100 the *real* wages rise, while if the cost-of-

living rises above 100 the rates rise in exact proportion. This scheme seems to me to be well worth consideration.

10. Until recently the Boards have not attempted to fix rates strictly on a cost-of-living basis as shown by the index figure. The diminished value of the currency has made this impossible. This will be apparent if existing Trade Board rates are tested by Mr. Seebohm Rowntree's figures, adjusted to the increase in the cost-of-living over 1914, as shown by the index figure for "all items." On the 1st January, 1922, the index figure was 92, but on the 1st December, 1921, it was 99, and all existing effective rates were fixed when the index figure was at or about the latter figure. I take it at 100 for convenience of calculation. It may be that some slight correction is necessary in applying the index figure to Mr. Rowntree's calculations, but I do not think that the margin of error is material for the present purpose.

Mr. Rowntree's (a) minimum, and (b) subsistence wage rates, adjusted to this figure, become:—

(a) *Minimum Wage.*

Men.—Pre-war, 35s. 3d.

December, 1921, 70s. 6d. (approximate).

Women.—Pre-war, 20s.

December, 1921, 40s. (approximate).

(b) *Subsistence Wage.*

Men.—Pre-war, 26s.

December, 1921, 52s. (approximate).

Women.—Pre-war, 16s.

December, 1921, 32s. (approximate).

No Trade Board rates, I think, satisfy these tests for a reasonable minimum rate for either men or women. Current rates are round about Mr. Rowntree's subsistence rates, adjusted to the present cost of living, but several are well below even this standard. For example, the labourers' rate on the Brush and Broom Board is at present 1s. 1½d. per hour, or 54s. per week, and it is proposed to reduce this rate to 1s. 0½d. an hour, or 50s. per week. The General Waste Materials Reclamation Trade Board, in August last, proposed 55s. for labourers in the scrap metal and scrap iron section of the trade, and 48s. for all other male workers.

11. It is generally the practice for Trade Boards to fix piece-work basis rates at a fixed ratio above plain time rates. The ratio differs on different Boards. The Laundry Board have adopted 17½ per cent., but usually the ratio is from 7½ per cent. to 15 per cent. Commonly in the case of women it is 1d. per hour above the general minimum time rate.

12. In addition to a piece-work basis time rate a few Boards have fixed a guaranteed time rate for piece-workers. When fixed this rate has sometimes been slightly below, in other cases the same as, the plain time rate. The Laundry Board have fixed such a rate 5s. per week below the plain time rate for women workers. The General Waste Materials Reclamation Trade Board have determined the same figure for the plain time rate and the guaranteed time rate for piece-workers.

III. THE METHODS BY WHICH TRADE BOARD RATE SETTLEMENTS ARE REACHED BY COMPLETE AGREEMENT.

13. The extent to which settlements of wage rates are reached on Trade Boards by agreement between the employers' and workers' representatives differs very much as between one Board and another. It depends largely on the personnel of the Boards. Speaking generally, when the trade is fairly well organised on both sides, or when both the representatives of the employers and workers have a strong craft consciousness, the Board display a certain unity in outlook and feeling which leads to rates being determined by agreement. Where, on the contrary, this unity in outlook and feeling is absent, as in cases where the majority of the workers' representatives are drawn from general workers' Unions, determinations by agreement are more difficult to obtain.

1 February, 1922.]

Mr. E. H. C. WETHERED, O.B.E., M.A., LL.B.

[Continued.]

Thus, on the Brush and Broom and the Hair, Bass and Fibre Trade Boards, both of which display a marked craft consciousness, most of our important determinations have been reached by agreement, not at once or easily, but eventually, after thorough discussion of the whole situation conducted on a very high level of excellence on both sides. On the General Waste Materials Reclamation Trade Board it has been much more difficult to achieve agreement on any important question, though even in this case agreements have been reached, and all subsidiary and minor questions have generally been determined by agreement. Although well organised and possessed of a strongly marked craft consciousness, special reasons peculiar to the trade have made it very difficult to secure agreement on the Retail Bespoke Tailoring Board.

The Brush and Broom and the Hair, Bass and Fibre Trade Boards are admirable Boards. The members are animated by feelings of confidence in one another and mutual respect, which has deepened as their work together has developed. All our discussions, in spite of very wide differences of opinion and divergent views, often strongly held, have invariably been conducted without bitterness and with consistent courtesy, the aim of every member, while doing what he believes to be his duty to his constituents, being to find a way of removing and solving difficulties and to achieve a basis of agreement. In consequence it has been the exception for a controversial vote to be taken.

The Brush and Broom Board have held 17 meetings, and 122 decisions (omitting formal resolutions) relating to rates have been taken. Of these, 110 have been adopted by agreement, and 12 only by a contested vote. Of the 12 resolutions passed by a vote, three only were carried by the votes of the Appointed Members; one was lost because the Appointed Members did not vote; the remaining eight were carried by the Board either without or irrespective of the votes of the Appointed Members.

As indicating the class of questions upon which it has been found possible on this Board to achieve agreement in almost every instance by the process of discussion and compromise, the following particulars of the Board's legislation may be of interest to the Committee. The operatives are mainly piece workers. The Board have:—

- (i) Fixed minimum time rates, piece-work basis rates and overtime rates for women and girls; minimum time rates and overtime rates for skilled, semi-skilled and unskilled men and boys.
- (ii) Fixed a national list of piece rate prices for all the major operations in the industry.
- (iii) Framed a comprehensive scheme of indentured apprenticeship for the skilled branches of the trade, comprising apprenticeship rates, conditions of training, a ratio of journeymen to apprentices, and scheduling a model indenture. This was the first apprenticeship scheme adopted by a Trade Board.
- (iv) Framed a training scheme for male late entrants, with the object of meeting the needs of ex-service men desirous of entering the industry, and scheduling a model form of contract to the order.
- (v) Reduced the piece prices and time rates for men by a $\frac{7}{8}$ per cent. all-round reduction, except in the case of unskilled men, the rate for whom was reduced by $\frac{1}{4}$ d. an hour.
- (vi) Proposed an all-round reduction of rates on the basis of $\frac{7}{8}$ per cent. for women workers other than learners and female pan hands, and a further reduction of 1d. an hour for unskilled men.
- (vii) Fixed special rates for women employed as pan hands, and framed a training scheme for girls seeking to enter this branch of the trade, a model form of contract being scheduled.

Our experience on the Hair, Bass and Fibre Trade Board has been very similar. This Board have held 8 meetings and taken 27 decisions (omitting formal resolutions) with reference to rates. Of these, 24 have been adopted by agreement, and 3 only by a contested vote, one of which was not carried by the votes of the Appointed Members, who did not vote.

14. The Appointed Members on all the Boards with which I have been associated have steadily kept in mind the view that they are not acting as arbitrators, but as members of the Board. While conscious of the fact that, inasmuch as the voting power of the representative members must always be equalised, the Appointed Members are, in almost every case, in a position to decide any contested motion by their vote, yet this power has always been kept in the background, and our prime efforts have been directed to acting as conciliators with the object of bringing about an agreement between the representative members.

15. To what extent agreement, when it is reached, is brought about by the influence of the Appointed Members it is very difficult to determine. A great deal, again, depends upon the personnel of the Board. In my experience subsidiary and minor questions are frequently decided by agreement between the representative members apart from any influence of the Appointed Members, but in major questions the influence of the Appointed Members counts for a great deal.

16. I have read with surprise the evidence of Mr. Gordon T. H. Stamper and Mr. Ashley Ward, given before the Committee on the 24th November, 1921, to the effect that the practice of the Appointed Members is to adopt the attitude, "If you don't give the figure, we shall vote for the other side."

In the most positive way I desire to repudiate the allegation, on behalf of myself and my colleagues on the Boards with which I am associated. I cannot speak, of course, as to other Boards, but I say that no such practice as they allege has ever been adopted by the Appointed Members with whom I am associated.

The evidence given by Mr. Ashley Ward contained a number of inaccurate statements which, unless corrected, are calculated to give the Committee an altogether erroneous picture of the proceedings of the General Waste Materials Reclamation Trade Board, and I must ask the indulgence of the Committee to deal with his statements somewhat fully. I have done this in a separate memorandum annexed thereto.

IV. THE PRESENT RATE FIXING POWERS OF TRADE BOARDS.

17. In my opinion the fullest freedom should be accorded Trade Boards to fix minimum rates for such classes of workers, and in such manner, and subject to such conditions, as the Boards think fit. I think that only mischief is likely to result if the powers of the Boards are confined within artificial limits prescribed by Statute. A Trade Board is the counterpart of a Joint Industrial Council in the industry with which it is concerned, and in my opinion the Boards should have the same powers with regard to rates, hours, and cognate questions as are possessed by a Joint Industrial Council. I think that full effect should be given to the recommendation to this effect contained in the Second Report of the Whitley Committee (par. ii). Business men and representatives of workers find it difficult to understand the terms of the Acts and orders defining and limiting their powers at the present time, and all those with whom I am acquainted who have experience of Trade Board work are of opinion that greater elasticity, and not further restriction, is required if the Boards are to function properly.

For example, the decision of the Minister that the guaranteed week incorporated in the first order of the Laundry Trade Board was *ultra vires* caused a great deal of difficulty and friction.

1 February, 1922.]

Mr. E. H. C. WETHERED, O.B.E., M.A., LL.B.

[Continued.]

Again, the Brush and Broom Trade Board, in 1920, were anxious to put forward a scheme for enabling ex-Service men to be trained to enter the industry. We framed a carefully considered scheme, but when we approached the Minister for confirmation of the rates we had fixed we were informed that he was advised that ex-Service men did not constitute a class of workers within the meaning of the Acts, and that accordingly our scheme could not go through. This caused a great deal of annoyance to the employers and workers on the Board. Eventually the scheme was confirmed as a scheme for late male entrants, the limitation to ex-soldiers being dropped. The difficulty, however, caused a long and exasperating delay before the scheme was made effective.

The difficulty arose owing to the narrow interpretation put by the Minister on the words "class of workers" in Section 3 (1) of the Act of 1918. I would suggest that the words "any class of workers in the trade" should be altered so as to read "any particular workers in the trade." Subject to this amendment I think the definition is satisfactory.

18. I understand that it has been suggested that the existing powers of the Boards should be confined to fixing compulsory rates for the lowest grades of workers, and that for superior grades the Boards should either (a) have no jurisdiction at all, or (b) the jurisdiction should be confined to cases where rates are agreed between the representative parties on the Boards, the Appointed Members having no vote in the proposal or fixing of such rates.

19. To limit the jurisdiction of a Trade Board to the lowest grade of workers would mean, so far as men are concerned, fixing rates for labourers only, and so far as women are concerned, fixing rates for very limited classes of unskilled workers. I think this would be exceedingly unsatisfactory. Minimum rates for skilled and semi-skilled men and women are, in my opinion, quite as necessary in some trades as minimum rates for unskilled workers, and to so limit the function of the Boards would be to deprive them practically of all their usefulness. They would be unable to do anything to secure or maintain a reasonable standard of life for the operatives proper, and their usefulness from the point of view of preserving industrial peace and fostering a spirit of co-operation in industry would be destroyed. Moreover, such a limitation of the powers of the Boards would almost certainly have the effect, I think, of tending to bring the wages of superior grades of women workers down to the level of wages fixed for unskilled workers. Whatever rate is fixed for women in many women's trades tends to become the standard rate.

May I, by way of example, direct the attention of the Committee to the orders of the Hair, Bass and Fibre, and the Brush and Broom Trade Boards?

The former industry falls into two clear divisions, (i) the Hair trade, and (ii) the Bass and Fibre trade. The latter is closely allied to the Brush and Broom industry. The first order, made effective on the 3rd August, 1920, fixed three time rates for men and three time rates for women, namely:—

- (i) For operatives in the Hair trade: Men, 1s. 6d. per hour. Women, 9½d. per hour.
- (ii) For operatives in the Bass and Fibre trade: Men, 1s. 5½d. per hour. Women, 9½d. per hour.
- (iii) For unskilled workers: Men, 1s. 2d. per hour. Women, 8½d. per hour.

The bulk of the workers fell in classes (i) and (ii). The number of labourers and unskilled women workers in class (iii) was relatively very small.

The Brush and Broom Board, in their first order, made effective on the 1st January, 1920, fixed two time rates for men, namely:—

- (i) For skilled and semi-skilled operatives, 1s. 5½d. per hour.
- (ii) For labourers, 1s. 2d. per hour.

The bulk of the workers were in class (i). The number of workers in class (ii) was small.

If the proposal which has been made to the Committee had been in operation the orders of these Boards would have been valueless, since the real operatives would not have been affected.

Another very serious objection to the proposal is that it would deprive the Boards of the power they now possess of controlling piece prices, and, by so doing, removing the objection to piece work based on the fear of unfair cutting of rates. As the Committee are doubtless aware, this is an old and serious grievance, which is largely responsible for the reluctance displayed by some sections of organised labour to adopt payment by results. By fixing piece prices or piece work basis time rates the Boards render unfair rate cutting practically impossible. I have never heard of a complaint on this score in a Trade Board industry. To deprive the Boards of this power would, in my judgment, be a serious set-back to the efforts made during and since the war to remove the causes of bitterness and suspicion between employer and employee.

I do not know whether those who made these proposals wish to exclude juvenile rates from the jurisdiction of the Boards, but if so, I think such exclusion would be very undesirable. I shall return to this question in dealing with Point 9.

20. I do not think there are such serious objections to the alternative proposal to limit the power of the Boards to fix rates for superior grades of workers to rates which have been agreed, but I am inclined to think that in practice it would mean that, while rates for superior grades of workers would be agreed and fixed upon the best Boards, none would be fixed on many Boards established for industries in which the workers were most in need of protection. If either side adopted an unreasonable attitude, nothing would be done. This would inevitably lead to unrest in the Unions concerned and consequential industrial strife, and one of the prime objects of the existence of a Trade Board would thus be defeated.

For these reasons I am of opinion that the Boards' jurisdiction over all rates should be retained.
